the translator himself, who, at times added one word, or even a few words to the original before him, to make the meaning clearer or to guard the text against possible misunderstanding. But the great bulk of the glosses resemble the Greek additions in the Book of Proverbs; they are expansions of the thought, or hellenizing interpretations, or additions from current collections of gnomic sayings. The following are the best-ascertained results which flow from a comparison of the Greek version with the text of our Hebrew fragments. Oftentimes, the corruptions of the Hebrew may be discovered by means of the Greek; and, conversely, the Greek text is proved to be defective, in the line of additions or omissions, by references to parallel places in the Hebrew. At times, the Hebrew discloses considerable freedom of rendering on the part of the Greek translator; or enables one to perceive how the author of the version mistook one Hebrew letter for another; or again, affords us a means to make sense out of an unintelligible expressions in the Greek text. Lastly, the Hebrew text confirms the order of the contents in xxx-xxxvi which is presented by the Syriac, Latin, and Armenian versions, over against the unnatural order found in all existing Greek manuscripts. Like the Greek, the Syriac version of Ecclesiasticus was made directly from the original Hebrew. This is wellnigh universally admitted; and a comparison of its text with that of the newly found Hebrew fragments should settle the point forever; as just stated, the Syriac version gives the same order as the Hebrew text for the contents of xxx-xxxvi; in particular, it presents mistaken renderings, the origin of which, while inexplicable by supposing a Greek original as its basis, is easily accounted for by reference to the text from which it was made must have been very defective, as is proved by the numerous and important lacunae in the Syriac translation. It seems, likewise, that the Hebrew has been rendered by the translator himself in a careless, and at times even arbitrary manner. The Syriac version has all the less critical value at the present day, because it was considerably revised at an unknown date, by means of the Greek translation.

Of the other ancient versions of Ecclesiasticus, the Old Latin is the most important. It was made before St. Jerome's time, although the precise date of its origin cannot now be ascertained; and the holy doctor apparently revised its text but little, previously to its adoption into the Latin Vulgate. The unity of the Old Latin version, which was formerly undoubted, has been of late seriously questioned, and Ph. Thielmann, the most recent investigator of its text in this respect, thinks that chs. xlv-1 are due to a translator other than that of the rest of the book, the former part being of European, the latter and chief part of African, origin. Conversely, the view formerly doubted by Cornelius a Lapide, P. Sabatier, E.G. Bengel, etc., namely that the Latin version was made directly from the Greek, is now considered as altogether certain. The version has retained many Greek words in a latinized form: *eremus* (vi, 3); *eucharis* (vi, 5); *basis* (vi, 30); *acharis* (xx, 21), *xenia* (xx, 31); *dioryx* (xxiv, 41); *poderes* (xxvii, 9); etc.,

etc., together with certain Graecisms of construction; so that the text rendered into Latin was unquestionably Greek, not the original Hebrew. It is indeed true that other features of the Old Latin -- notably its order for xxx-xxxvi, which disagrees with the Hebrew text -- seem to point to the conclusion that the Latin version was based immediately on the original Hebrew. But a very recent and critical examination of all such features in i-xliii has led H. Herkenne to a different conclusion; all things taken into consideration, he is of the mind that: "Nititur Vetus Latina textu vulgari graeco ad textum hebraicum alterius recensione graece castigato." (See also Jos. Knabenbauer, S.J., "In Ecclesiasticum", p. 34 sq.) Together with graecized forms, the Old Latin translation of Ecclesiasticus presents many barbarisms and solecisms (such as *defunctio*, i, 13; *religiositas*, i, 17, 18, 26; *compartior*, i, 24; *receptibilis*, ii, 5; *peries*, *periet*, viii, 18; xxxiii, 7; *obductio*, ii, 2; v, 1, 10; etc.), which, to the extent in which they can be actually traced back to the original form of their version, go to show that the translator had but a poor command of the Latin language. Again, from a fair number of expressions which are certainly due to the translator, it may be inferred that at times, he did not catch the sense of the Greek, and that at other times he was too free in rendering the text before him. The Old Latin version abounds in additional lines or even verses foreign not only to the Greek, but also to the Hebrew text. Such important additions -- which often appear clearly so from the fact that they interfere with the poetical parallelisms of the book -- are either repetitions of preceding statements under a slightly different form, or glosses inserted by the translator or the copyists. Owing to the early origin of the Latin version (probably the second century of our era), and to its intimate connection with primitive form, as far as this form can be ascertained is one of the chief things to be desired for the textual criticism of Ecclesiasticus. Among the other ancient versions of the Book of Ecclesiasticus which are derived from the Greek, the Ethiopic, Arabic, and Coptic are worthy of special mention.

V. AUTHOR AND DATE

The author of the Book of Ecclesiasticus is not King Solomon, to whom, at St. Augustine bears witness, the work was oftentimes ascribed "on account of some resemblance of style" with that of Proverbs, Ecclesiastes, and the Canticle of Canticles, but to whom, as the same holy doctor says, "the more learned" (apparently among the church writers of the time) "know full well that it should not be referred" (On the City of God, Bk. XVII, ch xx). At the present day, the authorship of the book is universally and rightly assigned to a certain "Jesus", concerning whose person and character a great deal has indeed been surmised but very little is actually known. In the Greek prologue to the work, the author's proper name is given as *Iesus*, and this information is corroborated by the subscriptions found in the original Hebrew: 1, 27 (Vulg., 1, 29); li, 30. His familiar surname was Ben Sira, as the Hebrew text and the ancient versions

agree to attest. He is described in the Greek and Latin versions as "a man of Jerusalem" (1, 29), and internal evidence (cf. xxiv, 13 sqq.; 1) tends to confirm the statement, although it is not found in the Hebrew. His close acquaintance with "the Law, the Prophets, and the other books delivered from the fathers", that is, with the three classes of writings which make up the Hebrew Bible, is distinctly borne witness to by the prologue to the work; and the 367 idioms or phrases, which the study of the Hebrew fragments has shown to be derived from the sacred books of the Jews, are an ample proof that Jesus, the son of Sirach, was thoroughly acquainted with the Biblical text. He was a philosophical observer of life, as can be easily inferred from the nature of his thought, and he himself speaks of the wider knowledge which he acquired by traveling much, and of which he, of course, availed himself in writing his work (xxxiv, 12). The particular period in the author's life to which the composition of the book should be referred cannot be defined, whatever conjectures may have been put forth in that regard by some recent scholars. The data to which others have appealed (xxxv, 22, sqq.; xxxviii, 1-15; etc.) to prove that he was a physician are insufficient evidence; while the similarity of the names (Jason-Jesus) is no excuse for those who have identified Jesus, the son of Sirach, a man of manifestly pious and honourable character with the ungodly and hellenizing high priest Jason (175-172 B.C. -- concerning Jason's wicked deeds, see II Mach., iv, 7-26).

The time at which Jesus, the author of Ecclesiasticus, lived has been the matter of much discussion in the past. But at the present day, it admits of being given with tolerable precision. Two data are particularly helpful for this purpose. The first is supplied by the Greek prologue, where he came into Egypt *en to ogdoo kai triakosto etei epi tou Euergetou Basileos*, not long after which he rendered into Greek his grandfather's work. The "thirty-eighth year" here spoken of by the translator does not mean that of his own age, for such a specification would be manifestly irrelevant. It naturally denotes the date of his arrival in Egypt with a reference to the years of rule of the then monarch, the Egyptian Ptolemy Euergetes; and in point of fact, the Greek grammatical construction of the passage in the prologue is that usually employed into the Septuagint version to give the year of rule of a prince (cf. Aggeus; i, 1; 10; Zach., i, 1, 7; vii, 1; 1 Mach., xii, 42; xiv, 27; etc.). There were indeed two Ptolemys of the surname Euergetes (Benefactor): Ptolemy III and Ptolemy VII (Physcon). But to decide which is the one actually meant by the author of the prologue is an easy matter. As the first, Ptolemy III, reigned only twenty-five years (247-222 B.C.) it must be the second, Ptolemy VII, who intended. This latter prince shared the throne along with his brother (from 170 B.C. onwards), and afterwards ruled alone (from 145 B.C. onwards). But he was wont to reckon the years of his reign from the earlier date. Hence "the thirty-eighth year of Ptolemy Euergetes", in which the grandson of Jesus, the son of Sirach, came to Egypt,

is the year 132 B.C. This being the case, the translator's grandfather, the author of Ecclesiasticus, may be regarded as having lived and written his work between forty and sixty years before (between 190 and 170 B.C.), for there can be no doubt that in referring to Jesus by means of the term *pappos* and of the definite phrase *ho pappos mou Iesous*, the writer of the prologue designated his grandfather, and not a more remote ancestor. The second datum that is particularly available for determining the time at which the writer of Ecclesiasticus lived is supplied by the book itself. It has long been felt that since the son of Sirach celebrated with such a genuine glow of enthusiasm the deeds of "the high priest Simon, son of Onias", whom he praises as the last in the long line of Jewish worthies, he must himself have been an eyewitness of the glory which he depicts (cf. 1, 1-16, 22, 23). This was, of course, but an inference and so long as it was based only on a more or less subjective appreciation of the passage, one can easily understand why many scholars questioned, or even rejected, its correctness. But with the recent discovery of the original Hebrew of the passage, there has come in a new, and distinctly objective, element, which places practically beyond doubt the correctness of the inference. In the Hebrew text, immediately after his eulogism of the high priest Simon, the writer subjoins the following fervent prayer:

May His (i.e. Yahweh's) mercy be continually with Simon, and may He establish with him the covenant of Phineas, that will endure with him and with his seed, as the says of heaven (I, 24).

Obviously, Simon was yet alive when this prayer was thus formulated; and its actual wording in the Hebrew implies this so manifestly, that when the author's grandson rendered it into Greek, at a date when Simon had been dead for some time, he felt it necessary to modify the text before him, and hence rendered it in the following general manner:

May His mercy be continually with *us*, and may He redeem *us* in His days.

Besides thus allowing us to realize the fact that Jesus, the son of Sirach, was a contemporary of the high priest Simon, chap. 1 of Ecclesiasticus affords us certain details which enable us to decide which of the two Simons, both high priests and sons of Onias and known in Jewish history, is the one described by the writer of the book. On the one hand, the only known title of Simon I (who held the pontificate under Ptolemy Soter, about 300 B.C.) which would furnish a reason for the great ecomium passed upon Simon in Eccus., 1 is the surname "the Just" (cf. Josephus, Antiq. of the Jews, Bk.XII, chap. ii, 5), whence it is inferred that he was a renowned high priest worthy of

being celebrated among the Jewish heroes praised by the son of Dirach. On the other hand, such details given in Simon's panegyric, as the facts that he repaired and strengthened the Temple, fortified the city against siege, and protected the city against robbers (cf. *Ecclus.*, 1 1-4), are in close agreement with what is known of the times of Simon II (about 200 B.C.). While in the days of Simon I, and immediately after, the people were undisturbed by foreign aggression, in those of Simon II the Jews were sorely harrassed by hostile armies, and their territory was invaded by Antiochus, as we are informed by Josephus (*Antiq. of the Jews*, Bk. XII, chap. iii, 3). It was also in the later time of Simon II that Ptolemy Philopator was prevented only by the high priest's prayer to God, from desecrating the Most Holy Place; he then started a fearful persecution of the Jews at home and abroad (cf. *III Mach.*, ii, iii). It appears from these facts -- to which others, pointing in the same direction, could easily be added -- that the author of *Ecclesiasticus* lived about the beginning of the second century B.C. As a matter of fact, recent Catholic scholars, in increasing number, prefer this position that which identifies the high priest Simon, spoken of in *Ecclus.*, 1, with Simon I, and which, in consequence, refers the composition of the book to about a century earlier (about 280 B.C.)

VI. METHOD OF COMPOSITION

At the present day, there are two principal views concerning the manner in which the writer of *Ecclesiasticus* composed his work, and it is difficult to say which is the more probable. The first, held by many scholars, maintains that an impartial study of the topics treated and of their actual arrangement leads to the conclusion that the whole book is the work of a single mind. Its advocates claim that, throughout the book, one and the same general purpose can be easily made out, to wit: the purpose of teaching the practical value of Hebrew wisdom, and that one and the same method in handling the materials can be readily noticed, the writer always showing wide acquaintance with men and things, and never citing any exterior authority for what he says. They affirm that a careful examination of the contents disclosed a distinct unity of mental attitude on the author's part towards the same leading topics, towards God, life, the Law, wisdom, etc. They do not deny the existence of differences of tone in the book, but think that they are found in various paragraphs relating to minor topics; that the diversities thus noticed do not go beyond the range of one man's experience; that the author very likely wrote at different intervals and under a variety of circumstances, so that it is not to be wondered at if pieces thus composed bear the manifest impress of a somewhat different frame of mind. Some of them actually go so far as to admit that the writer of *Ecclesiasticus* may at times have collected thoughts and maxims that were already in current and popular use, may even have drawn material from collections of wise sayings no longer extant or from unpublished discourses of sages;

but they, each and all, are positive that the author of the book "was not a mere collector or compiler; his characteristic personality stands out too distinctly and prominently for that, and notwithstanding the diversified character of the apophthegms, they are all the outcome of one connected view of life and of the world" (Schürer).

The second view maintains that the Book of Ecclesiasticus was composed by a process of compilation. According to the defenders of this position, the compilatory character of the book does not necessarily conflict with a real unity of general purpose pervading and connecting the elements of the work; such a purpose proves, indeed, that one mind has bound those elements together for a common end, but it really leaves untouched the question at issue, viz. whether that one mind must be considered as the original author of the contents of the book, or, rather, as the combiner of pre-existing materials. Granting, then, the existence of one and the same general purpose in the work of the son of Sirach, and admitting likewise the fact that certain portions of Ecclesiasticus belong to him as the original author, they think that, on the whole, the book is a compilation. Briefly stated, the following are their grounds for their position. In the first place, from the very nature of his work, the author was like "a gleaner after the grape-gatherers"; and in thus speaking of himself (xxxiii, 16) he gives us to understand that he was a collector or compiler. In the second place, the structure of the work still betrays a compilatory process. The concluding chapter (li) is a real appendix to the book, and was added to it after the completion of the work, as is proved by the colophon in 1, 29 sqq. The opening chapter reads like a general introduction to the book, and indeed as one different in tone from the chapters by which it immediately followed, while it resembles some distinct sections which are embodied in further chapters of the work. In the body of the book, ch. xxxvi, 1-19, is a prayer for the Jews of the Dispersion, altogether unconnected with the sayings in verses 20 sqq. of the same chapter; ch. xliii, 15-1, 26, is a discourse clearly separate from the prudential maxims by which it is immediately preceded; chs. xvi, 24; xxiv, 1; xxxix, 16, are new starting-points, which, no less than the numerous passages marked by the address my son (ii, 1; iii, 19; iv, 1, 23; vi, 18, 24, 33; etc.). and the peculiar addition in 1, 27, 28, tell against the literary unity of the work. Other marks of a compilatory process have also been appealed to. They consist in the significant repetition of several sayings in different places of the book (cf. xx, 32, 33, which is repeated in xli, 17b, 18; etc.); in apparent discrepancies of thought and doctrine (cf. the differences of tone in chs. xvi; xxv; xxix, 21-41; xl, 1-11; etc); in certain topical headings at the beginning of special sections (cf. xxxi, 12; xli, 16; xliv, 1, in the Hebrew); and in an additional psalm or canticle found in the newly discovered Hebrew text, between li, 12, and li, 13; all of which are best accounted for by the use of several smaller collections containing each the same saying, or differing considerably in their general tenor, or supplies with their respective titles.

Finally, there seems to be an historical trace of the compilatory character of Ecclesiasticus in a second, but unauthentic, prologue to the book, which is found in the "Synopsis Sacrae Scripturae". In this document, which is printed in the works of St. Athanasius and also at the beginning of Ecclesiasticus in the Complutensian Polyglot, the actual redaction of the book is ascribed to the Greek translator as a regular process of compilation detached hymns, sayings, prayers, etc., which had been left him by his grandfather, Jesus, the son of Sirach.

VII. DOCTRINAL AND ETHICAL TEACHING

Before setting forth in a summary way the principal teachings, doctrinal and ethical, contained in the Book of Ecclesiasticus, it will not be amiss to premise two remarks which, however elementary, should be distinctly borne in mind by anyone who wished to view the doctrines of the son of Sirach in their proper light. First, it would be obviously unfair to require that the contents of this Sapiential book should come full up to the high moral standards of Christian ethics, or should equal in clearness and precision the dogmatic teachings embodied in the sacred writings of the New Testament or in the living tradition of the Church; all that can be reasonably expected of a book composed some time before the Christian Dispensation, is that it shall set forth substantially good, not perfect, doctrinal and ethical teaching. In the second place, both good logic and sound common sense demand that the silence of Ecclesiasticus concerning certain points of doctrine be not regarded as a positive denial of them, unless it can be clearly and conclusively shown that such a silence must be so construed. The work is mostly made up of unconnected sayings which bear on all kinds of topics, and on that account, hardly ever, if ever at all, will a sober critic be able to pronounce on the actual motive which prompted the author of the book either to mention or to omit a particular point of doctrine. Nay more, in presence of a writer manifestly wedded to the national and religious traditions of the Jewish race as the general tone of his book proves the author of Ecclesiasticus to have been, every scholar worthy of the name will readily see that silence on Jesus' part regarding some important doctrine, such for instance as that of the Messiah, is no proof whatever that the son of Sirach did not abide by the belief of the Jews concerning that doctrine, and, in reference to the special point just mentioned, did not share the Messianic expectations of his time. As can readily be seen, the two general remarks just made simply set forth the elementary canons of historical criticism; and they would not have been dwelt on here were it not that they have been very often lost sight of by Protestant scholars, who, biased by their desire to disprove the Catholic doctrine of the inspired character of Ecclesiasticus, have done their utmost to depreciate the doctrinal and ethical teaching of this deuterocanonical book.

The following are the principal dogmatic doctrines of Jesus, the son of Sirach. According to him, as according to all the other inspired writers of the Old Testament, God is one and there is no God beside Him (xxxvi, 5). He is a living and eternal God (xviii, 1), and although His greatness and mercy exceed all human comprehension, yet He makes Himself known to man through His wonderful works (xvi, 18, 23 xviii, 4). He is the creator of all things (xviii, 1; xxiv, 12), which He produced by His word of command, stamping them all with the marks of greatness and goodness (xlii, 15-xliii; etc.). Man is the choice handiwork of God, who made him for His glory, set him as king over all other creatures (xvii, 1-8), bestowed upon him the power of choosing between good and evil (xv, 14-22), and will hold him accountable for his own personal deeds (xvii, 9-16), for while tolerating, moral evil He reproves it and enables man to avoid it (xv, 11-21). In dealing with man, God is no less merciful than righteous: "He is mighty to forgive" (xvi, 12), and: "How great is the mercy of the Lord, and His forgiveness to them that turn to Him" (xvii, 28); yet no one should presume on the Divine mercy and hence delay his conversion, "for His wrath shall come on a sudden, and in the time of vengeance He will destroy thee" (v, 6-9). From among the children of men, God selected for Himself a special nation, Israel, in the midst of which He wills that wisdom should reside (xxiv, 13-16), and in behalf of which the son of Sirach offers up a fervent prayer, replete with touching remembrances of God's mercies to the patriarchs and prophets of old, and with ardent wishes for the reunion and exaltation of the chosen people (xxxvi, 1-19). It is quite clear that the Jewish patriot who put forth this petition to God for future national quiet and prosperity, and who furthermore confidently expected that Elias's return would contribute to the glorious restoration of all Israel (cf. xlvi, 10), looked forward to the introduction of Messianic times. It remains true, however, that in whatever way his silence be accounted for, he does not speak anywhere of a special interposition of God in behalf of the Jewish people, or of the future coming of a personal Messiah. He manifestly alludes to the narrative of the Fall, when he says: "From the woman came the beginning of sin, and by her we all die" (xxv, 33), and apparently connects with this original deviation from righteousness the miseries and passions that weigh so heavily on the children of Adam (xl, 1-11). He says very little concerning the next life. Earthly rewards occupy the most prominent, or perhaps even the sole, place, in the author's mind, as a sanction for present good or evil deeds (xiv, 22-xv, 6; xvi, 1-14); but this will not appear strange to anyone who is acquainted with the limitations of Jewish eschatology in the more ancient parts of the Old Testament. He depicts death in the light of a reward or of a punishment, only in so far as it is either a quiet demise for the just or a final deliverance from earthly ills (xli, 3, 4), or, on the contrary, a terrible end that overtakes the sinner when he least

expects it (ix, 16, 17). As regards the underworld or Sheol, it appears to the writer nothing but a mournful place where the dead do not praise God (xvii, 26, 27)

The central, dogmatic, and moral idea of the book is that of wisdom. Ben Sira describes it under several important aspects. When he speaks of it in relation to God, he almost invariably invests it with personal attributes. It is eternal (i, 1), unsearchable (i, 6, 7), universal (xxiv, 6 sqq.). It is the formative, creative power of the world (xxiv, 3 sqq.), yet is itself created (i, 9; also in Greek: xxiv, 9), and is nowhere treated as a distinct, subsisting Divine Person, in the Hebrew text. In relation to man, wisdom is depicted as a quality which comes from the Almighty and works most excellent effects in those who love Him (i, 10-13). It is identified with the "fear of God" (i, 16), which should of course prevail in a special manner in Israel, and promote among the Hebrews the perfect fulfilment of the Mosaic Law, which the author of Ecclesiasticus regards as the living embodiment of God and wisdom (xxiv, 11-20, 32, 33). It is a priceless treasure, to the acquisition of which one must devote all his efforts, and the imparting of which to others one should never grudge (vi, 18-20; xx, 32, 33). It is a disposition of the heart which prompts man to practise the virtues of faith, hope, and love of God (ii, 8-10), of trust and submission, etc. (ii, 18-23; x, 23-27; etc.); which also secures for him happiness and glory in this life (xxxiv, 14-20; xxxiii, 37, 38; etc.). It is a frame of mind which prevents the discharge of the ritual law, especially the offering of sacrifices, from becoming a heartless compliance with mere outward observances, and it causes man to place inward righteousness far above the offering of rich gifts to God (xxxv). As can readily be seen, the author of Ecclesiasticus inculcated in all this a teaching far superior to that of the Pharisees of a somewhat later date, and in no way inferior to that of the prophets and of the commendable, too, are the numerous pithy sayings which the son of Sirach gives for the avoidance of sin, wherein the negative part of practical wisdom may be said to consist. His maxims against pride (iii, 30; vi, 2-4; x, 14-30; etc.), covetousness (iv, 36; v, 1; xi, 18-21), envy, (xxx, 22-27; xxxvi, 22), impurity (ix, 1-13; xix, 1-3; etc.), anger (xviii, 1-14; x, 6), intemperance (xxxvii, 30-34), sloth (vii, 16; xxii, 1, 2), the sins of the tongue (iv, 30; vli, 13, 14; xi, 2, 3; i, 36-40; v, 16, 17; xxviii, 15-27; etc.), evil company, (xi, 31-36; xxii, 14-18; etc.), display a close observation of human nature, stigmatize vice in a forcible manner, and at times point out the remedy against the spiritual distemper. Indeed, it is probably no less because of the success which Ben Sira attained to in branding vice than because of that which he obtained in directly inculcating virtue, that his work was so willingly used in the early days of Christianity for public reading at church, and bears, down to the present day, the pre-eminent title of "Ecclesiasticus".

Together with these maxims, which nearly all bear on what may be called individual morality, the Book of Ecclesiasticus contains valuable lessons relative to the various

classes which make up human society. The natural basis of society is the family, and the son of Sirach supplies a number of pieces of advice especially appropriate to the domestic circles as it was then constituted. He would have the man who wishes to become the head of a family determined in the choice of a wife by her moral worth (xxxvi, 23-26; xl, 19-23). He repeatedly describes the precious advantages resulting from the possession of a good wife, and contrasts with them the misery entailed by the choice of an unworthy one (xxvi, 1-24; xxv, 17-36). The man, as the head of the family, he represents indeed as vested with more power than would be granted to him among us, but he does not neglect to point out his numerous responsibilities towards those under him: to his children, especially his daughter, whose welfare he might more particularly be tempted to neglect (vii, 25 sqq.), and his slaves, concerning whom he writes: "Let a wise servant be dear to thee as they own soul" (vii, 23; xxxiii, 31), not meaning thereby, however, to encourage the servant's idleness or other vices (xxxiii, 25-30). The duties of children towards their parents are often and beautifully insisted upon (vii, 29, 30, etc.). The son of Sirach devoted a variety of sayings to the choice and the worth of a real friend (vi, 6-17; ix, 14, 15; xii, 8, 9), to the care with which such a one should be preserved (xxii, 25-32), and also to the worthlessness and dangers of the unfaithful friend (xxvii, 1-6, 17-24; xxxiii, 6). The author has no brief against those in power but on the contrary considers it an expression of God's will that some should be in exalted, and others in humble, stations in life (xxxiii, 7-15). He conceives of the various classes of society, of the poor and the rich, the learned and the ignorant, as able to become endowed with wisdom (xxxvii, 21-29). He would have a prince bear in mind that he is in God's hand, and owes equal justice to all, rich and poor (v, 18; x, 1-13). He bids the rich give alms, and visit the poor and the afflicted (iv, 1-11; vii, 38, 39; xii, 1-7; etc.), for almsgiving is a means to obtain forgiveness of sin (iii, 33, 34; vii, 10, 36) whereas hardheartedness is in every way hurtful (xxxiv, 25-29). On the other hand, he directs the lower classes, as we might call them, to show themselves submissive to those in higher condition and to bear patiently with those who cannot be safely and directly resisted (viii, 1-13; ix, 18-21; xiii, 1-8). Nor is the author of Ecclesiasticus anything like a misanthrope that would set himself up resolutely against the legitimate pleasures and the received customs of social life (xxxii, 1 sqq.); while he directs severe but just rebukes against the parasite (xxix, 28-35; xi, 29-32). Finally, he has favourable sayings about the physician (xxviii, 1-15), and about the dead (vii, 37; xxxviii, 16-24); and strong words of caution against the dangers which one incurs in the pursuit of business (xxvi, 28; xxvii, 1-4; viii, 15, 16).

FRANCIS E. GIGOT

Samuel Eccleston

Samuel Eccleston

Fifth Archbishop of Baltimore, U.S.A., born near Chestertown, Maryland, 27 June, 1801; died at Georgetown, D.C., 22 April, 1851. His father was Samuel Eccleston, an Espiscopalian. After her husband's death, Mrs. Eccleston married a Catholic gentleman named Stenson. Samuel was thus brought under Catholic influences, and sent to St. Mary's College, Baltimore, where he was converted. Entering St. Mary's Seminary in 1819, he was ordained priest, 24 April, 1825. He went to Issy, France, for further theological studies, and, returning to Baltimore in July, 1827, was made vice-president, and two years later president, of St. Mary's College. On 14 Sept., 1834, he was consecrated titular Bishop of Thermia, and coadjutor with the right of succession for Baltimore, and, upon the death of Archbishop Whitfield, 19 October, 1834, succeeded to the metropolitan see. He became also admimistrator of Richmond, until Bishop Whelan's appointment in 1841.

During his term of office many new churches were erected. He contributed largely of his own means towards the building of the cathedral. To provide for German Caatholics the Redemptorists were invited from Austria in 1841; the Brothers of the Christian Schools were introduced into the United States in 1846, establishing Calvert Hall School at Baltimore, and the same year the Brothers of St. Patrick took charge of a manual labour school (since discontinued) near that city. An important event was the opening, 1 November, 1849, of St. Charles College, founded by the generosity of Charles Carroll of Carrollton. Five provincial councils, the third to the seventh inclusive, were held at Baltimore under Archbishop Eccleston. (See BALTIMORE, ARCHDIOCESE OF.)

J.P.W. MCNEAL

Thomas of Eccleston

Thomas of Eccleston

Thirteenth-century Friar Minor and chronicler, dates of birth and death unknown. He styles himself simply "Brother Thomas" and Bale seems to have first given him the title "of Eccleston". He appears to have entered the order about 1232-3 and to have been a student at Oxford between 1230 and 1240. After the latter year he was stationed at the convent in London, but he does not appear to have ever held any office in the order. He is chiefly famous for his chronicle "De Adventu Fratrum Minorum in Angliam", which extends from the coming of the friars into England under Agnellus of Pisa, in 1224, up to about 1258, when the work was probably completed. Eccleston declares that he spent twenty-six years collecting material for his chronicle, most of the information it contains being derived from personal knowledge or verbal communication, although he seems to have had access to certain written documents now lost. His "De Adventu" is a collection of notes rather than a finished work. He describes with extreme simplicity and vividness what has been called the heroic period of the Franciscan movement in England. In spite of the absence of dates and of any chronological sequence and of its tendency to extol the English province above all others, his chronicle is very valuable and is accurate and reliable in all that concerns the establishment and spread of the Friars Minor in England. Incidentally it throws some light on the trend of early Franciscan events and thought in general. Four manuscripts of the "De Adventu", all of which go back to one lost archetype, are known to scholars. The chronicle has been often edited; in part by Brewer in the "Monumenta Franciscana" (Rolls Series, London, 1858); and by Howlett in the same series (1882); by the Friars Minor at Quaracchi (in *Analecta Franciscana*, I, 1885, 217-57); by Liebermann in the "Monumenta Germaniæ" (XXVIII, Hanover, 1885, 560-69). A critical edition of the complete text is much needed. There is an English translation of Eccleston's work by Father Cuthbert, O.S.F.C., "The Friars and how they came to England" (London, 1903).

PASCHAL ROBINSON

Jacques Echard

Jacques Echard

Historian of the Dominicans, born at Rouen, France, 22 September, 1644; died at Paris, 15 March, 1724. As the son of a wealthy official of the king he received a thorough classical and secular education. He entered the Dominican Order at Paris and distinguished himself for his assiduity in study. When Jacques Quétif, who had planned and gathered nearly one-fourth of the material for a literary history of the Dominican Order, died in 1698, Echard was commissioned to complete the work. After much labour and extensive research in most European libraries this monumental history appeared in two quarto volumes under the title "Scriptores ordinis prædicatorum recensiti, notisque historicis illustrati" etc. (Paris, 1721). Besides a sketch, based chiefly on Pignon and Salanac, and a list of each writer's works, with dates and peculiarities of the various editions, Echard enumerates the unpublished, spurious, and doubtful works, with valuable indications as to their whereabouts. He displays throughout a keen, sane, and incisive criticism which has been highly praised by competent critics (*Journal des Savants*, LXIX, 574). A new and revised edition was prepared in 1908 by Rémi Coulon, O.P.

THOS. M. SCHWERTNER

Baltasar de Echave

Baltasar De Echave

Painter, born at Zumaya, Guipuzcoa, Spain, in the latter part of the sixteenth century; died in Mexico about the middle of the seventeenth. As there was a painter of the same name, thought to be his son, he is known as Echave the Elder. He was one of the earliest Spanish artists to reach Mexico, arriving at about the same time, near the end of the sixteenth century, as Sebastian Arteaga and Alonzo Vasquez. He was then a young man, and there is a tradition that his wife, also a painter, was his instructor. Echave, whose subjects are chiefly religious, had especial skill in composition, and his best works, which have much charm of colour and tenderness of treatment, are thought to recall those of Guercino. In the galleries of the National Academy of San Carlos, in the City of Mexico, there are some of his best pictures, notably "The Adoration of the Magi", "Christ in the Garden", "The Martyrdom of San Aproniano", "The Holy Family", "The Visitation", "The Holy Sepulchre", "Saint Ann and the Virgin", "The Apparition of Christ and the Virgin to San Francisco", "The Martyrdom of San Ponciano" and

"Saint Cecilia". In the church of San José el Real, generally known as the "Profesa", are several others, including "St. Isabel of Portugal", while he executed for the church of Santiago Tlalatelolco fifteen altar-panels. In the cathedral is his "Candelaria" and a "San Sebastian", believed to be by his wife. Among the smaller paintings of Echave is one of San Antonio Abad with St. Paul, the first hermit. The artist also had areputation as an author, among his works being one on the Biscayan language.

AUGUSTUS VAN CLEEF

Echinus

Echinus

A titular see of Thessaly, Greece. Echinus, (*Echinos*, also *Echinous*) was situated on the northern shore of the Gulf of Lamia (*Maliacus Sinus*). Today it is a small village, Akkhinos (*Achinos*), of 500 inhabitants, in the demos of Phalara and the eparchy of Phthiotis. On the conical hill which rises above the village are remains of the old walls. The city has been destroyed by earthquakes and rebuilt many times, particularly in 426 B.C. and A.D. 551. Philip II of Macedon left it to the Malians, and Philip V took it from the Ætolians. It was fortified by Justinian, The see, mentioned in "Notitae episcopatum" as late as the twelfth or thirteenth century, was a suffragan of Larissa. Three bishops are known: Theodore in 431, Peter in 451, and Aristotle in 459 (Lequien, *Oriens christianus*, II 115).

LEAKE, Northern Greece (London, 1835), II 80; PAULY-WISOWS, *Real-Encyc.*, s.v.

S. PÉTRIDÈS

Abbey of Echternach

Abbey of Echternach

(Also EPTERNACH, Lat. EPTERNACENSIS).

A Benedictine monastery in the town of that name, in the Grand Duchy of Luxemburg and the Diocese of Trier. It was founded in 698 by St. Willibrord, and English monk of Ripon, who became the Apostle of Friesland and first bishop of Utrecht. Although a bishop, he ruled the monastery as abbot until his death in 739. The abbey stood near Tier on land given him for the purpose by St. Irmine, Abbess of Oeren and daughter of Dagobert II. It had many royal and other benefactors, including Pepin and Charlemagne, who conferred upon it great privileges. In 859 the monks were displaced by secular canons, as was so often the case with the early monasteries, but in

971 Emperor Otho I restored the Benedictine life there, bringing forty monks thither from the great Abbey of St. Maximin at Trier, one of whom, Ravanger by name, was made abbot. The monastery became very celebrated and was, during the Middle Ages, one of the most important in Northern Europe. It continued to flourish until the French Revolution, when it was suppressed, and the monks dispersed. The buildings put up by St. Willibrord were burnt down in 1017, and a new abbey was then erected. The church was Romanesque in style, but Gothic additions and alterations were made in the fourteenth and sixteenth centuries. In 1797 it was sold and became a pottery manufactory, but in 1861 it was reacquired by the townspeople, through whose generosity and devotion it was restored and made a parish church. The reconsecration took place with great solemnity in 1868, and since that date the work of restoration and decoration has continued steadily. It is popularly called "the cathedral", though not the seat of a bishop. The conventual buildings, originally erected in 1017-31, have been frequently rebuilt and added to, and they were entirely modernized in 1732. At the suppression they became State property and have for many years served as barracks. The library was noted for a number of precious manuscripts of very early date which it contained; some of them are now in the Bibliothèque Nationale at Paris.

The Dancing Procession

The Abbey of Echternach owes much of its fame, especially in modern times, to the curious "dancing procession" which takes place annually on Whit Tuesday, in honour of St. Willibrord. The cult of the saint may be traced back almost to the date of his death, and the stream of pilgrims to his tomb in the abbey church had never ceased. The Emperors Lothair I, Conrad, and Maximilian may be numbered amongst them. The tomb stands before the high altar and has been recently entirely renewed. On it is a recumbent effigy of the saint, and amongst other relics preserved there are a mitre, crosier, and chasuble said to have been used by him. The origin of the procession cannot be stated with certainty. Authentic documents of the fifteenth century speak of it as a regular and recognized custom at that time, but for earlier evidence there is only tradition to depend upon. The legend is that in 1347, when a pestilence raged amongst the cattle of the neighbourhood, the symptoms of which were a kind of trembling or nervous shaking followed by speedy death, the people thought that by imitating these symptoms, more or less, whilst imploring the intercession of St. Willibrord, the evil might be stayed. The desired result was obtained, and so the dancing procession to the saint's tomb became an annual ceremony. Nowadays it is made an act of expiation and penance on behalf of afflicted relations and especially in order to avert epilepsy, St. Vitus's dance, convulsions, and all nervous diseases. The function commences at nine o'clock in the morning at the bridge over the Sure, with a sermon by the parish priest (formerly the abbot of the monastery); after this the procession

moves toward the basilica, through the chief streets of the town, a distance of about 1.5 kilometres. Three steps forward are taken, then two back, so that five steps are required in order to advance one pace. The result is that it is well after midday before the last of the dancers has reached the church. They go four or five abreast, holding each other by the hand or arm. Many bands accompany them, playing a traditional melody which has been handed down for centuries. A large number of priests and religious also accompany the procession and not infrequently there are several bishops as well. On arrival at the church, the dance is continued around the tomb of St. Willibrord, when litanies and prayers in his honour are recited, and the whole concludes with Benediction of the Blessed Sacrament. Though curious and even somewhat ludicrous, the people perform it in all seriousness and as a true act of devotion. It usually attracts to Echternach a great concourse of tourists as well as pilgrims and as many as ten thousand people generally take part in it. The procession took place annually without intermission until 1777. Then, on account of some abuses that had crept in, the music and dancing were forbidden by the Archbishop of Trier, and in 1786 Joseph II abolished the procession altogether. Attempts were made to revive it ten years later but the French Revolution effectually prevented it. It was recommenced, however, in 1802 and has continued ever since. In 1826 the Government tried to change the day to a Sunday, but since 1830 it has always taken place on Whit Tuesday, as formerly.

G. CYPRIAN ALSTON

Julius Echter von Mespelbrunn

Julius Echter von Mespelbrunn

Prince-Bishop of Würzburg, b. 18 March, 1545, in the Castle of Mespelbrunn, Spessart (Bavaria); d. 13 Sept., 1617, at Würzburg. Descended from an ancient family in the service of the archbishops of Mainz, he received a good education in the schools of that city, also at Louvain, Douai, Paris, Angers, Pavia, and Rome; it was in Rome that he became a licentiate of canon and civil law. In 1567 he entered on his duties as canon of Würzburg, an office to which he had been appointed in 1554; in 1570 he became the dean of the cathedral chapter, and in 1573, at the age of twenty-eight, even before his ordination to the priesthood, was appointed Prince-Bishop of Würzburg.

Various causes had combined to bring the diocese into a sad state. Deeply in debt and poorly administered, it had an almost entirely Protestant population. The clergy, in point of virtue and learning, were for the most part unequal to their task, and the cathedral chapter was adverse to any ecclesiastical reform. During the first ten years of Echter's government the attempt to unite the Abbey of Fulda and the Bishopric of Würzburg, after the deposition of the Prince-Abbot Balthasar von Dernbach, caused much confusion. This was due to the youthful ambition of Echter, and not, as some wish to interpret it, a sign of any anti-Catholic sentiments on his part. From the outset he endeavoured to carry out a thorough ecclesiastical restoration. For this reason he encouraged, as far as possible, the Jesuits and promoted their beneficent ministry. In the same spirit he conceived the plan of founding a university at Würzburg, and despite all difficulties it was solemnly opened (2 Jan., 1582) and became a model for all similar Counter-Reformation institutions. Under the Jesuits it flourished, grew rapidly, and furnished the see with the priests and officials needed to counterbalance the more or less irreligious temper of the population. The bishop was now able to take decisive steps against Protestantism. He banished all Lutheran preachers from his territory and removed all priests who were unwilling to observe the rules of their office. The public officials had to be Catholics, and none but Catholic teachers could be appointed. He began, moreover, courses of careful instruction for non-Catholics, and to some extent threatened them with penalties and even with banishment. Within three years about 100,000 returned to the Catholic Church. Public worship was also improved by the introduction of new devotions, processions, and the establishment of confraternities. Bishop Echter restored ruinous monasteries or devoted their revenues to the erection of new parishes and to the building of three hundred new churches. The tapering towers of these churches, called after the bishop "Julius towers", still preserve his memory. His most beneficial and lasting monument, after the university, is the Julius Hospital, which he founded with the endowment of the abandoned monastery of Heiligenthal. By skilful administration he improved the decadent economic conditions of his ecclesiastical states, reduced taxes, perfected the administration of justice, and established many primary schools. In a word, he proved himself one of the most capable rulers of his time. Not only in his own diocese did he display an extraordinary and varied activity, but as the founder and soul of the Catholic League, he exercised a decisive influence on the future of Germany.

PATRICIUS SCHLAGER.

Johann Eck

Johann Eck (Eckius)

Theologian and principal adversary of Luther, b. 15 Nov., 1486, at Eck in Swabia; d. 10 Feb., 1543, at Ingolstadt. His family name was Maier, and his father, Michael Maier, was for many years magistrate in the town, the latinized name of which, *Eckius* or *Eccius*, was adopted after 1505 by Johann. His uncle, Martin Maier, pastor at Rothenburg on the Neckar, received Johann in his house (1495) and educated him. In 1498, when twelve years old, he was admitted to the Heidelberg University; thence he went in 1499 to Tübingen where he received the degree of Master of Arts in 1501; then to Cologne and in 1502 to Freiburg in the Breisgau. After his graduation in the faculty of arts he began the study of philosophy and theology, took courses at the same time in jurisprudence, physics, mathematics, and geography, joined the Humanistic movement, and in addition to Latin, learned Hebrew and Greek. Among his instructors at the university were many distinguished scholars. His uncle now withdrew his allowance and Eck was obliged to earn his livelihood as a tutor while continuing his studies. In 1505 he was appointed rector of the *Artistenburse zum Pfau*, i.e., principal of the hall for students in arts at Freiburg, and received the degree of Bachelor of Theology; he lectured on the "Sentences" in 1506; was promoted to the licentiate in 1509; and in 1510, when twenty-four years old, he received the degree of Doctor of Theology. He had been ordained to the priesthood in 1508 with a papal dispensation from the age-requirement. Shortly after graduating as doctor, he was invited (1510) by the Dukes of Bavaria to the professorship of theology in Ingolstadt. He was appointed pro-chancellor of the university in 1512, and during his professorate of thirty-two years filled repeatedly the offices of dean, pro-rector, and rector; he also served as pastor and was appointed canon in Eichstätt. At Freiburg and during his earlier years at Ingolstadt, his literary activity was remarkable, not only in theology but also in other departments of science, as is evidenced by his writings which have been preserved partly in print and partly in MS. He engaged in geographical research and published a series of philosophical works, some of which were to serve as textbooks in the faculty of arts at Ingolstadt. In these writings he attempts to combine in a rational synthesis the advantages of the older philosophy with those of the new. His principal theological work during this period, entitled "Chrysopassus", treats of predestination with special reference to the dogmas of grace and free will which were so soon to become, in consequence of Luther's outbreak, the centre of sharp discussion. The tenor of this treatise, written when its author was only twenty-eight years old, evinces both confidence and modesty.

Luther's appearance, and especially the Disputation at Leipzig (1519), formed the turning-point in Eck's intellectual development and in his activity as a theologian. Thenceforth he is a prominent figure in the history of that period. With a clear insight into the meaning of Lutheranism, he was the first to champion the cause of Catholic teaching against Protestant error; and he became Luther's ablest opponent, skilful, untiring, and thoroughly equipped in theology. The rest of his life was spent in conflict with the Reformers in Germany and Switzerland. He defended the Catholic Church, its doctrines and its institutions, in his writings, in public debates, in his speeches at the diets, and in his diplomatic missions. For the betterment of ecclesiastical life and the spread of genuine reform he laboured earnestly by preaching to the people and by insisting on the scientific education of the clergy. As a reply to Luther's "theses" he wrote his "Obelisci", originally intended solely for the Bishop of Eichstätt. Both Luther and Karlstadt answered bitterly and then it was agreed to submit the points at issue to the test of a public debate, which was held in Leipzig, 27 June-15 July, 1519. Eck came off victorious, exposed Luther's heresy, and won over as a loyal adherent to the Catholic standard, George, Duke of Saxony. During the same year he published several essays attacking the tenets of Luther, and grew steadily in prominence as an authority on theological questions. In 1520 he visited Rome to report on the condition of affairs in Germany and to secure the condemnation of Luther's heresy. He submitted his essay on the Primacy of Peter to Leo X, was appointed prothonotary Apostolic, and was charged as papal legate, along with two other legates, Aleander and Caracciolo, to carry out in Germany the provisions of the Bull "Exsurge Domine", which excommunicated Luther and condemned his 41 theses. The execution of this mandate was beset with difficulties on every side. Eck, through his "Epistola ad Carolum V" (1521), admonished Emperor Charles to enforce the papal ban. In the same year he went to Rome again, principally at the behest of the Bavarian dukes for whom he acted as counsellor in ecclesiastical affairs, and made a third visit to Rome in 1523. Meanwhile (1522) he had induced the Bavarian dukes to publish an edict in defence of the Catholic Faith. While in Rome he procured for the dukes, among other privileges, the power of enacting, independently of the bishops, decrees for the moral reformation of the clergy; and furthermore the right to appropriate, for use against heretics and Turks, a fifth part of all church revenues.

Eck in the meantime combated Lutheranism by his letters and essays. Between the years 1522 and 1526 he published eight voluminous treatises against Luther. Through his influence the University of Ingolstadt retained its strictly Catholic attitude and strenuously opposed the rising Protestant institutions. Eck had also a considerable share in organizing the "Catholic Federation", founded 5 June, 1524, by the leaders in Church and State for the purpose of safeguarding the ancient faith and enforcing the

Edict of Worms. He also defended in numerous essays the traditional doctrines of the Church against Zwingli and his adherents, and participated in the religious discussion in Baden (1526). When the Protestants, at the Diet of Augsburg in 1530, promulgated the "Augsburg Confession", defining their religious views, Eck headed the Catholic champions upon whom the refutation of the articles in this confession devolved. Together with Wimpina and Cochlaeus he represented the Catholic party at the conference (16 Aug.) between Catholic and Lutheran theologians relative to the "Confessio" and its "Confutatio"; and as theologian he served on the sub-committee which canvassed the results of the conference. Zwingli also had presented at Augsburg a Confession of Faith and this Eck alone refuted. Eck then drew up 404 heretical theses upon which he challenged the Protestant theologians to public debate. The challenge was not accepted; the only answer from the Protestant party was a torrent of abuse. In the negotiations relative to the Council of Trent, Eck was consulted by the emperor, Charles V, as well as by the pope, Paul III, and was charged by the latter with preliminary work for the council. At the religious disputation in Worms (1540), Eck again appeared as the chief Catholic representative and debated with Melanchthon on the issues involved in the "Augsburg Confession". This discussion was continued during the Diet of Ratisbon (1541) to which, besides Eck, the emperor delegated as spokesmen on the Catholic side, Julius Pflug and Gropper. Eck maintained clearly and decisively the Catholic position, and quite disapproved the "Ratisbon Interim". He also went on a mission to England and the Netherlands in the interest of the Catholic cause. In 1529 the bishops of Denmark invited Eck and Cochlaeus to the discussion at Copenhagen; but neither appeared. Eck fully deserved the prominence gained by him during the struggle against Protestantism. He was the most distinguished theologian of the time in Germany, the most scholarly and courageous champion of the Catholic Faith. Frank and even in disposition, he was also inspired by a sincere love of truth; but he showed none the less an intense self-consciousness and the jovial bluntness of speech which characterized the men of that day. His adversaries, lampooning him publicly, taxed him with drunkenness and immorality; but the general tone of the writings published against Eck and the readiness of the Protestants to calumniate their victorious opponent, arouse strong suspicion as to the truth of these accusations and make them, so far as the evidence goes, altogether improbable. In rebuttal it should be noted that Eck received the Last Sacraments with exemplary piety, and that his funeral in the Frauenkirche at Ingolstadt was marked by great solemnity.

As a writer Eck was prolific. His most important works are: "*Loci communes adversus Lutherum et alios hostes ecclesiae*" (Arguments against Luther and Other Enemies of the Church), printed first in 1525, 45th edition in 1576; essays on the Primacy of Peter, Penance, the Sacrifice of the Mass, Purgatory, etc. He also published numerous

polemical writings against Luther, Zwingli, Bucer, and other leaders of the new religious movements. He compiled the results of the numerous disputations in which he participated and the sermons he preached on various subjects. In 1539 he published a German version of the Scriptures, translating the Old Testament from the original and adopting Emser's translation of the New Testament. Eck, however, was abler as a theologian than as a stylist. He also published a collection of most of his writings prior to 1535 entitled "Opera Johannis Eckii contra Ludderum in 5 partes" (Ingolstadt, 1530-1535). In this edition parts I-II contain his polemical writings on the Primacy, Penance, etc. against Luther; parts III-IV, his reports of the debates and his polemics against Zwingli, Karlstadt, and Bucer; also the "Loci Communes", part V (4 vols.), his Latin sermons.

WIEDEMANN, "Dr. Johann Eck" (Ratisbon, 1865), with list of Eck's works; BRECHER in "Allgemeine deutsche Biographie" (Leipzig, 1877), V, 596-602; GUENTHER, "Johann Eck als Geograph" in "Forschungen zur Kultur- und Literaturgesch. Bayerns" (Munich, 1894), II, 140-162; SCHNEID, "Dr. Johann Eck u. das kirchliche Zinsverbot" in "Historisch-politisch Blätter" (1891), CVIII, 241 sq., 321 sq., 473 sq., 570 sq., 659 sq., 789 sq.; BAUCH, "Die Anfaenge des Humanismus in Ingolstadt" (Munich, 1901); GREVING, "Johann Eck als junger Gelehrter" in "Reformationsgesch. Studien u. Texte" (Muenster, 1906), I.

J.P. KIRSCH

Anselm Eckart

Anselm Eckart

Missionary, born at Bingen, Germany, 4 August, 1721; died at the College of Polstok, Polish Russia, 29 June, 1809. Entering the Society of Jesus at nineteen, he was sent as a missionary to Brazil. Two years after his arrival in that country, he and his brethren were seized like felons and carried to Portugal, where they languished in prison till death released them or till the king, in whose name it was all done, was summoned by his own Judge. Father Eckart was confined for eighteen years in the underground dungeons of Almeida and St. Julian. He wrote the story of his own sufferings and those of his companions in prison. Upon the death of Joseph I of Portugal in 1777, Pombal fell into disgrace, and those of his victims who survived were released from their loathsome dungeons. The Society of Jesus, which had been suppressed four years earlier by the Brief of Clement XIV, had continued to exist in Russia. Father Eckart applied for readmission, and for thirty-two years following had the consolation of wearing the habit of the proscribed order. After filling the office of master of novices at Dünaburg, he was sent to the College of Polstok, where this venerable confessor of

Jesus Christ, the last survivor, perhaps, of the cruelties of Pombal, preserved in extreme old age the same vigour of soul which had sustained him in the missions and in captivity. He died full of days and merits in the eighty-eighth year of his age and the sixty-ninth after his admission to the Society.

EDWARD P. SPILLANE

Eckebert

Eckebert

(Ekbert, Egbert), Abbot of Schönau, born in the early part of the twelfth century of a distinguished family along the Middle Rhine; died 28 March, 1184, in the Abbey of Schönau. He was for a time canon in the collegiate church of Sts. Cassius and Florentius at Bonn. In 1155 he became a Benedictine at Schönau in the Diocese of Trier, and in 1166, after the death of the first abbot, Hildelin, he was placed at the head of the monastery. A man of great zeal, he preached and wrote much for the salvation of souls and the conversion of heretics. The Cathari, then numerous in the Rhineland, gave him especial concern. While a canon at Bonn he often had occasion to debate with heretics, and after his monastic profession, was invited by Archbishop Rainald of Cologne to debate publicly with the leaders of the sect in Cologne itself. His chief works are "Sermones contra Catharos" with extracts on the Manichæans, from St. Augustine (P.L., CXCIV); "De Laube Crucis" (ibid.); "Soliloquium seu Meditationes" (ibid.); "Ad Beatam Virginem Deiparam sermo Panegyricus" (ibid., CLXXXIV); "De sanctâ Elizabethâ virgine", a biography of his sister, a Benedictine nun and a famous visionary and mystic (see ELIZABETH OF SCHÖNAU), a portion of which is in P.L., CXCIV, also in "Acta SS", June, IV, 501 sqq. (ed. Palmé, 1867). A complete edition of his works is found in Roth, "Die Visionen der hl. Elisabeth und die Schriften der Aebte Ekbert und Emecho von Schönau" (Brünn, 1884).

FRANCIS J. SCHAEFER

Johann Georg von Eckhart

Johann Georg von Eckhart

(Called Eccard before he was ennobled)

German historian, b. at Duingen in the principality of Kalenberg, 7 Sept., 1664; d. at Würzburg, 9 Feb., 1730. After a good preparatory training at Schulpforta he went to Leipzig, where at first, at the desire of his mother, he studied theology, but soon turned his attention to philology and history. On completing his course he became

secretary to Field-Marshal Count Flemming, the chief minister of the Elector of Saxony; after a short time, however, he went to Hanover to find a permanent position. Owing to his extensive learning he was soon useful to the famous historian Leibniz, who, in 1694, took Eckhart as assistant and was, until death, his large-hearted patron and generous friend. Through the efforts of Leibniz Eckhart was appointed professor of history at Helmstedt in 1706, and in 1714 councillor at Hanover. After the death of Leibniz he was made librarian and historiographer of the royal family of Hanover, and was soon after ennobled by Emperor Charles VI, to whom he had dedicated his work "Origines Austriacae". For reasons which have never been clearly explained he gave up his position, in 1723, and fled from Hanover, perhaps on account of debt, to the Benedictine monastery of Corvey, and thence to the Jesuits at Cologne, where he became a Catholic. Not long after this the Prince-Bishop of Würzburg, Johann Philipp von Schönborn, appointed Eckhart his librarian and historiographer. In his work Eckhart was influenced by the new school of French historians, and gave careful attention to the so-called auxiliary sciences, above all to diplomatics; he also strove earnestly to follow a strictly scientific method in his treatment of historical materials. Together with Leibniz he may be considered as a founder of the critical school of historical writing. Besides the help he rendered Leibniz, of whom he prepared an affectionately respectful obituary (in Murr, "Journal für Kunstgeschichte", VII), he issued a number of independent works. His chief work, while professor at Helmstedt, is his "Historia studii etymologici linguae germanicae haetenus impensi" (Hanover, 1711), a literary and historical study of all works bearing on the investigation of the Teutonic languages. At Hanover he compiled a "Corpus historicum medii aevi" (Leipzig, 1723), in two volumes; at Würzburg he published the "Commentarii de rebus Franciae Orientalis et episcopatus Wirceburgensis" (1729), also in two volumes, an excellent work whose rich materials are treated with scientific exactness.

PATRICIUS SCHLAGER.

Meister Eckhart

Meister Johann Eckhart

(*Also spelled* Eckard, Eccard. Meister means "the Master").

Dominican preacher, theologian and mystic, born about 1260 at Hochheim, near Gotha; died in 1327 at Cologne. He made his philosophical and theological studies in the Dominican Order. Although a profound mystic he was also an able man of affairs, admirably manifesting the spirit of his order by uniting throughout his career great activity with contemplation. After a period of teaching he was made, in 1298, prior of the Dominican convent at Erfurt and vicar-provincial of Thuringia. Two years later

he began to lecture at Paris, where in 1302 his order gave him the degree of Master of Sacred Theology. In the following year he was elected provincial of the province of Saxony, to which office he was re-elected in 1307, when he was also appointed vicar-general of Bohemia and charged to reform its convents. His term of office having expired in 1311, he again took a professorial chair at Paris, whence he went in 1314 to teach at Strasbourg. After three years he was made prior at Frankfort. He finally returned to the schools in 1320, when he was made first professor of his order at Cologne, where he remained until his death.

Eckhart's activity was also displayed in the pulpit, of which he was an illustrious ornament, and in his writings in the form of treatises and sayings. As a preacher he disdained rhetorical flourish and avoided oratorical passion; but effectively employed the simple arts of oratory and gave remarkable expression to a hearty sympathy. Using pure language and a simple style, he has left us in his sermons specimens of the beautiful German prose of which he was a master. In these sermons, really short catacheses, we find frequent citations from such writers as Seneca and Avicenna, as well as from the theologians and Fathers. His discourses are directed to the intellect rather than to the will and are remarkable for their depth of mystical teaching, which only those who were advanced in the spiritual life could fully appreciate. His favourite themes are the Divine essence, the relations between God and man, the faculties, gifts, and operations of the human soul, the return of all created things to God. These and kindred subjects he develops more at length in his treatises, which partake of the catechetical character of his sermons. In his sayings he presents them in short and pithy form. Although the writings of Eckhart do not present a connected and studied system, they reveal the mind of the philosopher, the theologian, and the mystic. The studies of Henry Denifle, O.P., while showing Eckhart to have been less of a philosopher than he was supposed to be, show also that he was a Scholastic theologian of very superior merit, although not of the first order. He followed the teaching of St. Albert the Great and of St. Thomas Aquinas, but departed from their Scholastic method and form. Some opponents of Scholasticism, admiring his aphorisms and originality of method, have pronounced him to be the greatest thinker before Luther. And there have been Protestants who called him a Reformer. It was, however, as a mystic that Eckhart excelled. He is held by many to have been the greatest of the German mystics, and by all to have been the father of German mysticism. To Tauler and Suso he gave not only ideas but also a clear, simple style, possessing a heartiness like that of his own. Although he frequently quotes from the writings of the Pseudo-Areopagite and of John Scotus Eriugena, in his mysticism he follows more closely the teaching of Hugh of St. Victor.

The very nature of Eckhart's subjects and the untechnicality of his language were calculated to cause him to be misunderstood, not only by the ordinary hearers of his

sermons, but also by the Schoolmen who listened to him or read his treatises. And it must be admitted that some of the sentences in his sermons and treatises were Beghardic, quietistic, or pantheistic. But although he occasionally allowed harmful sentences to proceed from his lips or his pen, he not unfrequently gave an antidote in the same sermons and treatises. And the general tenor of his teaching shows that he was not a Beghard, nor a quietist, nor a pantheist. While at Strasbourg, although he had no relations with the Beghards, he was suspected of holding their mystical pantheism. Later, at Frankfort suspicion was cast upon his moral conduct, but it was evidently groundless; for, after an investigation ordered by the Dominican general, he was appointed to a prominent position at Cologne. Finally the charge was made at a general chapter of his order, held at Venice in 1325, that some of the German brethren were disseminating dangerous doctrine. Father Nicholas, O.P., of Strasburg, having been ordered by Pope John XXII to make investigation, declared in the following year that the works of Eckhart were orthodox. In January, 1327, Archbishop Heinrich of Cologne undertook an independent inquiry, whereupon Eckhart and Father Nicholas appealed to Rome against his action and authority in the matter. But the next month, from the pulpit of the Dominican church in Cologne, Eckhart repudiated the unorthodox sense in which some of his utterances could be interpreted, retracted all possible errors, and submitted to the Holy See. His profession of faith, repudiation of error, and submission to the Holy See were declared by Pope John XXII in the Bull "Dolentes referimus" (27 March, 1329), by which the pontiff condemned seventeen of Eckhart's propositions as heretical, and eleven as ill-sounding, rash, and suspected of heresy (Denzinger, *Enchiridion*, no. 428 sqq.; Hartzheim, *Conc. Germ.*, IV, 631).

The entire works of Eckhart have not been preserved. Pfeiffer in "Deutsche Mystiker des 14. Jahrhunderts" (1857), II, has given an incomplete version of his sermons. Additions have been made by Sievers in "Zeitschrift für deutsche Alterthümer", XV, 373 sqq., Wackernagel in "Altdeutsche Predigten" (1876), 156 sqq., 172 sqq.; Berlinger in "Alemannia", III, 15 sqq.; Bech in "Germania", VIII, 223 sqq.; X, 391 sqq.; Jundt in "Histoire du Panthéisme" (1875), 231 sqq. There is a translation in High German by Landauer, "Meister Eckharts mystische Schriften" (1903). Eckhart's Latin works bore the title "Opus Tripartitum". In the first part (Opus propositionum) there are over one thousand theses, which are explained in the second part (Opus quæstionum), and proved in the third part (Opus expositionum). Of these only the three prologues are known. Denifle discovered also a portion of the third part, part of an explanation of Genesis, a commentary on Exodus, Sirach, xxiv, Wisdom, and other fragments.

A.L. MCMAHON

Joseph Hilarius Eckhel

Joseph Hilarius Eckhel

German numismatist, b. 13 January, 1737, at Enzesfeld near Pottenstein, in Lower Austria, where his father, Johann Anton Eckhel, was steward to the Prince of Montecuculi; d. 16 May, 1798. In 1745 he was sent to study in Vienna, in 1751 was admitted into the Society of Jesus, and thirteen years later was ordained priest. He had studied humanities in Leoben and philosophy in Graz, besides mathematics, Greek, and Hebrew. The first fruit of his literary labours, produced in his twenty-first year, was an "Exercitium grammaticum in prophetiam Obadiæ". This he published as an appendix to the "Institutiones linguæ sacræ" of P.J. Engstler. After his ordination, and probably for some time before, he was professor at the Jesuit gymnasia at Leoben and Steyer; probably also at Judenburg, and finally at the college of Vienna, where he taught poetry and rhetoric, and acquired a mastery of Latin, which he handled with ease and elegance. We still possess two rather comprehensive odes from his pen, "Plausus Urbis" and "Plausus Ruris". He left, besides, two German poems written for special occasions, in the style of that period, and a speech of the same nature delivered on the occasion of the journey of Emperor Joseph II to Italy.

How he became a numismatist, Eckhel himself has told us in the preface to his "Numi veteres anecdoti". Whilst teaching at the Academic Gymnasium he became interested in its cabinet of coins, which was under the supervision of his fellow Jesuit, P. Khell. The collection, containing principally Greek coins, had attained considerable size, through the exertions of the learned Erasmus Fröhlich, who had edited a catalogue of most of the ancient coins; Eckhel set to work selecting the coins which were as yet unknown and unedited, and added thereto the unedited coins of the choice collections of Count Michael Viczay and Paul Festetics. Forced by ill-health to abandon teaching, he devoted himself entirely to numismatics and archæology. With the permission of his superior he went to Italy in 1772 for his further education. In Bologna and Rome he studied all the accessible coin collections, but found his richest treasures in Florence. Raimundo Cocchi, prefect of the Archducal Museum, received him most cordially and obtained for him the commission to arrange the coins which had been collected by Cardinal Leopoldo de'Medici, and which had afterwards been very considerably increased. Cocchi, who died shortly after this, recommended Eckhel to the Archduke Peter Leopold, who in turn introduced him to his mother, the Empress Maria Theresa. Meanwhile (1773) the Society of Jesus was suppressed, and Eckhel, like his brethren, was secularized. Returning to Vienna through the South of France in January, 1774, he was delighted to be entrusted by the empress with the task of transferring the col-

lection which belonged to the university college of the Jesuits, to the court cabinet, where, however, it received a separate place. In March of the same year, having acquired an excellent reputation as a numismatist, he was named director of the cabinet of ancient coins, with Duval as his superior. After the latter's death (1775) he received sole charge. Eckhel was commissioned to deliver bi-weekly lectures on numismatics in the coin cabinet. In the fall of 1775 he was promoted to the chair of antiquities and of the historical auxiliary sciences in the university. In the same year his first numismatic publication appeared.

J. von Bergmann writes of Eckhel's official work: "Eckhel, as is everywhere evident, was an expert administrator of the treasure committed to his charge. Without much ado, without ostentation, he wrote only what was needful and regarded merely that which was essential. Besides his very simple accounts and some reports written during the twenty-four years of his incumbency, only a very few documents concerning the collection of antique coins are in existence. He enriched the cabinet without advertising it." He obtained the means for these acquisitions from the proceeds of the sale of duplicates of gold and silver coins. The duplication of examples resulted from the amalgamation of the collection of Francis I with that of the imperial family. Moreover, the series of the Persian and Parthian kings were transferred from the Oriental to the ancient department. The collection of Duke Charles of Lorraine, that of the Count of Ariosti, and a selection of coins from the collections of suppressed monasteries were added. By means of embassies and lucky finds the coin cabinet acquired important additions (e.g. those of Osztropataka and Szilagy-Somlyo). As a professor in the university Eckhel lectured on ancient numismatics. His delivery is described as being simple, clear, instructive, inspiring, and often abounding in humour. He was highly respected by his pupils. That he also enjoyed high repute among his colleagues is attested by his appointment as dean of the philosophical faculty in 1789. However, he soon resigned this position.

The first numismatic work published by Eckhel was "Numi veteres anecdoti ex museis Cæsareo Vindobonensi, Florentino Magni Ducis Etruriæ, Granelliano nunc Cæsareo, Vitziano, Festeticsiano, Savorgnano Veneto aliisque" (Vienna, 1775, in two 4to sections with 17 copperplates). "Catalogus Musei Cæsariensis" (Vienna, in two large folio parts with numerous illustrations) followed four years later. Eckhel had given the collection entrusted to him an entirely new arrangement, discarding the time-honoured alphabetical order, and substituting quite a new system. He divided ancient numismatics into two departments: the first contained the coins minted by cities other than Rome, arranged according to the geographical situation of the countries as far as this was possible; the second comprised all the coins of the Roman Empire. First come the important but crude *asses*, then the unclassified pieces with the inscrip-

tion *Roma*. They are followed by those of the various families, emperors, and empresses, all arranged as far as possible in chronological order. Those whose date could not be exactly obtained are placed after each emperor as unclassified in alphabetical succession. "By this method", says Eckhel, "the author was enabled to rectify countless errors which Mezzabarba had forced upon us in his General Catalogue" (*Imperatorum Romanorum numismata*, Milan, 1683). And to make these corrections principally led him to prepare this catalogue for print. In it he gives an account, not on outside authority, but from personal observation and after lengthy and painstaking research, of everything instructive which so numerous a collection presents. The work was written in Latin and, "contrary to the present ornamental style, in the simplest language". This catalogue was followed by "Sylloge II, numorum veterum anecdotorum Thesauri Cæsarei" and "Descriptio numorum Antiochiæ" (1786), then by the classical work "Doctrina numorum veterum", in eight volumes (1792-1798). Friedrich Kenner says of this: "Misguided dilettantism had produced most mischievous results in the field of numismatics. Lack of system, want of critical judgment, and the disorderly arrangement of the literature had begotten confusion and distrust, which prevented numismatics from taking the place among other sciences to which it was entitled. With his naturally critical eye, Eckhel mastered all the literature of his subject, eliminated errors and forgeries with the help of his profound learning, and then combined the results into an organic whole in his 'Doctrina numorum veterum'. . . . Eckhel has become the founder of the scientific numismatics of classical antiquity and taken his place alongside of his contemporaries, Heyne and Winckelmann. Numismatics, hitherto despised, he changed into a kind of encyclopedia of classical antiquities, which includes extensive and much-used sources for other branches of archæology." The addenda to this work which Eckhel entered in his manuscript copy were edited by his successor, Steinbüchel.

By command of Emperor Joseph II, Eckhel wrote an excellent manual, "Kurzgefasste Anfangsgründe zur alten Numismatik" (Vienna, 1787; 2nd ed., 1807). The work appeared in a Latin translation in 1799 and in a French revision in 1825. He edited, besides, "Choix des pierres gravées du Cabinet Imperial". Furthermore, a number of smaller treatises still exist in manuscript form. His "Inscriptiones veteres" was used by Theodore Mommsen. He also left an extensive correspondence with the most prominent representatives of his branch of learning (Abbé Barthélemy, R. Cocchi, Cousinéry, L. Lanzi, G. Marini, F. Séguier, and others).

Eckhel died shortly after the completion of his "Doctrina". He was, as Bergmann writes, "a man of firm and decided character, serious, but at the same time cheerful, indulging in sarcastic, and at times heated, attacks on cant and literary arrogance. He used his extensive learning to correct thousands of blunders committed by other writers, and was modest and not at all disputatious in his controversies. He spoke as

he thought and acted as he spoke." Later scholars rank Eckhel's scientific importance equally high. On the first centenary of his birth a medal was struck (by Manfredini) with the inscription, SYSTEMATIS. REL. NVMARLÆ. ANTIQVÆ. CONDITORI. The distich which Michael Denis dedicated to his dead friend will vindicate its own truth:--

Eckhelium brevis hora tulit, sed diva Moneta
Scripta viri secum vivere secla jubet.

VON BERGMANN, Dem Andenken des Abbé J.H. Eckhel in Sitzungsberichte der phil. Classe der kaiserl. Akademie der Wissenschaften, XXIV (1857), 296-364; KENNER, Eckhel, ein Vortrag (Vienna, 1871); the same in Allgemeine Deutsche Biographie, V (1877), 633 sqq.

KARL DOMANIG

Eclecticism

Eclecticism

(Gr. *ek, legein*; Lat. *eligere*, to select)

A philosophical term meaning either a tendency of mind in a thinker to conciliate the different views or positions taken in regard to problems, or a system in philosophy which seeks the solution of its fundamental problems by selecting and uniting what it regards as true in the various philosophical schools. In the first sense, eclecticism is a characteristic of all the great philosophers, with special development in some, such as Leibniz; an element of the integral method of philosophy more or less emphasized in the divers schools. The term *eclectics*, however, is properly applied to those who accept Eclecticism as the true and fundamental system of philosophy. It is with Eclecticism in this strict sense that we are dealing here.

As a rule, in the history of philosophy, Eclecticism follows a period of scepticism. In presence of conflicting doctrines regarding nature, life, and God, the human mind despairs of attaining scientific and exact knowledge about these important subjects. Eclecticism then aims at constructing a system broad and vague enough to include, or not to exclude, the principles of the divers schools, though giving at times more importance to those of one school, and apparently sufficient to furnish a basis for the conduct of life. In the latter period of Greek philosophy, during the two centuries preceding the Christian Era and the three centuries following, Eclecticism is represented among the Epicureans by Asclepiades of Bithynia; among the Stoics by Boethus, Panetius of Rhodes, (about 180-110 b.c.), Posidonius (about 50 b.c.), and later on by the

neo-Cynics, Demetrius and Demonax (about a.d. 150); in the New Academy by Philo of Larissa (about 80 b.c.) and Antiochus of Ascalon (died 68 b.c.); in the Peripatetic School by Andronicus of Rhodes (about 70 b.c.), the editor and commentator of the works of Aristotle, and later on by Aristocles (about a.d. 180), Alexander of Aphrodisias (about a.d. 200), the physician Galen (a.d. 131-201), Porphyry in the third, and Simplicius in the sixth, century of our era. The eclectic system was, by its character, the one which was best suited to the practical mind of the Romans. With the exception of Lucretius's doctrine, their speculative philosophy was always and altogether eclectic, while Stoicism dominated in their ethical philosophy. Cicero is, in Rome, the best representative of this school. His philosophy is a mixture of the scepticism of the Middle Academy with Stoicism and Peripateticism. The School of the Sextians, with Quintus Sextius (80 b.c.), Sotion, and Celsus, was partly Stoic and Cynic, partly Pythagorean. Under the empire, Seneca, Epictetus the slave, and the Emperor Marcus Aurelius combined the principles of Stoicism with some doctrines taken from Platonism. The neo-Platonic School of Alexandria, in the second and third centuries after Christ, is considered by some as eclectic; but the designation is not exact. The school borrows, indeed, many of its principles from Pythagoreanism, Stoicism, Peripateticism, and especially from Platonism; but all these doctrines are dominated by and interpreted according to certain principles of religious mysticism which make this neo-Platonism an original though syncretic system. The same may be said of the Christian writers of this school who take some of their philosophical principles from the dominant systems, but who are guided in their choice as well as in their interpretation by the teaching of Christian revelation.

In modern times Eclecticism has been accepted in Germany by Wolff and his disciples. It has received its most characteristic form in France in the nineteenth century from Victor Cousin (1792-1867) and his school, which is sometimes called the Spiritualistic School. Drawn away from sensualism by the teaching of Royer Collard, Cousin seeks in the Scottish School a sufficient foundation for the chief metaphysical, moral, and religious truths. Failing in this attempt, he takes up the different doctrines then current; he is successively influenced by Maine de Biran whom he calls "the greatest metaphysician of our time", by the writings of Kant, and by personal intercourse with Schelling and Hegel; finally, he turns to the works of Plato, Plotinus, and Proclus, only to come back to Descartes and Leibniz. He then reaches the conclusion that the successive systems elaborated throughout the preceding ages contain the full development of human thought; that the complete truth is to be found in a system resulting from the happy fusion, under the guidance of common sense, of the fragmentary thoughts expressed by the different thinkers and schools of all ages. Four great systems, he says, express and summarize the whole development of human speculation: sensism,

idealism, scepticism, and mysticism. Each contains a part of the truth; none possesses exclusively the whole truth. Human thought cannot invent any new system, nor can it neglect any of the old ones. Not the destruction of any of, but the reduction of all to one, will put us in possession of the truth.

There is, indeed, something true in Eclecticism. It would be folly for each thinker to deliberately ignore all that has been said and taught before him; such a method would render progress impossible. The experience and knowledge acquired by past ages is a factor in the development of human thought. The history of philosophy is useful; it places at our disposal the truths already discovered, and by showing us the errors into which philosophy has fallen, it guards us against them and against the principles or methods which have caused them. This is the element of value contained in the system. But Eclecticism errs when it substitutes for personal reflection as the primary source of philosophy a mere fusion of systems, or the history of philosophy for philosophy proper. Eclecticism does not furnish us with the ultimate principles of philosophy or the criterion of certitude. We cannot say that philosophy has reached the highest degree of precision either in its solution or in its presentation of every problem; nor that it knows all that can be known about nature, man, or God. But even if this were the case, the principles of Eclecticism cannot provide us with a firm, complete, and true system of philosophy. Cousin says that there is some truth in every system; supposing this to be exact, this partial truth as evidently to be acquired at first through principles and a rule of certitude which are independent of Eclecticism. When Cousin declares that there is a mingling of truth and error in every system, he evidently assumes a principle superior and antecedent to the very principle of Eclecticism. The eclectic must first separate error from truth before building into a system the results of his discrimination. But this is possible only on the condition of passing a judgment upon each of these systems and therefore of having, quite apart from history, some rational principle as an ultimate criterion. In a word, Eclecticism, considered as a study of the opinions and theories of others in order to find in them some help and enlightenment, has its place in philosophy; it is a part of philosophic method; but as a doctrine it is altogether inadequate.

G.M. SAUVAGE

Ecstasy

Ecstasy

Supernatural ecstasy may be defined as a state which, while it lasts, includes two elements:

- the one, interior and invisible, when the mind rivets its attention on a religious subject;
- the other, corporeal and visible, when the activity of the senses is suspended, so that not only are external sensations incapable of influencing the soul, but considerable difficulty is experienced in awakening such sensation, and this whether the ecstatic himself desires to do so, or others attempt to quicken the organs into action.

That quite a large number of the saints have been granted ecstasies is attested by hagiology; and nowadays even free-thinkers are slow to deny historical facts that rest on so solid a basis. They no longer endeavour, as did their predecessors of the eighteenth century, to explain them away as grounded on fraud; several, indeed, abandoning the pathological theory, current in the nineteenth century, have advocated the psychological explanation, though they exaggerate its force.

FALSE VIEWS ON THE QUESTION OF ECSTASY

The first three errors here mentioned are psychological in nature; they fail to estimate at its proper value the content of ecstasy; the other false theories spoken of identify this state with certain morbid physical or psychological conditions.

(1) Certain infidel philosophers maintain that during an ecstasy there is a lessening of intellectual power, that at a certain stage there is an utter loss of the ego, an annihilation of the faculties. This is the theory of Murisier and of Leuba. The arguments for this view are based upon an exaggerated interpretation of certain phrases used by the mystics. Their accounts, however (those, for instance, of Blessed Angela of Foligno), give the lie to such an explanation. The mystics state clearly that they experience, not only the fullness, but the superabundance of intelligence, an increase of activity of the highest faculties. Now, in a science that is based on observation, as is mysticism, we are not justified in brushing aside the numerous and consistent testimonies of those who have tested the facts, and putting in their place the creations of the imagination.

(2) The theory of unconsciousness distorts the facts so unscrupulously that some writers have preferred a theory less crude, i.e., the emotional explanation. The ecstatic, it is admitted, is not buried in a heavy sleep; rather, he experiences violent emotions,

in consequence of which he loses the use of the senses; and as there is nothing new to occupy his attention, it follows that his mind is taken up by some trifling thought, so trifling, indeed, that these writers deem it unworthy of their notice. This theory clashes less with historical data than does the first, since it does not wholly eliminate the activity of the ecstatic; but it denies half the facts emphatically urged by the mystical writers.

(3) It has been said that ecstasy is perhaps a phenomenon wholly natural, such as might well be occasioned by a strong concentration of the mind on a religious subject. But if we are not to rest satisfied with arbitrary conjectures, we must show that similar facts have been observed in spheres of thought other than purely religious. The ancients attributed natural ecstasies to three or four sages, such as Archimedes and Socrates, but as the present write has proved elsewhere, these stories are founded either on inconclusive arguments or upon false interpretation of the facts (*Des graces d'Uraison*, c. xxxi).

(4) The rigid condition of the ecstatic's body has given rise to a fourth error. Ecstasy, we are told, is but another form of lethargy or catalepsy. The loss of consciousness, however, that accompanies these latter states points to a marked difference.

(5) In view of this, some have sought to identify ecstasy with the hypnotic state. Physically, there are usually some points of contrast. Ecstasy is always accompanied by noble attitudes of the body, whereas in hospitals one often marks motions of the body that are convulsive or repelling; barring, of course, any counter-command of the hypnotist. The chief difference, though, is to be found in the soul. The intellectual faculties, in the case of the saints, became keener. The sick in our hospitals, on the contrary, experience during their trances a lessening of their intelligences, while the gain is only a slight representation in the imagination. A single idea, let it be ever so trivial, e.g. that of a flower, or a bird, is strong enough to fasten upon it their profound and undivided attention. This is what is meant by the narrowing of the field of consciousness; and this is precisely the starting-point of all theories that have been advanced to explain hypnotic ecstasy. Moreover, the hallucination noticed in the case of these patients consists always of representations of the imagination. They are visual, auricular, or tactual; consequently they differ widely from the purely intellectual perceptions which the saints usually enjoy. It is no longer possible, then, to start with the extremely simple hypothesis that the two kinds of phenomena are one and the same.

A comparison of the effects that follow these states will bring out more clearly the essential difference between the two.

- The neuropath, after an hypnotic trance, is dull, lifeless, and depressed.

- His will is extremely weak. In this abnormal weakness is to be sought the reason why the subject can no longer resist suggestion. These poor creatures, distraught, listless, and helpless, pass their days in idle dreams.
- The level of their morality is frequently almost as low as that of their intelligence.

From a threefold point of view, then, there is a contrast between their case and that of the saints who have been granted ecstasies.

- The latter possess strong intellects, conceiving projects lofty and difficult in the execution; in proof of this assertion we might appeal to the history of the founders of religious orders.
- Their will-power is second to none in energy; so strong, indeed, as to enable them to break through all opposition, especially that which arises from their own nature.
- Lastly, the saints keep before them a moral ideal of a lofty character, the need of self-forgetfulness if they would give themselves to the glory of God and the temporal and spiritual welfare of their fellow-men.

The hysterical subject of hypnotism, on the contrary combines in himself none of these noble qualities.

(6) An attempt has been made to rank ecstasy with somnambulism, with which have also been classed, but with greater reason, the trances of spirit mediums. The case which most approaches, on the surface, the ecstasy of the saints is that of Helen Smith, of Geneva, whom Professor Flournoy studied carefully during the closing years of the nineteenth century. During the crises of spontaneous somnambulism she described her visions in word or in writing. At one time she saw the inhabitants of the planet Mars, at another she dwelt among the Arabs or the Hindus of the fourteenth century. In 1904 she had crises lasting a quarter of an hour, during which she painted in oil pictures of Christ and the Madonna, though she was quite unconscious of what she was doing. The ecstasies of the saints were, it was thought, of exactly the same nature. There are, however, some striking differences:

- From the moral viewpoint the visions of the saints produce a remarkable change in their manner of life, and lead them to the exercise of the most difficult virtues. Helen experiences nothing of the kind. She is a good woman, that is all.
- Unlike the saints, she remembers nothing of what she has seen.

- While the vision lasts, the faculties at play are not the same. In the case of the saints, the activity of the imagination is arrested during the culminating periods, and the intellect undergoes a marvelous expansion. In the case of Helen, the imagination alone was at work, and its objects were of the most commonplace character. Not a single elevated thought; simply descriptions of houses, animals, or plants--nothing but a mere copy of what we see on earth. Such descriptions serve only as stories to amuse children.

(7) A seventh theory would identify ecstasy with the wild reveries and disordered fancies occasioned by the use of alcohol, ether, chloroform, opium, morphine, or nitrous oxide. In the first place, the physical condition is quite different. No one, for instance, would mistake the exalted attitude of an ecstatic for that of a man under the influence of narcotics. Secondly, the mental perceptions are not the same in character. For if the slave of the drugs we have mentioned above does not lose all consciousness, if he still retains any ideas, they consist of extravagant, incoherent images, whereas the ideas and thoughts of the mystic are throughout coherent and elevated. Finally, the victims of alcohol and of opium, on recovering from their debauch, remain in a state of sottishness. Thought and action are simultaneously lessened; the moral and the social life have equally suffered. The use of narcotics has never enabled a man to lead a purer life or to better himself and others; experience points to the contrary.

These, then, are the false views that have been entertained on the question of ecstasy. Nor should it be a matter of surprise that free-thinkers should have ventured on these explanations. It is but the conclusion that follows logically from the principles with which they start, i.e., there is no such thing as the supernatural. They must, then, at any cost, seek the causes in natural phenomena. (See CONTEMPLATION.)

Ecuador

Republic of Ecuador (La República del Ecuador).

An independent state of South America, bounded on the north by Colombia, on the east by Brazil, on the south by Peru, and on the west by the Pacific Ocean. The northwest corner of the state is crossed by the equator, hence its name.

No part of America has been so prominent for scientific explorations, specially geographic and physiographic, carried out on a large scale in the eighteenth and first half of the nineteenth century. One, sent out in 1735 by the French Government for the purpose of measuring the meridian near the equator, recalls the names of La

Condamine and Bouguer. The other (1790-1804) forever associates Alexander von Humboldt with the history of the New World.

AREA, PHYSICAL FEATURES, ETC.

Ecuador is the third smallest of the South American republics. It forms, approximately, an isosceles triangle wedged in between Colombia and Peru. Indenting the southwest coast is the Gulf of Guayaquil within which lies the large island of Puná. As in the case of other South American republics, the boundaries of Ecuador are ill-defined and subject to modification by treaty. Its area is variously given as from 80,300 to 152,000 sq. miles, to which must be added the Galapagos Islands in the Pacific, lying about 90°-92° west long., 10 degrees off the coast, and covering from 2490 to 3000 sq. miles. These islands are about ten in number, only one of which (Isabella or Albemarle) is inhabited by some two hundred people.

The eastern half of Ecuador is low, wooded, and traversed by many rivers emptying into the Marañon or Upper Amazon; the western is very mountainous, the high Andes chain dividing the two sections. The mountain chain runs nearly due south from the southern boundary of Colombia to the Peruvian frontier. It has a number of high peaks, all of volcanic origin, among them Chimborazo (20,500 ft.) and many volcanoes. Of the latter, Cotopaxi (19,613 ft.), Tunguragua (16,690 ft.) and Sangai (17,454 ft.) are still active; Antisana (19,335 ft.); Pichincha (15,918 ft.), etc. have been extinct for a century or more, while Altar, Cotacachi, etc., show traces only of activity in ages long past.

The Ecuadorian table-land and higher mountain valleys are temperate, though the temperature is low in the greater altitudes. The year is divided into the dry and the wet season. Under the Equator, however, there is little difference between the seasons. The coast valleys and shores are very hot, and the climate generally unhealthful.

Ecuador has but one navigable river, the Guayas, which empties into the Gulf of Guayaquil. The other streams of Western Ecuador are of little importance. The flora is luxuriant except in high altitudes. Both lower slopes of the Andes are densely wooded. On the coast there is an arid zone of limited extent; the larger portion, however, is very fertile as far as the Peruvian boundary at Tumbez. The inland forests in the south are rich in Chicon bark, and extend easterly to a height of nearly 10,000 feet. Then follows a sub-Andean zone for the next 3500 feet, in which cereals thrive in an average temperature of from 53° to 59° Fahr. This is followed by what are called the *páramos*, cold and stormy wastes, treeless and exposed to daily snows, which reach an altitude of 15,000 feet above sea level, and where the tough puna-grass flourishes. On the eastern slope of the Andes dense forests are found again and the cinnamon tree. Animal life is tropical and found in proportion to the vegetation.

As far as known, Ecuador is fairly rich in minerals. It is the only South American state, with the exception of Colombia, where emeralds have been found in any quantity (near the coast at Manta and Esmeraldas); their location, however, is uncertain.

The population is estimated at 1,272,000, of whom about 20,000 are supposed to be Indians. Exact statistics, however, do not exist. Of the 400,000, one-half is allowed to the wild forest-tribes of the eastern section and the other half to the remnants of the diverse sedentary tribes which formerly occupied the table-land and coast. The whole country is divided into fifteen provinces besides the Eastern territory and the Galapagos Islands.

HISTORY

Of the pre-Columbian conditions and languages of the Indians of Ecuador little is known. The coast tribes have almost disappeared, and those of the higher regions have adopted Spanish customs. That they differed from the Peruvian Quicha seems likely. The best known were the Cañaris, the Carangas, and the Puruaes or Puruays; a tribe known as the Scyri is mentioned in the neighbourhood of Quito. They were all sedentary; knew how to work gold, silver, copper, and possibly bronze; and practiced the fetishism common to primitive Americans. The coast tribe built their houses of wood and cane while those of the interior used stone. They were skillful navigators, some of their vessels being estimated at thirty tons, and propelled by oars and cotton sails.

The Spaniards, led by Francisco Pizarro, first saw the coast of Ecuador in 1525. From Tacamez, or Atacames, where they touched, Pizarro dispatched Ruiz, his pilot, to the south. In the account of Pizarro we have the earliest description of the Ecuadorian coast and people. He sailed south beyond the present limits of Peru, verifying his pilot's reports, and in 1528 returned to Spain to prepare for the conquest of Peru. He returned in 1531, landed at Coaque, and, marching south along the shore, established himself, despite the hostility of the natives, on the island of Puná. The permanent Spanish occupation of Ecuador, however, began in 1534, from Piura to Peru under Sebastian de Belalcazar. He had a tedious campaign to Quito, in which he was assisted by Cañaris. In 1534, three towns were established; San Francisco de Quito (15 August) at Riobamba, thirteen days later transferred to its present site, Chimbo; and Guayaquil, also originally founded at a place distinct from the one it now occupies. Meanwhile Pedro de Alvarado had landed on the coast with a considerable force from Guatemala. Reaching the central plateau, he was confronted by Belalcazar and Diego de Almagro the elder. An amicable agreement was reached, and Gonzalo Pizarro pushed into the cinnamon country, but made little headway and had to turn back. His lieutenant, Orellana, however, floated down the Amazon, and landed on the Isle of Trinidad, whence he carries to Spain the first information about southeastern Ecuador.

The second epoch of civil wars in Peru, the uprising of Gonzalo Pizarro against the viceroy Nuñez de la Vela, came to an end with the defeat and death of the viceroy near Quito, 16 Jan., 1546. Quito became the headquarters of the Crown's representative, and with this as a basis, the independence movement was put down. During the colonial period the Church founded institutions of learning such as the University of Quito and established a printing press at the same place in 1760. Political disturbances were few, but during the sixteenth, seventeenth, and eighteenth centuries volcanic and seismic phenomena were frequent and often disastrous. An attempt was made in 1809 to overthrow the Spanish power, and Ecuador, Colombia, and Venezuela, together with the rest of Spanish South America, then engaged in efforts toward independence. In 1820 Guayaquil succeeded in throwing off Spanish control, and the battle of Pichincha (22 May, 1822) finally put an end to the domination of the mother country. Ecuador, with Colombia and Venezuela, next formed an independent confederacy until 1830, when the union was dissolved and the first Ecuadorian congress met. Since then Ecuador has been toward by internal dissensions and foreign complications, chiefly with Colombia. The opposing political parties are the Conservatives, or Clericals, and the Liberals. Since 1893 the latter have been in power and have to a great extent adopted a policy of secularization in church matters. From 1833 to 1908 Ecuador has had nineteen presidents.

GOVERNMENT, EDUCATION, ETC.

Ecuador is a constitutional republic. From 1830 to 1883 it had no less than ten constitutions; the last was adopted in 1897. The executive head is the president, elected with the vice-president directly by the people for a term of four years. The senators (30) and the deputies (41) are also elected by direct vote, the former for four, the latter for two years. Congress meets biennially at Quito, the capital, on 10 August, and is in session for sixty days. The principal cities are: Quito (80,000); Guayaquil (51,000); Cuenca (30,000); Riobamba (18,000), and five of ten thousand or more inhabitants. Guayaquil is the chief seaport. In 1904 Ecuador had 168 miles of railroad and 2565 miles of telegraph, both of which have since been added to. The monetary unit is the *sucre*, about equal to the *peso* of other Spanish-American countries, but subject to fluctuation in value. The chief exports are cacao, vegetable ivory, india-rubber, and straw hats.

Educational statistics are scanty. There is a university at Quito with thirty-two professors and two hundred and sixteen students (1905). Institutions of higher education are found at Guayaquil and Cuenca. The number of secondary schools is 35; primary schools 1088 with 1498 teachers and 68,380 pupils; and 9 high schools and colleges.

RELIGION

Soon after the discovery of the country missionaries began their labour in Ecuador and in 1545 the Bishopric of Quito was erected. Work among the different Indian tribes on the tributaries of the Amazon was difficult, and the Dominican missions were destroyed in 1599 by the savage Jivaros. Later, however, the Dominicans re-established themselves and were assisted by the Jesuits who had been in Quito since 1596. By the close of the seventeenth century Ecuador was well-evangelized, but after the expulsion of the Jesuits in 1767, who on the Napo alone had thirty-three missions with 100,000 inhabitants, the Dominicans were unable to keep up the work and the natives fell back into paganism. The revolution destroyed all traces of two hundred years of untiring labour. Since 1848 Ecuador has formed an ecclesiastical province. The population is Catholic except for a small number of foreigners and a few pagan Indians in the East.

Up to 1861 the government was in the hands of the Liberal and largely anti-Catholic party. When Garcia Moreno was elected president (1861-65 and 1869-75), however, he reorganized civil and religious affairs. Under him a Concordat (20 November, 1863) was concluded with Rome, new dioceses were erected, schools and missions given to the Jesuits (who had been recalled), and others, and in 1864, at the time of the spoliation of the Holy See, ten percent of the state's income was guaranteed to the pope. Moreno was murdered 6 Aug., 1875, and his death not only put an end to the concordat, but under the new regime which succeeded him a series of persecutions occurred. In 1885, when Bishop Schumacher took charge, nearly all the native clergy were suspended and replaced by Europeans and practically a new hierarchy established. The religious and moral education of the people was likewise in bad condition. The revolution of Alfaro in 1895 was a severe blow to the Church. The orders, among them the Capuchins, Salesians, Missionaries of Steyl, and the various sisterhoods, were all banished and Bishop Schumacher obliged to flee.

The State religion is the Catholic, but other creeds are not interfered with. Since tithes were abolished the State has provided for the maintenance of Catholic worship; it also supports religious educational institutions, such as the three seminaries at Quito and six elsewhere, one in each of the six dioceses. Civil marriage was recognized in 1902, and two years later the Church and its property were placed under State control. At the same time it was enacted that no new or foreign religious order would be permitted in the country. Suffragan to Quito, which became an archbishopric in 1848, are: Cuenca (1786), Guayaquil (1837), Ibarra (1862), Loja (1866), Puerto Viejo, or Porto Viejo (1871), Riobamba (1863). There are also four vicariates Apostolic subject to the Congregation of Extraordinary Ecclesiastical Affairs: Canelos and Macas, Mendez and Gualaquizza, Napo, Zamora.

The first known mention of the Ecuadorian coast is made by JUAN de SAMANO, *Relación de los primeros descubrimientos de Francisco Pizarro y Diego de Almagro* (1525-26) in *Documentos para la Historia de España*, V.

Accounts of eyewitnesses on the conquest: Francisco de Zerez, *Verdadera relación della Conquista de la Perú y provincia del Cuzco llamada la nueva Castilla* (ed. 1534; Salamanca, 1547; and translations); *La Conquista de la Perú llamada la nueva Castilla* (Seville, 1534); PEDRO PIZZARO, *Relación del descub. y conquista del Perú* (c. 1571) in *Doc. para la Hist. de España*, V.

C.) and *Dicc. Hisp-Amer.* For history of printing in Ecuador, see TORIBIO MEDINA, *La Imprenta en Quito* (Santiago, 1904).

AD. F. BANDELIER

Edda

Edda

A title applied to two different collections of old Norse literature, the poetical or "Elder Edda" and the prose or "Younger Edda". Properly speaking the title belongs only to the latter work, having been given to the former through a misnomer.

I. "The Younger Edda", the work of the Icelandic historian and statesman Snorri Sturluson (1178-1241), is a treatise on poetics for the guidance of the skalds or Icelandic poets. The title "Edda" is given to this work in the most important manuscript which we possess of it, the "Upsala Codex", dating from about 1300. The meaning of the word *Edda* is not certain. The older explanation of "great-grandmother" is now generally discarded, the most commonly accepted rendering being "poetics" (from *óthr*, "spirit", "reason"). Some scholars derive the word from Oddi, the name of a place in southern Iceland, where Snorri received his earliest training. The work itself was intended to supply to the skald all the necessary information concerning mythology, poetic diction, and versification. Besides a *formalí* (preface) of later origin it contains three parts. (1) "Gylfaginning" (Gylfi's Deception), an abstract of old Scandinavian mythology in the form of a dialogue between King Gylfi and three gods. Appended to this are the "Bragarœdhur" (Bragi's Sayings), stories about Odhin and Thor, related by Bragi, the god of poetry, to the sea-god Aegir. (2) "Skaldskaparmál" (Diction of Poetry) is a collection of poetic paraphrases (*kenningar*) and synonyms (*ókend heti*), interspersed with mythological and legendary stories. (3) "Háttatal", a panegyric on the Norwegian King Hákon Hákonarson and Jarl Skúli, containing one hundred and two strophes, each of which is composed in a different metre. This is followed by a prose commentary written, however, after Snorri's death by an unknown author. The work was unfinished when Snorri died and was subsequently revised and amplified by other writers. The best edition of the Snorra Edda is that published in three volumes by the Arna-Magnaean Society (Copenhagen, 1848-1887). Selections were edited by E. Wilken (Paderborn, 1877); glossary to this edition, Paderborn, 1883). Parts were translated into German by Gering (Leipzig, 1892), into English by Dasent (1842), by Blackwell in Mallet's "Northern Antiquities" (London, 1770), and R. B. Anderson (Chicago, 1880).

II. "The Elder Edda", a collection of mythological and heroic songs in the ancient Icelandic language. Altogether there are thirty-three such songs, twenty-nine of which are contained in the famous "Codex Regius", the most important of the Eddic manuscripts. This codex was found in Iceland in 1643 by Bishop Brynjólf Sveinsson. It had no title, and since it contained poems, portions of which are cited in the Snorra Edda,

the bishop concluded that this was Snorri's source and so he called the collection "Edda". He furthermore assumed that the priest Saemund (1056-1133), whose reputation for learning had become proverbial, was the author, or at least the collector of these songs, and he therefore wrote on a copy which he caused to be made the title "Edda Saemundi multiscii" (Edda of Saemund the wise), and the title "Edda" has since then remained in general use to designate the kind of poems found in the "Codex Regius". Such poems differ both in content and form from the so-called skaldic poems. There is no doubt that these songs were collected and written down in Iceland from oral tradition; but nothing certain is known concerning their age, original home, and authorship. All this has to be inferred from internal evidence, and hence opinions differ widely. It is agreed, however, that these poems are not common Scandinavian, but purely Norwegian; they were composed either in Norway or in Norwegian settlements like Iceland and Greenland. As to their age, it is conceded that none dates earlier than the middle of the ninth, and that some were written as late as the thirteenth century. The subject-matter of the songs is taken either from mythology or heroic saga. Among the mythological poems the most famous is the "Vóluspá" (the prophecy of the volva or sibyl), the most important source for our knowledge of Norse cosmogony. Important also in this respect are the "Vafthrúdnismál" and "Grímnismál", where Odhin's superior wisdom is set forth.

Of the songs dealing with Thor the best known is the "Thrymskvdha" (The song of Thrym), relating Thor's quest of his hammer. The sententious wisdom of the Northmen is represented by the "Hávamál" (sayings of the High One), i.e., Odhin). Among the heroic poems the chief interest attaches to the lays of Sigurd and the Niflungs. Unfortunately this cycle of poems is incomplete, owing to a great gap of about eight leaves in the "Codex Regius"; but an idea of the contents of the lost poems may be gained from the prose version of the "Volsungasaga", the author of which still had before him the complete collection. The first complete edition of the "Elder Edda", with Latin translation, was issued by the Arna-Magnaean Society (Copenhagen, 1787-1828). The first critical edition, on which all subsequent ones were based, was given by Sophus Bugge (Christiana, 1867). A lithographic facsimile edition of the "Codex Regius", with a diplomatic text, was given by Wimmer and Jónsson (Copenhagen, 1891). Other editions are those of Sijmons and Gerine (Halle, Vol.I, text, 1888-1901; Vol II, glossary, 1903); F. Jónsson (Halle, 1888-190), 2 vols.); Hildebrand-Gering (Paderborn, 1904); F. Detter and R. Heinzel (Leipzig, 1903, 2 vols.). the poems of this kind not found in the "Codex Regius" were edited by Heusler and Ranisch, "Eddica Minora" (Dortmund, 1903). The best translation into German is the metrical version of Hugo Gering (Leipzig, 1892). The first English version (of the mythological songs only) was made by A.S. Cottle (Bristol, 1797). A complete English version is that of

Benj. Thorpe (London, 1865-66). The songs are also translated in Vigfusson and Powell's "Corpus poeticum boreale" (Oxford, 1883), and some songs are also rendered in Magnusson and Morris's "Translation of the Volsungasaga" (London, 1870). A new translation by W. H. Carpenter is in preparation (1908).

ARTHUR F.J. REMY

Edelinck

Edelinck

The family name of four engravers.

Gerard Edelinck

Born in Antwerp c. 1640; died in Paris, 2 April, 1707. Galle instructed him in the rudiments of his art, and from him, in Antwerp, the youth imbibed that vigour and energy characterizing Rubens' school of engravers, which was later to transform the art in France and impart to it Northern freshness and simplicity. In 1665 Gerard came to Paris, studied with de Poilly, quickly surpassed him, and almost immediately reached the height of his powers, which remained undiminished until his death. Le Brun and Colbert called Louis XIV's attention to Edelinck, who received commissions, a pension, the title of engraver to the king, apartments in the Gobelins, and the position of professor in the Gobelins Academy from the monarch whose features he depicted in fourteen engravings. In 1675 he was naturalized; in 1677 he became a Royal Academician; and soon thereafter the order of Chevalier of Saint-Michel was conferred upon him.

Edelinck was one of the greatest masters of pure engraving. He never used etching or dry-point on his plates, and of the four hundred that he produced there is not one that is poor or second-rate. Edelinck's work was epoch-making: he revolutionized engraving, abandoning lines that crossed to form squares for lozenge forms. Further, he massed his lines and changed their direction, thus avoiding the monotony that had marked all previous work in France. Edelinck had all the merits of his predecessors and, besides, rendered texture, colour, and light and shade as they never before had

been rendered. His strokes were clear and bold, and the results beautifully finished, harmonious, and silvery. His proofs were the first to possess the quality called technically by engravers "colour". Sometimes they were slightly "metallic". Reproductions on steel by Edelinck frequently suggested more colour and quality in the originals than the latter possessed. He worked with marvellous facility and concealed his consummate science under an unobtrusive technic. While he did not confine his burin to portraits, it was these which gave him his great fame, for he so depicted all the notable men of his time, in the Church and the Court, and in literature and art, that we, to-day, gain an insight into their very character. The greater part of his work was reproductive, but he sometimes engraved from his own drawings, for he was a superb draughtsman. Edelinck was chosen to engrave Raphael's "Holy Family", Le Brun's "Magdalen", and "Alexander Visiting the Family of Darius", the first-named bringing him instant fame. Only two impressions before letters of the "Holy Family" exist. Edelinck's life was one of piety, contentment, and tireless labour; it was made up of teaching engraving to his son and his two brothers and working on his own plates. Death found him engraving the "Alexander Entering the Tent of Darius", a superb plate finished by Pierre Drevet. To his family he left a fortune. Plates wholly his own were signed "Gerard Edelinck", or "Edelinck eques"; but when his compatriot Pitau or Gaspard Edelinck assisted him the signature was "Edelinck". Among his pupils were Gaspard, Jean, and Nicolas Edelinck, Lombard, and Trouvain. His principal works are: "Portrait of Louis XIV", after Le Brun; "Portrait of Rigaud", after Rigaud; "Portrait of Mme. Hélyot with a Crucifix", after Galliot; "Portrait of Philippe de Champagne", which the artist thought his best work, after Champagne; "Combat of the Four Horsemen", after da Vinci.

Nicolas Edelinck

Son of the preceding, b. in Paris in 1680; d. there in 1730. He studied under his father, Gerard, and to perfect himself subsequently went to Italy. In Venice he produced many plates in the style of his father, whom, however, he never equalled in vigour or quality. He engraved several plates for the Crozat collection. His masterpiece is a "Virgin and Infant" after Correggio.

His works include a "Portrait of his Father", after Torteбат; "Portrait of Cardinal Giulio de' Medici", after Raphael; "Portrait of John Dryden", after Kneller.

Jean Edelinck

Born in Antwerp, c. 1643; died in Paris, 1680. He was a younger brother and pupil of Gerard, with whom he worked and whose style he imitated. Plates wholly his own are much inferior to those of his celebrated brother, though they have considerable merit. "The Deluge", after A. Veronese, is his masterpiece. He made many engravings of the statues in the gardens of Versailles.

Gaspard François Edelinck

Born in Antwerp, 1652; died in Paris, 1722. Gaspard, the youngest brother of Gerard, who was his teacher and co-worker, was inferior in talent to the other members of the Edelinck family, and did not long follow the career of engraver. Because he used a signature similar to that of Gerard and because his master often helped him with his plates, much of his work is difficult to distinguish from Gerard's.

LIPPMAN, *Engraving and Etching* (New York, 1906); DUMESNIL, *Le peintre graveur français* (Paris, 1835-50), VII, 169-336; DUPLESSIS, *Hist. de la Gravure* (Paris, 1880); *Biographie générale des Belges*; SEUBERT, *Allgemeines Künstler-Lexikon* (3 vols., Frankfurt-on-the-Main, 1882).

LEIGH HUNT

Edesius and Frumentius

Edesius and Frumentius

Tyrian Greeks of the fourth century, probably brothers, who introduced Christianity into Abyssinia; the latter a saint and first Bishop of Axum, styled the Apostle of Abyssinia, d. about 383. When still mere boys they accompanied their uncle Metropius on a voyage to Abyssinia. When their ship stopped at one of the harbours of the Red Sea, people of the neighbourhood massacred the whole crew, with the exception of Edesius and Frumentius, who were taken as slaves to the King of Axum. This occurred about 316. The two boys soon gained the favour of the king, who raised them to positions of trust and shortly before his death gave them their liberty. The widowed queen, however, prevailed upon them to remain at the court and assist her in the education of the young prince Erazanes and in the administration of the kingdom during the prince's minority. They remained and (especially Frumentius) used their influence to spread Christianity. First they encouraged the Christian merchants, who were temporarily in the country, to practise their faith openly by meeting at places of public worship; later they also converted some of the natives. When the prince came of age Edesius returned to his friends and relatives at Tyre and was ordained priest, but did not return to Abyssinia. Frumentius, on the other hand, who was eager for the conversion of Abyssinia, accompanied Edesius as far as Alexandria, where he requested St. Athanasius to send a bishop and some priests to Abyssinia. St. Athanasius considered Frumentius himself the most suitable person for bishop and consecrated him in 328, according to others between 340-46. Frumentius returned to Abyssinia, erected his episcopal see at Axum, baptized King Aeizanas, who had meanwhile succeeded to the throne, built many churches, and spread the Christian Faith throughout Abyssinia. The people called him *Abuna* (Our Father) or *Abba Salama* (Father of Peace), titles still given to the head of the Abyssinian Church. In 365 Emperor Constantius addressed a letter to

King Aeizanas and his brother Saizanas in which he vainly requested them to substitute the Arian bishop Theophilus for Frumentius (Athanasius, "Apol. ad Constantium" in P.G., XXV, 631). The Latins celebrate the feast of Frumentius on 27 October, the Greeks on 30 November, and the Copts on 18 December. Abyssinian tradition credits him with the first Ethiopian translation of the New Testament.

Michael Ott

Edessa

Edessa

A titular archiepiscopal see in that part of Mesopotamia formerly known as Osrhoene.

The name under which Edessa figures in cuneiform inscriptions is unknown; the native name was Osroe, after some local satrap, this being the Armenian form for Chosroes; it became in Syriac Ourhoï, in Armenian Ourhaï in Arabic Er Roha, commonly Orfa or Urfa, its present name. Seleucus Nicator, when he rebuilt the town, 303 b.c., called it Edessa, in memory of the ancient capital of Macedonia of similar name (now Vodena). Under Antiochus IV (175-164 b.c.) the town was called Antiochia by colonists from Antioch who had settled there.

On the foundation of the Kingdom of Osrhoene, Edessa became the capital under the Abgar dynasty. This kingdom was established by Nabataean or Arabic tribes from North Arabia, and lasted nearly four centuries (132 b.c. to a.d. 244), under thirty-four kings. It was at first more or less under the protectorate of the Parthians, then of the Romans; the latter even occupied Edessa from 115 to 118 under Trajan, and from 216 to 244, when the kingdom was definitely suppressed to form a Roman province. The literary language of the tribes which had founded this kingdom, was Aramaic, whence came the Syriac.

The exact date of the introduction of Christianity into Edessa is not known. It is certain, however, that the Christian community was at first made up from the Jewish population of the city. According to an ancient legend, King Abgar V, Ushana, was converted by Addai, who was one of the seventy-two disciples. (For a full account see Abgar.) In fact, however, the first King of Edessa to embrace the Christian Faith was Abgar IX (c. 206). Under him Christianity became the official religion of the kingdom.

As for Addai, he was neither one of the seventy-two disciples as the legend asserts, nor was he the Apostle Thaddeus, as Eusebius says (*Hist. Eccl.*, IV, xiii), but a missionary from Palestine who evangelized Mesopotamia about the middle of the second century, and became the first bishop of Edessa. (See *Doctrine of Addai*.) He was succeeded by Aggai, then by Palout (Palut) who was ordained about 200 by Seraphion of Antioch. Thenceforth the Church of Edessa, until then under that of Jerusalem, was subject to the metropolitan of Syria. The aforesaid relations with Jerusalem and Antioch caused in important Syriac literary movement at Edessa of which the city long remained the centre. Thence came to us in the second century the famous Peshitto, or Syriac translation of the Old Testament; also Tatian's Diatessaron, which was compiled about 172 and in common use until St. Rabbula (Rabulas), Bishop of Edessa (412-35), forbade its use. Among the illustrious disciples of the School of Edessa special mention is due to Bardesanes (154-222), a schoolfellow of Abgar IX, the originator of Christian religious poetry, whose teaching was continued by his son Harmonius and his disciples. (See *Bardesanes and B ARDESANITES*.)

A Christian council was held at Edessa as early as 197 (*Euseb.*, *Hist. Eccl.*, V, xxiii). In 201 the city was devastated by a great flood, and the Christian church was destroyed ("*Chronicon Edessenum*", *ad. an.* 201). In 232 the relics of the Apostle St. Thomas were brought from India, on which occasion his Syriac Acts were written. Under Roman domination many martyrs suffered at Edessa: Sts. Scharbil and Barsamya, under Decius; Sts. Gûrja, Schâmôna, Habib, and others under Diocletian. In the meanwhile Christian priests from Edessa had evangelized Eastern Mesopotamia and Persia, and established the first Churches in the kingdom of the Sassanides. Atillâtîâ, Bishop of Edessa, assisted at the Council of Nicæa (325). The "*Peregrinatio Silviæ*" (or *Etheriæ*) (ed. Gamurrini, Rome, 1887, 62 sqq.) gives an account of the many sanctuaries at Edessa about 388.

When Nisibis was ceded to the Persians in 363, St. Ephrem left his native town for Edessa, where he founded the celebrated School of the Persians. This school, largely attended by the Christian youth of Persia, and closely watched by St. Rabbula, the friend of St. Cyril of Alexandria, on account of its Nestorian tendencies, reached its highest development under Bishop Ibas, famous through the controversy of the Three Chapters, was temporarily closed in 457, and finally in 489, by command of Emperor Zeno and Bishop Cyrus, when the teachers and students of the School of Edessa repaired to Nisibis and became the founders and chief writers of the Nestorian Church in Persia (*Labourt, Le christianisme dans l'empire perse*, Paris, 1904, 130-141). Monophysitism prospered at Edessa, even after the Arab conquest.

Suffice it to mention here among the later celebrities of Edessa Jacob Baradeus, the real chief of the Syrian Monophysites known after him as Jacobites; Stephen Bar Sudaili, monk and pantheist, to whom was owing, in Palestine, the last crisis of Origen-

ism in the sixth century; Jacob, Bishop of Edessa, a fertile writer (d. 708); Theophilus the Maronite, an astronomer, who translated into Syriac verse Homer's Iliad and Odyssey; the anonymous author of the "Chronicon Edessenum" (Chronicle of Edessa), compiled in 540; the writer of the story of "The Man of God", in the fifth century, which gave rise to the legend of St. Alexius. The oldest known dated Syriac manuscripts (a.d. 411 and 462), containing Greek patristic texts, come from Edessa.

Rebuilt by Emperor Justin, and called after him Justinopolis (Evagrius, *Hist. Eccl.*, IV, viii, Edessa was taken in 609 by the Persians, soon retaken by Heraclius, but captured again by the Arabs in 640. Under Byzantine rule, as metropolis of Osrhoene, it had eleven suffragan sees (*Echos d'Orient*, 1907, 145). Lequien (*Oriens christ.*, II, 953 sqq.) mentions thirty-five Bishops of Edessa; yet his list is incomplete. The Greek hierarchy seems to have disappeared after the eleventh century. Of its Jacobite bishops twenty-nine are mentioned by Lequien (II, 1429 sqq.), many others in the "Revue de l'Orient chrétien" (VI, 195), some in "Zeitschrift der deutschen morgenländischen Gesellschaft" (1899), 261 sqq. Moreover, Nestorian bishops are said to have resided at Edessa as early as the sixth century. The Byzantines often tried to retake Edessa, especially under Romanus Lacapenus, who obtained from the inhabitants the "Holy Mandylion", or ancient portrait of Christ, and solemnly transferred it to Constantinople, 16 August, 944 (Rimbaud, *Constantin Porphyrogénète*, Paris, 1870, 105 sqq.). For an account of this venerable and famous image, which was certainly at Edessa in 544, and of which there is an ancient copy in the Vatican Library, brought to the West by the Venetians in 1207, see Weisliebersdorf, "Christus und Apostelbilder" (Freiburg, 1902), and Dobschütz, "Christusbilder" (Leipzig, 1899). In 1031 Edessa was given up to the Greeks by its Arab governor. It was retaken by the Arabs, and then successively held by the Greeks, the Seljuk Turks (1087), the Crusaders (1099), who established there the "county" of Edessa and kept the city till 1144, when it was again captured by the Turk Zengui, and most of its inhabitants were slaughtered together with the Latin archbishop. These events are known to us chiefly through the Armenian historian Matthew, who had been born at Edessa. Since the twelfth century, the city has successively belonged to the Sultans of Aleppo, the Mongols, the Mamelukes, and finally (since 1517) to the Osmanlis.

Orfa is to-day the chief town of a sanjak in the vilayet of Aleppo, and has a trade in cotton stuffs, leather, and jewellery. Ruins of its walls and of an Arab castle are yet visible. One of its curiosities is the mosque of Abraham, this patriarch according to a Mussulman legend having been slain at Orfa. The population is about 55,000, of whom 15,000 are Christians (only 800 Catholics). There are 3 Catholic parishes, Syrian, Armenian, and Latin; the Latin parish is conducted by Capuchins, who have also a school. Franciscan nuns conduct a school for girls. This mission depends on the Apostolic

mission of Mardin. There are also at Orfa a Jacobite and a Gregorian Armenian bishop.

Henry Essex Edgeworth

Henry Essex Edgeworth

Better known as L' ABBÉ Edgeworth de Firmont

Confessor of Louis XVI, and vicar-general of the Diocese of Paris at the height of the French Revolution, b. at Edgeworthstown, County Longford, Ireland, in 1745; d. 22 May, 1807, at Mittau, Russia. His father, the Rev. Robert Edgeworth, Protestant rector of Edgeworthstown, or Mostrim, was a first cousin to Richard Lowell Edgeworth, the father of Maria Edgeworth, the novelist; and his mother was a granddaughter of the Protestant Archbishop Ussher. The Rev. Robert Edgeworth owned an estate at Firmont, or Fairy-mount, a few miles distant from Edgeworthstown, where the elder branch of the Edgeworth family resided. The Edgeworths were of English descent, and went to Ireland in the reign of Elizabeth. The title, "Edgeworth de Firmont", by which the abbé was universally known in France, was derived from Firmont, the ancestral patrimony of his family. The vicarage house at Edgeworthstown where he passed his childhood is believed to be the same in which Oliver Goldsmith went to school to the Rev. Patrick Hughes. The Rev. Robert Edgeworth through conscientious motives resigned his living, embraced the Catholic religion, and, finding life at home intolerable under the penal laws, with his family (all of whom became Catholics) removed to Toulouse in France, where Henry Essex, then four years of age, received his early training for the ecclesiastical state. Subsequently he went to the seminary of Trente-Trois, Paris, at the suggestion of Bishop Moylan of Cork (at one time a *curé* in Paris). After a course of theology at the Sorbonne, Henry Essex Edgeworth was ordained priest and the capital of France became the theatre of his apostolic labours. The Irish bishops offered him a mitre in Ireland, an honour which he declined with his usual

humility. On the removal of her confessor, Madame Elisabeth, sister of the ill-fated Louis XVI, requested the superior of *Les Missions Etrangères*, where the abbé resided, to recommend her another and he unhesitatingly selected the Abbé Edgeworth. The Archbishop of Paris approved of the choice, and introduced him at court. Thus he became known to the royal family as a devoted friend. In their fallen fortunes he stood by them at the risk of his life, followed the survivors after the Revolution into exile, and died in their service.

When the Archbishop of Paris was obliged to fly in 1792 in order to save his life, he vested the Abbé Edgeworth with all his powers, making him his *grand vicaire*, and committed the great diocese to his care. In answer to the urgent entreaties of his friends to seek safety in Ireland or England, at this time, the abbé replied: "Almighty God has baffled my measures, and ties me to this land of horrors by chains I have not the liberty to shake off. The case is this: the wretched master [the king] charges me not to quit this country, as I am the priest whom he intends to prepare him for death. And should the iniquity of the nation commit this last act of cruelty, I must also prepare myself for death, as I am convinced the popular rage will not allow me to survive an hour after the tragic scene; but I am resigned. Could my life save him I would willingly lay it down, and I should not die in vain" (Letter to Mr. Maffey, priest in London).

At last, on the 20th of January, 1793, he was summoned by the Executive Council to proceed to the Temple prison at the desire of "Louis Capet", who was condemned to die on the following day. The abbé, having remained in the Temple all night, said Mass in the king's apartment on the morning of the execution, sat beside him in the carriage on the way to the scaffold, and, when the axe of the guillotine was about to fall, consoled his beloved master with the noble words: "Son of St. Louis, ascend to heaven." In his graphic and authoritative account of the last moments of Louis XVI (the original of which in French is preserved in the British Museum) the abbé is silent about this fine apostrophe, which everyone has heard of; but, when asked if he made use of the memorable expression, he replied that, having no recollection of anything that happened to himself at that awful moment, he neither affirmed nor denied having used the words. He was allowed to leave the scene of the execution unmolested, and so escaped; but soon after his head was demanded in several clubs, so that he was obliged to quit Paris and take refuge at Bayeux, whence at that time he might easily have escaped to England. Three chief considerations, however, bound him to the land of horrors. He had a great diocese committed to his care; he had promised Madame Elisabeth, then in prison, never to desert her, and he could not abandon his mother and sister, still living in Paris. Dressed as an ordinary citizen, and passing under the name now of Essex, now of Edgeworth, and again of Henry, he eluded capture and

the guillotine, until finally in August, 1796, after the death of his mother, and the execution of Madame Elisabeth, he escaped to Portsmouth, and proceeded to London.

Mr. Pitt offered to settle a pension for life on him, but he respectfully declined it. During the three months he spent in London he was lionized by fashionable society. His brother, Ussher, who resided at Firmount, and his relatives at Edgeworthstown, proud of his fame and renown, were most anxious to see him in Ireland; and, in fact, he was on the point of revisiting the land of his birth when he was entrusted with confidential despatches for Louis XVIII, then at Blankenburg. This changed all his plans. At the earnest entreaty of the exiled king he resolved to remain with him as his chaplain, going afterwards with the royal family to Mittau in Russia, where he spent the remainder of his days, revered and honoured by all with whom he came in contact. The Emperor Paul settled a pension of 500 roubles per annum on him. When Napoleon invaded Russia in 1807 it happened that some French soldiers were taken prisoners, and sent to Mittau. A contagious fever broke out among them, and in attending to their spiritual wants Abbé Edgeworth, never of a robust constitution, fell a victim to the plague. The daughter of Louis XVI, despite the manifest danger of contagion, attended night and day at the sick bed of her "beloved and revered invalid, her more than friend, who had left kindred and country for her family", to use her own words. He was interred at Mittau. Louis XVIII wrote his epitaph, a copy of which, together with a letter of condolence, was sent by Louis' orders to Mr. Ussher Edgeworth, the abbé's brother, residing in Ireland.

Edinburgh

Edinburgh

Edinburgh, the capital of Scotland, though not its largest city, derives its name from the time (about a.d. 620) when the fortress of Edwin's burgh was raised on a lofty spur of the Pentland Hills, overlooking the Firth of Forth, and established the Anglian dominion in the northern part of the Northumbrian Kingdom. Edinburgh Castle was a royal residence in the reign of Malcolm Canmore, husband of St. Margaret, who died there in 1093. Round the castle the town grew up, and a little lower down the collegiate church of St. Giles, predecessor of the present church bearing that name, was erected

in the twelfth century. St. Margaret's son, King David I, founded the Abbey of Holyrood, at the foot of the castle hill, 1128; but the town of Edinburgh for several centuries did not extend beyond the ridge sloping eastwards from the castle. In the middle of the fifteenth century Edinburgh became the real capital of Scotland, that is, the seat of the Parliament and the Government, as well as the residence of the kings, and the scene of many of the most important provincial councils which regulated the affairs of the Scottish Church. James II was the first king crowned at Edinburgh instead of in the Abbey of Scone, and he and his successors conferred many privileges on the capital, and did all in their power to develop it and increase its prosperity. The buildings of the city gradually spread outside the ancient walls, all along the sloping ridge which extends from the castle at the top to Holyrood at the bottom; and towards the end of the nineteenth century the New Town was built to the northward, beyond the extensive lake (since drained) which stretched under the castle hill.

During the past hundred years Edinburgh has steadily increased in population and wealth, if not so rapidly as other cities which are greater centres of manufactures and commerce. The unrivalled beauty of its situation, and the social and other advantages which it offers as the capital of the country, as well as the remarkable educative facilities afforded by its many splendidly equipped schools and colleges, have always made it exceptionally attractive as a place of residence. Literary taste and culture were long the special characteristic of Edinburgh society, and it still possesses some of the literary charm which won for the city the title of the Modern Athens in the second quarter of the nineteenth century, when Scott, Wilson, Jeffrey, Brougham, and others made it famous by their personality and their genius. Modern facilities of travel and of intercommunication have inevitably given to Edinburgh, as to every centre of population in the kingdom outside London, a certain note or provincialism; but it has not altogether lost the dignity and charm proper to a capital. The population of Edinburgh is now (1908) 317,000, an increase of more than 100,000 in the past thirty years; and its total area is nearly 11,000 acres. It returns four members to Parliament, and is governed by a town council of fifty members, presided over by the lord provost. Printing, brewing, and distilling have long been, and still are, the principal industries of the city. Edinburgh is the seat of the supreme court of Scottish law, which in its external forms as well as in many essential points differs greatly from the law of England. The presidents of the courts are the lord-justice-general and the lord-justice-clerk; and the judges, properly entitled "senators of the college of justice", enjoy the official title of lord. The supreme courts occupy the ancient Scottish Parliament house, a stately seventeenth century building; and under the same roof is the Advocates' Library, one of the most extensive and valuable collections of books and manuscripts in the kingdom.

EDINBURGH UNIVERSITY

Edinburgh University, the only one of the four Scottish universities not founded in Catholic times, was established in 1582 by royal charter granted by James VI, and was speedily enriched by many benefactions from prominent citizens. Its buildings occupy the site of the ancient collegiate church of St. Mary-in-the-Fields, or the Kirk o'Field (well known as the scene of the mysterious murder of Lord Darnley), and have in recent years been greatly extended and embellished. The university comprises the usual faculties of divinity, law, medicine, and arts, and has produced many eminent men. The Edinburgh medical school has a world-wide reputation, and attracts students from all parts of the empire, as well as many foreigners. No religious tests prevent Catholics from enjoying the full benefits of university education in Edinburgh; but the number of Catholics frequenting the schools is remarkably small. The total number of students frequenting the university is between three and four thousand.

ECCLESIASTICAL HISTORY

Edinburgh is naturally much bound up in its ecclesiastical history with the country at large. In the earliest centuries of its existence, belonging as it did to the Kingdom of Northumbria, Edinburgh was included in the Diocese of Lindisfarne, as we find from the list of churches belonging to that see compiled by Simeon of Durham in 854. The early connexion of the city with Lindisfarne is shown by the dedication to St. Cuthbert of its oldest church, founded probably in the ninth century. St. Cuthbert's church was presented to the newly established Abbey of Holyrood by King David; it was the richest church in Edinburgh, and possessed several outlying chapels, such as St. Ninian's, St. Roque's, and St. John Baptist's. When the diocesan system came to be fully established in Scotland, under Malcolm and Margaret and their sons, Edinburgh was included in the metropolitan Diocese of St. Andrews, and continued to be so until the suppression of the ancient hierarchy in the sixteenth century. The archbishop's see, as well as the episcopal residence, was of course in the primatial city of St. Andrews, beyond the Firth of Forth; and there was no building known as a cathedral in Edinburgh prior to 1634, when the new Anglican Diocese of Edinburgh was formed out of the ancient archdeaconry of Lothian, and Forbes became the first occupant of the see. The old collegiate church of St. Giles was at this time, and during the revival of Episcopalianism in Scotland, used as the cathedral of the Protestant bishop. As regards the Catholic Church, Edinburgh was the head-quarters of the vicars Apostolic of the Eastern District of Scotland from the time of the foundation of that vicariate in 1828, when the church now known as St. Mary's Catholic Cathedral had been in existence for some fifteen years. It has no architectural interest, but a spacious chancel was added, and other improvements carried out, in 1891. A cathedral for the Episcopalian body (whose bishop resides in Edinburgh) was erected about 1878, at a cost of over \$500,000, from

funds left by two charitable ladies. It is a Gothic building of much dignity, and by far the finest ecclesiastical building, either ancient or modern, now existing in Edinburgh. The Presbyterians have some handsome churches, but the grand old church of St. Giles, now in their hands, has been hopelessly vulgarized by the "restorer". A new church built by the Irvingites is adorned within by some fine mural paintings.

The seven Catholic churches which (besides the cathedral) supply the needs of the Catholic population of Edinburgh are of no particular merit architecturally, the most imporinteresting being the latest erected, St. Peter's, which is in the earliest Byzantine style, and forms, with its presbytery, a little group of much originality and charm. The Catholic Archbishop of St. Andrews and Edinburgh (the fourth who has held that office in thirty years) resides in Edinburgh, and has his episcopal seat in St. Mary's Cathedral. St. Andrews (to which the title of Edinburgh was added at the restoration of the hierarchy in 1878) possesses a small Catholic church; but the Catholic population of the primatial city is—except for summer visitors—only a handful. In Edinburgh the Catholics are estimated to number about 20,000. In the reign of Queen Anne (1702-14) a list sent in to the privy council of "Popish parents and their children in various districts of Scotland" gives the number of Catholics in Edinburgh as 160, including the Duke and Duchess of Gordon with their family and household, and several other noble families. The majority of the Catholics of Edinburgh to-day are of the poorer classes, and of Irish origin; but the past decade or so has witnessed a considerable number of conversions among the more well-to-do inhabitants of the city. Since the great anti-Catholic tumults of 1779, when the chapels and houses belonging to the insignificant Catholic body were burned by the rioters, the spirit of tolerance has made progress in the Scottish capital as elsewhere in the kingdom. Catholics are generally respected, and may and do rise to high positions of trust in the commercial, legal, and municipal world.

Something remains to be said of the religious houses which have flourished in Edinburgh in ancient and modern times. The principal and wealthiest monastery in former days was the Abbey of Holyrood, founded by David I for Augustinian canons, who were brought from St. Andrews. The Blackfriars or Dominican monastery was founded by Alexander II in 1230, on a site now occupied by a hospital. The Greyfriars or Franciscan church (of the Observant branch of the order) stood in the Grassmarket until it was destroyed by fire in 1845. The Whitefriars of Carmelites did not settle in Edinburgh until 1518. Their house of Greenside, near the Calton Hill, was transformed at the Dissolution into a lepers' hospital. Beyond the Carmelite house, nearer Leith, stood the preceptory of St. Anthony, the only house of that order in Scotland. The collegiate churches in and about Edinburgh included those of St. Giles and St. Mary-in-the-Fields (already mentioned), Trinity Church, Restalrig, Corstorphine, Creighton,

and Dalkeith. Trinity church, one of the most exquisite Gothic buildings in Scotland, was destroyed in the nineteenth century by a deplorable act of vandalism, to make room for new railway works. Neither the Benedictine nor Cistercian monks, who had numerous houses in Scotland, were established in Edinburgh. The Cistercian or Bernardine nuns, however, possessed the convent of St. Marie-in-the-wynd (or lane) near a hospital, where the sisters tended the sick. The Dominican nuns had also a convent (called *Sciennes* or *Shenes*, from St. Catherine of Siena) in the outskirts of the city. The numerous hospitals in Catholic Edinburgh comprised St. Mary Magdalen's in the Cowgate, founded in 1503 (the chapel remains, and is now used as a medical mission-hall); St. Leonard's, at the foot of Salisbury Crag; St. Mary's, in Leith Wynd, for twelve almsmen (converted into a workhouse by the Edinburgh magistrates in 1619); St. Thomas's, near the water-gate, founded in 1541 by Abbot Crichton of Holyrood for seven almsmen in red gowns; and Ballantyne's Hospital, founded by Robert Ballentyne or Bellenden, Abbot of Holyrood. The two religious orders of men now working in Edinburgh and its seaport of Leith are the Jesuits and the Oblates of Mary Immaculate. The former serve one of the largest churches in the city, and the latter have a house at Leith. There are eight convents of nuns, the oldest being St. Margaret's (Ursuline), founded in 1835, the first since the Reformation. The nuns keep a high-class school and attend several hospitals. St. Catherine's Convent of Mercy has a well-equipped training-college for teachers as well as a ladies' school. The other convents are those of the Sisters of Charity, Little Sisters of the Poor, Sisters of the Sacred Hearts, Poor Clares, Order of Marie Réparatrice, Helpers of the Holy Souls, and Sisters of the Immaculate Conception. The other Catholic institutions of the city include a children's refuge, orphanages for boys and girls, home for working boys, home for destitute children, dispensary, and home for penitents.

Editions of the Bible

In the present article we understand by editions of the Bible the printed reproductions of its original texts. We are not concerned with copies of the versions of the Bible, whether printed or written; nor do we purpose to consider the manuscript copies of the original text. The written reproductions are described under CODEX ALEXANDRINUS and similar articles. See also BIBLICAL CRITICISM in the latter part of which article will be found an explanation of the critical nomenclature of Bible codices and the symbols by which they are denoted. The translations of the Bible will be treated under the title VERSIONS OF THE BIBLE. Since the original text of the Bible was written in Hebrew or Greek (the original Aramaic portions can for the present purpose be considered as coincident with the Hebrew), our study of its printed reproductions naturally considers first the editions of the Hebrew text, and secondly those of the Greek.

I. EDITIONS OF THE HEBREW TEXT OF THE BIBLE

Roughly speaking, there are three classes of editions of the Hebrew text:

- 1 The so-called *Incunabula* (Lat. *cunabula*, pl., "cradle")
- 2 The common editions
- 3 The critical editions.

The reader will see that this division has an historical as well as a logical basis.

1. THE INCUNABULA

Technically speaking, the Incunabula are the editions issued before the year 1500. From our present critical standpoint, they are very defective; but since they represent

manuscripts now lost, they are important even for critical purposes. The following publications constitute the main body of the Incunabula:

- 1 The quarto edition of the Hebrew Psalter with the commentary of Rabbi David Kimchi, printed in 1477, probably at Bologna. Vowels and accents are wanting, except in the first four psalms. The volume is noted for its omissions, abbreviations, and general lack of accuracy.
- 2 The folio edition of the Pentateuch, with vowels and accents, containing the Targum of Onkelos and the commentary of Rabbi Samuel Jarchi, printed at Bologna, 1482. This publication is much more perfect and correct than the foregoing.
- 3 The so-called Earlier Prophets, i. e. the Books of Josue, Judges, Samuel, and Kings, printed in 1488 at Soncino, near Cremona, in Italy.
- 4 The folio edition of the Later Prophets, i. e. Isaias, Jeremias, Ezechiel, and the twelve Minor Prophets, printed soon after the preceding publication, without accents and vowels, but interlined with the text of Kimchi's commentary.
- 5 The Psalter and the Megilloth, or "Rolls", i. e. the Canticle of Canticles, Ruth, Lamentations, Ecclesiastes, and Esther, printed in the same year as the preceding publication, at Soncino and Casale, in Italy, in a quarto volume.
- 6 Three folio volumes containing the Hagiographa with several rabbinic commentaries, printed at Naples in 1487; the text is accompanied by the vowels, but not by the accents.
- 7 A complete Hebrew Bible, in folio, printed in 1488 at Soncino, without any commentary. Its text, accompanied by both vowels and accents, is based partly on the previously printed portions of the Hebrew Bible, partly on Hebrew manuscripts, but it lacks accuracy.
- 8 A folio containing the Hebrew and Chaldee Pentateuch with Rashi's commentary, printed in 1490 in Isola del Liri.
- 9 A most accurate and highly esteemed quarto edition of the Pentateuch, printed at Lisbon in 1491.
- 10 A second complete edition of the Hebrew text, in quarto, printed in 1494 at Brescia. The editor calls himself Gerson ben Mose of Soncino. The text, which is accompanied by its vowels and accents, exhibits many peculiar readings not found in any other edition. The type is small and indistinct, the proofreading most

slovenly; in a word, the edition is utterly defective. Luther based his translation on it.

- 11 The foregoing text is repeated in an octave edition printed at Pisa in 1494.
- 12 A folio edition of the Hebrew Bible, printed on parchment, bears no indication of its date or place of printing; it probably appeared in Constantinople about 1500.
- 13 To these may be added Seb. Münster's Hebrew-Latin Bible, printed in folio at Basle, 1534 and 1546, since its text is based on that of the 1488 and 1494 editions. Here also belong, for the same reason, the "Biblia Rabbinica Bombergiana", first edition (see below), the editions of R. Stephanus (1539-44, 1546), and the manual editions of Bomberg.

2. COMMON EDITIONS

By these we understand editions of the Bible reproduced either from manuscripts or previous printed editions without the aid of critical apparatus and the application of critical principles. While the editions of the Hebrew text thus far enumerated owed their publication to Jewish enterprise, those that follow were, at least in part, due to Christian scholarship. For practical purposes we may divide the common editions into two classes: (1) those not depending on other printed editions (independent editions); (2) those depending, at least partly, on a previously printed text (dependent, or mixed, editions).

(1) Independent editions

This class of editions comprises two principal ones: (a) the "Biblia Polyglotta Complutensia"; (b) the "Biblia Rabbinica Bombergiana", second edition. Here we can give only a summary of their principal features.

(a) "Biblia Polyglotta Complutensia"

In the year 1502, Cardinal Ximenes engaged several learned scholars to prepare the edition of a polyglot Bible called variously after the name of its ecclesiastical patron and the place of its publication (Alcalá, in Lat. Complutum). The editors of the Hebrew text were Jewish converts. Ancient manuscripts, estimated at the value of 4000 florins, and probably also the best extant printed copies of the Hebrew text, were placed at their disposal. Thus the cardinal's scholars produced a text quite different from the other printed texts of his time. They marked the vowels, but not the accents. The Polyglot was finished in 1517, but was published only in 1520 or 1522, according to Gregory (Canon and Text of the New Testament, New York, 1907). The pure form of its text was only once reprinted in the so-called "Biblia Polyglotta Vatabli", or "Polyglotta Sanctandreaana", or again, "Bertram's Polyglot" (Heidelberg, 1586, 1599, 1616).

(b) "Biblia Rabbinica Bombergiana", second edition

Daniel Bomberg, of Antwerp, who had established a printing-office for Hebrew and rabbinic literature in Venice, published, in 1518, two important editions of the Hebrew text: (a) an edition for Christian readers, in quarto, which was reprinted in 1521, 1525-28, 1533, 1544; (b) an edition for Jewish readers, edited by the Jewish convert Felix Pratensis. It contained the Targumim, the Massorah, and many Jewish commentaries, but did not satisfy the Jews. Hence Bomberg found it advisable to publish another edition under the editorship of R. Jacob ben Chayim, the most celebrated Jewish scholar of his time. He brought the text into closer agreement with the Massorah, and added several more Jewish commentaries. The work appeared in Venice, in four folio volumes, 1525-26, and was justly regarded as the first Massoretic Bible. It won the approbation of both Jewish and Christian scholars, so that it had to be republished in 1547-49, and 1568; the last edition was brought out under the direction of John de Gara. In spite of the great merits of the work, it is not wholly free from defects; Ben Chayim paid too much attention to the Massorah and too little to reliable old manuscripts. The principal codex he followed fell afterwards into the hands of de Rossi, who testifies that it is quite defective and has not been carefully edited. Chayim printed it without correcting its most glaring mistakes.

The subsequent editions were influenced principally by Ben Chayim's text, and only secondarily by the Complutensian Polyglot. Thus the former text was repeated by Bragadin (Venice, 1617), and, in a slightly modified form, by Justiniani (Venice, 1551, 1552, 1563, 1573), the editors of Geneva (1618), John de Gara (Venice, 1566, 1568, 1582), Plantin (Antwerp, 1566), Hartmann (Frankfort, 1595, 1598), the editors of Wittenberg (1586, 1587), and Tores (Amsterdam, 1705). Long before the last publication appeared, John Buxtorf edited first the Hebrew text in manual form (Basle, 1611), then Chayim's rabbinic Bible in four folio volumes (Basle, 1618, 1619). Though he corrected some of Ben Chayim's mistakes, he allowed others to remain and even

introduced some new ones. He ought not to have regulated the vocalization of the Targumim according to the vowels in the Chaldee fragments of the Bible, and it was at least inconsistent to change the Massorah according to the Hebrew text, seeing that Ben Chayim, whose text he professed to follow, had modified the Hebrew text according to the Massorah.

(2) Dependent, or mixed, editions

In the editions thus far mentioned the text of one or the other of the two principal forms of the Hebrew Bible was reproduced without any notable change. We have now to consider the attempts made to correct the text either according to the reading of other editions or according to that of ancient manuscripts.

(a) Texts Corrected according to Printed Texts

The first mixed text of the Hebrew Bible appeared in the Antwerp Polyglot (1569-72); the same text was repeated in the Paris Polyglot (1629-45), in the London Polyglot (1657), in that of Reineccius (Leipzig, 1750-51), the smaller Plantin editions (Antwerp, 1580, 1582; Burgos, 1581; Leyden, 1613), the manual edition of Reineccius (Leipzig, 1725, 1739, 1756), and in the Vienna Bible (1743). The beautifully printed Bible of Hutter (Hamburg, 1588) presents a peculiarly mixed text. Here may be added the names of a few editors who published a Hebrew text without vowels and without pretence to critical accuracy: Plantin (Antwerp, 1573, 8vo and 12mo; Leyden, 1595, 16mo; 1610, 12mo; Hanau, 1610, 24mo); Menasse ben Israel (Amsterdam, 1630, 1639, 8vo); Leusden (1694, 8vo); Maresius (1701, 8vo); Jablonsky (Berlin, 1711, 24mo); Forster (Oxford, 1750, 4to).

(b) Texts Corrected according to Codices and Printed Texts

The mixture of Chayim's text with the Complutensian could not give permanent satisfaction. Every comparison of the mixed text with that of any good manuscript brought to light many discrepancies and suggested the idea that a better Hebrew text might be obtained by the help of good codices. The first attempt to publish a Hebrew text thus corrected was made by John Leusden with the cooperation of the printer Jos. Athias (Amsterdam, 1661, 1667). The editor revised Chayim's text according to the readings of two codices, one of which was said to be about 900 years old. This edition, printed by Athias, was revised by George Nissel according to the readings of Hutter's Bible (Leyden, 1662). Nissel makes no pretence of having collated any codices, so that his work is noted for its scarcity rather than its critical value. Clodius, too, endeavoured to correct Athias's text according to earlier editions, but was not always successful (Frankfort, 1677, 1692, 1716). Jablonsky corrected the second edition of Athias according to the readings of several codices and of the better previous editions, paying special attention to the vowels and accents (Berlin, 1699, 1712); his first edition is commonly regarded as being one of the best. Van der Hooght corrected the second edition of

Athias according to the Massorah and the previously printed editions (Amsterdam and Utrecht, 1705); his attention to the smallest details and the printer's care account for the general favour with which the edition was received. A still more perfect reprint of the edition was published by Props (Amsterdam, 1724). Simonis, too, published correct and cheap reprints of Van der Hooght's Bible. Opitz corrected the edition of Athias according to the readings of seventeen of the best previous editions and of several manuscripts (Kiel, 1709; Züllichau, 1741). He supervised the proof in person, and even the type was remarkable for its size and clearness, so that the edition was considered the most accurate extant. J. H. Michaelis edited the first Hebrew text with variants (Halle, 1720). He based it on the text of Jablonsky which he compared with twenty-four earlier editions and with five manuscripts preserved in Erfurt. The more important variants he added at the bottom of the page. It has been found that the comparison was made rather superficially as far as the printed editions were concerned, and there is no good reason for supposing that more care was taken in the comparison of the manuscript text. Still, the edition remains valuable, because it is the first of its kind, and some of its variants deserve attention even to-day. The Oratorian Father Houbigant tried to produce a text far superior to the commonly received one. Taking Van der Hooght's text for his basis, he added his own corrections and conjectures in critical notes. His apparatus consisted of a number of manuscripts, the ancient versions, and the Hebrew context. The precipitancy of his inferences and the rashness of his conjectures did much to create a prejudice against his method, though the merit of his work has been duly appreciated by scholars. His "Notæ Criticæ" were printed in separate form in Frankfort (1777), after the full edition had appeared in Paris (1753).

Here may be mentioned the work of the Italian Jew, Salomo Norzi. He began in the early years of the seventeenth century to compare Bomberg's text with the best of the printed editions, with a number of good manuscripts of both Bible and Massorah, with the Biblical citations found in the Talmud, the Midrashim, and in other rabbinic writings, and with the critical annotations of the more notable Jewish commentators; the results of his long study he summarized in a Massoretico-critical commentary intended to accompany the text of the Hebrew Bible, which had been rather scantily corrected. The title of the work was to be "Repairer of the Breach" (Is., lviii, 12), but the author died before he could publish his book. Nearly a century later, a Jewish physician named Raphael Chayim Italia had Norzi's work printed at his own expense under the title "Offering of the Gift" (Mantua, 1742-44). Among Christian scholars it appears to have remained unnoticed until Bruns and Dresde drew attention to it. In spite of his best intentions, Norzi at times rather corrupts than corrects the Hebrew text, because he prefers the readings of the Massorah to those of the manuscripts.

3. CRITICAL EDITIONS

The editions thus far enumerated can hardly be called critical, since their editors either lacked the necessary apparatus or did not consider it prudent to correct the received Hebrew text according to the full light of their textual information. Later on, two classes of scholars published really critical editions of the Hebrew text; some endeavoured to restore critically the most correct Massoretic text obtainable; others tried to find the most accurate pre-Massoretic text.

(1) Critical Editions of the Massoretic Text

In order to restore the correct Massoretic text it was necessary first to collect the apparatus. About the middle of the eighteenth century this need was felt very keenly by Benjamin Kennicott, a canon of Christ Church, Oxford, who determined to remedy the evil. Beginning in 1759, he collated either in person or through others as many as 615 Hebrew manuscripts, 52 printed editions, and the Talmud, continuing this preparation until the year 1773. Then he began the printing of the work (*Vetus Testam. Hebr. cum var. lectionibus*, 2 volumes, Oxford, 1776-80) based on Van der Hooght's Hebrew text as edited by Simonis. The variants, with their respective sources, were indicated below the text. In the introductory dissertation of the second volume the author gives the history of his enterprise and justifies its methods. He found this necessary because, after the appearance of the first volume, his critics had charged him with lack of care and discernment in the choice of the manuscripts used, of the variants noticed, and in the treatment of the Massorah.

Bernardo de Rossi, professor at Parma, tried to construct an apparatus that should not be open to the exceptions taken against Kennicott's work. The material on which de Rossi worked exceeded that of Kennicott by 731 manuscripts, 300 printed editions, and several ancient versions. In his work (*Variæ lectiones Vet. Testam.*, 4 volumes, Parma, 1784-88) and its subsequent supplement (*Supplementa ad varias s. text. lectiones*, 1798) he noted the more important variants, gave a brief appreciation of their respective sources and their values, and paid due attention to the Massorah. He follows Van der Hooght's text as his basis, but considers it known, and so does not print it. All of de Rossi's critics are at one in admiring the laboriousness of his work, but they deny that its importance bears any proportion to the labour it implies. Perhaps the author himself, in his "Dissertatio præliminaris" to vol. IV, gives a fairer opinion of his work than his critics do. It can hardly be denied that de Rossi at least showed what can be done by a study of the manuscripts and of the old editions for the correction of the received Hebrew text.

The apparatus of the textual, or lower, criticism of the Old Testament text (see BIBLICAL CRITICISM) is not limited to the works of Kennicott and de Rossi; it comprises also the above-mentioned work of Salomo Norzi, re-edited in Vienna, 1813; the writings of Wolf ben Simson Heidenhaim; Frensdorff's "Ochla W' Ochlah" (1864),

and "Massora Magna" (Hanover, 1876); the prophetic "Codex of St. Petersburg", dating back to 916, phototyped by Strack in 1876; all the recently discovered or recently studied codices and fragments, together with the works of the ancient Jewish grammarians and lexicographers.

But even with these means at their command, the editors of the Hebrew text did not at once produce an edition that could be called satisfactory from a critical point of view. The editions of Döderlein-Meisner (Leipzig, 1793) and Jahn (Vienna, 1807) only popularized the variants of Kennicott and de Rossi without utilizing them properly. The edition published under the name of Hahn and prefaced by Rosenmüller (Leipzig, 1834) is anything but critical. The stereotype editions of Hahn (Leipzig, 1839) and Theile (Leipzig, 1849) remained for many years the best manual texts extant. More recently the apparatus has been used to better advantage in the edition of Ginsburg (*The New Massoretico-Critical Text of the Hebrew Bible*, 1894) and in that of Baer and Delitzsch. The last-named appeared in single books, beginning with the year 1861. The Books of Exodus, Leviticus, Numbers, and Deuteronomy are still wanting; both editors are dead, so that their work will have to be completed by other hands.

(2) Critical Editions of the Pre-Massoretic Text

The editors whose work we have thus far noticed endeavoured to restore as far as possible the text of the Massorah. However valuable such an edition may be in itself, it cannot pretend to be the last word which textual criticism has to say concerning the Hebrew text of the Old Testament. After all, the Massoretic text attained to its fixed form in the early centuries of the Christian Era; before that period there were found many text-forms which differed considerably from the Massoretic, and which nevertheless may represent the original text with fair accuracy. The most ancient and reliable witness for the pre-Massoretic text-form of the Hebrew Bible is found in the Septuagint. But it is practically certain that, even at the time of the Septuagint, the original text had suffered considerable corruptions; these can be corrected only by comparing parallel passages of the context, or again by conjectural criticism; a critical edition of this kind presupposes, therefore, a critical edition of the Septuagint text.

Various attempts have been made to restore the pre-Massoretic text of single books of the Old Testament: thus Olshausen worked at the reconstruction of the Book of Genesis (*Beiträge zur Kritik des überlieferten Textes im Buche Genesis*, 1870); Wellhausen (*Text der Bücher Samuelis*, 1871), Driver (*Notes on the Hebrew Text of the Books of Samuel*, 1890), and Klostermann (*Die Bücher Samuelis und der Könige*, 1887) at the correction of the Books of Samuel; Cornill at the correction of the Book of Ezechiel (*Das Buch des Propheten Ezechiel*, 1886). To these might be added various other publications; e. g., several recent commentaries, some of the works published by Bickell, etc. But all these works concern only part of the Old Testament text. "The

Sacred Books of the Old Testament", edited by Paul Haupt (see CRITICISM, BIBLICAL, s. v. Textual), is a series intended to embrace the whole Hebrew text, though the value of its criticism is in many instances questionable; Kittel's "Biblia Hebraica" (Leipzig, 1905), too, deserves a mention among the critical editions which attempt to restore the pre-Massoretic Hebrew text.

II. EDITIONS OF THE GREEK TEXT OF THE BIBLE

Before speaking of the Greek text of the New Testament, we shall have to give a brief account of the editions of the Greek books of the Old Testament. They appear partly in separate editions, partly in conjunction with the Septuagint.

1. SEPARATE EDITIONS

The principal separate editions of the deuterocanonical books appeared at Antwerp, 1566 (Plantin), 1584, and with Latin text taken from Ximenes' Polyglot, 1612; at Frankfort, 1694; Halle, 1749, 1766 (Kircher); Leipzig, 1757 (Reineccius), 1804 (Augusti), 1837 (Apel), 1871 (Fritzsche); Oxford, 1805; London, 1871 (Greek and English); Frankfort and Leipzig, 1691 (partial edition); Book of Tobias, Franeker, 1591 (Drusius), and Freiburg, 1870 (Reusch); Book of Judith, Würzburg, 1887 (Scholz, Commentar); Book of Wisdom, 1586 (Holkoth's "Prælectiones" edited by Ryterus); Coburg, 1601 (Faber); Venice, 1827 (Greek, Latin, and Armenian); Freiburg, 1858 (Reusch); Oxford, 1881 (Deane); Ecclesiasticus, 1551, '55, '68, '70, '89, '90 (Drusius), 1804 (Bretschneider); Books of Machabees, Franeker, 1600 (Drusius); I Mach., Helmstädt, 1784 (Bruns).

2. EDITIONS JOINED TO THE SEPTUAGINT

The history of these editions of the deuterocanonical books of the Old Testament is connected with that of the Septuagint editions. The reader will find full information on this question in the article SEPTUAGINT.

The newly invented art of printing had flourished for more than half a century before an attempt was made to publish an edition of the Greek New Testament. The Canticles, Magnificat, and Benedictus were printed at Milan, 1481; at Venice, 1486 and 1496, as an appendix to the Greek Psalter; John, i, 1, to vi, 58, appeared in Venice, 1495 and 1504, together with the poems of St. Gregory Nazianzen; the beginning of the Fourth Gospel, John, i, 1-14, was published at Venice, 1495, and at Tübingen, 1511. Not that the reading public of that age did not feel interested in the other parts of the New Testament; but it did not show any desire for the Greek text of the Bible. After the beginning of the sixteenth century the world's attitude with regard to the Greek text of the New Testament changed considerably. Not counting the publication of codices, mere stereotype reprints, or the issue of parts of the Testament, the number of editions of the complete Greek text has been estimated at about 550; in other words, since the beginning of the sixteenth century, every year has witnessed the publication of, roughly speaking, two new editions of the complete Greek text. For our present

purpose, we may consider the principal editions under the four headings of the Complutensian, the Erasmusian, the Received, and the Critical text.

(1) The Complutensian Text

It was the Archbishop of Toledo, Cardinal Ximenes de Cisneros, who began at Alcalá, in 1502, the preparation of the edition of the Old Testament in Hebrew, Greek, and Latin, and of the New Testament in Greek and Latin. It has been thus far impossible to ascertain what codices served as the basis of the work called the Complutensian Polyglot. Though Leo X sent from the Vatican Library some manuscripts *venerandoe vetustatis* for the use of the scholars engaged in the work at Alcalá, it is quite certain that the well-known Codex Vaticanus was not among them. It appears that the Greek New Testament text of the Polyglot rests on the readings of a few manuscripts only, belonging to the so-called Byzantine family (see CRITICISM, BIBLICAL, s. v. Textual). The charge that the Complutensian text was corrected according to the evidence of the Latin Vulgate, is now generally abandoned, excepting with regard to I John, v, 7. The New-Testament text is contained in the fifth or, according to other arrangements, in the last of the six folios of the Polyglot; it was finished 10 Jan., 1514, and though the rest of the work was ready 10 July, 1517, four months before the great cardinal's death (8 Nov., 1517), it was not published until Leo X had given his permission *proprio motu*, 22 March, 1520.

The Complutensian text, corrected according to certain readings of the Erasmusian and of that of Stephanus, was repeated in the Antwerp Polyglot published, under the auspices of King Philip II, by the Spanish theologian Benedict Arias Montanus and his companions, and printed by the celebrated typographer, Christopher Plantin, of Antwerp, 1569-72. The Greek New Testament text occurs in the fifth and in the last of the eight folios which make up the Antwerp Polyglot; in the fifth it is accompanied by the Syriac text (both in Hebrew and Syriac letters), its Latin version, and the Latin Vulgate; in the eighth volume, the Greek text has been corrected in a few passages, and is accompanied by the interlinear Latin Vulgate text. The text of the fifth volume of the Antwerp Polyglot was repeated only in the fifth volume of the Paris Polyglot, 1630-33, while that of the eighth volume reappears in a number of editions: Antwerp 1573-84 (four editions, Christopher Plantin); Leyden, 1591-1613 (four editions, Rapheleng); Paris, 1584 (Syriac, Latin, and Greek text; Prevosteau); Heidelberg, 1599, 1602 (Commelin); Lyons, 1599 (Vincent); Geneva, 1599; Geneva, 1609-27 (eight very different editions; Pierre de la Rouière, Sam. Crispin, James Stoer); Leipzig, 1657 (with the interlinear version of Arias Montanus; Kirchner); Vienna, 1740 (edited by Debiel, published by Kaliwoda); Mainz, 1753 (edited by Goldhagen; published by Varrentrapp); Liège, 1839 (Kersten). To these editions, containing the Plantinian, or the modified Complutensian, text, the following may be added, which represent a mixture of the

text of Plantin and that of Stephanus: Cologne, 1592 (Arnold Mylius; Greek and Latin text); Nuremberg, 1599-1600 (Hutter's Polyglot, twelve languages); 1602 (the same, four languages); Amsterdam, 1615 (the same, Welschaert); Geneva, 1628 (Jean de Tournes; one edition gives only the Greek text, another gives Beza's Latin version and a French translation).

(2) The Erasmian Text

On 17 April, 1515, the well known humanist, Beatus Rhenanus, invited Desiderius Erasmus, who lived at the time in England, to edit the Greek New Testament which John Froben, a celebrated printer of Basle, was anxious to publish before Pope Leo X should give his permission to put forth the Complutensian text printed more than a year before. Erasmus hastened to Basle, and printed almost bodily the text of the manuscripts that happened to fall into his hands: the Gospels according to a manuscript of Basle (Evv. 2); the Book of Acts and the Epistles according to another manuscript of Basle ([Act. 2](#)); the Apocalypse according to a manuscript named after Reuchlin "Codex Reuchlini" ([Apoc. 1](#)). He made a few corrections after superficially collating some other Basle manuscripts, Evv. 1 among the rest. Since Reuchlin's manuscript did not contain the end of the Apocalypse, Erasmus translated Apoc., xxii, 16b-21, from the Vulgate. The printing began in Sept., 1515, and the whole New Testament text was finished in the beginning of March, 1516. Under these circumstances satisfactory work could hardly be expected; Erasmus himself, in a letter to Pirkheimer, confesses that the first New Testament edition is "præcipitatum verius quam editum". In 1519 appeared the second Erasmus edition, in which the text of the first was almost entirely repeated, though several hundred mistakes were corrected. Luther followed this edition in his German translation of the New Testament. Urged by the importunities of his critics, Erasmus admitted into his third edition (1522) the passage I John, v, 7, according to the reading of the Codex Montfort. (Evv. 61). In his fourth edition (1527) he changed his text, especially in Apoc., in several passages according to the readings of the Complutensian Polyglot; in the fifth edition (1535) he repeated the text of the fourth with very few changes.

The Erasmian text was frequently reprinted: Venice, 1518; Hagenau, 1521; Basle, 1524, 31, etc.; Strasburg, 1524; Antwerp, 1571, etc.; Paris, 1546 and 1549 (Robertus Stephanus introduced corrections from the Complutensian Polyglot); in his third edition, R. Stephanus repeats the fifth Erasmian with variants from fifteen manuscripts and the Complutensian Polyglot (Paris, 1550). This edition is called *Regia*, and is the basis of the English Authorized Version (1611). Stephanus's fourth edition (Geneva, 1551) adds the Latin to the Greek text, the latter of which is for the first time divided into verses, a contrivance which was introduced into the Latin Vulgate in 1555, and then became general. The last edition of R. Stephanus was reprinted with slight

modifications a great number of times; its principal repetitions were those supervised by Theodore Beta (Geneva, 1565, 1582, 1589, 1598 in folio; 1565, 1567, 1580, 1590, 1604 in octavo) and the brothers Bonaventure and Abraham Elzevir (Leyden, 1624, 1633, 1641; Amsterdam, 1656, 1662, 1670, 1678). In the preface of the second Elzevir edition (Leyden, 1633) we read the words: "Textum ergo habes nunc ab omnibus receptum." Hence this Elzevir text became known as the *textus receptus*, or the Received Text.

(3) The Received Text

From what has been said it follows that the Received Text is that of the second Elzevir edition, which is practically identical with the text of Theodore Beza, or the fourth edition of Robertus Stephanus corrected in about one hundred and fifty passages according to the readings of the Codex Claromontanus, the Codex Cantabrigiensis, the Latin, Syriac, and Arabic versions, and certain critical notes of Henry Stephanus. In its turn, the fourth edition of Robertus Stephanus is almost identical with the fifth Erasmian edition which exhibits the text of five rather recent manuscripts corrected in about a hundred passages according to the reading of the Complutensian Polyglot. Still, it can hardly be denied that the readings peculiar to the text can be traced at least as far back as the fourth century. For about a century the Received Text held undisputed sway; its editions numbered about one hundred and seventy, some of the more important being the following:

- The fifth volume of Brian Walton's "Biblia Polyglotta" (London, 1657) contains the New Testament in Greek, Latin, Syria, Arabic, Ethiopia; a learned apparatus is added in the sixth volume.
- John Fell edited the text anonymously (Oxford, 1675) with variants collected "ex plus centime mss. codicils et antiques versionibus".
- John Mill reprinted the text of Stephanus, 1550, together with valuable prolegomena and a critical apparatus (Oxford, 1707), and L. Kuster published an enlarged and corrected edition of Mill's work (Amsterdam, 1710).
- Not to speak of Richard Bentley's "Proposals for Printing", published in 1720, we must mention Wetstein's edition, the prolegomena to which appeared anonymously in 1730, and were followed by the body of the work in two folios: (Amsterdam, 1751-1752) with an apparatus collected from codices, versions, readings of the Fathers, printed editions, and works of Biblical scholars. He also laid down principles for the use of variants, but did not put them into practice consistently enough.

- Principles advocated by Wetstein were more faithfully followed in W. Bowyer's edition of the Greek New Testament (London, 1763).
- When the foregoing scholars had collected an almost unmanageable number of variants, John Albert Bengel endeavoured to simplify their use by dividing them into two families, an Asiatic and an African; besides, he constructed a Greek text based on the readings of previous editions, excepting that of the Apocalypse, which was based also on the readings of manuscripts (Tübingen, 1734).
- This edition was enlarged and amended by Burck (Tübingen 1763).

(4) The Critical Text

In the last paragraph we have enumerated a list of editions of the Greek New Testament which contain, besides the text, a more or less complete apparatus for the critical reconstruction of the true reading. We shall now mention a number of editions in which such a reconstruction was attempted.

(1) Griesbach developed Bengel's method of grouping the variants into a formal system. He admitted three textual recensions: the Occidental, the Alexandrian (or Oriental), and the Constantinopolitan (or Byzantine). The first two he derived from the middle of the second century, and the third he considered as a mixture of the two, belonging to the fourth century, though subsequently modified. After laying down his principles of textual criticism, he tried to reconstruct the text best known in the ancient Church of both East and West. In 1774 he published the text of the synoptic Gospels; in 1796-1806, the text of the New Testament, called "Editio secunda"; in 1827 David Schulz added the first volume of a third edition. Griesbach is not always faithful to his principles, being too much under the sway of the Received Text; moreover, he did not sufficiently utilize the codices most important for his purpose. His text has been followed by Schott, Knapp, Tittmann, Hahn, and Theile.

(2) It suffices to mention the editions of Mace (London, 1729), Harwood (London, 1776), Matthaei (Riga, 1782-1788), Alter (Vienna, 1786), and Scholz (Leipzig, 1830-1836); the last named scholar (a Catholic, and professor of exegesis in the University of Bonn) reduced Griesbach's first two recensions to one, distinguishing it only from the Constantinopolitan textform, which he derived from the more correct copies circulating in Asia Minor, Syria, and Greece during the first centuries. Scholz himself had industriously collected manuscripts in the East. The labours of Hug and Eichhorn may also be mentioned briefly. The former substituted his so-called Common Edition, and the latter the uncorrected text of Asia and Africa, for Griesbach's Occidental class. Both Hug and Eichhorn assign the Alexandrian text-form to Hesychius, and the Byzantine to Lucian; finally, Hug assigns to the labours of Origen in his old age a fourth

text-form identical with a middle class favoured by Griesbach and Eichhorn. Rinck (1830) divided the Occidental manuscripts into African and Latin, both of which are surpassed in purity by the Oriental.

(3) Carl Lachmann was the first critic who tried to reconstruct a New Testament text independent of the Received. Believing that the autograph text could not be found, he endeavoured to restore the text-form most common in the Oriental Church during the course of the fourth century. He published his small stereotype edition in 1831 (Berlin), and his large Latin-Greek text in 1842-50 (Berlin); this latter is accompanied by P. Buttmann's list of authorities for the Greek readings. Though Lachmann's text is preferable to the Received, his apparatus and the use he made of it are hardly satisfactory in the light of our present-day methods.

(4) Among the editors of the New Testament text, Tischendorf deserves a place of honour. During the thirty years which he devoted exclusively to textual studies, he published twenty or twenty-one editions of the Greek Testament; the most noteworthy among them belong to one or another of the following five recensions:

- In 1841 (Leipzig) he issued an edition in which he surpassed even Lachmann in his departure from the Received Text; the ancient manuscripts, the early versions, and the citations of the Fathers were regarded as the highest authorities in the selection of his reading. In 1842 Tischendorf published in Paris an edition destined for the French Protestants (Didot), and in the same year and place, at the instance of the Abbé I.M. Jager, another for the French Catholics, which he dedicated to Archbishop Affre. In this he received the Greek readings most in keeping with the Latin Vulgate.
- The second recension consists of four stereotype editions (12mo, 1842-59) containing the Greek text brought into agreement with the Latin Vulgate.
- Tischendorf's third recension is represented by his fourth (*Lipsiensis secunda*, 1849; Winter), his fifth (stereotype; Leipzig, 1850, Tauchnitz), and his sixth edition (with corrected Latin Vulgate and Luther's translation; Leipzig, 1854, Avenarius and Mendelssohn). A separate print of the Greek text of this last edition (1855) constitutes the first of Tischendorf's so-called "academic" editions. In the seventh reprint of the academic edition, as well as in the third of Tauchnitz's stereotype text, the readings were changed according to Tischendorf's fifth recension.
- The fourth recension is found in Tischendorf's "*Editio Septima Critica Maior*" (Leipzig, 1856-59; Winter). The work contains valuable prolegomena and a detailed critical apparatus.

- Tischendorf's fifth recension is found in his "Editio Octava Critica Maior" (Leipzig, 1864-72, Giesecke and Devrient). In his first recension Tischendorf is further removed than Lachmann from the Received Text; in his second he favours the Latin Vulgate; in the third, and still more in the fourth, he returns to the readings of the Received Text of Elzevir and Griesbach; but in the fifth he again follows the principles of Lachmann and favours the readings of his first recension rather than those of his third and fourth. Tischendorf will always occupy a high rank among the editors of the Greek text; but he is rather a student of the text than a textual critic. The "Prolegomena" to the eighth edition had to be supplied by C.R. Gregory on account of the great editor's untimely death (7 Dec., 1874). Gregory published these "Prolegomena" in three instalments (Leipzig, 1884, 1890, 1894), giving the reader a most satisfactory and complete summary of the information necessary or useful for the better understanding of the Greek text and its apparatus.

(5) The discrepancy between the text of Scholz's edition (Leipzig, 1830-36) and the readings of the early documents stimulated Tregelles to study the textual questions more thoroughly in order to relieve the existing uncertainty. The favourable reception of his "Book of Revelation in Greek . . . with a, new English Version" published with a "Prospectus of a Critical Edition of the Greek New Testament, now in Preparation" encouraged him to continue the arduous course of studies he had begun. After collating all the more important manuscripts which were to be found in England, he visited the libraries of Rome, Florence, Modena, Venice, Munich, Basle, Paris, Hamburg, Dresden, Wolfenbüttel, and Utrecht for an accurate study of their respective codices. It has been noted that when the results of Tregelles differ from those of Tischendorf, the former are usually correct. He was enabled to publish the Gospels of St. Matthew and St. Mark in 1857; those of St. Luke and St. John in 1861; the Acts and the Catholic Epistles in 1865; the Pauline Epistles in 1869-70. While engaged on the last chapters of the Apocalypse, he had a stroke of apoplexy, so that this part had to be finished by the hand of a friend (1872). Seven years later, Hort and Streane added "Prolegomena" to the work of Tregelles. A reprint of the text without its critical apparatus appeared in 1887. The character of the work is well described by its title, "The Greek New Testament, Edited from Ancient Authorities, with their Various Readings in full, and the Latin Version of Jerome" (London, 1857-79).

(6) The textual labours of Tregelles and Tischendorf were, to a certain extent, overshadowed by the work achieved by the two eminent Cambridge scholars, Brook Foss Westcott and Fenton John Anthony Hort. Like their predecessors, they acknowledged and followed the principles of Lachmann; but they differed from Lachmann as well as from Tischendorf and Tregelles in utilizing and systematizing the genealogical

grouping of the ancient readings, thus connecting their labours with the views of Bengel and Criesbach. They distinguished four branches of textual tradition.

- The Western has a tendency to paraphrase the text and to interpolate it from parallel passages and other sources. It is found mainly in Codex D, the old Latin Version, and partly in Cureton's Syriac manuscript.
- The Alexandrian is purer than the Western, but contains changes of a grammatical character. It is found in the oldest uncial codices, except in B (and part of N), a number of cursive manuscripts, and the Egyptian versions.
- The Syrian is a mixture of all the other texts, or at least it contains some of the characteristics of all the others. It is found in the later uncials, and in most of the cursive manuscripts and versions.
- The neutral text comes nearest to the original text, being almost identical with it. Its pure form is found nowhere, but the readings of N and some of the oldest uncials, especially of B, give us the nearest approach to it.

As to the value of the several classes of readings, Hort believes that most of the Western and Alexandrian, and all the Syrian must be rejected; these latter he finds nowhere before the middle of the third century. All the necessary explanations have been collected in a volume accompanying Westcott and Hort's "New Testament in the Original Greek" (Cambridge and London, 1881). The volume contains an introduction (324 pages) and an appendix (173 pages). The introduction treats of the necessity of Textual New-Testament Criticism (pp. 4-18), of its various methods (19-72), of the application of its principles to the restoration of the New-Testament text (73-287), and finally of the character, the aim, and the arrangement of the new edition (288-324). The appendix contains critical comments on difficult passages (pp. 1-140), notes on certain orthographic and grammatical discrepancies between the ancient codices (pp. 141-173), and finally a complete list of the Old-Testament passages employed in the New (pp. 174-188). The volume containing the text of Westcott and Hort's edition was printed also separately in the year of the first appearance. In 1885 (1887, etc.) the text appeared separately in a volume of smaller size, and in 1895-96 both volumes of the original work were published anew in their larger form.

(7) Westcott and Hort's Greek New Testament, though hailed with delight by a great number of textual critics, did not meet with unchallenged praise. Among the dissenters were Godet, Wunderlich, Dobschütz, Jülicher, Bousset, and Burgon (*The Revision Revised*; *The Quarterly Review*, 1881-82; 2nd edit., London, 1885). Of these, some object to Westcott and Hort's method, others to their appreciation of Codex B,

others to their attitude towards the so-called Western readings, others, finally, uphold the claims of the Received Text. In the third and fourth editions of his "Plain Introduction to the Criticism of the New Testament", F. H. Scrivener writes against the views of Tischendorf, Treffelles, and Westcott-Hort; he favours the readings of the later manuscripts in the reconstruction of the Greek New-Testament text, and advocates the return to a text-form similar to the Received Text. Among his various publications we may notice "The New Testament in the Original Greek, together with the Variations Adopted in the Revised Version" (New Edition, London, 1894) and his various collations of texts (Twenty Manuscripts of the Gospels, London, 1853; Collation of Codex Sinaiticus with the Received Text, Cambridge and London, 1863, 1867). Here may be mentioned also "The Greek Testament with a critically revised text, a digest of various readings, marginal references to verbal and idiomatic usage, prolegomena, and a critical and exegetical commentary" edited by Henry Alford, afterwards Dean of Canterbury (London, 1849-1857; sixth edition, 1871). Tischendorf was of opinion that Alford's revision of the text was not satisfactory. Again "The New Testament in the Original Greek, with Notes and Introduction" (London, 1856-60; newly edited with index, 1867), by Christopher Wordsworth, Canon of Westminster, is a mixture of the texts of Griesbach, Lachmann, Tischendorf, and Elzevir. Finally, in connexion with the Revised Edition, Professor C. Palmer, of Oxford, published "The Greek Testament, with the Readings adopted by the Revisers of the Authorised Version" (Oxford, 1881; Clarendon Press).

(8) Among the chief works dealing with the textual restoration of the Greek New Testament which have appeared in recent years, we must mention the edition of B. Weiss: Part I, Acts, Catholic Epistles, Apocalypse (Leipzig, 1894, Hinrichs); Part II, The Pauline Epistles together with Hebr. (1896); Part III, The Gospels (1900). A manual edition of this text appeared 1902-05, in three volumes; the mistakes of the first issue were corrected as far as possible. Richard Francis Weymouth edited in a handy form "The Resultant Greek Testament" (London, 1886, Elliot Stock; cheap edition, 1892 and 1896; third edition, 1905); in it he gives us the text on which the majority of modern editors are agreed, together with all the readings of Stephens (1550), Lachmann, Tregelles, Lightfoot, Ellicott, Alford, Weiss, the Bale Edition (1880), Westcott-Hort, and the Revision Committee, with an introduction by J. J. St. Perowne. The editor may not give the reader anything of his own, but he furnishes an amount of textual erudition which the Bible student can hardly afford to neglect. Dr. E. Nestle has edited a "Novum Testamentum Græce cum apparatu critico", (Stuttgart, 1898, 1899, 1901, 1903, 1904, 1906) based on the four most prominent of the recent texts: Tischendorf, Westcott-Hort, Weymouth, and Weiss. All the variants of the four editions, excepting as to minor details, are noted, so that the reader obtains at a glance the results of the

foremost textual criticism on any given text. It would be difficult indeed to contrive a handier and more complete edition of the Greek text than this of Nestle's, which seems likely to become the Received Text of the twentieth century.

(9) It is, therefore, all the more to be regretted that Nestle's text cannot be recommended to the general Catholic reader. Not to mention other shortcomings, it places John, v, 4, and vii, 53-viii, 11, among the foot-notes, and represents Mark, xvi, 9-20, together with an alternative ending of the Second Gospel, as a "Western non-interpolation", suggesting that it is an ancient Eastern interpolation of the sacred text. The rules of the new Index enumerate with precision those classes of Catholics who may read texts like that of Nestle; others must content themselves with one or another of the following editions: P.A. Gratz reedited the Complutensian text (Tübingen, 1821; Füs); L. Van Ess published a combination of the Complutensian and the Erasmusian text (Tübingen, 1827; Füs); Jaumann adheres closely to the edition of Tittmann (Munich, 1832; Lindauer); we have already mentioned Tischendorf's text prepared for Catholic readers under the influence of I.M. Jager (Paris, 1847, 1851, 1859); Reithmayr produced a combination of this latter edition and that of Lachmann (Munich, 1847; Ratisbon, 1851); V. Loch derived his text, as far as possible, from the Codex Vaticanus (Ratisbon, 1862); Tauchnitz published, with the approbation of the proper ecclesiastical authority of Dresden, Theile's text almost without change, together with the text of the Latin Vulgate; Brandseheid edited the Greek text and the Latin Vulgate of the New Testament in such a way as to bring the former as much as possible into agreement with the latter (Freiburg, 1901, etc.); finally, M. Hetzenauer published his "Novum Testamentum Græce" (Innsbruck, 1904, Wagner), reproducing in separate form the Greek text of his Greek-Latin edition (1896-98). He is more independent of the Vulgate text than Brandscheid, and he adds the more important variants in the margin, or in footnotes, or again in an *appendix critica*.

(10) It must not be imagined that the textual criticism of the New Testament has arrived at a state that can be regarded as final. Without doing injustice to the splendid results attained by the labours of the scholars enumerated in this article, it must be confessed that the condition of the textual criticism of the New Testament is more uncertain to-day than it was twenty years ago. The uncertainty springs mainly from the doubts of our critics as to the real value of the Western readings. Professor Blass may exaggerate the importance of these Western readings, at least with regard to the Book of Acts, when he considers them as the transcript of the inspired writer's first or rough copy, while he identifies the Eastern with the copy actually sent out to Antioch. Even if students repudiate Blass's view, they will be influenced by the conservative work of H. von Soden, which is now (1908) in course of publication (Die Schriften des NT. in ihrer ältesten erreichbaren Textgestalt hergestellt auf Grund ihrer Text-

geschichte, Berlin, Duncker). The writer distinguishes three groups of readings: most manuscripts present the Antiochene text, which is probably the recension of Lucian, called K; about fifty witnesses represent the Egyptian text, probably the recension of Hesychius, denoted by H; the third group, denoted by I, is the Vulgate of Palestine. An investigation of the original form and the development of each of these recensions gives rise to a number of subdivisions. The problem for the textual critic is to discover the archetype which lies in each case at the bottom of the three recensions. If von Soden's method should eventually prove to be false, it may at least contribute to the improvement of our Greek New-Testament editions.

A. J. MAAS

Congregation of St. Edmund

Congregation of St. Edmund

Founded in 1843, by Jean-Baptiste Muard, at Pontigny, France, for the work of popular missions. The members also devote themselves to parochial work, to the education of youth in seminaries and colleges, to the direction of pious associations, and to foreign missions. The motherhouse is at Pontigny, but since the expulsion of the religious orders the superior general resides at Hitchin, England. In the United States, the congregation has two houses: a missionary house and apostolic school at Swanton, Vermont, for the training of young men who wish to study for the priesthood and the religious life; and a college at Winooski, Vermont, with 12 fathers, 8 scholastics, and 100 pupils.

E.M. SALMON

Ven. Edmund Arrowsmith

Ven. Edmund Arrowsmith

English martyr, born in 1585 at Haddock; executed at Lancaster, 23 August, 1628. He is of great reputation for the numerous favours, spiritual and temporal, which are won through his "Holy Hand", still preserved as an object of veneration in the church of St. Oswald, Ashton, near the martyr's birthplace. His parents suffered much for their religion, and the future martyr was once, when a child, left shivering in his night-clothes by the pursuivants, who carried his parents off to Lancaster jail. He entered Douai College in 1605, but ill-health compelled him to interrupt his studies; he was, however, ordained priest in 1612. Lancashire was the scene of his missionary labours and he was eminent for "fervour, zeal and ready wit." Apprehended, probably in 1622, he was brought before Bridgeman, Protestant Bishop of Chester, and had a lively discussion with him and his ministers. Regaining his liberty he entered the Society of Jesus in 1623, and made his noviceship on the Mission, retiring to Essex for a spiritual retreat. He was eventually betrayed by false brethren, tried at Lancaster in 1628, and was found guilty of high treason for being a Jesuit priest and a seducer in religion. His fellow-prisoner, Father John Southworth, afterwards a martyr, absolved him as he went forth to undergo the usual butchery.

CHALLONER, *Missionary Priests* (1874), II, 68; FOLEY, *Records of the English Province, S.J.*, II, 24 sqq.; GILLOW, *Bibl. Dict. Eng. Cath.*, I, 62.

PATRICK RYAN

St. Edmund Campion

St. Edmund Campion

English Jesuit and martyr; he was the son and namesake of a Catholic bookseller, and was born in London, 25 Jan., 1540; executed at Tyburn, 1 Dec., 1581. A city company sent the promising child to a grammar school and to Christ Church Hospital. When Mary Tudor entered London in state as queen, he was the schoolboy chosen to give the Latin salutatory to her majesty. Sir Thomas White, lord mayor, who built and endowed St. John's College at Oxford, accepted Campion as one of his first scholars, appointed him junior fellow at seventeen, and, dying, gave him his last messages for his academic family. Campion shone at Oxford in 1560, when he delivered one oration at the reburial of Amy Robsart, and another at the funeral of the founder of his own college; and for twelve years he was to be followed and imitated as no man ever was in an English university except himself and Newman. He took both his degrees, and became a celebrated tutor, and, by 1568, junior proctor. Queen Elizabeth had visited Oxford two years before; she and Dudley, then chancellor, won by Campion's bearing, beauty, and wit, bade him ask for what he would. Successes, local responsibilities, and allurements, his natural ease of disposition, the representations, above all, of his friend Bishop Cheyney of Gloucester, blinded Campion in regard to his course as a Catholic: he took the Oath of Supremacy, and deacon's orders according to the new rite. After-thoughts developing into scruples, scruples into anguish, he broke off his happy Oxford life when his proctorship ended, and betook himself to Ireland, to await the reopening of Dublin University, an ancient papal foundation temporarily extinct. Sir Henry Sidney, the lord deputy, was interested in Campion's future as well as in the revival which, however, fell through. With Philip Sidney, then a boy, Campion was to have a touching interview in 1577.

As too Catholic minded an Anglican, Campion was suspected, and exposed to danger. Hidden in friendly houses, he composed his treatise called "A History of Ireland" Written from an English standpoint it gave much offence to the native Irish, and was severely criticized, in the next century, by Geoffrey Keating In his Irish history of Ireland. Urged to further effort by the zeal of Gregory Martin, he crossed to England in disguise and under an assumed name, reaching London in time to witness the trial of one of the earliest Oxonian martyrs, Dr. John Storey. Campion now recognized his vocation and hastened to the seminary at Douai. Cecil lamented to Richard Stanihurst the expatriation of "one of the diamonds of England." At Douai Campion remained for his theological course and its lesser degree, but then set out as a barefoot pilgrim to Rome, arriving there just before the death of St. Francis Borgia; "for I meant", as he

said at his examination, "to enter into the Society of Jesus, thereof to vow and to be professed". This he accomplished promptly in April (1573), being the first novice received by Mercurianus, the fourth general. As the English province was as yet non-existent, he was allotted to that of Bohemia, entering on his noviceship at Prague and passing his probation year at Brunn in Moravia. Returning to Prague, he taught in the college and wrote a couple of sacred dramas; and there he was ordained in 1578. Meanwhile, Dr. Allen was organizing the apostolic work of the English Mission, and rejoiced to secure Fathers Robert Parsons and Edmund Campion as his first Jesuit helpers. In the garden at Brunn, Campion had had a vision, in which Our Lady foretold to him his martyrdom. Comrades at Prague were moved to make a scroll for *P. Edmundus Campianus Martyr*, and to paint a prophetic garland of roses within his cell. Parsons and Campion set out from Rome, had many adventures, and called upon St. Charles Borromeo in Milan, and upon Beza in Geneva. Campion was met in London, and fitly clothed, armed, and mounted by a devoted young convert friend. His office was chiefly to reclaim Catholics who were wavering or temporizing under the pressure of governmental tyranny; but his zeal to win Protestants, his preaching, his whole saintly and soldierly personality, made a general and profound impression. An alarm was raised and he fled to the North, where he fell again to writing and produced his famous tract, the "Decem Rationes". He returned to London, only to withdraw again, this time towards Norfolk. A spy, a former steward of the Roper family, one George Eliot, was hot upon his track, and ran him and others down at Lyford Grange near Wantage in Berkshire on 17 July, 1581.

Amid scenes of violent excitement, Campion was derisively paraded through the streets of his native city, bound hand and foot, riding backwards, with a paper stuck in his hat to denote the "seditious Jesuit". First thrown into Little Ease at the Tower, he was carried privately to the house of his old patron, the Earl of Leicester; there he encountered the queen herself, and received earnest proffers of liberty and preferments would he but forsake his papistry. Hopton having tried in vain the same blandishments, on Campion's return to the Tower, the priest was then examined under torture, and was reported to have betrayed those who had harboured him. Several arrests were made on the strength of the lie. He had asked for a public disputation. But when it came off in the Norman chapel of the Tower, before the Dean of St. Paul's and other divines, Campion had been denied opportunity to prepare his debate, and had been severely racked. Thus weakened, he stood through the four long conferences, without chair, table, or notes, and stood undefeated. Philip Howard, Earl of Arundel, who was looking on in the flush of worldly pride, became thereby inspired to return to God's service. The privy council, at its wits' end over so purely spiritual a "traitor", hatched a plot to impeach Campion's loyalty, and called in the hirelings Eliot and Munday as

accusers. A ridiculous trial ensued in Westminster Hall, 20 Nov., 1581. Campion, pleading not guilty, was quite unable to hold up his often-wrenched right arm, seeing which, a fellow prisoner, first kissing it, raised it for him. He made a magnificent defence. But the sentence was death, by hanging, drawing, and quartering: a sentence received by the martyrs with a joyful shout of *Haec dies* and *Te Deum*. Campion, with Sherwin and Briant, who were on a separate hurdle, was dragged to Tyburn on 1 December. Passing Newgate arch, he lifted himself as best he could to salute the statue of Our Lady still *in situ*. On the scaffold, when interrupted and taunted to express his mind concerning the Bull of Pius V excommunicating Elizabeth, he answered only by a prayer for her, "your Queen and my Queen". He was a Catholic Englishman with political opinions which were not Allen's, though he died, as much as ever Felton did, for the primacy of the Holy See. The people loudly lamented his fate; and another great harvest of conversions began. A wild, generous-hearted youth, Henry Walpole, standing by, got his white doublet stained with Campion's blood; the incident made him, too, in time, a Jesuit and a martyr.

Historians of all schools are agreed that the charges against Campion were wholesale sham. They praise his high intelligence, his beautiful gaiety, his fiery energy, his most chivalrous gentleness. He had renounced all opportunity for a dazzling career in a world of master men. Every tradition of Edmund Campion, every remnant of his written words, and not least his unstudied golden letters, show us that he was nothing less than a man of genius; truly one of the great Elizabethans, but holy as none other of them all. He was beatified by Pope Leo XIII on 9 December, 1886, and canonized by Pope Paul VI in 1970. Relics of him are preserved in Rome and Prague, in London, Oxford, Stonyhurst, and Roehampton. A not very convincing portrait was made soon after his death for the Gesù in Rome under the supervision of many who had known him. Of this there is a copy in oils at Stonyhurst, and a brilliantly engraved print in Hazart's "Kerckelycke Historie" (Antwerp, 1669), Vol. III (Enghelandt, etc.), though not in every copy of that now scarce work.

Notes

CAMPION'S *Historie of Ireland* was first published by STANIHURST in HOLINSHED, *Chronicles* (1587), then in WARE'S book under the same title (1633). and again by the Hibernia Press (Dublin, 1809); *Edmundi Campiani Decem Rationes et alia Opuscula*, carefully edited (Antwerp, 1631); this included *Orations*, *Letters*, and the *Narratio Divortii Henrici VIII, Regis Angliae, ab Uzore et ab Ecclesia*, first printed by HARPESFIELD. There is no modern ed. or tr. The standard biography is SIMPSON, *Edmund Campion, Jesuit Protomartyr of England* (London, 1866; reissued, London, 1907). Accounts of Campion's life, labours, and death are in CHALLONER, *Memoirs*

of Missionary Priests; FOLEY, *Records of the English Province of the Society of Jesus*, and STANTON, *Menology of England and Wales*.

L.I. GUINEY

St. Edmund Rich

St. Edmund Rich

Archbishop of Canterbury, England, born 20 November, c. 1180, at Abingdon, six miles from Oxford; died 16 November, 1240, at Soissy, France. His early chronology is somewhat uncertain. His parents, Reinald (Reginald) and Mabel Rich, were remarkable for piety. It is said that his mother constantly wore hair-cloth, and attended almost every night at Matins in the abbey church. His father, even during the lifetime of his mother, entered the monastery of Eynsham in Oxfordshire. Edmund had two sisters and at least one brother. The two sisters became nuns at Catesby. From his earliest years he was taught by his mother to practise acts of penance, such as fasting on Saturdays on bread and water, and wearing a hair shirt. When old enough he was sent to study at Oxford. While there, the Child Christ appeared to him while he was walking alone in the fields. In memory of what passed between him and Christ on that occasion, he used every night to sign his forehead with the words "Jesus of Nazareth", a custom he recommended to others. Anxious to preserve purity of mind and body, Edmund made a vow of chastity, and as a pledge thereof he procured two rings; one he placed on the finger of Our Lady's statue in St. Mary's Oxford, the other he himself wore.

About 1195, in company with his brother Richard, he was sent to the schools of Paris. Thenceforward, for several years, his life was spent between Oxford and Paris. He taught with success in both universities. After having devoted himself to the study of theology, Edmund acquired fame as a preacher, and was commissioned to preach the Sixth Crusade in various parts of England. All this time his austerities were very great. Most of the night he spent in prayer, and the little sleep he allowed himself was taken without lying down. Though thus severe to himself, he was gentle and kind towards others, especially to the poor and sick, whom sometimes he personally attended. In 1222 Edmund became treasurer of Salisbury cathedral. Ten years later he was appointed to the Archbishopric of Canterbury by Gregory IX and consecrated 2 April, 1234.

Notwithstanding the gentleness of his disposition, he firmly defended the rights of Church and State against the exactions and usurpations of Henry III. He visited Rome in 1237 to plead his cause in person. This fearless policy brought him into conflict, not only with the king and his party, but also with the monks of Rochester and Canterbury. Determined opposition met him from all sides, and constant appeals were

carried to Rome over his head. In consequence, a papal legate was sent to England, but Henry adroitly managed the legate's authority to nullify Edmund's power. Unable to force the king to give over the control of vacant benefices, and determined not to countenance evil and injustice, Edmund saw he could not longer remain in England. In 1240 he retired to the Cistercian Abbey of Pontigny. Here he lived like a simple religious till the summer heat drove him to Soissy, where he died. Within six years he was canonized, and numerous miracles have been wrought at his shrine. Notwithstanding the devastation that from time to time has overtaken Pontigny, the body of St. Edmund is still venerated in its abbey church. Important relics of the saint are preserved at Westminster Cathedral; St. Edmund's College, Ware; Portsmouth Cathedral, and Erdington Abbey. The ancient proper Mass of St. Edmund, taken from the Sarum Missal, is used in the Diocese of Portsmouth, of which St. Edmund is patron. In September, 1874, 350 English pilgrims visited St. Edmund's shrine. The community, known as Fathers of St. Edmund, were forced to leave their home at Pontigny, by the Associations law. The "Speculum Ecclesiae", an ascetical treatise, and the "Provincial Constitutions" are the most important of St. Edmund's writings.

Besides the three ancient lives of St. Edmund by MATTHEW PARIS, ROGER BACON, and ROGER RICH, there is a fourth ascribed to BERTRAND OF PONTIGNY in MARTENE AND DURAND, *Thesaurus Anecdotorum*. For a complete account of the MSS. records, the reader is referred to WALLACE, *St. Edmund of Canterbury* (London, 1893), 1-18, and to DE PARAVICINI, *St. Edmund of Abingdon* (London, 1898), xiii-xlii; BUTLER, *Lives of the Saints*, 16th Nov.; S. Edmund Archp. of Canterbury (London, 1845) (Tractarian); WARD, *St. Edmund Archbp. of Canterbury* (London, 1903); ARCHER in *Dict. of Nat. Biog.*, s.v.

COLUMBA EDMONDS

St. Edmund the Martyr

St. Edmund the Martyr

King of East Anglia, born about 840; died at Hoxne, Suffolk, 20 November, 870. The earliest and most reliable accounts represent St. Edmund as descended from the preceding kings of East Anglia, though, according to later legends, he was born at Nuremberg (Germany), son to an otherwise unknown King Alcmund of Saxony. Though only about fifteen years old when crowned in 855, Edmund showed himself a model ruler from the first, anxious to treat all with equal justice, and closing his ears to flatterers and untrustworthy informers. In his eagerness for prayer he retired for a year to his royal tower at Hunstanton and learned the whole Psalter by heart, in order that he might afterwards recite it regularly. In 870 he bravely repulsed the two Danish

chiefs Hinguar and Hubba who had invaded his dominions. They soon returned with overwhelming numbers, and pressed terms upon him which as a Christian he felt bound to refuse. In his desire to avert a fruitless massacre, he disbanded his troops and himself retired towards Framlingham; on the way he fell into the hands of the invaders. Having loaded him with chains, his captors conducted him to Hinguar, whose impious demands he again rejected, declaring his religion dearer to him than his life. His martyrdom took place in 870 at Hoxne in Suffolk. After beating him with cudgels, the Danes tied him to a tree, and cruelly tore his flesh with whips. Throughout these tortures Edmund continued to call upon the name of Jesus, until at last, exasperated by his constancy, his enemies began to discharge arrows at him. This cruel sport was continued until his body had the appearance of a porcupine, when Hinguar commanded his head to be struck off. From his first burial-place at Hoxne his relics were removed in the tenth century to Beodricsworth, since called St. Edmundsbury, where arose the famous abbey of that name. His feast is observed 20 November, and he is represented in Christian art with sword and arrow, the instruments of his torture.

Eadmundi* (c. 1150); Tynemouth and Capgrave, *Nova Legenda Angliae*, ed. Horstman (Oxford, 1901); Butler, *Lives of the Saints* (Dublin, 1872); Mackinlay, *Saint Edmund King and Martyr* (London, 1893).

G.E. PHILLIPS

Education

Education

IN GENERAL

In the broadest sense, education includes all those experiences by which intelligence is developed, knowledge acquired, and character formed. In a narrower sense, it is the work done by certain agencies and institutions, the home and the school, for the express purpose of training immature minds. The child is born with latent capacities which must be developed so as to fit him for the activities and duties of life. The meaning of life, therefore, of its purposes and values as understood by the educator, primarily determines the nature of his work. Education aims at an *ideal*, and this in turn depends on the view that is taken of man and his destiny, of his relations to God, to his fellow-men, and to the physical world. The *content* of education is furnished by the previous acquisition of mankind in literature, art, and science, in moral, social, and religious principles. The inheritance, however, contains elements that differ greatly in value, both as mental possessions and as means of culture; hence a selection is necessary, and

this must be guided largely by the educational ideal. It will also be influenced by the consideration of the educative process. Teaching must be adapted to the needs of the developing mind, and the endeavour to make the adaption more thorough results in theories and methods which are, or should be, based on the findings of biology, physiology, and psychology.

The work of education begins normally in the home; but it is, for obvious reasons, continued in institutions where other teachers stand in place of the parents. To secure efficiency it is necessary that each school be properly organized, that the teachers be qualified and that the subjects of instruction be wisely chosen. Since the school, moreover, is so largely responsible for the intellectual and moral formation of those who will later, as members of society, be useful or harmful, there is evidently needed some higher direction than that of the individual teacher, in order that the purpose of education may be realized. Both the Church and the State, therefore, have interests to safeguard; education is to strive for the true ideal through the obvious that education at any given time expresses while, in its practical control, the existing relations between the temporal power and the spiritual assume concrete form. As, moreover, these ideas and relations have varied considerably in the course of time, it is quite intelligible that a solution of the central educational problems should be sought in history; and it is furthur beyond question that histoical study, in this as in other departments, has a manifold utility. But a mere recital of facts is of little avail unless certain fact of Christian revelation be given its due importance. It is needful, then, to distinguish the constant elements in education from those that are variable; the former including man's nature, destiny, and relations to God, the latter all those changes in theory, conduct of educational work. It is with the first aspect of the subject that the present article is mainly concerned; and from this standpoint education may be defined as that form of social activity whereby, under the direction of mature minds and by the use of adequate means, the physical, intellectual, and moral powers of the immature human being are so developed as to prepare him for the accomplishment of his lifework here and for the attainment of his eternal destiny. Neither this nor any other definition was formulated from the beginning. In primitive times the helplessness and needs of the child were so obvious that his elders by a natural impulse gave him a training in the rude arts that enabled him to procure the necessaries of life, while they taught him to proptitate the hidden powers in each object of nature, and handed on to him the tribal customs and traditions. But of education properly so called the savage knows nothing, and much less does he busy himself with theory or plan. Even civilized peoples carry on the work of education for a long time before they begin to reflect upon its meaning, and such reflection is guided by philosophical speculation and by established social, religious, and political institutions. Often, too, their theorizing is the workof exceptional

minds, and presents a higher ideal than might be inferred from their educational practice. Nevertheless, an account of what was done by the principal peoples of antiquity will prove useful by bringing out the profound modification which Christianity wrought.

ORIENTAL EDUCATION

The invention of writing was of the utmost importance for the developments of language and the keeping of records. The earliest texts, chiefly of a religious nature, became the sources of knowledge and the means of education. Such were in China the writings of Confucius, in India the Vedas, in Egypt the Book of the Dead, in Persia the Avesta. The main purpose in having these books studied by youth was to secure uniformity of thought and custom, and unvarying conformity with the past. In this respect Chinese education is typical. The sacred writings contained minute prescriptions for conduct in every circumstance and station of life. These the pupil was obliged to memorize in a purely mechanical fashion; whether he understood the words as he repeated them was quite indifferent. He simply stored his memory with a multitude of established forms and phrases, which subsequently he employed in the preparation of essays and in passing the governmental examinations. That he should learn to think for himself was of course out of the question.

With such a training, the development of free personality was impossible. In China, the family, with its sacred traditions and its ancestor-worship was controlled by the State; in Egypt by the priesthood; in India by the different castes. There was, doubtless, in the Oriental mind a consciousness of personality; but no effort was made to strengthen it and give it value. On the contrary, the Hindu philosophy, which regarded knowledge as the means of redemption from the miseries of life, placed that redemption itself in nirvana, the extinction of the individual through absorption into the being of the world. The position of women was, in general, a degraded one. Though the early training of the child devolved upon the mother, her responsibility brought with it no dignity. But little provision was made for the education of girls; their only vocation was to marry, bear children, and render service to the head of the family.

In view of these facts, it cannot be said that education as the Western world conceives it owes any great debt to the East. It is true that some of the sciences, mathematics, astronomy, and chronology, and some of the arts, as sculpture and architecture, were carried to a certain degree of perfection; but the very success of Oriental ability and skill in these lines only emphasizes by contrast the deficiencies of Oriental education. Even in the sphere of morality the same antagonism appears between precept and practice. It cannot and need not be denied that many of the sayings, e.g. of Confucius, evince a high ideal of virtue, while some of the Hindu proverbs, such as those of the "Pantscha-tantra", are full of practical wisdom. Yet these facts only make it more

difficult to answer the question: Why was the actual living of these people so far removed from the formally accepted standards of virtue? Nevertheless, Oriental education has a peculiar significance; it shows quite plainly the consequences of sacrificing the individual to the interests of human institutions, and of reducing education to a machine like process, the aim of which is to mould all minds upon one unchanging pattern; and it further shows how little can be accomplished for real education by despotic authority, which demands, and is satisfied with, an outward observance of custom and law. (See Davidson. *A History of Education*, New York, 1901.)

THE GREEKS

If the education of the Oriental peoples was stationary, that of the Greeks exhibits a progressive development which passes from one extreme to another through a variety of movements and reactions, of ideals and practice. What remains constant throughout is the idea that the purpose of education is to train youth for citizenship. This, however, was conceived, and its realization attempted, in different ways by the several City-States. In Sparta, the child, according to the Code of Lycurgus, was the property of the State. From his seventh year onward he received a public training whose one object was to make him a soldier, by developing physical strength, courage, self control, and obedience to law. It was a hard training in gymnastic exercises, with little attention to the intellectual side and less to the aesthetic; even music and dancing took on a military character. Girls were subjected to the same severe discipline, not so much to emphasize the equality of the sexes as to train the sturdy mothers of a warrior race.

The ideal of Athenian education was the completely developed man. Beauty of mind and body, the cultivation of every inborn faculty and energy, harmony between thought and life, decorum, temperance, and regularity -- such were the results aimed at in the home and in the school, in social intercourse, and in civic relation. "We are lovers of the beautiful", said Pericles, "yet simple in our tastes, and we cultivate the mind without the loss of manliness" (Thucydides, II, 40). The means of culture were music and gymnastics, the former including history, poetry, the drama, oratory, and science, along with music in the narrower sense; while the latter comprised games, athletic exercises, and the training for military duty. That music was no mere "accomplishment" and that gymnastics had a higher aim than bodily strength or skill is evident from what Plato tells us in the *Protagoras*. The Greeks indeed laid stress on courage, temperances, and obedience to law; and if their theoretical disquisitions could be taken as fair accounts of their actual practice, it would be difficult to find, among the products of human thinking, a more exalted ideal. The essential weakness of their moral education was the failure to provide adequate sanction for the principles they formulated and for the counsels they gave to youth. The practice of religion, whether in public services or in household worship exerted but little influence upon the formation of

character. The Greek deities, after all, were no models for imitation; some of them could scarcely have been objects of reverence, since they were endowed with the weaknesses and passions of men. Religion itself was mechanical and external; it did not touch conscience nor awaken the sense of sin. As to the future life, the Greeks believed in the immortality of the soul; but this belief had little or no practical significance. Thus the motive for virtuous action was found, not in respect for Divine law nor in the hope of eternal reward, but simply in the desire to temper in due proportion the elements of human nature. Virtue is not self-repression for the sake of duty, but, as Plato says, "a kind of health, and beauty and good habit of the soul"; while vice is "a disease and deformity and sickness of it." The just man

will so regulate his own character as to be on good terms with himself, and to set those three principles {reasons, passion, and desire} in tune together, as if they were verily three chords of a harmony, a higher, and a lower, and a middle, and whatever may lie between these; and after he had bound all these together and reduced the many elements of his nature to a real unity as a temperate and duly harmonized man, he will then at length proceed to do whatever he may have to do. (Republic, IV, 443)

This conception of virtue as a self-balancing was closely bound up with that idea of personal worth which has already been mentioned as the central element in Greek life and education. But the personality referred to was not that of man for the sake of his humanity, nor even that of the Greek for the sake of his nationality; it was the personality of the free citizen, and from citizenship the artisan and the slaves were excluded. The mechanical arts were held in bad repute; and Aristotle declares that "they render the body and soul or intellect of free persons unfit for the exercise and practice of virtue" (Politics, V, 1337). A still more serious limitation, affecting not only their concept of human dignity, but their regard for human life as well, consisted in the exposure of children. This was practised at Sparta by the public authority, which destroyed the child that was unfit for the service of the State; while at Athens the fate of his offspring was committed to the father and might be decided in accordance with purely personal interests. The mother's position was not much better than it had been in the Orient. Women were generally regarded as inferior beings, "impotent for good, but clever contrivers of all evil" (Euripides, *Medea*, 406). At best she was a means to an end, the bearing of children and the care of the household; her education consequently was of the scantiest sort. The only exceptions were the *hetaerae*, i.e. the women who were outside the home circle and who with greater freedom of living combined higher culture than the legitimate wife could hope for. Under such circumstances marriage implied

for woman a lowering of personal worth that was in marked contrast with the ideals set up for the education of men.

These ideals, again, underwent a decided change during the fifth century B.C. In one respect at least it was a change for the better; it extended the rights of citizenship. The constitution of Solon was set aside and that of Clisthenes adopted in its stead (509 B.C.) The democratic character of the latter, with the increase in prosperity at home and the widening of foreign relations, afforded new opportunities for individual ability and endeavour. This heightened activity, however, was not put forth in behalf of the common good, but rather for the advancement of personal interests. At the same time morality was deprived of even the outward support it had formerly drawn from religion; philosophy gave way to scepticism; and education, while it became more intellectual, laid emphasis on form rather than on content. The most influential teachers were the Sophists, who supplied the growing demand for instruction in the art of public discussion and offered information on every sort of subject. Developing in practical directions the principle that "man is the measure of all things", they carried individualism to the extreme of subjectivism alike in the sphere of speculative thought and in that of moral conduct. The purposes of education were correspondingly modified, and new problems arose. Now that the old standards and basis of morality had been rejected, the main question was to replace them by others in which due allowance would be made on the one hand for individuality and on the other for social needs. The answer of Socrates was: "Know thyself" and "Knowledge is virtue", i.e. a knowledge drawn from personal experience, yet possessing universal validity; and the means prescribed by him for obtaining such knowledge was his *maieutics*, i.e. the art of giving birth to ideas through the method of question and answer, by which he developed the power of thinking. As an intellectual discipline, this scheme had undoubted value; but it left unsolved the chief problem; how is knowledge, even of the highest kind, to be translated into action? Plato offered a twofold solution. In the *Republic*, setting out from his general theory that the idea alone is real, and that the good of each thing consists in harmony with the idea when it originated, he reaches the conclusion that knowledge consists in the perception of this harmony. The aim of education, therefore, is to develop knowledge of the good. So far, this scheme contains little more promise of practical results than that of Socrates. But Plato adds that society is to be ruled by those who attain to this knowledge, i.e. by the philosophers; the other two classes, soldiers, and artisans, are subordinate, yet each individual being assigned to the class for which his abilities fit him, reaches the highest self-development and contributes his share to the social weal. In the *Laws*, Plato attempts to revise and combine certain elements of the Spartan and of the Athenian system but this reactionary scheme met with no success.

This problem, finally, was taken up by Aristotle in the *Ethics* and the *Politics*. As in his philosophy, so in his educational theory, he departs from Plato's teaching. The goal for the individual as well as for society is happiness: "What we have to aim at is for the happiness of each citizen, and happiness consists in a complete activity and practice of virtue" (*Politics*, IV). More precisely, happiness is "the conscious activity of the highest part of man according to the law of his own excellence, not unaccompanied by adequate, external conditions." Merely to know the good does not constitute virtue; this knowledge must issue in practice the goodness of the intellect (knowledge of universal truth) must be combined with goodness of action. The three things which make men good and virtuous -- nature, habit, and reason --

must be in harmony with one another (for they do not always agree); men do many things against habit and nature, if reason persuades them that they ought. We have already determined what natures are likely to be most easily moulded by the hands of the legislator. All else is the work of education; we learn some things by habit and some by instruction. (*Politics*, Bk. VII)

Education, however, must always be adapted to the peculiar character of the State: "The citizen should be moulded to suit the form of government under which he lives" (*ibid.*, VIII). And again, "It is right that the citizens should possess a capacity for affairs and for war, but still more for the enjoyment of peace or leisure; right that they should be capable of such actions as are indispensable and salutary, but still more of such as are moral *per se*. It is with a view to these objects, then, that they should be educated while they are still children, and at all other ages, till they pass beyond the need of education" (*ibid.*, IV). "Neither must we suppose that any one of the citizens belongs to himself, for they all belong to the State, and are each of them a part of the State, and the care of each part is inseparable from the care of the whole" (*ibid.*, VII).

In the theories of Plato and Aristotle are found the highest reaches of hellenic thought regarding the purpose and nature of education. Each of these great thinkers established schools of philosophy, and each has profoundly affected the thought of all subsequent time, yet neither succeeded in providing an education sound and permanent enough to avert the moral and political downfall of the nation. The diffusion of Greek thought and culture throughout the world by conquest and colonization was no remedy for the evils which sprang from an exaggerated individualism. Once the idea was accepted that each man is his own standard of conduct, neither brilliancy of literary production nor fineness of philosophic speculation could prevent the decay of patriotism, and of a virtue which had never looked higher than the State for its sanction. Aristotle himself, at the close of his *Ethics*, points out the radical difficulty:

Now if arguments and theories were able by themselves to make people good, they would, in the words of Theognis, be entitled to receive high and great rewards, and it is with theories that we should have to provide ourselves. But the truth apparently is that, though they are strong enough to encourage and stimulate young men of liberal minds, though they are able to inspire with goodness a character that is naturally noble and sincerely loves the beautiful, they are incapable of converting the mass of men to goodness and beauty of character.

No such "conversion" was aimed at by the Sophists. Appealing to the natural tendencies of the individual, they developed a spirit of selfishness which in turn broke out in discord, thus opening the way for the conquest of Greece by Roman arms.

THE ROMANS

In striking contrast with the Greek character, that of the Romans was practical, utilitarian, grave, austere. Their religion was serious, and it permeated their whole life, hallowing all its relations. The family, especially, was far more sacred than in Sparta or Athens, and the position of woman as wife and mother more exalted and influential. Still, as with the Greeks, the power of the father over the life of his child -- *patria potestas* -- was absolute, and, in the earlier period at least, the exposure of children was a common practice. In fact the laws of the Twelve Tables provided for the immediate destruction of deformed offspring and gave the father, during the whole life of his children, the right to imprison, sell, or slay them. Subsequently, however, a check was placed on such practices. The ideal at which the Roman aimed was neither harmony nor happiness, but the performance of duty and the maintenance of his rights. Yet this ideal was to be realized through service to the State. Deep as was the family feeling, it was always subordinate to devotion to the public weal. "Parents are dear," said Cicero, "and children and kindred, but all loves are bound up in the love of our common country" (*De Officiis*, I, 17). Education therefore was essentially a preparation for civic duty. "The children of the Romans are brought up that they may one day be able to be of service to the fatherland, and one must accordingly instruct them in the customs of the State and in the institutions of their ancestors. The fatherland has produced and brought us up that we may devote to its use the finest capacities of our mind, talent, and understanding. Therefore we must learn those arts whereby we may be of greatest service to the State; for that I hold to be the highest wisdom and virtue."

These words express, at any rate, the spirit of the early Roman education. The home was the early school, and the parents the only teachers. Of scientific and aesthetic training there was little or none. To learn the Laws of the Twelve Tables, to become familiar with the lives of the men who had made Rome great and to copy the virtues

which he saw in the father were the chief endeavour of the boy and youth. Thus the moral element predominated, and virtues of a practical sort were inculcated: first of all *pietas*, obedience to parents and to the gods: then prudence, fair dealing, courage, reverence, firmness, and earnestness or philosophical reasoning, but through the imitation of worthy models and, as far as possible, of living and concrete examples. *Vitæ discimus*, "We learn for life," said Seneca; and this phrase sums up the whole purpose of Roman education. In the course of time, elementary schools (*ludi*) were opened, but they were conducted by private teachers and were supplemented to the home instruction. About the middle of the third century B.C. foreign influence began to make themselves felt. The works of the Greeks translated into Latin, Greek teachers were introduced and schools established in which the educational characteristics of the Greeks reappeared. Under the direction of the *litteratus* and the *grammaticus* education took on a literary character, while in the school of the *rhetor* the art of oratory was carefully cultivated. The importance which the Romans attached to eloquence is clearly shown by Cicero in his "De Oratore" and by Quintilian in his "Institutes"; to produce the orator became eventually the chief end of education. Quintilian's work, moreover, is the principal contribution to educational theory produced in Rome. The hellenizing process was a gradual one. The vigorous Roman character yielded but slowly to the intellectualism of the Greeks, and when the latter finally triumphed, far-reaching changes had come about in Roman society government, and life. Whatever the causes of decline -- political, economic, or moral -- they could not be stayed by the imported refinement of Greek thought and practice. Nevertheless, pagan education as a whole, with its ideals, successes, and failures, has a profound significance. It was the practical, that the world has known. It pursued in turn the ideals that appeal most strongly to the human mind. It engaged the thought of the greatest philosophers and the action of the wisest legislators. Art, science, and literature were placed at its service, and the mighty influence of the State was exerted in its behalf. In itself, therefore, and in its results, it shows how much and how little human reason can accomplish when it seeks no guidance higher than itself and strives for no purposes other than those which find, or may find, their realization in the present phase of existence.

THE JEWS

Among the pre-Christian peoples the Jews occupy a unique position. As the recipients and custodians of Divine revelation, their conception of life and morality were far above those of the Gentiles. God manifested Himself to them directly as a Person, a Spirit, and an ethical Being, guiding them by His providence, making known to them His will, and prescribing the minutest details of life and religious practice. Throughout the Old Testament, God appears as the teacher of His chosen people. He sets before them a standard of righteousness which in none other than Himself: "You shall be

holy, because I am holy" (Levit., xi, 46). Through Moses and the Prophets He gives them His Commandments and the promises of a Messiah to come. But He also placed upon them the duty of instructing their children.

Hear, O Israel, the Lord our God is one Lord. Thou shalt love the Lord thy God with thy whole heart, and with thy whole soul, and with thy whole strength. And these words which I command thee this day, shall be in thy heart: and thou shalt tell them to thy children, and thou shalt meditate upon them sitting in thy house, and walking on thy journey, sleeping and rising. (Deut., vi, 4-7)

In accordance with this injunction, education, at least in the earlier period, was given chiefly in the home. Jewish family life, indeed, far surpassed that of the Gentiles in the purity of its relations, in the position it secured to woman, and in the care which it bestowed on children, who were regarded as a blessing vouchsafed by God and destined for His service by fidelity to the Divine law. An important function of the synagogue also was the instruction of youth, which was committed to the scribes and the doctors. Schools, as such, came into existence only in the later period, and even then the teaching was permeated by religion. Though the Old Testament, contains no theory of education in the stricter sense, it abounds in maxims and principles which are all the more weighty because they are inspired by Divine wisdom and because they have a practical bearing upon life. God Himself showed the dignity of the teacher's office when he declared: "They that are learned shall shine as the brightness of the firmament: and they that instruct many to justice, as stars for all eternity" (Dan., xii, 3). In the light, however, of a more perfect revelation, it is clear that God's dealings with Israel had an ultimate purpose which was to be realized "in the fullness of time." Not only the utterances of the Prophets, but many signal events in the history of the Jews and many of their ritual observances were types of the Messiah; as St. Paul says, "All these things happened to them in figure" (I Cor., x, 11), and "The law was our pedagogue in Christ" (Gal., iii, 24). As the Supreme Teacher of mankind, God, while imparting to them the truth which they presently needed, also prepared the way for the greater truths of the Gospel.

CHRISTIAN EDUCATION

As in many other respects so for the work of education, the advent of Christianity is the most important epoch in the history of mankind. Not only does the Christian conception of life differ radically from the pagan view, not only does the Christian teaching impart a new sort of knowledge and lay down a new principle of action, but Christianity, moreover, supplies the effectual means of making its ideals actual and of

carrying its precepts into practice. Through all vicissitudes of conflict and adjustment, of changing civilizations and varying opinions, in spite even of the shortcomings of its own adherents, Christianity has steadfastly held up before men the life and the lessons of its Divine Founder.

Jesus Christ as Teacher

"God who, at sundry-times and in divers manners, spoke in times past to the fathers by the prophets, last of all, in these days hath spoken to us by his Son" (Heb., i, 1-2). This communication through the God-Man was to reveal the true way of living: "The grace of God our Saviour hath appeared to all men; instructing us, that, denying ungodliness and worldly desires, we should live soberly, and justly, and godly in this world, looking for the blessed hope and coming of the great God and our Saviour Jesus Christ" (Titus, ii 11, 12). Of Himself and His mission Christ declared, "I am come a light into the world; that whosoever believeth in me, may not remain in darkness" (John, xii, 46); and again, "For this was I born, and for this came I into the world; that I should give testimony to the truth" (John, xviii, 37). The knowledge which He came to impart was no mere intellectual possession or theory: "I am come that they may have life, and may have it more abundantly" (John, x, 10). He taught therefore, as one "having authority"; He insisted that His heirs should believe the truths which He taught, even though these might seem to be "hard sayings." His doctrines, indeed, made no appeal either to pride of intellect or to selfishness or to passion. For the most part, as in the Sermon on the Mount, they were dramatically opposed to the maxims that had obtained in the pagan world. They were, in the highest sense, supernatural, not only in proposing eternal life as the ultimate goal of man's existence and action, but also in enjoining the denial of self as the chief requisite for attaining that destiny. Service to the neighbor was insisted upon, but this was to be rendered in the spirit of love, the new commandments which Christ gave (John, xiii, 34). Faithfulness also to civic duty was required, but the sanction which imparted force to such obligation was man's elevation to a higher citizenship in the Kingdom of God. To strive after this and to realize it in one's earthly life, so far as possible, was the ideal to which every other good was subordinate; "Seek ye first the kingdom of God, and his justice, and all these things shall be added unto you" (Matt., vi, 33).

Truths of this kind, so far removed from the natural tendencies of human thought and desire, could be imparted only by one who embodied in himself all the qualifications of a perfect teacher. The philosophers no doubt might, and did, formulate beautiful theories regarding knowledge and virtue; but Christ alone could say to His disciples: "I am the way, the truth, and the life" (John, xiv, 6). And whatever worth they attached in theory to personality was of far less ideal in Christ's own Person. He could thus rightfully appeal to that imitative tendency which is so deeply rooted in man's

nature and from which so much is expected in modern education. The axiom, also, that we learn by doing and that knowledge gets its full value only when it issues in action, finds its best exemplification in Christ's dealings with His disciples. He "began to do and to teach" (Acts, i, 1). In His miracles he gave evidence of His power over all nature and therefore of His authority to require faith in His words: "The works themselves which I do give testimony of me, that the Father hath sent me" (John, v, 36). To His disciples, when they hesitated or were slow to realize that the Father abided in Him, the answer was given: "Otherwise believe for the very works' sake" (xiv, 12). What He demanded in turn was no mere outward profession of faith or loyalty: "Not every one that saith to me Lord, Lord, shall enter into the kingdom of heaven; but he that doth the will of my Father" (Matt., vii, 21).

The necessity of manifesting belief through action is constantly pointed out both in the literal teaching of Christ and in His parables. These, again, illustrate His practical wisdom as a teacher. They were drawn from objects and circumstances with which His hearers were familiar. In each instance they were adapted to the manner of thinking suggested by the local surroundings and the customs of the people; and they were often called forth by an incident that seemed unimportant or by a question which was asked now by His followers and again by His tireless enemies. Thus the simplest things of nature -- the vine, the lily, the fig-tree, the birds of the air, and the grass of the field -- were made to yield lessons of the deepest moral significance. His aim was not to adorn His own discourse, but rather to bring its content into the minds of his hearers more vividly, and to secure for it greater permanence by associating in their thought some supernatural truth with the facts of daily experience. Sensory perception, memory, and imagination were thus developed to form a mental setting for the great truths of the Kingdom. The same principle found its appreciation in the institution of the sacraments whereby natural elements are made the outward signs of inward grace. As St. John Chrysostom aptly says,

If you were incorporeal, he would have bestowed on you incorporeal gifts in their bare reality; but because the soul is bound up with the body, he gives you intelligible things under sensible forms. (Homilia, lx, as *populum Antioch*)

In fact the whole teaching of Christ is the clearest proof of the principle that education must adapt itself in method and practice to the needs of those who are to be taught. In accordance with this principle He prepared the minds of His followers beforehand for the institution of the Holy Eucharist for His own death, and for the coming of the Holy Ghost (John, vi, xiv, xv); and he even reserved certain truths to be made known by the Paraclete: "I have yet many things to say to you: but you cannot bear them now.

But when he, the Spirit of truth, is come, he will teach you all truth" (xvi, 12, 13). Thus the completion of His work as a teacher is left not to human conjecture or speculation, nor to the theories of philosophical schools, but to the Spirit of God Himself. This of course was best realized by those who were nearest to Him; yet even those of the Jews who were not among the Apostles, but were, like Nicodemus, disposed to judge fairly, confessed His superiority: "We know that thou art come a teacher from God; for no man can do these signs which thou dost, unless God be with him" (John, iii, 2).

The Aim of Christian Education

Had Christ's mission ended when He quitted the earth, He would still have been in word and work the ideal teacher, and would have influenced for all time the education of mankind so far as its ultimate aims and basic principles are concerned. But as a matter of fact, He made ample provision for the perpetuation of His work by training a select body of men who for three years were constantly under His direction and were thoroughly imbued with His spirit. To these Apostles, moreover He gave the command: "Going therefore, teach ye all nations . . . and behold I am with you all days, even to the consummation of the world" (Matt., xxvii, 19, 20). These words are the charter of the Christian Church as a teaching institution. While they refer directly to the doctrine of salvation, and therefore to the imparting of religious truth, they nevertheless, or rather by the very nature of that truth and its consequences for life, carry with them the obligation of insisting on certain principles and maintaining certain characteristics which have a decisive bearing on all educational problems.

1. The truth of Christianity is to be made known to all men. It is not confined to any one race or nation or class, nor is it to be the exclusive possession of highly gifted minds. This characteristic of *universality* is in plain contrast with the highest conceptions of the pagan world. The cultured Greek had only contempt for the barbarian, and the Roman looked upon outside nations as subjects to be governed rather than as people to be taught. But at Athens also and at Rome there was the distinction between free citizens and slaves, in consequence of which the latter were excluded from the benefits of education. As against these narrow limitations Christ charged His apostles to "teach all men"; and St. Paul, in the same spirit, professes himself a debtor to all men, Greeks and barbarians, the wise and the unwise alike. All, in fact, were to be dealt with as children of the same Heavenly Father and heirs of the Kingdom of God. In respect of these supernatural prerogatives, the distinctions which had hitherto prevailed were set aside: Christianity appeared as one vast school with mankind at large for its disciples.

2. The commission given to the Apostles was not to expire with them; it was to remain in force "all days, even to the consummation of the world." *Perpetuity*, therefore, is an essential feature in the educational work of Christianity. The institution of pagan-

ism had indeed flourished and advanced from phase to phase of development, but they did not contain the element of enduring vitality. In the higher departments of learning, as in philosophy, school had followed school into vigour and into decay. And in education itself, one ideal after another had been put forward only to be displaced. Christianity, on the contrary, while it could never become a rigid system, held up to mankind certain unchangeable truths which should serve as criteria for determining the value of every fundamental theory of life and of education. By insisting, especially, that man's destiny was to be attained, not in any form of temporal service or success but in union with God, it proposed an ideal which should be valid for all time and amid all the variations of human thought and endeavour. That such changes would inevitably come to pass, Christ, without doubt, foresaw. In view of these, a merely human teacher would have provided for the stability of his work by devices which would, if successful, have attested his foresight, or shrewdness, or knowledge of human nature. But Christ's guarantee to the Apostles is at once simpler and surer: "Behold I am with you all days." The task of instructing the world in Christian truth would have been impossible but for this permanent abiding of Christ with His appointed teachers. On the other hand, once the force of His promise is realized, the significance of Christianity as a perpetual institution becomes evident: it means that Christ, Himself through a visible agency was to continue for all time the work He began during His earthly life as Teacher of the human race.

3. It has already been pointed out that some of the pagan peoples, and notably the Greeks, had attained a very high conception of *personality*; and it has also been shown that this conception was by no means perfect. The teaching of Christianity in this respect is so far superior to any other that if a single element could be designated as fundamental in Christian education it would be the emphasis which it lays on the worth of the individual. In the first place, Christianity had its origin, not in any abstract speculation as to goodness or virtue, but in the actual, concrete life of a Person who was absolutely perfect. It was not, then, obliged to cast about for the ideal man, or to present a theory as to what that ideal might possibly be: it passed the most exalted ideas of human wisdom. In Christ first appeared the full dignity of human nature through its elevation personal union with the Word of God; and in Him, as never before or since, were manifest those traits which furnish the noblest models for imitation.

Christianity, furthermore, elevated human personality by the value it set upon each human soul as created by God and destined for eternal life. The State is no longer the supreme arbiter, nor is service to the public weal the ultimate standard. These, it is true within their legitimate sphere have just claims upon the individual. Christianity by no means teaches that such claims can be disregarded or the corresponding duties neglected, but rather that the discharge of all social and civic obligations will be more

thorough when subordinated to, and inspired by, fidelity in the duties that man owes to God. While the value of personality is thus enhanced, the sense of responsibility is correspondingly increased; so that the freer development of the person is not allowed to culminate in selfishness nor in that extreme individualism which is a threat to social organization.

4. From these principles Christianity drew consequences which were totally at variance with the thought and practice of paganism. The position of woman was lifted at once to a higher plane; she ceased to be a chattel, or a mere instrument of passion, and became the equal of man, with the same personal worth and the same eternal destiny. Marriage was no longer a union entered into through caprice or convention, but an indissoluble bond involving mutual rights and duties. Moreover, it was raised to the dignity of a sacrament, which not only sanctified the marital relation and its purposes, but also conferred the graces needful for the due fulfilment of its obligations. The whole meaning of the family was thus transformed. Parental authority was indeed maintained, but such an exercise of the *patria potestas* as the destruction or the exposure of children could not have been tolerated once it was realized that the child's personality also is sacred, and that parents are responsible not simply to the State, but also to God, for the proper education of their offspring. Christianity, moreover, laid upon the child the duty of respecting and obeying his parents, not out of servile fear or hard necessity, but through a spirit of reverence and filial love. The ties of home-life were thereby strengthened, and the whole work of education took on a new character because it was consecrated in its very source by religion.

5. In respect of its content Christianity opened up to the human mind wide realms of truth which unaided reason could not possibly have attained, and which nevertheless are of far deeper import for life than the most learned speculations of pagan thought. Upon those truths, also, which the philosophers had but vaguely discerned, or about which they had remained in doubt, it shed a new light. There could be no further questioning, for the Christian, as to the existence of a personal God, the reality of His providence, the immortality of the soul, the freedom of the will, and the resulting accountability of man to Divine Justice. Above all, the nature of the moral order was set forth in unmistakable terms. Christianity insisted that morality was not mere outward conformity to custom or law, but the inner rectitude of the will, that aesthetic refinement was of far less consequence than purity of heart, and that love of the neighbour as proven in deed, not personal gain or advantage, was the true norm of human relationships. That such a conception of life, with its emphasis on really spiritual aims, must lead to the formation of educational ideals unknown to the pagan world, is obvious. But on the other hand it would be wrong to infer that Christianity, in its "other worldliness", reduces or neglects the values of the present life. What it consistently

maintains is, that life here gets its highest value by serving as a preparation for the life to come. The question is not whether one should live now without any regard to the future or look forward to the future with no concern for the present; but rather how one should profit by the opportunities of this life in such wise as to secure the other. The problem, then, is one of establishing proportions, i.e. of determining values according to the standard of man's eternal destiny. When education is defined as "preparation for complete living" (Herbert Spencer), the Christian can take no objection to the words as they stand; but he will insist that no living can be "complete" which leaves out of consideration the ultimate purpose of life, and hence that no education really "prepares" which thwarts that purpose or sets it aside. It is just this completeness -- in teaching all men in harmonizing all truths, in elevating all relationships, and in leading the individual soul back to the Creator -- that forms the essential characteristic of Christianity as an educational influence.

THE EDUCATIONAL WORK OF THE CHURCH

Next in importance to Christ's personal teaching was the establishment of a teaching body whose mission was identical with His own: "As the Father hath sent me, I also send you" (John, xx, 21); and "He that heareth you, heareth me" (Luke, x, 16). He was not content with proclaiming once for all the truths of the Gospel, nor did He leave its wider dissemination to individual enthusiasm or initiative; He founded a Church to carry on His work. The spread of His doctrine was entrusted, not to books, nor to schools of philosophy, nor to the governments of the world, but to an organization that spoke in His name and with His authority. No other body of teachers ever undertook so vast a work, and no other ever accomplished so much for education in the highest sense. Apart from the preaching of the Apostles, the earliest form of Christian instruction was that given to the catechumens (q.v.) in preparation for baptism. Its object was twofold: to impart a knowledge of Christian truth, and to train the candidate in the practice of religion. It was conducted by the bishop and, as the number of catechumens increased, by priests, deacons, and other clerics. Until the third century this mode of instruction was an important adjunct to the Apostolate; but in the fifth and sixth centuries it was gradually replaced by private instruction of the converts, who were then less numerous, and by the training given in other schools to those who had been baptized in infancy. The catechumenal schools, however, gave expression to the spirit which was to animate all subsequent Christian education: they were open to every one who accepted the faith, and they united religious instruction with moral discipline. The "catechetical" schools, also under the bishop's supervision, prepared young clerics for the priesthood. The courses of study included philosophy and theology, and naturally took on an apologetic character in defense of Christian truth against

the attacks of pagan learning. One of the oldest of these schools was at the Lateran in Rome; the most famous was that of Alexandria (see CHRISTIAN DOCTRINE).

In addition to this formal instruction, the Church from the beginning carried on through her worship and educational work embodying the deepest and soundest psychological principles. The ritual at first was of necessity simple; but as the Church was allowed a larger freedom, and her worship passed from the catacombs to the basilica, stater forms were introduced; yet their essential purpose was the same. The Mass, which has always been the central liturgical function, appeals to the mind through the medium of sense. It combines light and colour and sound, the action of the priest, and the dramatic movement that fills the sanctuary, especially in the more solemn service. Beneath these outward forms lies the inner meaning. The altar itself, in every detail, is full of a symbolism that brings vividly to mind the life and personality of Christ, the work of redemption, and the enduring sacrifice of the Cross. In due proportion, each item of the liturgy conveys a lesson through eye and ear to the highest faculties of the soul. Sense, memory, imagination, and feeling are thus aroused, not simply as aesthetic activities, but as a support of intellect and will which thereupon issue in adoration and thanksgiving for the "mystery of faith." On the other hand, the liturgy has always included in its purpose the participation of the faithful, and hence it prescribes the response of the people to the prayers at the altar, the chanting of certain portions of the service, bodily postures and movements in keeping with the various phases of the sacred rite. The faithful are not merely bystanders or onlookers; they are not to maintain a passive, receptive attitude, but rather to give active expression to the religious thought and feeling aroused in them. This is especially evident in the sacramental system. While each of the sacraments is a sign to be perceived, it is also a source of grace to be received; and the reception involves in each case a series of actions which manifest the faith and disposition of the recipient. Moreover, each sacrament is adapted to some particular need, and the whole system for sacraments, from baptism to extreme unction, builds up the spiritual life by processes of cleansing, strengthening, nourishing, and healing, which parallel the stage and requirements of organic growth.

In a larger way, also, the liturgical year, as it commemorates the principal events in the life of Christ, brings into Christian worship a variety which affects to some extent both the details of the liturgy itself and the religious feelings which it inspires -- from the joy of Christmas to the triumph of Easter and Pentecost. For the due observance of the greater festivals the Church provides, as in Advent and Lent, by seasons of preparation. The Old Law with its types foreshadowed the New; the Baptist announce the Messiah; Christ himself prepared His disciples beforehand for the mystery of the Eucharist, for His death, and for the coming of the Holy Ghost. The Church, following the same practice arouses in the mind of the faithful those thoughts and feelings which

form an apperceptive preparation for the central mysteries of faith and their proper observance at appointed times. Along with these greater solemnities come year by year the commemorations of the Christian heroes, the men and women who have walked in the footsteps of Christ, laboured for the spread of His kingdom, or even shed their blood for His sake. These are held up as models to be imitated, as realizations more or less perfect of the sublime ideal which is Christ Himself. And among the saints the foremost place is given to Mary the Mother of Christ, the ideal of Christian womanhood, to whom the Son of God was "subject" in the home at Nazareth. Each festival in her honour is at once an exhortation to copy her virtues and an evidence of the high station to which woman was raised by Christianity. The liturgy, then, is an application on a large scale of those principles which underlie all real teaching -- appeal to the senses, association, apperception, expression, and imitation. The Church did not begin by theorizing about these, nor did she wait for a psychological analysis to determine their value. Instructed by her founder, she simply incorporated in her liturgy those elements which were best fitted to teach men the truth and lead them to act in conformity with the Gospel. It is none the less significant that modern education is adopting for its own purposes, i.e. the teaching of secular subjects, the psychological principles which the Church from the beginning has put into practice.

While the Church, in her interior life and in the execution of her mission, gave proof of her vitality and of her ability to teach mankind, she necessarily came into contact with influences and practices which were the legacy of paganism. In point of religious belief there was, of course, a clean breach between the polytheism of Athens and Rome and the doctrines of Christianity. But philosophy and literature were factors which had to be counted with as well as the educational system, which was still largely under pagan control. Schools had been opened by converts who were imbued with the ideas of Greek philosophy -- by Justin at Rome, and Aristides at Athens; while, at Alexandria, Clement and Origen enjoyed the highest repute. These men regarded philosophy as a means of guiding reason to faith, and of defending that faith against the attacks of paganism. Others again, like Tertullian, condemned philosophy outright as something with which the Christian could have nothing to do. In regard to the pagan classics the conflict of opinion was even sharper. Some of the greatest theologians and Fathers, like St. Basil, St. Gregory Nazianzen, and St. Gregory of Nyssa, had studied the classics under pagan masters and were therefore in favour of sending Christian youths to non-Christian schools on the ground that literary studies would enable them the better to defend their religion. At the same time these Fathers would not permit a Christian to teach in such schools lest he should be obliged to take part in idolatrous practices. Tertullian (*de Idolatriâ*, c. x) insists on the same distinction, the teacher, he says, by reason of his authority, becomes in a way the "catechist of demons"; the pupil,

imbued with Christian faith, profits by the letter of classical instruction, but rejects its false doctrine and holds aloof from the superstitious practices which the teacher can hardly avoid. Such a distinction was naturally the source of difficulties and gave rise to much discussion. The situation was not remedied by the edict of Julian the Apostate, forbidding the Christians to teach; though this called forth some protests and suggested the creation of a Christian literature based on classical models of style, nothing decisive resulted. On the other hand, fear of the corrupting influence of pagan literature had more and more alienated Christians from such studies; and it is not surprising to find among the opponents of the classics such men as St John Chrysostom, St. Ambrose, St Jerome, and St. Augustine. Though they had received a thorough classical education, and though they appreciated fully the worth of the pagan authors, their final attitude was adverse to the study of pagan literature. Apart from many controverted points in this subject, it is clear that the Fathers, at a time when the environment of the Church was still pagan, were far more anxious for the purity of faith and morals than for the cultivation of literature. In later ages, as the danger of contamination grew less, classical studies were revived and encouraged by the Church; but their value has more than once been questioned (see Lalanne, *Influence des Pères de l'Église sur l'éducation publique*, Paris 1850).

Meanwhile the work of education was not neglected. If the Empire gave way before barbarian invasion, the Church found a new field of activity among the vigorous races of the North. To these she brought not only Christianity and civilization, but also the best elements of classical culture. Through her missionaries she became the teacher of Germany and France, of England and Ireland. The task was a difficult one, and its accomplishment was marked by many vicissitudes of temporary failure and hard-won success. At times, indeed, it would seem that the desire for learning had quite disappeared even among those for whom the acquisition of knowledge was a sacred obligation. Yet these drawbacks only served to stimulate the zeal of ecclesiastical and civil rulers in behalf of a more thorough and systematic education. Thus the salient feature of the Middle Ages is the co-operation of Church and State for the development of schools. Theodoric in Italy, Alfred in England, and Charlemagne in the Frankish Kingdom are illustrious examples of princes who joined their authority with that of bishops and councils to secure adequate instruction for clergy and people. Among churchmen it suffices to mention Chrodegand of Metz, Alcuin, St. Bede, Boethius, and Cassiodorus (see the several articles). As a result of their efforts, education was provided for the clergy in the cathedral schools under the direct supervision of the bishop and for the laity in parochial schools to which all had access. In the curriculum, religion held the first place; other subjects were few and elementary, comprising at best the *trivium* and *quadrivium* (see THE SEVEN LIBERAL ARTS). But the significance of

this education lies not so much in its content as in the fact that it was the means of arousing a love of learning among peoples that had just emerged from barbarism, and of laying the foundations of Western culture and science. This history of education records no greater undertaking; for the task was not one of improving or perfecting, but of creating and had not the Church gone vigorously about her work, modern civilization would have been retarded for centuries. (See SCHOOLS; MIDDLE AGES.)

One of the chief factors in this progress was monasticism. The Benedictine monasteries especially were homes of study and depositories of the ancient learning. Not only sympathetic writers, like Montalembert, but those also who are more critical, acknowledge the service which the monks rendered to education.

In those restless ages of rude culture, of constant warfare, of perpetual lawlessness and the rule of might, monasticism offered the one opportunity for a life of repose, of contemplation, and of that leisure and relief from the ordinary vulgar but necessary duties of life essential to the student Thus it happened that the monasteries were the sole schools for teaching; they offered the only professional training; they were the only universities of research; they alone served as publishing houses for the multiplication of books; they were the only libraries for the preservation of learning; they produced the only scholars; they were the sole educational institutions of this period. (Paul Monroe, *A Text-Book in the History of Education*, New York, 1907, p. 255)

In addition to their prescribed studies, the monks were constantly occupied in copying the classic texts.

While the Greek classics owed their safe preservation to the libraries of Constantinople and to the monasteries of the East, it is primarily to the monasteries of the West that we are indebted for the survival of the Latin classics. (Sandys, *A History of Classical Scholarship*, 2nd ed. Cambridge, 1906, p. 617)

The specific work of education was carried on in the monastery school and was intended primarily for the novices. In some cases, however, a *schola exterior*, or outer school was added for lay students and for aspirants to the secular priesthood. The course of study included, besides the seven liberal arts, the reading of Latin authors and the music of the Church. Finally, through their annals and chronicles, the monks provided a rich store of information concerning medieval life, which is invaluable to the historian of that period. The Chief importance, however, of the monastic schools is found

in the fact that they were conducted by an organized body of teachers who had withdrawn from the world and devoted their lives under the guidance of religion, to literary pursuits and educational work. The same Christianity that had sanctified the family now gave to the profession of teacher a sacredness and a dignity which made teaching itself a noble vocation.

Two other movements form the climax of the Church's activity during the Middle Ages. The development of Scholasticism meant the revival of Greek philosophy, and in particular of Aristotle; but it also meant that philosophy was now to serve the cause of Christian truth. Men of faith and learning like Albertus Magnus and Thomas Aquinas, far from dreading or scorning the products of Greek thought, sought to make them the rational basis of belief. A synthesis was thus effected between the highest speculation of the pagan world and the teachings of theology. Scholasticism, moreover, was a distinct advance in the work of education; it was an intellectual training in method, in systematic thought, in severe logical reasoning, and in accuracy of statement. But taken as a whole, it furnished a great object-lesson, the purport of which was that, for the keenest intellect, the findings of reason and the truths of Revelation could be harmonized. Having used the subtleties of Greek thought to sharpen the student's mind, the Church thereupon presented to him her dogmas without the least fear of contradiction. She thus united in a consistent whole whatever was best in pagan science and culture with the doctrine entrusted to her by Christ. If education be rightly defined as "the transmission of our intellectual and spiritual inheritance" (Butler), this definition is fully exemplified in the work of the Church during the Middle Ages.

The same synthetic spirit took concrete form in the universities (q.v.). In founding these the popes and the secular rulers co-operated; in university teaching all the then known branches of science were represented; the student body comprised all classes, laymen and clerics, seculars and religious; and the diploma conferred was an authorization to teach everywhere. The university was thus, in the educational sphere, the highest expression of that completeness which had all along characterized the teaching of the Church; and the spirit of inquiry which animated the medieval university remains, in spite of other modification, the essential element in the university of modern times. The changes which have since taken place have for the most part resulted in separating those elements which the Church had built into a harmonious unity. As Protestantism by rejecting the principle of authority brought about innumerable divisions in belief, so it led the way to rupture between Church and state in the work of education. The Renaissance in its extreme forms ranked pagan culture above everything else; and the Reformation in its fundamental tenet went beyond the individualism which led to the decline of Greek education. Once the schools were secularized, they fell readily under influences which transformed ideals, systems, and methods. Philo-

sophy detached from theology formulated new theories of life and its values, that moved, at first slowly then more rapidly away from the positive teachings of Christianity. Science in turn cast off its allegiance to philosophy and finally proclaimed itself the only sort of knowledge worth seeking. The most serious practical result was the separation of moral and religious from purely intellectual education -- a result which was due in part to religious differences and political changes, but also in large part to erroneous views concerning the nature and need of moral training. Such views again are in general derived from the denial, explicit or implicit, of the supernatural order and of its meaning for human life in its relations to God; so that, during three centuries past, the main endeavour outside the Catholic Church has been to establish education on a purely naturalistic basis, whether this be aesthetic culture or scientific knowledge, individual perfection or social service. In its earlier stages Protestantism, which laid so much stress on faith, could not consistently have sanctioned an education from which religious ideals were eliminated. But according to its principles worked out to their legitimate consequences, it became less and less capable of opposing the naturalistic movement. The Catholic Church has thus been obliged to carry on, with little or no help from other Christian bodies, the struggle in behalf of those truths on which Christianity is founded; and her educational work during the modern period may be described in general terms as the steadfast maintenance of the union between the natural and the supernatural.

From a human point of view the Church was under many disadvantages. The loss of the universities, the confiscation of monastic and other ecclesiastical property, and the opposition of various governments seemed to make her task hopeless. Yet these difficulties only served to call forth new manifestations of her vitality. The Council of Trent gave the impulse by decreeing that a more thorough education of the clergy should be secured through the seminaries (q.v.) and by urging upon bishops and priests the duty of building up the parochial schools. Similar measures were adopted by provincial and diocesan symbols throughout Europe. Then came the religious orders founded for the express purpose of education Catholic youth. (See especially INSTITUTE OF THE BROTHERS OF THE CHRISTIAN SCHOOLS; SOCIETY OF JESUS; ORATORIAN.) And to these finally must be added the numerous congregations of women who devoted their lives to the Christian training of girls. However different in organization and method, these institutions had for their common purpose the spread of religious truth along with secular knowledge among all classes. Thus there arose, by force of circumstances, a distinctly Catholic system of education, including parish schools, academics, colleges, and a certain number of universities which had remained under the control of the Church were founded anew by the Holy See. It is especially the parochial school that has served in recent times as an essential factor in

the work of religion. In some countries, e.g. Canada, it has received support from the Government; in others, as in the United States, it is maintained by voluntary contributions. As Catholics have also to pay their share of taxes for the public school system they are under a double burden; but this very hardship has only served to place in clearer light their practical loyalty to the principles on which Catholic education is based. In fact, the whole parochial school movement during the nineteenth century forms one of the most remarkable chapters in the history of education. It proves on one side that neither loss of the State's co-operation nor lack of material resources can weaken the determination of the Church to carry on her educational work; and on the other side it shows what faith and devotion on the part of parents, clergy, and teachers can accomplish where the interests of religion are at stake. (See SCHOOLS.) As this attitude and this action of Catholics place them in a position which is not always rightly understood, it may be useful to present here a statement of the principles on which the Church has based her course in the past, and to which she adheres unswervingly at the present time when the problems of education are the subject of so much discussion and the cause of agitation in various directions. The Catholic position may be outlined as follows:

- Intellectual education must not be separated from moral and religious education. To impart knowledge or to develop mental efficiency without building up moral character is not only contrary to psychological law, which requires that all the faculties should be trained but is also fatal both to the individual and to society. No amount of intellectual attainment or culture can serve as a substitute for virtue; on the contrary, the more thorough intellectual education becomes, the greater is the need for sound moral training.
- Religion should be an essential part of education; it should form not merely an adjunct to instruction in other subjects, but the centre about which these are grouped and the spirit by which they are permeated. the study of nature without any reference to God, or of human ideal with no mention of Jesus Christ, or of human legislation without Divine law is at best a one-sided education. The fact that religious truth finds no place in the curriculum is, of itself, and apart from any open negation of that truth, sufficient to warp the pupil's mind in such a way and to such an extent that he will feel little concern in his school-days or later for religion in any form; and this result is the more likely to ensue when the curriculum is made to include everything that is worth knowing except the one subject which is of chief importance.
- Sound moral instruction is impossible apart from religious education. The child may be drilled in certain desirable habits, such as neatness, courtesy, and punctuality; he may be imbued with a spirit of honour, industry, and truthfulness -- and none

of this should be neglected; but if these duties towards self and neighbour are sacred, the duty towards God is immeasurably, more sacred. When it is faithfully performed, it includes and raises to a higher plane the discharge of every other obligation. Training in religion, moreover, furnishes the best motives for conduct and the noblest ideals for imitation, while it sets before the mind an adequate sanction in the holiness and justice of God. Religious education, it should be noted, is more than instruction in the dogmas of faith or the precepts of the Divine law; it is essentially a practical training in the exercises of religion, such as prayer, attendance at Divine worship, and reception of the sacraments. By these means conscience is purified, the will to do right is strengthened, and the mind is fortified to resist those temptations which, especially in the period of adolescence, threaten the gravest danger to the moral life.

- An education which unites the intellectual, moral and religious elements is the best safeguard for the home, since it places on a secure basis the various relations which the family implies. It also ensures the performance of social duties by inculcating a spirit of self-sacrifice, of obedience to law, and of Christian love for the fellow-man. The most effectual preparation for the citizenship is that schooling in virtue which habituates a man to decide, to act, to oppose a movement or to further it, not with a view to personal gain nor simply in deference to public opinion, but in accordance with the standards of right that are fixed by the law of God. The welfare of the State, therefore demands that the child be trained in the practice of virtue and religion no less than in the pursuit of knowledge.
- Far from lessening the need of moral and religious training, the advance in educational methods rather emphasizes that need. Many of the so-called improvements in teaching are of passing importance, and some are at variance with the laws of the mind. Upon their relative worth the Church does not pronounce, nor does she commit herself to any particular method provided the essentials of Christian education are secured, the Church welcomes whatever the sciences may contribute toward rendering the work of the school more efficient.
- Catholic parents are bound in conscience to provide for the education of their children, either at home or in schools of the right sort. As the bodily life of the child must be cared for, so, for still graver reasons, must the mental and moral faculties be developed. Parents, therefore, cannot take an attitude of indifference toward this essential duty nor transfer it wholly to others. They are responsible for those earliest impressions which the child receives passively, before he exercises any conscious selective imitation; and as the intellectual powers develop, the parents example is the lesson that sinks most deeply into the child's mind. They are also obliged to in-

struct the child according to his capacity, in the truths of religion and in the practice of religious duties, thus co-operating with the work of the Church and the school. The virtues, especially of obedience, self-control, and purity, can nowhere be inculcated so thoroughly as in the home; and without such moral education by the parents, the task of forming upright men and women and worthy citizens is difficult, and if not impossible.

That the need of moral and religious education has impressed the minds of non-Catholics also, is evident from the movement inaugurated in 1903 by the Religious Education Association in the United States, which meets annually and publishes its proceedings at Chicago. An international inquiry into the problem of moral training was started in London in 1906, and the report has been edited by Professor Sadler under the title, *Moral Instruction and Training in Schools* (London, 1908).

E.A. PACE

The Catholic Educational Association

The Catholic Educational Association

The Catholic Educational Association is a voluntary organization composed of Catholic educators and other persons who have an interest in the welfare of Catholic education in the United States of America. It includes several associations established to secure closer union and more active co-operation in special lines of work. The movement for unification began with an effort to establish a conference of seminary presidents and professors. A meeting called by the Right Rev. T. J. Conaty, Rector of the Catholic University of America, was held at St. Joseph's Seminary, New York, in May, 1898. A second meeting was held in Philadelphia, September, 1899, but nothing further was done until April, 1904, when, at the instance of the Right Rev. D. J. O'Connell, representatives of several seminaries met and decided to revive the conference, and to hold a meeting at St. Louis in July, 1904.

The first meeting of the Association of Catholic Colleges and Universities of the United States was called by the Right Rev. T. J. Conaty, and was held in Chicago in April, 1899. Annual meetings have been held since that time. The Parish School Conference was organized in Chicago in July, 1902, and it was then decided to meet at Philadelphia with the Association of Catholic Colleges and Universities in 1903. At the Philadelphia meeting the Parish School Conference passed a resolution empowering a committee on organization to confer with the standing committee of the Association of Catholic Colleges and to draw up a plan of union. These three conferences met in St. Louis 12-14 July, 1904; and a committee including representatives of each proposed a constitution to be tried for one year. The report of the committee was unanimously adopted at a joint meeting of all three and the Catholic Educational Association was formed 14 July, 1904, the Right Rev. D. J. O'Connell being unanimously elected President General of the Association.

This Association held its second meeting in New York and a leading feature of the meeting was the remarkable public demonstration in Carnegie Hall at the close. The third meeting was held in Cleveland, and the fourth at Milwaukee; both were notable for the increasing attendance and for the cordial approbation of the movement given by members of the hierarchy. At the meeting in Milwaukee, July, 1907, the constitution, which had been amended each year, was finally adopted, and the executive board was authorized to take steps to incorporate the association. The fifth annual meeting was held at Cincinnati in July, 1908. There was a registration of 769 names at this convention; all sections of the country were represented, and a number of religious communities sent official delegates.

An idea of the general scope of these gatherings may be had from the subjects treated in the papers and the addresses at this meeting. Among the former were contributions on "The Present Condition of Latin Studies in the Catholic Institutions of the United States"; "The Method of Teaching Religion"; "Necessity and Means of Promoting Vocations to Teaching Orders"; "School Library and the Child's Reading", and on the study of social questions and problems in the seminary, the present state of education and the curriculum. At the public meeting the topics were "Religious Instruction, the Basis of Morality", "The Catholic School and Social Morality", and "The Necessity of an Enlightened Conscience for the Proper Performance of Civic Duties".

The convention was the largest and most representative gathering of Catholic educators that had up to that date been held in the country. The usefulness of these meetings is now generally recognized. They give an understanding of the strength and weakness of the Catholic educational position that can be obtained in no other way. A great deal of earnest and serious work is done at them; they foster a spirit of unity and co-operation in all departments of educational work; and they inspire the educators with a greater love and devotion to their calling. The whole system of Catholic educational activity has been strengthened, unified and developed by the annual conventions of the association, and more especially was this the result of the meeting in Cincinnati.

As the understanding of the Catholic educational situation, with its difficulties and possibilities, becomes clearer, the work of the association becomes every year more definite and more practical. The slow and gradual growth of the association has given it a form of organization well suited to the development of the work. Catholic educators have a good understanding of the problems they must solve, among which are the problem of secondary education, and the problem of curriculum. Of more importance, even, than the thoroughness of educational work is the defence of the general interests of Catholic education, and the vindication of the principles on which it is based. The secular system of education is based largely on the theory that man is born for the State and that he derives his rights from the State. The socialist would have the State absorb all authority in the domain of learning and of industry, and there are many secular educators who would fain see the monopoly of education lodged in the power of the State. The Catholic system is based on the right of the parent, the right of the child, and a reasonable individualism. The resolutions of the Cincinnati convention insisted on the right of the parent in the matter of education, and the association exists for the purpose of maintaining the right of the parent and the principle of liberty of education. The Catholic Educational Association is an expression of the unity of principle that unites all Catholic educators.

The officers of the association are a president general, several vice-presidents general, a secretary general, treasurer general, and an executive board. The association

includes the college, school, and seminary departments. The affairs of the association are managed by the executive board. Each department is represented in this board by its president and two other members elected by the department. Each department regulates its own affairs, and each may organize sections for the more special work in which its members are interested. In the Parish School Department, there is a Superintendents' Section and a Deaf Mute Section. A local meeting for the teachers is organized at every convention through the Parish School Department.

In the constitution the aims of the association are stated as follows: "The object of this association shall be to keep in the minds of the people the necessity of religious instruction and training as the basis of morality and sound education; and to promote the principles and safeguard the interests of Catholic education in all its departments; to advance the general interests of Catholic education, to encourage the spirit of cooperation and mutual helpfulness among Catholic educators, to promote by study, conference, and discussion the thoroughness of Catholic educational work in the United States; to help the cause of Catholic education by the publication and circulation of such matter as shall further these ends."

According to the report of the secretary general there were on 1 July, 1908, three hundred and sixty-four members of the Parish School Department, fifty-two colleges in the College Department, and fourteen seminaries in the Seminary Department. The association publishes an annual report giving all the papers and discussions of the association and its departments. It also publishes "The Catholic Educational Association Bulletin" quarterly, which contains matters of interest to the members of the association and articles that have an important bearing on Catholic educational work. The association has issued to 1908 five annual reports from the secretary's office, Columbus, Ohio.

FRANCIS W. HOWARD.

Education of the Blind

Education of the Blind

Although the education of the blind as a class dates back no further than the year 1784, historians and statisticians generally admit that the affliction which it tends to relieve was no less prevalent before than it has been since that date. Indeed, so far from having increased, blindness appears to have in a marked degree decreased during the last hundred years.

GENERAL STATISTICS OF BLINDNESS

An exact statement of the number of blind persons in all parts of the inhabited earth is of course impossible. The estimates which publicists have formed upon the basis of census returns, as also those derived from the observation of travellers, give the ratio of blind persons to the whole population in Asia 1 to 500; in Africa 1 to 300; in Europe 1 to 1094 (the ratios for seventeen countries of the last-named division being, approximately: England, 1 to 1235; Scotland, 1 to 1118; Ireland, 1 to 870; France, 1 to 1194; Germany, 1 to 1136; European Russia, 1 to 534; Austria, 1 to 1234; Hungary, 1 to 952; Italy, 1 to 1074; Spain, 1 to 835; Denmark, 1 to 1248; Sweden, 1 to 1262; Norway, 1 to 795; Finland, 1 to 689; Belgium, 1 to 1229; Switzerland, 1 to 1325; Bulgaria, 1 to 321). For the other great geographical divisions no data are available for even a fairly satisfactory approximation. (See below *Blindness in the United States*.) Consistently with the foregoing ratios, and with such conjectures as may be hazarded for America, Australasia, etc., it may be estimated that the number of blind persons now living in all parts of the world is not far short of 2,500,000. A careful study of the figures shows that blindness prevails most in tropical, and least in temperate, regions; more in the Eastern than in the Western Hemisphere. In the temperate climates of the North the blind are comparatively few; nearer the Arctic Circle, the glittering snows, the alternation from the brilliant nights of the Arctic summer to the prolonged darkness of the winter, and other conditions affect the visual organs unfavourably, while in the torrid zones the glare from desert sands and the intense heat of the sun occasion many diseases, resulting in either total or partial loss of sight.

Blindness in the United States

In the Western Hemisphere a different ratio seems to obtain. The data, however, for an accurate comparison are wanting, except in the United States (lying between the 24th and 49th parallels of north latitude), where, according to the census of 1900, the ratio of the blind to the entire population is 1 to 1178. In 1890, the ratio was 1 to 1242. The number of blind persons in the United States originally returned by the enumerators of the Federal Census Bureau, 1900, was 101,123; by subsequent correspondence with individuals, this number was reduced to 64,763; but the special report on "The Blind and the Deaf" states that this should be considered only as a minimum, the correct figure being probably 80,000 and possibly over 100,000. Of the minimum 64,763 reported in the Census, 57.2 per cent were males, 42.8 per cent females; about 13 per cent were under, and about 87 per cent over, twenty years of age. Of the juvenile 13 per cent (8308), those entirely or partially blind before the age of two years numbered 8166.

Causes and Effects

In a careful study of the causes of blindness Cohn of Breslau estimates that among 1000 blind there are only 220 absolutely unavoidable cases, 449 possibly avoidable, and 326 (or nearly one-third) absolutely avoidable. Blindness may result from accident or from disease. The diseases most often productive of blindness are: *ophthalmia neonatorum*, or inflammation of the eyes of the new-born; *trachoma*, often called "granular lids", and *glaucoma*, and atrophy of the optic nerve. Blindness from ophthalmia of the new-born is so widespread that, according to Magnus, out of 2528 cases of total blindness in Germany, 10.88 per cent were due to this cause. Among the blind under the age of twenty the proportion is as high as 30 per cent. In the United States, between 6000 and 7000 persons have thus become blind. Thanks to improved sanitary conditions in homes, to more intelligent care on the part of midwives and nurses, and more skilful medical treatment, ophthalmia in certain countries appears as a cause of blindness in only seven per cent of the total number of cases, as against the 41 per cent recorded fifty years ago.

The function of sight can, to a certain extent, be replaced by the use of the other senses. Stimulated by necessity and trained by education, touch, hearing, and smell take the place of vision. Having no sight to distract them, moreover, the blind cultivate their remaining senses all the more effectually. As for the exercise of their mental faculties, although wanting some of the means by which various impressions are received, and attention is aroused, the blind are as capable of reflection and reason as other human beings, while, owing to their condition, they are more frequently forced to close mental application. That blindness does not necessarily render its subjects intellectually inferior, may also be inferred from the number of famous persons who were blind from childhood or early youth. A list of such examples might with little difficulty be produced, long enough and important enough to show how erroneous is the idea that the physical darkness of the blind is necessarily associated with intellectual darkness.

HISTORY OF EDUCATION OF THE BLIND

That no attempt was made in ancient times to instruct the blind, or in any way to cultivate their intelligences, was mainly due to the prevalent error as to their mental capacities. The same error, generally speaking, produced the same unfortunate results in Christian civilization until as late as the end of the eighteenth century. On the other hand, the Church, from the earliest ages, at least made provision for their corporal needs, while here and there attempts were made to teach them various handicrafts. Among the most noted of the hospices for the poor and afflicted which began to appear in all parts of Christendom almost as soon as persecution ceased, was that established in the fourth century by Saint Basil at Cæsarea, where special provision was made for the blind, and guides were supplied for them. In the fifth century, Limnæus, a hermit

of Syria, received, in cottages especially built for them, the blind of the surrounding country, whom he taught, among other things, to sing the praises of God. Two centuries later, towards the year 630, a refuge exclusively for the blind, such as was called in the Middle Ages a *typhlocomium*, was founded at Jerusalem.

In the West, the Church was animated with similar charity. Early in the seventh century, St. Bertrand, Bishop of Le Mans, founded a hospice for the blind at Pontlieu, in the north-west of France. In the eleventh century, William the Conqueror, in expiation of his sins, founded a number of institutions; among them four hospices for the blind and other infirm persons at Cherbourg, Rouen, Bayeux and Caen respectively. Towards 1260, St. Louis, King of France, established at Paris the Hospice des Quinze-Vingts, where he housed and instructed three hundred blind persons. The inmates of the hospice, after the example of the students and the craftsmen of the day, formed among themselves a distinct brotherhood, to whom the saintly king gave special statutes and privileges. It is noteworthy that, in spite of the changes of government, the "Hospice des Quinze-Vingts" has survived to this day. A similar institution, though less extensive, was established and endowed at Chartres by King John the Good in 1350. Provision was made for 120 blind persons. For various reasons, however, the number of inmates dwindled till, in 1837, according to Dufau, there were but ten. A hospice for the blind is said to have been erected (1305) at Bruges, in Flanders, by Robert de Béthune, in gratitude for the courage displayed by the inhabitants in repelling (1300) an invasion of Philip the Fair. A similar foundation was made at Ghent by Peter Van der Leyen about 1370. Brotherhoods of the blind were formed, particularly at Chartres, Caen, Châlons, Meaux, Padua, Memming, Frankfort, and Hull. That the inmates of these institutions received other suitable instruction besides that in the Catechism and in trades there can be no doubt. So desultory, however, were these attempts to give the blind a modicum of education, and so inadequate were the means employed, that the problem of their special education remained unsolved. No one had as yet suggested the idea of providing a permanent literature for them. As early as the sixteenth century attempts were made to devise special processes, but these attempts, so far as we know, met with very little success.

Among others, Girolamo Cardano (1501-1576), an Italian mathematician, had pointed out a way of teaching the blind to read and write by the sense of touch. They were to trace with a steel bodkin or stylus the outline of each of the letters of the alphabet, engraved on metal, until they could distinguish the letters by the sense of touch and reproduce them on paper. Cardano, however, failed to suggest how to write on a straight line with uniformity of space between the lines. In 1575 Rampazetto produced at Rome prints in intaglio from letters carved in wood. His invention was dedicated to St. Charles Borromeo. In 1580, under Philip II, to whom he dedicated his invention,

Francesco Lucas, at Madrid, engraved letters in wood for the instruction of the blind; but the letters being sunk in the wood, the outlines could not as readily be followed with the finger-tips. In 1640, Pierre Moreau, a notary at Paris, had movable letters cast for the use of the blind, but for lack of means was unable to follow up his undertaking. In his work, "Deliciae mathematicae et physicae, published at Nuremberg in 1651, George Harsdörffer describes how the blind can recognize, and be taught to name and imitate, letters engraved in wax. Padre Francesco Lana-Terzi, the same Italian Jesuit who anticipated by more than a century the system of lip-reading for deaf mutes, also suggested, as an improvement on Cardano's invention for the blind, a guide consisting of a series of wires and strings arranged in parallel lines at equal distances from one another, to secure straight writing and uniformity of space between the lines. Besides this, Lana-Terzi describes, in his "Prodrómo", an invention of his own, by which the blind may be taught to correspond with each other by a secret code. We have looked in vain in works of reference for any description of this cryptographic device. It is so simple that it can be learned in a few hours. Instead of compelling a blind person to learn how to form all the letters of the alphabet, the three methods pointed out by Lana-Terzi demand only a tactual knowledge of the letters, familiarity with their positions in their respective sections, and a little skill;

- (1) to insert one, two, or three dots within a square or parts of a square or right angles turned in four different directions; or
- (2) to prefix to either a comma, colon, semicolon, period, or interrogation mark any one of the first four numerals; or
- (3) merely to form these numerals. The letters of the alphabet with the lines enclosing them, Lana-Terzi suggests, should be in relief rather than in intaglio, raised letters being far more distinguishable to the sense of touch than letters sunk in a plane surface. The following diagrams will make the matter clear.

First (Lana-Terzi) Method

Suppose the blind correspondent wishes to send the cipher message, *Son prigionero* (I am a prisoner), he will turn to his tablet,

a	o	G	u	B	T	V
F	J	M	N	E	S	P
C	L	H	R	D	Q	Z

and ascertain by touch that the letter s is the second of those enclosed within the lines forming the figure □. He will trace this figure with a pencil, and, to indicate that it is the second letter in the above figure, he will write, either above, or below, or within it, two dots, thus □. The message in full is as follows: —

□ = SON PRIGIONE

Second Method

The letters of the alphabet are embossed on a wooden or metallic tablet and distributed in any order whatever into five or more sections, which are indicated by lines in relief. Each section is distinguished from the others by one of the five principal punctuation marks, formed, like the letters, in relief.

a b c d ,	e f g h ;	i l m n o p q r :	s t u .	v ?
--------------	--------------	----------------------	------------	--------

The position of each letter in its own section is indicated by one of the first four numerals according to the order in the section. Thus, the message, *Il re è morto* (the king is dead), would be written as follows: —

1: 2: 4. 1; 1; 3: 1. 4. 2? 1.
I L R E È M O R T O

Third Method

Instead of designating by punctuation marks the different sections into which the letters are distributed, they may be indicated by numerals, thus: —

abcd 1	efgh 2	ilmn 3	opqr 4	stuv 5
-----------	-----------	-----------	-----------	-----------

By this method the blind person would have to learn how to form only the first five numerals. Thus the above message, *Il re è morto*, according to this method, would be written as follows: —

1-3 2-3 4-4 1-2 1-2 3-3 1-4 4-4 2-5 1-
I L R E È M O R T O

the first numeral indicating the position of the letter in the section, and the second numeral the section itself.

To enable the correspondent to make out for himself the answer to his message or communication, Lana-Terzi proposes the following plan: Let each of the correspondents have a table or long strip of wood on which are engraved or embossed the letters of the alphabet arranged in serial order at equal distances from each other, as in the diagram here given.

LANA-TERZI CONTRIVANCE FOR CORRESPONDING BY KNOTS

Suppose now that a person who is not blind should wish to send to his blind friend this message: *Il nemico ti trama insidie* (the enemy is trying to ensnare you). Let him take a piece of thread or twine, apply the end of it to the extreme point of the tablet, extend the thread over the space from a to the first letter i of the message and make a knot at that point; for the second letter, apply this first knot to point a, extend the thread over the space from a to the letter l, make, as before, a knot at that point, and so on for the rest of the letters. It will readily be understood how the blind person, to whom the roll of knotted thread or twine is sent, can make out the communication by applying the various thread lengths over the distances indicated by the knots, and thus discover each letter of the message. The blind correspondent, in his turn, can easily send by this same method whatever communication he wishes.

A few years after the publication of Lana-Terzi's "Prodromo", Jacques Bernouilli, being at Geneva in 1676, taught Elizabeth Waldkirch to read by a method not unlike that of Cardano. The young lady made such progress that after four years she was able to correspond with her friends in German, French, and Latin, all of which she spoke

fluently at the age of fifteen. She knew almost all the Bible by heart, was familiar with philosophy, and was an accomplished musician.

About the year 1711 the first known attempt was made to construct a tactile ciphering-tablet or apparatus by which all the operations of arithmetic might be performed and recorded. This was the work of Nicholas Saunderson, who became blind when one year old. So distinguished was this blind mathematician that he was appointed Lucasian Professor of Mathematics in the University of Cambridge. The Abbé Claude-François Deschamps (1745-91), in his treatise on the education of the deaf and dumb, is said to have also sketched the outlines of the art of teaching the blind to read and write. Diderot in his "Lettre sur les aveugles", which appeared in London in 1749, and for which he was condemned to prison, mentions his interview with Lenôtre, better known as "The Blind Man of Puisaux". Among other remarkable things related of him is the teaching of his son, though not blind, to read by means of raised letters. Between 1772 and 1784 we read of the earliest attempt to make maps in relief for the blind. This invention is ascribed to R. Weissenburg, of Mannheim, who was partially blind at five years of age, and totally at fifteen. Whether any of the credit is due to Weissenburg's teacher, Christian Niesen, cannot be ascertained. Though Diderot was among the first to call special attention to the condition and wants of the blind, and to make them generally known through his famous letter, yet neither he, nor Leibniz, nor Reid, nor Condillac, nor any of the Encyclopedists went beyond abstract psychological speculation. None of them proposed any measure of practical utility or relief nor devised any plans for the instruction and training of sightless persons.

The modern era in the history of education of the blind opened in 1784 — nearly three centuries after the desultory and apparently ineffectual attempts of Cardano and others — when Valentin Haüy (1745-1822) set himself to do for the blind what the Abbé del' Epée had done for deaf mutes. It was in June, 1784, that Haüy met, in one of the churches of Paris, a young mendicant named Lesueur, who had been blind from his birth. Having already spent many years in studying the theory, Haüy took this young waif to be the subject of his first practical essays in teaching the blind. Lesueur was promised a regular daily allowance in place of the income which he was supposed to earn by begging. Before long the number of Haüys pupils increased to twelve, then to double that number, and finally to fifty. His school was at first a day-school, to which children of both sexes were admitted. When Haüy, in 1786, exhibited the attainments of twenty-four of his best pupils at Versailles, Louis XVI and his court were in raptures at the wonderful novelty of children without sight reading, writing, ciphering, doing handicraft work, and playing orchestral music. So great was the interest which this and similar exhibitions aroused, and so generous the patronage of the king and the public which they secured for his school, that Haüy soon had sufficient means to

board his pupils. From the very beginning the institution had the triple character of a school, a workshop, and an academy of music; and to this day these three departments have been maintained with such a record for efficiency that the institution founded by Haüy has served as the model for most of the many others in both hemispheres. But true intellectual culture for the blind dates only from the day when reading by touch was made possible. To Haüy is due the credit of having provided a system of tactual printing and a permanent literature for the blind. In the light of a century's progress and of better systems of printing and writing invented since his day, the shortcomings of Haüy's print in relief may lessen the value of his invention, but, in fairness to his memory, it must be remembered that Haüy alone succeeded in making practical for the blind as a class what others before him had merely foreshadowed, or had successfully applied only in individual instances. In spite, therefore, of the derogatory claims made by two or three writers, and notwithstanding that he himself admitted having seen a letter printed by Theresa von Paradis from type made for her by von Kempelen, the fact remains that no one before Haüy had ever tried seriously to make printing available for the blind; to no one before him had the idea occurred of printing books for the blind, or of establishing libraries of literature printed in relief. The movement originated by him has resulted in the establishment in all civilized countries of institutions of learning and industrial training schools for the blind. Before the close of the eighteenth century, a period of only sixteen years, four such institutions had sprung up in Great Britain, viz., in Liverpool (1791), in Edinburgh (1793), in Bristol (1793), and in London (1799). Other countries were not slow in following the example. The following table shows what the leading countries of Europe and America have done for their blind during the nineteenth century: —

	First Institute founded in the year	Number of Blind	Number of Educational Institutes	Number of Trade Schools and Asylums
France	1784	32,340	24	10
England	1791	26,330	24	54
Scotland	1793	4,000	5	2
Austria-Hun- gary	1804	41,400	11	17
Germany	1806	49,570	34	48
European Rus- sia	1807	221,208	37	6

Sweden	1808	4,100	3	5
Switzerland	1809	2,500	4	5
Ireland	1810	5,120	6	7
Denmark	1811	1,961	2	2
Spain	1820	21,000	11	5
United States	1831	64,763	44	24
Belgium	1836	4,935	8	4
Italy	1838	30,210	19	5
Norway	1861	2,816	2	1

CONTEMPORARY EDUCATION OF THE BLIND

General Aspects

In nearly all the countries referred to in the foregoing table, most of the schools for the blind maintain three distinct departments: a literary department, a department of music, and an industrial department. The rank of these institutions is higher or lower from an educational point of view according as more or less prominence is given to literature and music as compared with industrial or manual training. In the leading schools the literary department embraces kindergarten, primary, secondary, and, in a few instances, collegiate education; the department of music embraces primary, secondary, and collegiate education; while the industrial department embraces the teaching of handicrafts, varying in kind according to age, sex, and country. The courses of study in the literary department are generally the same as those pursued in the public high schools of the respective countries. The work in the department of music varies from instruction in the mere elements of music to thoroughly organized courses of study and highly specialized instruction in the science and art of music. In the industrial department the chief trades are: in the male department, piano-tuning, wood-carving, the making of baskets, mats, matting, brooms, and mattresses, chair-caning, hammock-work, and upholstery; in the female department, basket-making, knitting, hand- and machine-sewing, crocheting, fancy work of various kinds.

In the experimental stages of education, there was a tendency in almost all the schools for the blind to make the industrial department the most prominent feature. The lack of books, of adequate educational appliances, and of definite methods, the comparative ease in teaching some one or other of the simpler trades, the want of technical experience on the part of instructors, the dependence upon manual occupations and mechanical arts for self-support, the readiness to be swayed by the utilitarian

principle of training the blind for the active duties and occupations opening the way to self-maintenance and independence — these and other similar considerations were strong arguments in favour of industrial training, to the neglect and detriment of the prime and essential work of education. Of late years, however, a marked change has been wrought in the ideals pursued in the education of the blind. Owing to the increase of general intelligence, on the one hand, and the steady decrease in value of manual labour, on the other hand, educators of the blind have come to realize that it is not technical skill, or ability to work successfully at one or more of the usual trades, but only a broad and liberal scheme of education that will release the blind from the bondage of dependence, uplift them as a class, and raise them to a level of usefulness and independence. In consequence of the extensive employment of machinery in almost every department of human activity, there has sprung up among educators of the blind a growing conviction that the only field in which the sightless can hope in the future to compete successfully with the seeing is a field of thought where the intellect can have free play and where blindness will be no hindrance to advancement and success. The blind need, therefore, at least as good an education as the seeing. The question as to whether they are capable and entitled to such an education has not been settled in the same manner in all countries. In many of the European institutions the prevailing idea is that, as a class, the blind must necessarily remain at the foot of the social scale, forever dependent upon the more fortunate classes, and that what is done for them is rather in the spirit of favour and charity than as of strict obligation. In the United States the education of the blind rests on a different basis. As modern methods of instruction have proved the possibility of imparting to the normal blind child practically the same education as to other children, it is generally acknowledged that the blind, as a class, have an equal right with the seeing to share in all the educational benefits which are provided for every child in the commonwealth; and since this education cannot for obvious reasons be given them in the common schools, special provision should be made for their education in distinct institutions, public or private.

Systems of Embossed Print

Three centuries and a half elapsed after the invention of printing before any attempt to make printing available for the blind as a class was successful. Whatever information and inspiration may have been drawn by the ingenious inventor from special processes devised before his day, the credit of having first made reading by finger-touch possible must be accorded to Valentin Haüy (see above). The first book embossed by Haüy for the use of the blind was, according to Guadet, his "*Essai sur l'éducation des aveugles*" (1786). This book was translated into German by Michel, and into English, in 1795, by the blind poet Blacklock. The style of type adopted by Haüy was the French script, resembling the legal manuscripts of the time. The capital and small letters were respect-

ively fourteen and seven and a half millimetres high. The book was a quarto of 111 pages, printed on one side only, two pages being gummed together back to back, to preserve the relief. The pages were embossed from metal type by the blind children of Haüy's school under the direction of Clousier, the court printer. While this invention won unstinted praise for Haüy, he himself, when he heard his achievements compared to those of the Abbé de l'Épée, modestly protested, "I only fit spectacles, while he bestows a soul." From 1806, the time of Haüy's departure for St. Petersburg, to 1854, when line-print was superseded by point-print, the type used at the Institution des Jeunes Aveugles at Paris, varied between the French script, the Italic, and Roman capitals.

Embossed Printing in England

Printing for the blind had been used in France for forty-three years, in Austria for eighteen, in Prussia for twenty-six, before it was used in England; Haüy's system of printing, it is claimed, was introduced into England by Sir Charles Lowther, to whom it was suggested by a copy of one of the books printed at the Institution des Jeunes Aveugles, and purchased for him by his mother, he being himself blind. In 1826, James Gall, of Edinburgh, who had seen specimens of books embossed at the Paris institution, set himself to improve the alphabet, by making it more perceptible to the touch. In 1827 he printed a small book in an angular modification of the common English alphabet. It is said to have been the first English book printed for the blind in England, and naturally great interest was excited when it was found that the blind could read it easily with their finger-tips. Between 1828 and 1838 no fewer than 20 styles of embossed printing were brought out in Great Britain. Of these, however, only six obtained recognition: those of Haüy, Gall, Fry-Alston, Lucas, Frere, and Moon. Haüy's script was adopted by Sir Charles Lowther in his publication, in 1834, of the Gospel of St. Matthew. Though Gall modified the common characters of the alphabet to make them more easily distinguishable by touch, he did not believe that arbitrary characters would ever be universally adopted, maintaining that these books should be legible to both blind and seeing. Besides two or three booklets previously embossed, Gall printed, in 1832, the Gospel of St. John. The Fry-Alston system of embossed printing is the plain upper-case Roman without serifs or the lighter strokes, and was devised by Dr. Edmund Fry and adopted by Alston at the Glasgow Institution for the Blind, of which he was principal. In 1832 the Scottish Society of Arts offered a gold medal for the best system to produce cheapness and tangibility in connexion with an alphabet suited alike to the fingers of the blind and to the eyes of the seeing. Nineteen different alphabets, seventeen of which were of a purely arbitrary character, were submitted to the society between 9 January, 1832, and 24 October, 1833. After much deliberation and a series of rigid tests, the medal was awarded (after Dr. Fry's death) to Alston, 31 May, 1837. From the

award made to Dr. Fry's alphabet, the Scottish Society of Arts evidently shared the idea of Haüy and of other advocates of the Roman letter that in the education of the blind everything should be done to establish a bond of vital unity between them and the seeing and to lessen the isolation which arbitrary systems of print would only increase. As Alston's type was rather small and not very legible, his system did not stand the test of time. Lucas invented a stenographic system formed of arbitrary characters and of numerous contractions. In this system the Gospel of St. John and the Acts of the Apostles were printed in 1837 and 1838 respectively. Frere devised a phonetic system which he himself describes as a "scientific representation of speech". It consists of 34 characters indicating each of the simple sounds in speech. Frere was the first to introduce (1839) the "return lines", in which the reading is alternately from left to right and from right to left, and the letters themselves are reversed in the lines from right to left. He also devised an ingenious system of embossing from stereotype plates; which invention was, at the time, the greatest improvement in embossing since the days of Haüy.

SIX PRINCIPAL SYSTEMS OF EMBOSSED TYPE

The larger part of the Old and portions of the New Testament were printed in Frere's system. Dr. Moon of Brighton, whose system is used more than any other by the adult blind, at least in England, devised, towards 1845, an alphabet formed of more or less arbitrary characters, which either resemble or suggest a resemblance to the Roman letters which they represent. He also adopted, with a number of slight alterations, Frere's "return lines" and his method of stereotyping. The first book in Moon's system appeared in 1847. The printing of the Bible was begun in 1848 and completed in 1858. Moon's books, though easy to read owing to their large type, are very bulky and expensive; 56 volumes are required for the Protestant edition of the Bible, which omits a number of books contained in the Catholic edition. The chief defects of the Moon system are that it is not a writable system and that it lacks a musical notation.

It is useful chiefly for adults whose finger-touch has been dulled by age or manual labour.

Embossed Printing in Continental Europe

Between 1809, when embossed printing, of which he claimed to be the inventor, was begun by Klein, the founder of the first school for the blind at Vienna, and 1841, when Knie, principal of the institution for the blind at Breslau, introduced the Braille system into Germany, three styles of embossed printing, known as the Stachel-, Press-, and Punktierter Typendruck (the needle-, line-, and punctured print) had been used in Germany, Austria, Holland, Switzerland, and Denmark. These systems were different forms of the upper or lower case or of both upper and lower case, of the Roman letters. Owing to the size of the letters, the books embossed in other parts of Europe were much bulkier than those of like content in France or in England. For a long time after the introduction of the Braille system into Germany, line-print was retained, even where Braille was adopted. It was not until 1876 that interest began to be aroused in regard to uniformity of embossed printing, in consequence, no doubt, of the movement inaugurated in England by the British and Foreign Blind Association in favour of Braille.

Embossed Printing in the United States

From 1832, when the first school for the blind was opened in the United States, to 1860, when Dr. Pollack introduced Braille in the Missouri school (there being then as many as twenty-one institutions for the blind in this country), two systems of printing were in vogue. The first was that of Dr. Howe, the head of the Boston school for the blind, and the second that of Mr. Friedlander, the principal of the Philadelphia school. Dr. Howe's system was the angular lower case Roman and Mr. Friedlander's system the Roman capitals of the Fry-Alston type. In 1835 Dr. Howe published several books in the Boston letter; Mr. Friedlander's Roman capital was not adopted in Philadelphia until 1837. From an educational as well as from an economical point of view, it is a matter of regret that, for the lack of concerted action between the principals of the Boston and the Philadelphia schools, two systems of print should have been imposed at the very outset on the country. From 1837 to 1853 the two systems flourished in their respective spheres without any agitation regarding uniformity of type. In 1851 the Boston line-print was given the preference over all other embossed systems at the London exhibition of industries of all nations. This award, made twenty-six years after the appearance of Braille in France and one year after the adoption of the new system by the Paris institution for the blind, shows how deeply rooted was the theory prevailing since Haüy, that the adoption of any system not resembling in form and appearance the letters in common use would be prejudicial to the best interests of the blind by furthering their segregation from the seeing. A comparison between the leading systems

of line-letter print which obtained recognition in France, England, and the United States shows that Haüy's system gave 365 letters on 50 square inches of surface; Gall's, 526; Alston's, 891; Friedlander's (from 1833 to 1834), 290, and 826 after 1836; Howe's, 702 and by a further improvement, it is claimed, 1067 letters.

Braille

In spite of the perfection to which some of the line-letter systems had been brought as regards compactness, a careful study of the functions and limitations of the sense of touch showed that the Roman systems, which lacked the quality of strong appeal to that sense (known as *tangibility*), could be of no educational value. Besides this, they were practically unwritable, and they provided no adequate means of musical notation. Fortunately, when the various line-types were found deficient, and a strong protest by the intelligent blind in Europe and in the United States was raised against them, a new system was discovered, which possessed all the requisites which were lacking in the line-letter prints. This new system is known as Braille. Its invention by Louis Braille, a blind pupil of the Institution des Jeunes Aveugles of Paris, marked a new epoch in the history of the education of the blind. The original idea of a point-print was derived by Louis Braille from Barbier, who suggested a combination of points arranged in a rectangle — twelve points in two vertical columns of six each. The most conspicuous, though not most radical, defect was the large and unwieldy size of the signs, which could not be covered with the finger. Another drawback was the great waste of space. As the "cell", or rectangle, was of fixed size, if a letter was represented by a point in one corner, all the rest of the space was left blank. This was observed by Braille, who reduced Barbier's rectangle one-half; thus he limited the number of the points to six instead of twelve. The six points in Braille are arranged in two vertical rows of three each. By the omission of one or more of the points sixty-three distinct signs are formed, to represent the entire alphabet, accents, Arabic numerals, marks of punctuation, word- and part-word signs, as well as a system of algebraic and musical notation. Of these sixty-three characters ten are called fundamental signs, and form the basis of all the rest by the addition of one point in some part or other of the "cell" either to the fundamental signs or to the series formed from them. The chief advantages of the Braille system are:

- (1) its simplicity and easy acquisition;
- (2) its "tangibility", or efficiency in impressing the sense of touch, enabling the blind not only to read but also to write;
- (3) its adaptability to both the writing and printing of a system of musical notation.

In spite, however, of its evident advantages, many years went by before the new system obtained recognition, even in countries where, for lack of "tangibility" in the existing systems, the use of books in the class-room had been almost unknown. It is quite possible that the slowness and reluctance in the adoption of Braille were due to the fact that institutions for the blind had been so widely separated in dates of origin and in locality that the need of unity of action and community of interest was but slowly realized. In many cases prejudice, petty jealousy, and obstinate attachment to theories long since proved false, account for the unyielding attitude towards improved methods, which has often stood in the way of true and uniform progress in the education of the blind. From the day when the system was finally adopted in the schools of France, England, Germany, the United States, and other countries, the Braille has undergone various modifications; hence a variety of Braille systems, which have caused even greater confusion than the diversity of the earlier Roman styles of embossed literature. As late as 22 April, 1902, in an address made at the conference held at Westminster on matters relating to the blind, Mr. William H. Illingworth, headmaster of the Royal Blind Asylum and School, West Craigmillar, Edinburgh, spoke as follows regarding the diversity of Braille alphabets and the desirability of a uniform system: "Out of a chaos, born of conflicting opinions and petty jealousies, combined with an almost incredible amount of apathy, indifference and indecision such as exists in the Braille world, it would be impossible by any means short of a miracle to create or to formulate such a scheme. . . . We hear often and are treated to examples of 'English as she is spoke', but I venture to think that for variety and specimens of the grotesque, this pales into insignificance before 'Braille as she is wrote'. Though the time may be quite ripe for a serious attempt being made to improve the existing state of matters, it will require years of patient thought and interchange of opinion, absolute singleness of purpose and charitable, sympathetic self-abnegation to devise a perfectly uniform and practical system, and make the Braille — if that system be the very best system — as perfect and simple as possible and as worthy to be the tangible exponent of the most powerful and universally spoken language of modern times."

The claim to being, in the words of the writer quoted above, a system "as perfect and simple as possible and as worthy to be the tangible exponent" of the English language can justly be made for the punctographic system known as New York Point, or the Wait system, unquestionably the most perfect form which the idea suggested by Barbier and rescued from oblivion by Louis Braille has as yet attained. This system is a genuine American product, the outcome of years of patient thought, of indefatigable labour, and of absolute singleness of purpose. To Mr. William B. Wait, for upwards of forty-three years at the head of the leading institution for the blind in the United States, is due the credit of the origination, development, construction, and application of the literary, musical, and mathematical codes of the New York Point System. The genesis of this new punctographic system is the result of a desire on the part of Mr. Wait to improve the Braille by remodelling it, on principles of compactness and economy of time and space. Careful study, however, of the structure and application of Braille led to the conclusion that the vertical position of Braille signs, allotting a fixed and unvarying space to all signs alike, was defective in more than one important respect. Owing to its limited number of only sixty-three possible single signs, it was inadequate to the requirements of music, if not to those of literature and mathematics as well; it was also found to be much more bulky, and hence more costly, than the Boston-Line, which, in the absence of any other system, was then taken as a standard. To remedy these structural defects, by increasing the number of signs, and reducing the bulk and cost of books to the lowest possible minimum, only one course was left open. A different mode of sign structure was devised, employing two points instead of three vertically and extending the base forms to three, four, or five points horizontally. By this method the new sign-structure of New York Point yields 120 single, and 20 compound, signs against the 63 single signs to which the Braille is limited, and thus answers all the re-

quirements of literature, music, and mathematics. Besides, even apart from the application of the principle of recurrence in the structure of the New York Point — a principle that was not applied in the original Braille — all the advantages of simplicity, economy of space and (in writing) of time, as well as of cost, are on the side of the Wait or New York Point system, as has been demonstrated by the most rigid tests. Thus, in printing a font of 520 letters in each system on a perfectly uniform scale, the letter-, word-, and line-spaces being the same in each system, any Braille code (where the alphabet only is used, and no contractions or punctuation marks) requires 51.75 per cent more space than the New York Point. The space required by punctuation marks in Braille is 20 per cent greater than in the New York Point. The excess of labour in the writing of Braille is twenty-seven per cent greater than in New York Point. In the writing of punctuation marks there is a slight excess of labour on the side of New York Point. However, the use of punctuation marks does not materially affect the question, as they form only about .04 of the whole bulk of composition. Another advantage of the New York Point over Braille is its having true capitals. In Braille the practice is to place before words requiring capitals a sign identical with the period, and to begin the word with the usual small letter. This requires two full "cells", or sixty per cent more area than the New York capitals, which are four points wide. Although up to the sixth or seventh century no distinction was made in Europe, and none is made to this day in the Oriental alphabets, between capitals and small letters (the latter, in fact, were evolved from the former), yet, for those who are over-exacting regarding "good use", the advantage of possessing true capitals, instead of sham ones, is not inconsiderable. Furthermore, the gliding of the finger over the point-signs in but one direction, the lateral, is, on physiological grounds, an important advantage which the New York Point has over the Braille system, where the finger has to move first in the longitudinal and then in the lateral direction.

Methods of Writing

The invention of the New York Point marked an epoch in the history of the education of the blind; yet, had facilities not been supplied for writing and printing it, the new system would have failed to make its mark as an educational force. Fortunately, however, such appliances were provided by Mr. Wm. Wait in 1894, and consist of a desk-tablet, a pocket-tablet, the kleidograph for paper writing, and the stereograph for embossing the metal plates used in printing. The kleidograph and stereograph have done wonders in facilitating the education of the blind. The former, designed for the purpose of writing literature, music, and mathematics in tactile form, is invaluable for speed and efficiency, and for the reason that what is written by it can at once be read by the blind writer without removing or reversing the paper, as must be done when the tablet is used. At least eighty per cent of the time required for writing music is

saved, and sixty per cent for literary work. The stereograph is a development from the kleidograph, designed to emboss both sides of zinc or brass plates ready for use in printing. By its means a compositor can prepare twice or thrice as much matter in a given time as by the movable type; besides, the matter comes from the compositor's hands stereotyped and ready for the press. The cost of the complete plate is reduced by more than one-half. The further application of the interlining process, and of printing on both sides of the sheet at one impression from the plates embossed by Mr. Wait's stereograph, will reduce the cost of books still further, and effect a saving, in metal, in paper, and in binding, of nearly 50 per cent.

The many appliances devised since the days of Valentin Haüy, particularly in France, England, and Germany, to enable the blind to write, may be grouped under three classes. First, the "hand-guides" are designed merely to help the blind to write in straight lines and at equal distances. For correspondence with the seeing, an ordinary pen or, more generally, a lead pencil is used, and the letters are written from left to right. For correspondence with the blind the ordinary letters have to be formed with a blunt stylus from right to left and reversed on paper which is underlaid with some soft material, as felt or blotting-paper, to bring out the written matter in relief on the reverse side of the page and reading from left to right. Valentin Haüy devised a simple method of pencil-writing by placing the paper upon a frame in the interior of which were stretched parallel cords of catgut; between these cords it was an easy matter to write in straight lines and to make the letters of uniform size. Another ingenious way of producing tactile writing was, at the suggestion and request of Haüy, devised by Adet and Hassenfratz in 1783. It was to trace the letters in a bold hand with a glutinous ink, over which sand was spread, so as to form, when it adhered to the letters, a rough sort of relief, or "tangible", writing. Various other fluids were devised for embossed writing, by Challan and Rousseau in 1821, by C. L. Müller in 1823, by Freissauff in 1836, by Riesmer in 1867, and finally by the Abbé Vitali of Milan, in 1893. The use of these various coloured fluids produces a writing which is at once "tangible" to the blind and visible to the seeing.

Among the more elaborate appliances for writing in straight, parallel, equidistant lines, may be mentioned the tablets of Générèse (1807) and of Bruno, the typhlograph of Passard, Dr. Nord's skotograph, Dr. Woizechowsky's amaurograph, Count de Beaufort's stylograph, Wedgewood's noctograph, and the writing-frames of the Elliot brothers, of Thursfield, Dooley, and Levitte. The second class of apparatus are those designed not only to enable the blind to write in straight lines and to make the letters of uniform size, but also to mechanically assist the hand in the formation of the letters and in tracing them at the same distance from each other. These appliances may be divided into line-cell and point-cell frames, according as the ordinary line-letter alpha-

bet or the point system is used in writing. Of the line-cell frames or tablets, the best known are those devised by the Rev. Joseph Engelmann of Linz (1825), James Gall of Edinburgh, Mercier-Capette, Hebold, Dr. Llorens of Barcelona, by C. E. Guldberg of Copenhagen (1858), Galimberti of Milan, Martuscelli of Naples, Moon of Brighton, England, Kemps of Grave, Holland, Ballu, Brother Isidore of Woluwe-Saint-Lambert, Belgium, and Mlle Mulot of Angers, France. Mlle Mulot's stylographic frame enables the blind to correspond not only with the sightless, but also with the seeing just as readily and satisfactorily. Of the numerous print-cell writing-frames or tablets designed for writing Braille, the best known are those of Louis Braille, Ballu, Laas-d'Aguen, Krüger, Kull, Pablasek, Signora della Casa, T. R. Armitage; and for writing New York Point, Mr. Wait's desk and pocket-tablet already mentioned. Essentially, all point-cell tablets consist of a board bearing a movable metal plate indented with pits and having connected with it, and over it, a metal guide with two rows of either oblong or square holes. The paper is placed between the pitted plate and the metal guide. The writing is done with a blunt awl or bodkin, which forces the paper into pits, thereby producing the dots which represent the letters. When the paper is taken out and turned over, the writing which was from right to left appears in relief and is read from left to right. The metal guide has from four to five rows of openings, allowing for the writing of four or five lines; when these are written the guide is shifted downwards and held fast to the frame by two little pins, when four or five more lines are written, and the operation is repeated until the end of the page is reached. The third class of apparatus are those designed for increase of speed in writing, not by hand, however, but by mechanical means. Among the principal writing machines for the ordinary line-letter alphabet, are those of Braille-Foucault (1842), Thurber (1847), Hughes of Manchester (1850), Larivière of Nancy, Saintard (1847), Hirzel of Lausanne, Oehlwein of Weimar, Marchesi, Colard Viennot, Gastaldon of Turin, Ballu (1861), the Hammond, Simplex, Yost, Blickensderfer, Caligraph, etc. Without any doubt, the most rapid and most satisfactory way for the blind to correspond with the seeing is by means of typewriters. All methods of writing, however, which are not tangible to the fingers are liable to the objection that the written matter cannot be revised and corrected by the blind writer. Of machines constructed for embossing Braille and New York Point, those chiefly in use in the United States are Hall's writer, for Braille, and Wait's kleidograph, for New York Point. In France, England, and Germany, a number of Braille machines have been designed on the lines of Hall's Braille-writer.

Geography

The blind are fond of the study of geography, and with proper teaching are as capable of forming correct geographical notions as the seeing. Most of the detailed teaching of geography, however, must be from raised maps. In the elementary course,

rough maps made by the pupils themselves on cushions by means of pins and string are very helpful. The first maps used by the blind were on embroidered cloth or canvas, the needle-work representing the land and the plain cloth the water; boundaries were marked by coarse corded stitches, and towns and cities by points made with the same coarse material. Various attempts were subsequently made to construct relief maps on paper or cardboard, the boundary lines, river courses, lakes, bays, positions of towns and cities, etc., being represented in a variety of ways. The best thus far made are the wooden dissected maps, in which the divisions of a country are represented by a movable section, bodies of water by a depression in the wood, hills and mountains by a slight elevation, towns and cities by brass-headed nails. When all the movable sections are fitted together they form a complete map. The main objection to the dissected maps is that they are very expensive and better suited to individual than to class teaching.

The Teaching of Arithmetic

Records are not wanting to show that, from the very beginning, arithmetic and other branches of mathematics held an important place in the education provided by institutions for the blind. It was soon observed that the blind displayed great fondness for arithmetical calculations. While mental arithmetic was particularly encouraged, it became evident that in the more advanced branches of the science, the blind needed special apparatus, and various appliances were devised to meet this want. Among the earliest attempts to construct a tangible device for the more abstruse calculations of arithmetic and algebra is that of the great mathematician, Nicholas Saunderson. Since his day a great many different ciphering boards, or tablets, have been constructed. One of the best is Taylor's octagonal board with square pins and octagonal holes. On one end of the pin one of the edges is raised into a prominent ridge, and on the other end there is a similar ridge divided in the middle by a deep notch. The holes in the board are star-shaped, with eight points. The pin can be placed in eight different positions, and on reversing it, with the notched end uppermost, in eight more; this gives ten signs for the Arabic numerals and six for the ordinary algebraic signs. For pure algebra another pin is needed, differing from that used in arithmetic. This gives sixteen additional signs, which are quite sufficient.

Opening in the Board for

the reception of the

TAYLOR'S CIPHERING-TABLET

It is essential for a good arithmetic board that the same pin should represent every character; otherwise time is lost in selecting the required character and in distributing the type at the end of each operation. In the United States a board is used with square holes, and two kinds of type are required to give even the Arabic numbers.

Music

Since the days of Haüy, music has always been considered as one of the most potent factors in the education of the blind, offering them advantages which they can derive from no other source. Though a fair percentage of the blind attain to a high degree of musical skill, and find for themselves positions of responsibility and importance, yet, contrary to the general belief, no larger proportion of persons with exceptional musical talent is found among the blind than in any other class. The common idea that the blind are taught music by ear is erroneous; it arises partly from the assumption that those who are sightless must of course possess an abnormally acute sense of hearing, and partly from the fact that so many persons are unaware that a tactile musical notation exists. Since 1784 there have, in fact, been almost as many such systems as systems of embossed reading. Besides the common musical notation in relief, used by Valentin Haüy, by W. Taylor of York, and Alston of Glasgow, special systems were devised by Frere, Lucas, and Moon in England; by Guadet, Rousseau, and the Abbé Goupil, in France; by Klein, Krähmer, Oehlwein, and Warschauer, in Germany; by Petzelt in Austria; by D. Pedro Liorens in Spain; and by M. Mahony in the United States. In most of these systems the common letters in relief were used to express the

notes and their values, the octave, finger, repeat, and time signs, etc. All of the above systems, however, with the exception of the common musical notation in relief, have long since been entirely superseded by the Braille and the New York Point systems of musical notation. Soon after Louis Braille had devised the literary code he adapted his punctographic system to musical notation. An outline of the New York Point musical notation was first presented in 1872, and the first edition of the notation was printed in the same year. In 1878 it received the unanimous approbation of the American Association of Instructors of the Blind, and it was adopted a few years later in most of the institutions for the blind in the United States. As to the comparative merits of the two systems, it is claimed that the Braille notation is inferior in completeness and clearness of expression. The notation of music requires not less than 140 signs. The New York system, extending to four or five points horizontally, yields 120 single and 20 compound signs, while the Braille system admits of but 63 single signs and requires a uniform space for each.

Ambiguity is the consequence of this inadequate number of signs, the same sign being made to represent two different things of the same species, as, for example, a whole note and a sixteenth, a half-note and a thirty-second.

Industrial Training

From the very beginning of systematic education of the blind down to the last decade, industrial training has always occupied a decidedly prominent place in the curriculum. Too often, particularly in the earlier days, the essential work of education was subordinated to conditions created and demands made by the industries. Instead of being used as a means of education, the teaching of trades was made the chief aim and end. The success of certain pupils in careers from which they seemed necessarily excluded naturally gave rise to somewhat extravagant hopes of the possibilities of industrial education. Hence, perhaps, arose the prevalent notion and expectation that schools for the blind should graduate young men and women so equipped that each and all would be self-supporting and able to earn as much, or nearly as much, as persons of equal natural ability with the sense of sight. The fact, however, is that only a small proportion of the blind in Europe and America are wholly self-supporting. According to the United States Census of 1900, of 62,456 blind persons, ten years of age and upwards, only 12,506, or about 20 per cent, were reported as regularly engaged in remunerative occupations. The percentage of the general population so employed was upwards of 50. As most institutions for the blind, particularly in the United States, are open to all blind children of average intelligence, the heterogeneous character of the membership of such schools must lower the standard of efficiency. Another factor which has too often been lost sight of is that blindness is a disabling infirmity. Education is much slower and more difficult with only four senses than with five; it would, therefore, be unreasonable to expect better results of the schools for the blind than are expected of the public schools for normal children, in which schools neither trades nor music are taught. The teaching of skilled trades, it must also be remembered, properly belongs to a stage of education later than the primary, and it should not be allowed to trespass upon the legitimate work of the schools. As soon as adults are admitted to the school with minors, the industrial feature tends to become dominant and unavoidably imparts an element of commercialism to the school. Both adults and younger pupils become disposed to lay more stress on shop work than on mental exercises and discipline. In consequence, the finished pupils lack those general qualifications which are necessary to begin business in the trades they have learned, and still more to successfully compete against sight and machinery. The long, trying, and costly experience of the leading schools in the United States has, moreover, proved that the teaching of trades or industries during the school period confers no lasting good upon the pupils and is void of even such results as the sense of self-reliance and desire to

become self-supporting which, it was believed, were being promoted. For these reasons the industrial experiment is gradually being abandoned in order to save the institutions for that strictly educational work for which they were established. If trades, then, are to be taught the blind, and industries to be carried on by them, the technical training should, as in the case of seeing pupils, be taken up only after the completion of the primary or secondary course of studies and in a location altogether removed from the school proper.

Manual Training

Instead of the teaching of the ordinary trades, which, owing to the radical change in industrial conditions, can no longer be carried on by the blind at a financial profit, a system of regular and thorough training of the hands, the senses, and the muscles has been generally introduced in the leading American institutions for the blind. The various forms of solid work, of work in clay, paper, and cardboard, as well as sewing, cooking, weaving, basketry, simple wood-carving, etc., are the processes of manual training most commonly employed in the general education of the blind.

Physical Training

Educators of both blind and seeing pupils are in entire accord as to the great importance of physical training. The blind, for obvious reasons, are peculiarly in need of healthful, systematic exercise. Observation and statistics show that their health and strength are far below the normal standard. Hence, before there is any hope of obtaining satisfactory educational results, all physical and physiological defects, such as deformities in the muscular system, unsightly movements, natural timidity, awkwardness in walking, etc., must be corrected as far as possible. In view of these facts, physical training forms an integral part of the regular curriculum of the schools for the blind.

Libraries for the Blind

It is almost impossible for those who enjoy the use of sight to realize what a boon reading is for those who live in perpetual darkness. Outside of their early education, for those who have been blessed with it, there is nothing in the life of the blind so stimulating, so broadening, and so comforting as good books. In no country have more efforts been made to supply the blind with books and to solve the problem of their circulation than in the United States. In no country has such a liberal government provision been made for the education of the blind through the publication of books as was made by the United States Government, when by an act of Congress (3 March, 1879) the sum of \$250,000 was set apart as a perpetual fund, the interest of which (\$10,000) is expended each year in printing and distributing suitable books among the institutions for the blind in the United States. Mainly as a result of this provision, the number of volumes distributed among the thirty-nine school libraries amounts, according to the Annual Report of the Department of the Interior for 1902, to 105,804

volumes, an average of 2713 volumes per school. In France and in England, it must be admitted, there is far greater individual co-operation and a more generous interest displayed in furthering the extension of libraries for the blind than in the United States. Thus the "Association Valentin Haüy" of Paris had, in 1905, on its list of voluntary writers of books for the blind the names of 1150 persons who embossed in Braille and donated in that year to the "Bibliothèque Braille", for its forty-nine travelling libraries, 1533 volumes. In the same year the British and Foreign Blind Association of London was indebted to 574 generous persons who gave valuable time in writing Braille books for the blind.

Catholic Literature for the Blind in the United States

Before 1900, with the exception of a small catechism and Cardinal Gibbons' "Faith of Our Fathers", there were no Catholic books for the blind to be had in this country. To supply this long-felt want, which, with the dearth of Catholic schools for the blind, has resulted in the loss to the Church of thousands among the Catholic blind, the writer of this article founded, in January, 1900, a society whose aim it is to place gratuitously within the reach of the blind throughout the United States Catholic literature embossed in the Wait, or New York Point, print. With the assistance of a few devoted ladies, who helped to raise the necessary funds, a printing plant was equipped and has been in operation ever since. The society was incorporated in March, 1904, under the name of "The Xavier Free Publication Society for the Blind of the City of New York". Although from its inception the society has been dependent for the maintenance of its work upon donations and annual subscriptions, still, with the encouragement and blessing of the Catholic hierarchy, the deep appreciation and gratitude of thousands of Catholic blind throughout the country, and the generous help of its benefactors, it has been enabled to pursue its beneficent object for the moral and intellectual elevation of the blind. Since its foundation, thousands of volumes of Catholic literature, embracing ascetical, Biblical, biographical, doctrinal, and historical works, as well as works of general literature, of fiction, and of poetry, have been placed in upwards of thirty-seven state, city, or institute libraries for general and free circulation among the blind. The publications of the society are also circulated throughout the country from its own central library. "The Catholic Transcript for the Blind", a monthly magazine, published by the Xavier Free Publication Society for the Blind since 1900, is so far (1909) the only Catholic periodical embossed in the English language.

Catholic Literature in England

It is only within the last five years that, through the initiative of the Hon. Mrs. G. M. Fraser, who taught Braille to most of the writers, upwards of four hundred books have been hand-typed by voluntary workers and placed at the disposal of the Catholic Truth Society of London for circulation among the Catholic blind in Great Britain.

This work would not have been undertaken had it been possible to get Catholic books at the great English libraries for the blind.

The Blind-Deaf

According to the special reports of the United States Census Office for 1900, of the 64,763 persons reported as blind, 2772, or nearly 43 per 1000, were found to be also deaf. The age of the occurrence of these two defects cannot be stated exactly, except for those blind and deaf from birth, of whom there are 76. Between birth and five years of age are 64; between five and nine, 54; between ten and fourteen, 37; between fifteen and nineteen, 24. That the public, and even professional educators, entertain incorrect views on the education of this class of sufferers has been shown by Mr. William Wade in his interesting monograph, "The Blind-Deaf". For this excellent publication, and still more for his widespread and munificent charity to the blind-deaf, and particularly to the deaf and dumb and blind of this country, Mr. Wade's name deserves to be forever enshrined in the hearts of this doubly and trebly afflicted class. The knowledge by the public that the education of the blind-deaf is by no means the difficult task commonly believed, and the further knowledge of the number of those who have been educated and of their advanced position in mental attainments, will do much, it is contended by the author of the monograph, to advance the interests and the happiness of the blind-deaf. "In the early education of the blind-deaf", we are told by Dora Donald, "there are three distinct periods. In the first the pupil receives impressions from the material world. The mind of a blind-deaf child does not differ from that of a normal child; given the same opportunity, it will develop in the same way. Whilst the normal child discovers the world through the five senses, the world must be brought to the blind-deaf child and imparted by the teacher through the sense of touch. During the second period the child is taught to give utterance to his conceptions. This may be done either through the sign language, the manual alphabet of the deaf, or through one of the systems of raised print for the blind, if articulated speech cannot be taught the child. The third and by far the most difficult step is that of procuring mental images from the printed page. If the child has been thoroughly trained in the habit of personal investigation, if he has been taught to express freely the results of such investigation by means of the manual alphabet and to record them in print, he will eventually be able to reverse the process and to build about him an imaginary existence that will cause the printed page to teem with life and to glow with the charm of actual existence. At this stage of the child's education, he may enter either a school for the deaf, a school for the blind, or the common school for normal children. Supplied with the necessary apparatus and accompanied by a teacher who will faithfully translate all that he might obtain through sight and hearing, he may be taught by the same methods used for normal children, ever keeping in mind this one point of difference — touch must take

the place of sight and hearing; the manual alphabet or embossed page being substituted for speech."

JOSEPH M. STADELMAN

Education of the Deaf and Dumb

Education of the Deaf and Dumb

Education essentially includes the process of encouraging, strengthening, and guiding the faculties, whether of mind or body, so as to make them fit and ready instruments for the work they have to do; and, where the need exists, it must include, moreover, the awakening for the first time into activity and usefulness of some faculty which, but for the awakening, might remain forever dormant. As regards intellectual development, the deaf individual is the most handicapped of the afflicted class. The term "deaf and dumb", so frequently applied to that class of individuals who neither hear nor speak, is becoming obsolete among the educators of the deaf, as it implies a radical defect in both the auditory and the vocal organism. Persons who are born deaf, or who lose their hearing at a very early age, are unable to speak, although their vocal organs may be unimpaired. They become dumb because, being deprived of hearing, they are unable to imitate the sounds which constitute speech. To correct the error involved in the term *dumb*, it is customary to speak of human beings who do not hear and speak as deaf-mutes, a term which implies that they are silent, but not necessarily incapable of speaking. Brute animals that are deaf, are deaf and dumb; the little child,

before it has learned to speak, is mute, but not dumb. There are found individuals who can hear, but cannot speak. To such may be applied the term *dumb*, inasmuch as they are either destitute of the power of speech or are unwilling to speak and are lacking in intelligence. Such children are generally found to be more or less idiotic. On account of the great progress made, especially during the last century, in the education of deaf-mutes, by which a large percentage are taught to speak, the term *mute* is also omitted when speaking of matters pertaining to that class formerly designated as "deaf and dumb". Institutions for them are named preferably "Schools for the Deaf", and in the literature of the subject they are spoken of simply as the "deaf", e. g. "The Annals of the Deaf", etc. Here it is well to remark, that there is a strong and growing objection among the deaf and their educators to calling their institutions asylums — a term which classifies them with unfortunates needing relief and protection, like the insane. In fact, Webster, under the word "Asylum", classes the deaf and dumb with the insane. Efforts are consequently being made to place such institutions under the control of educational rather than of charity boards.

HISTORY

That there were deaf persons in the remote past is evident from the fact that the causes of deafness, such as disease, were as prevalent then as now. Before the Christian Era, their condition was deplorable. By many they were considered as under the curse of heaven; they were called monsters and even put to death as soon as their deafness was satisfactorily ascertained. Lucretius voices the received opinion that they could not be educated: —

- To instruct the deaf, no art can ever reach,
- No care improve them, and no wisdom teach.

Greek and Roman poets and philosophers classified them with defectives, and the Justinian Code abridged their civil rights. In the family they were considered a disgrace, or were looked upon as a useless burden and kept in isolation. It is a bright page in the New Testament which narrates the kindness of our Divine Lord, who, doing good to all, did not forget the deaf and dumb. After His example, the Church has extended its charity to this afflicted class, and has led the way in opening up for them other channels of thought in place of the hearing faculty. The statement met with in literature connected with the education of the deaf, that the real history of deaf-mute instruction must be considered as dating from the Reformation, is the old fallacy of *post hoc ergo propter hoc*. The fact is, that not a few of the more famous educators of the deaf received their first lessons from those who preceded the Reformation or were not influenced

by its errors, but undertook the instruction of deaf-mutes for the sole purpose of imparting religious instruction. No Catholic theologian maintained that the adult deaf and dumb from birth are beyond the pale of salvation, because "Faith cometh by hearing" (Rom., x, 17). The assertion is often made, without references being given, that St. Augustine held such an opinion. Although the great doctor may have held the opinion of his time, that the deaf could not be educated, he certainly did not exclude them from the possibility of salvation any more than he excluded pagans to whom the Gospel had not yet been preached.

That the deaf are very much handicapped, even in our time, as regards religious instruction, so necessary for the preservation of faith and morals, must be admitted. Many deaf-mutes born of Catholic parents have lost the Faith, owing to a lack of Catholic educational facilities. Moreover, they are deprived of the usual Sunday instructions and sermons. There are in the United States few priests engaged in ministering to their spiritual welfare, and such as have taken up this apostolate are not at leisure to devote their whole energy to the work. On the other hand, Protestant ministers travel through the length and breadth of the land and in their monthly itineraries assemble the deaf for religious services. There can be no doubt that from the dawn of Christianity the deaf enlisted the sympathy and zeal of many priests and missionaries who, by various ingenious devices suited to the occasion, taught them the essential truths of faith: but history has left meagre records of their good work. According to Venerable Bede, St. John of Beverley (721) caused a deaf and dumb youth to speak by making the sign of the cross over him; and Bede himself, in his "De Loquelâ per gestum digitorum", describes a manual alphabet. Rudolph Agricola, the distinguished humanist (1443-1485), states that he saw a deaf and dumb man who was able to converse with others by writing (*De inventione dialecticâ*, III, xvi). Ponce de Leon (1520-1584), a Spanish Benedictine monk, undertook the education of several deaf-mutes, as is related in the accounts of his work discovered among the archives at Oña. He relates that he taught pupils who were deaf and dumb from birth to speak, to read, to write, and to keep accounts, to repeat prayers and to confess orally. He first taught his pupils to write the names of objects and then to articulate. A contemporary writer, Francesco Valles, says that Ponce de Leon's method proved that, although we learn first to speak and then to write, the reverse order answers the same purpose for the deaf. It is highly probable that he was led to undertake the instruction of the deaf and dumb by the principle announced by Girolamo Cardano (1501-1576), a friend of St. Charles Borromeo, that "writing is associated with speech, and speech with thought, but written characters may be connected together without the intervention of sounds. The deaf can hear by reading, and speak by writing." About fifty years later, Juan Pablo Bonet, a Spanish priest, published a treatise entitled, "Reduccion de las Letras y arte para En-

señar a hablar los Mudos" (Madrid, 1620). He made use of a manual alphabet, invented a system of visible signs representing to the sight the sounds of words, and gave a description of the position of the vocal organs in the pronunciation of each letter. His work contains many valuable suggestions useful to modern teachers of articulation and lip-reading.

St. Francis de Sales, having on his missionary journeys met a deaf-mute, took him into his service and succeeded in establishing communication with him by signs, and prepared him for confession and Holy Communion. The celebrated Jesuit naturalist and physician, Lana Terzi (1631-1687), in his "Prodromo dell' Arte Maestra", considers the education of the deaf, which, according to him, consists in their "first learning to perceive the dispositions of the organs of speech in the formation of sounds, and then imitating them; and recognizing speech in others by lip-reading. To that end they should first utter each sound separately, read it on the lips of another, then join them in words; next they should be taught the meaning of these words by being shown the objects signified, and gradually be made acquainted with the meaning of those which relate to the functions of the senses, the arts, the understanding and the will" (Arnold). Lorenza Hervás y Panduro (1735-1809), a celebrated Spanish philologist and missionary in America, took an active interest in the education of the deaf in Rome and published a learned work in two volumes entitled "Escuela Española de Sordo-mudos, o Arte Para Enseñarles a Escribir y Hablar el Idioma Español" (Madrid, 1795). The work consists of five parts, "the first dealing with the deaf in the political, physical, philosophical, and theological aspects of the subject and the linguistic questions it gives rise to; the second is a history of their education up to that time, which is the first complete account written; the third explains the practical method of teaching idiomatic language by writing; the fourth that of teaching speech; and the fifth is on the instruction of the deaf in metaphysical ideas and in moral and religious knowledge" (Arnold).

Among other writers in the interest of the education of the deaf and dumb must be mentioned John Bulwer (1645); Deusing (died 1666), who in his writings recommends writing, signs, and, on occasion, lip-reading as the helpful instruments in the education of the deaf; William Holder (1616-1698), and his contemporary, John Wallis (1616-1703); George Dalgarno (1626-1687), of Aberdeen, Scotland, who published, in 1661, "Ars Signorum" and, in 1680, "Didascalocophus" (or "Deaf and Dumb Man's Tutor"), and devised a double-handed alphabet; Baron Von Helmont (1618-1699); John Conrad Amman (1669-1724), a native of Schaffhausen, Switzerland, who published (1700) "Dissertatio de Loquelâ", in which are described the means by which the deaf and dumb from birth may acquire speech.

Although Germany cannot claim originality in the field of the education of the deaf and dumb, several works published in other countries were translated into German,

and their teachings put in practice. Among the earliest to take up this work were Kerger (1704), Raphel (1673-1740), Lasius (1775), and Arnoldi (1777). The first public institution for the deaf in Germany was established by Samuel Heinicke (1729-1790), the great advocate of the oral method of instruction, which has generally been followed in German schools for the deaf. To Friedrich Moritz Hill (1805-1874), regarded as one of the greatest teachers of the deaf, is due what is distinctively called the "German System", which has found an able critic in J. Heidsiek, of the Breslau Institution for the Deaf, in a work entitled "Der Taubstumme und seine Sprache". Jacob Rodriguez Pereire (1715-1780), a Portuguese Jew, gave an exhibition of his skill in teaching the deaf before the Academy of Science in Paris. "His efforts were confined to a privileged few, and, from this circumstance, as well as his keeping his methods secret, his work, unlike de l'Epée's, had no lasting effect upon the deaf as a class" (Arnold). Abbé Deschamps, of Orléans, devoted his life and fortune to the education of the deaf-mutes and, in his instructions, relied chiefly on reading and writing together with speech and lip-reading.

Up to the middle of the eighteenth century, it was believed that speech was indispensable to thought. The practical utility of pantomime had not been fully shown before the days of Abbé Charles-Michel de l'Epée (1712-1789), the father of the sign-language and founder of the first school for the deaf. The deplorable condition of the two deaf-mutes whom he chanced to meet on one of his missionary errands excited his compassion and awakened in him zeal for their religious instruction. He discovered others of the same class, especially among the poor, and to these he devoted his time and fortune. In his first attempt to teach his silent pupils he tried the method of pictures used by Père Vanin before him; but, finding this method unsatisfactory, he tried the articulation method, which he found discouragingly slow. Noticing, as every instructor of the deaf has noticed, that deaf-mute children, even before having received instruction from anyone, will, at play and at other times, communicate with each other in pantomime and make use of certain natural gestures indicative of objects, their quality and action, he came upon the idea of using a sign-language as the means of instruction. Since words are conventional signs of our ideas, why could not conventional gestures be signs of ideas? He concluded that the natural language of signs, which the deaf-mutes themselves invent, would be of great service in their instruction. He accordingly made himself familiar with the few signs already in use and added others more or less arbitrary. He opened a school for deaf-mutes in Paris, about 1760, which soon won international fame. De l'Epée died in 1789, leaving as his successor the Abbé Sicard, who made important improvements in the system of de l'Epée. At about the same time a school for the deaf was opened by Samuel Heinicke at Dresden, which was afterwards removed to Leipzig, and another by Thomas Braidwood, at Edinburgh. The successful

results obtained in these schools prompted other cities and countries to establish similar ones under the direction of persons trained by de l'Épée, Heinicke, or their disciples.

In Italy the first school for the deaf was established in 1784 at Rome, by the Abbate Silvestri, a disciple of Abbé de l'Épée. Among other Italian educators must be mentioned Tommaso Pendola (1800-1883) and his brilliant associate, Enrico Marchio; Abbate Balestra and Abbate Giulio Tarra (1832-1889), who acted as president at the Milan International Congress in 1880 and saw his most cherished ideas regarding oral teaching practically approved by the resolutions that were adopted, and which hastened the progress of oral teaching, especially in France.

Francis Green, a native of Boston, 1742, whose son was a deaf-mute, was the earliest advocate of deaf-mute education in America. In his "Vox Oculis Subjecta", published in London, 1783, he describes the method by which the deaf-mute may be taught to speak. In about 1812, John Braidwood, Jr., a grandson of the founder of the Edinburgh school, attempted to establish schools in Virginia, New York, and Baltimore, but failed. "The immediate effects", says the "History of American Schools for the Deaf" (I, 10), "was to hinder and delay the opening of the first permanent school; for the members of his family in Great Britain, who controlled the monopoly of deaf-mute instruction in America, placed obstacles in the way of Dr. Gallaudet, when he sought to acquire the art of instruction in the mother country." An exceptionally large number of deaf-mutes having been found in the State of Connecticut by Dr. M. F. Cogswell, whose daughter was deaf, a corporation of several gentlemen was enlisted for the purpose of establishing a school at Hartford, under the care of Dr. Thomas Hopkins Gallaudet. For the purpose of mastering the art of instructing the deaf, Dr. Gallaudet sailed for England; but the exorbitant and humiliating terms imposed by the Braidwood-Watson family, which held the monopoly of the art, repelled him. Happening to meet Abbé Sicard, who with his pupils was visiting London, he accepted an invitation to visit the school in Paris. Here he received every assistance. The abbé gave him several hours of instruction every week and generously allowed Laurent Clerc, one of his distinguished pupils and valuable associates, to accompany him on his return to America. In the contract drawn up between Dr. Gallaudet and Laurent Clerc, it is stipulated (article 11): "He [Laurent Clerc] is not to be called upon to teach anything contrary to the Roman Catholic religion", and in his letter to Bishop Cheverus of Boston, Abbé Sicard writes: "The extreme desire to procure for the unfortunate deaf-mutes of the country in which you dwell, and fulfill so well the mission of the Holy Apostles, the happiness of knowing our holy religion, leads me to a sacrifice which would exceed human strength. I send to the United States the best taught of my pupils a deaf-mute whom my art has restored to society and religion. He goes fully resolved to live and

be faithful to the principles of the Catholic religion which I have taught him." Notwithstanding the kind solicitude of his beloved master, Laurent Clerc, like so many other deaf-mutes deprived of constant religious instruction, in his surroundings weakened in the Faith and apostatized. The kindness of Abbé Sicard only served to lay the foundation of a Protestant propaganda which, ever since the opening of the Hartford School founded by Dr. Gallaudet, has controlled the education of the deaf in America. This Hartford School, then known as the American Asylum, was opened 15 April, 1817, under the superintendency of the Rev. Dr. Gallaudet, whose two sons, the Rev. T. Gallaudet and E. M. Gallaudet, have been active in the cause of deaf-mute education. The latter was the founder of the Columbia Institution for the Deaf and Dumb at Washington, D. C., which was opened 13 June, 1857. Later on, in 1864, it developed into a school for the higher education of the deaf under the name of the National Deaf-Mute College. Connected with the college is a normal department for the training of teachers for the deaf. A course of studies leading up to entrance into the National Deaf-Mute College may be found in the "American Annals of the Deaf" for November, 1907. As regards higher education and normal-school practice, opportunities are also afforded by the Catholic deaf-mute schools in the State of New York.

When the Abbé de l'Epée originated the method of signs, many of his contemporaries, such as the Abbé Deschamps, refused to be associated with the new school, and between him and Samuel Heinicke of Leipzig, the great upholder of the speech method, there was carried on a spirited controversy, which has continued ever since, among the educators of the deaf. Professor E. A. Fay, in the "American Annals of the Deaf", gives the following classification and definition of the methods used in the schools for the deaf: —

- **"(1) The Manual Method:** — Signs, the manual alphabet, and writing are the chief means used in the instruction of the pupils, and the principal objects aimed at are mental development, and facility in the comprehension and use of written language. The degree of relative importance given to these three means varies in different schools; but it is a difference only in degree, and the end aimed at is the same in all.
- **"(2) The Manual Alphabet Method:** — The manual alphabet method and writing are the chief means used in the instruction of the pupils, and the principal objects aimed at are mental development, and facility in the comprehension and use of written language. Speech and speech-reading are taught to all of the pupils in one of the schools (the Western New York Institution) recorded as following this method.
- **"(3) The Oral Method:** — Speech and speech-reading, together with writing, are made the chief means of instruction, and facility in speech and speech-reading, as

well as mental development and written language, is aimed at. There is a difference in different schools in the extent to which the use of natural signs is allowed in the early part of the course, and also in the prominence given to writing as an auxiliary to speech and speech-reading in the course of instruction; but they are differences only in degree, and the end aimed at is the same in all.

- **"(4) The Auricular Method:** — The hearing of semi-deaf pupils is utilized and developed to the greatest possible extent, and, with or without the aid of artificial appliances, their education is carried on chiefly through the use of speech and hearing, together with writing. The aim of the method is to graduate its pupils as hard-of-hearing speaking people instead of deaf-mutes.
- **"(5) The Combined System:** — Speech and speech-reading are regarded as very important., but mental development and the acquisition of language are regarded as still more important. It is believed that, in many cases, mental development and the acquisition of language can be best promoted by the manual or the manual-alphabet method, and so far as circumstances permit, such method is chosen for each pupil as seems best adapted for his individual case. Speech and speech-reading are taught where the measure of success seems likely to justify the labor expended, and, in most of the schools, some of the pupils are taught wholly or chiefly by the oral method or by the auricular method."

Some educators of the deaf employ the method of visible speech, which is a species of phonetic writing: symbolizing the movements of the vocal organs in the production of speech. There is also a phonetic manual in which the several positions of the hand not only represent various speech sounds, but also indicate concisely the way in which the represented sound is, physiologically or mechanically produced (see Lyon, "Phonetic Manual", Rochester, New York, 1891). Whipple, in his "Phonetic Manual", endeavours to depict the positions taken by the visible organs, the teeth, lips, tongue, and palate, in the production of sound.

It is beyond the scope of this article to discuss the merits of the various methods in use. A teacher of the deaf cannot lose sight of the fact that in the term *deaf*, or *deaf-mute*, there are included at least four sub-classes, namely, the semi-mutes, who have lost their hearing after they had acquired more or less perfectly the use of language; the semi-deaf, who retain some power of hearing, but yet cannot attend with profit schools for hearing children; the congenitally deaf, possessing some ability to perceive sound; and the totally deaf from birth, who are unable to perceive sound. A teacher of hearing children may take for granted, if the class is properly graded, that all his pupils are on the same plane; but a teacher of the deaf, whose pupils may be only four

in number, may have before him, even in the lowest grade, as many different kinds of deaf children as there are pupils in the class. These he must instruct and educate. Considering that the deaf child is very much handicapped, and that the period of its school-days are limited, it is reasonable to suppose that a good teacher will take advantage of every latent power possessed by the child for educational development. In a word, the teacher will suit the method to the child and not endeavour to adapt the child to the method. It would certainly be a mistake to use the purely oral method for all deaf-mutes without discrimination and without considering the capacity, eyesight, etc. of the pupil.

AIDS TO EDUCATION OF THE DEAF

For the purpose of diffusing knowledge relative to the education of the deaf, there has been established, through the benefactions of Dr. Alexander Graham Bell, the Volta Bureau, Washington, D. C. Here are collected items of interest in the educational work for the deaf. Under John Hitz, its first superintendent, it received international development. In this way it has been possible to compile and diffuse international statistical information concerning institutions and work for the deaf throughout the world. Its publications are distributed gratuitously or by exchange. Among the publications of the Volta Bureau is an historical account of all the schools for the deaf in the United States, in three volumes, edited by Dr. E. A. Fay. As an incentive to the educational work for the deaf, and as a means of collating the opinions of those interested, there are about thirty-two periodical publications in Europe and more than sixty in America dealing with questions concerning the deaf. The oldest among the latter, "The American Annals of the Deaf", edited by Dr. Fay, is eclectic in its character and as such is the organ of the combined system of instruction. For the diffusion of the oral method there was founded, in 1899, at Philadelphia, a special periodical, "The Association Review", published by the "American Association to Promote the Teaching of Speech to the Deaf". Among the efficient agencies for the promotion of educational work for the deaf must be numbered the meetings, congresses, and conferences of superintendents and teachers of the deaf, and of the deaf themselves. The oldest organization of the kind is the "Convention of American Instructors of the Deaf" which met for the first time in New York in 1850, and for the sixteenth time in 1901, at the Le Cousteulx, St. Mary's Institution for the Improved Instruction of Deaf Mutes, Buffalo, as the guests of the Sisters of St. Joseph.

There are also annual meetings of the "Association to Promote the Teaching of Speech to the Deaf"; meetings of principals and of the Department of Special Education of the National Association of American Teachers. At the invitation of the Right Rev. D. J. O'Connell, Rector of the Catholic University of America, all persons interested in the education of Catholic deaf-mutes met in July, 1907, at Milwaukee, simultaneously

with the Catholic Educational Association, and organized the Catholic Deaf-Mute Conference. The conference is a powerful factor in enlisting the cooperation of bishops, priests, and laymen in ameliorating the educational condition of the Catholic deaf. The deaf themselves, also, at stated times, hold State and national conventions. Such meetings are carried on in the sign language, which, because visible to a large audience, is best adapted for public addresses, sermons, etc. Whenever at these meetings the deaf touch upon educational topics, they take occasion to manifest their strong protest against pure oralism in the schools, and their unequivocal adherence to the sign-language and the combined system of education. In the United States deaf-mutes are entitled to a share in the school fund, and special boarding and day schools are provided for them. Most of the institutions are controlled by trustees appointed by the State. The term of instruction is from seven to twelve years.

ACTUAL CONDITIONS

According to the subjoined statistics, compiled from the "American Annals of the Deaf" for 1907, there are 60 public State schools, 60 public day-schools, and 17 denominational and private schools, making in all 139 schools for the deaf in the United States, having an attendance of 11,648 pupils — 6317 boys and 5331 girls — 1552 instructors — 471 men and 1081 women. Out of the total number of 139 schools for the deaf, there are 13 Catholic schools with the following enrolment: St. Joseph's School for the Deaf, Oakland, California, 39; Ephpheta School for the Deaf, Chicago, Illinois, 72; Institute of the Holy Rosary, Chincuba, Louisiana, 37; St. Francis Xavier's School, Baltimore, Maryland, 35; Boston School for the Deaf, Randolph, Massachusetts, 93; Mater Boni Consilii School, St. Louis, Missouri, 40; St. Joseph's School, Longwood, Missouri, 20; Notre Dame School, Cincinnati, Ohio, 12; St. John's Institute, St. Francis, Wisconsin, 71; St. Joseph's Schools, 3, New York City, 417; Le Couteulx, St. Mary's School, Buffalo, New York, 176 — making in all 1002 deaf pupils in Catholic schools. It will be noticed that, in the four Catholic schools for the deaf in the State of New York, which has a deaf population of about 10,000, there are 593 children cared for; and that, in nine schools scattered throughout the remaining portion of the United States, where there is a deaf population eight times as great as that of the State of New York, only 409 are provided for. If all the States were as generous as New York in caring for its deaf children, there should be, if adequate facilities were provided, 4744 children in Catholic schools for the deaf outside of the State of New York.

With the exception of the New York institutions for the deaf, the other Catholic institutions are almost entirely dependent upon the charity of religious sisterhoods. Pupils of all denominations are admitted, the only requirements for admission being a sound mind and good morals. Good work has been done by these devoted sisters for Church and State, and their graduates are respected and self-supporting citizens;

but, as they carry on their schools with little support from without, the number of pupils is necessarily small. The pupils are for the most part girls, and, because there is no male community in the United States, as there is in Canada and Europe, to take charge of the deaf-mute boys, these are obliged, with very few exceptions, to attend State or public day-schools.

The celebrated school for the deaf at Cabra, near Dublin, Ireland, has two departments. The St. Joseph's School for boys is under the care of Christian Brothers and the St. Mary's School for girls is in charge of Dominican nuns. It was established in the year 1846 by Archbishop Murray of Dublin. The patrons of the institution are the archbishops and bishops of Ireland, the president of the management being the Archbishop of Dublin. Without government grant, the school has attained a foremost rank among educational institutions for the deaf. According to the report for May 1900, there were 518 pupils under instruction, — 260 boys and 258 girls. Industrial training suited to the age and capacity of the children, and so necessary for the deaf, forms an important part in the educational system of the school.

The institutions for the deaf in the United States, during the last decade, show a marked increase in the number of day-schools. This is due to the strong influence of the defenders of the oral method, who, for their purpose, consider such schools superior to boarding-schools. The conscientious duty of Catholic parents to withdraw their afflicted children from State boarding-schools that have proved so dangerous to faith, has also influenced the establishment of day-schools. Until boarding-schools are provided, the day-school, notwithstanding its many inconveniences, is preferable for the Catholic deaf-mute child, so that it may not be deprived of religious home influence. Until 1870, the schools for the deaf established in the United States were almost entirely boarding-schools.

DEAF-BLIND

There are some individuals who are not only deaf but also blind, and not a few who are deaf, mute, and blind. Wonderful results have been produced in the education of this afflicted class during the last half-century, as is evidenced in the case of Laura Bridgeman, taught by Dr. Howe; Helen A. Keller, educated by Miss Annie Sullivan; Clarence Selby, poet and author, taught by Sister Dosithea of the Le Couteux, St. Mary's Institution, Buffalo, New York, and Lottie Sullivan, educated by Mrs. G. W. Veditz of the Colorado School, and instructed for her first Holy Communion by the Sisters of St. Joseph in St. Louis. About forty more remarkable cases are known in the United States and Canada (see "American Annals of the Deaf", June, 1900). It is evident that a teacher of this class must be strong in the power of inventing means for the attaining of results, and of utilizing the unimpaired faculties as indirect ways of communication between the imprisoned soul and the outer world. Usually they are taught

the manual alphabet, and made to understand that objects have names, and that by these names, recognized in raised print or by spelling on the fingers, objects can be designated. So delicate is their sense of touch that, like Helen Keller, they can, by feeling the movements of the vocal organs in the production of speech, be taught to speak and even to read the speech of others.

MANUAL ALPHABETS

Venerable Bede (*op. cit.*) describes finger alphabets. Monks under rigid rules of silence often made use of them. Rosellius, a Florentine monk, in his "Thesaurus Artificioſæ Memoriae" (1579), figures three one-hand alphabets which, with minor differences, were used by Bonet and Hervas y Panduro. The first alphabet used in teaching spoken and written language to the deaf was the Spanish one-hand alphabet of Rosellius. "The happy thought of this adaptation", says J. C. Gordon, "is attributed to the pious and learned monk, Pedro Ponce de Leon" (1520-1584). The two-handed alphabet, used in Great Britain, was in use centuries ago among the school-boys of Spain, France, and England. Manual alphabets have nothing to do with "signs" or the "sign-language". They constitute a manner of writing language by spelling words on the fingers. As a means of intercourse with the deaf, they are preferable to writing on paper, being more convenient and rapid.

For the sake of promoting the welfare of thousands of deaf persons, it is recommended to hearing persons to master this art, which is easily acquired.

STATISTICS

According to the United States Special Census Report for 1900, there are in Continental United States 89,287 persons with seriously impaired powers of hearing. Of these 2772 are blind-deaf, 37,426 are totally and 51,861 partially deaf; 51,871 became deaf under the age of 20 and 37,416 in adult life; 46,915 are males and 42,372 females; 84,361 are white, and 4926 coloured.

There are on an average 1175 deaf to the 1,000,000 population in Continental United States. Considering that there are in this territory probably 15,000,000 Catholics, it follows that, if conditions and causes are uniform, there are 17,625 Catholic deaf — 10,272 under the age of 20 and 7353 adults. Since deaf-mutism is common among the poor, it is probable that the number of Catholic deaf is much larger. The statistics for the schools for the deaf throughout the world may be tabulated as follows: —

	Schools	Teachers	Pupils
Africa	7	16	127

Asia	9	47	453
Australia	7	46	332
Europe	450	3152	25,821
North America	148	1790	12,784
South America	7	34	229
Total	628	5085	39,746

Reports received from fifty-three State schools in the United States, having an aggregate attendance of 10,124 pupils, show the values of the grounds and buildings to be \$13,370,576; expenditure for grounds and buildings, \$605,027; expenditure for salaries and other expenses, \$2,556,459, making a total expenditure of \$3,161,486, or \$312 average cost per capita.

Reports from forty-three public day-schools show expenditures for salaries and other expenses to be \$96,014 for 788 pupils, or an average cost per capita of \$122. Reports from three denominational and private schools show an aggregate expenditure of \$20,649 for 135 pupils, that is to say, an average cost per capita of \$152. The following tables give the statistics for the United States: —

	No. of Institutions	Men	Women	Total	Deaf
State Schools	60	452	855	1,307	265
Public Day	62	5	150	155	3
Denominational and Private	17	14	76	90	5
Total in U. S.	139	471	1,081	1,552	273
Pupils in	During the Fiscal Year	Present 10 Nov., 1907			Graduates 1905-06.
		Boys	Girls	Total	
State Schools	11,008	5,563	4,542	10,105	238
Public Day	1,118	526	511	1,037	2

Denomina- tional and Private	538	528	278	506	13
In 139 Schools in U. S.	12,664	6,617	5,331	11,648	253

F. A. MOELLER.

Edward III

Edward III

King of England (1312-77), eldest son of Edward II and Isabella, daughter of Philip IV of France; born at Windsor Castle, 13 Nov., 1312; died at Sheen, 21 June, 1377. He succeeded to the throne in his fifteenth year through the deposition of his father in January, 1327, Edward II being forced to agree to his own deposition, as the son refused to accept the crown without his father's consent. His marriage to Philippa, daughter of the Count of Hainault, took place at York, 24 January, 1328. In person Edward was graceful, strong, and active; he was fond of hunting, hawking, and all knightly pastimes, especially war. Ambition seems the most prominent point in his character, and his life, characterized throughout by selfishness and extravagance, was spoilt in later years by indulgence in a shameful passion; As a king, though he won great renown by his wars, he seems to have cared neither to maintain the royal prerogatives nor to follow any policy which would benefit his people.

For the first four years of his reign all power was in the hands of the queen-mother and Mortimer, and not till their overthrow in November, 1331, can Edward be said to have begun to rule. His first warlike experience was inglorious. In 1327 the Scots, led by Robert Bruce, bent on recovering their independence, invaded the North

of England. Edward marched to meet them; but so quick and active were the Scots that Edward marched from York to Durham without gaining any definite news of their position, and, when he tried to cut them off and force them to fight, was completely outmanœuvred by them. The "Shameful Peace" of Northampton, made in 1328, by which Scotland's independence was again recognized, was one of the causes which brought about the downfall of Mortimer and Isabella. Edward renewed his struggle with Scotland in 1333, supporting Edward Baliol in an attempt on the Scottish throne. He defeated the Scots under Sir Archibald Douglas at Halidon Hill, and set Baliol on the throne, But the Scots quickly expelled Baliol, and, though Edward restored him, the quarrel with France prevented Edward from continuing the struggle. Further contests with Scotland took place during the Crécy campaign, when David Bruce, after securing his rightful place as king, took advantage of Edward's absence in France to invade England, only to be defeated and captured at Neville's Cross, October, 1346. David remained a prisoner for eleven years, but the Scottish raids continued. In 1355 the Scots took Berwick; Edward retook it in the following year, but, though he ravaged the Lothians in the campaign known as "Burnt Candlemas", he was unable to bring the Scots to terms. When David was released, in 1357, and found himself unable to pay the stipulated ransom, he agreed to make Edward heir to the Scottish throne. But David died, in 1371, and left Edward in a position which prevented him from prosecuting his claim or interfering with Scotland's independence.

Partly caused by the war with Scotland in 1333 and 1334 was the great war between England and France known as the Hundred Years War. The Scots had been helped by money from Philip VI of France, and Edward's anger at this was increased through the presence at his court of a French exile, Robert of Artois, who did all in his power to stir up enmity between the English and the French kings. Edward and Philip had been rival claimants for the French throne in 1328, and after Philip had been chosen king there was much dispute over the homage owed by Edward for his French fiefs. Philip, too, was anxious to be king over all France, a claim which involved the annexation of Guienne and Gascony, the parts still held by England. Thus personal and national rivalry combined to cause war. Edward's personal share in the war which lasted from 1338 to 1360 was a distinguished one. The first campaigns, however, were more remarkable for the concessions won by Parliament out of the king's needs than for successes in battle. By the end of 1339 he had agreed not to take a tallage of any kind without the consent of Parliament; and in 1341, to obtain further supplies, he submitted to his accounts being audited by a board chosen in Parliament, and promised not to choose ministers without the consent of his council. But, having received the money, Edward shamefully broke his promises, saying that he had "dissembled in order to avoid greater perils". The campaign of 1340 is noted for Edward's naval victory at Sluys

over a fleet of five hundred French ships which attempted to prevent his landing; and this, taken with his victory off Winchelsea, in 1350, over the Spanish fleet, goes some way towards justifying his claim to the sovereignty of the seas.

The next campaign in which Edward took an important part was that of 1346. The Earl of Derby had been appointed to command in Gascony, and in 1346 Edward was about to lead an army to help him, when he was persuaded to attack, instead, the unprotected northern part of France. Landing near Cherbourg, he marched through Normandy, doing as much mischief as he could, and advanced almost to Paris. Then, crossing the Seine, he retreated towards Calais, pursued closely by Philip; and at Crécy, 24 August, he won a complete victory over the French force. Continuing to Calais, he began a lengthy siege which ended in the surrender of the town, August, 1347. Truces frequently signed after this were as frequently broken till open war broke out again in 1355. Edward himself had small part in the warfare which followed till the campaign of 1359-60, when, after trying to take Reims, he concluded a treaty with the regent of France at Brétigny, 8 May, 1360, by which all the ancient province of Aquitaine with Calais, Guines, and Ponthieu was ceded to him, and he renounced his claim to the French crown and to all French provinces except Brittany. The period between 1347 and 1355 was remarkable for the Black Death, a plague which in England swept off about half the people. Decrease in population caused increase in labourers' wages. And in 1350 the king attempted to deal with the difficulty by proclaiming that labourers must work for the same wages as before the plague, under penalty fixed by statute. (See Gasquet, *The Black Death*, new ed., London, 1908.)

Ecclesiastically, Edward's reign was marked by some legislation directed against the pope. The difficulties were caused partly by the heavy taxation levied by the pope on the clergy, and partly by the appointment of foreigners to English benefices by the pope; while the irritation of Englishmen at these grievances was increased by the pope's residence at Avignon, under the influence of the French king. In 1351 the Statute of Provisors was passed. The king had, in 1344, complained to the pope against reservations and provisions by which English benefices were given to foreigners, and the rights of patrons were defeated; and this proving ineffectual, the statute now made all who procured papal provisions for benefices liable to fine and imprisonment; but the statute can hardly have benefited patrons, for preferments filled by provisions were declared forfeit to the Crown for that turn. In 1353, by the Statute of *Præmunire*, all subjects of the king were forbidden to plead in a foreign court in matters which the King's Court could decide, and in 1365 the papal courts were expressly included under this. Urban V in 1366 demanded the annual tribute promised by King John, which was then thirty-three years in arrear; but, on Parliament refusing to pay, nothing more was heard of the claim.

The last years of Edward's reign were a time of failure and disappointment. In France he had lost, by 1374, all possessions but Calais, Bordeaux, and Bayonne; at Sea the English were badly beaten by the Spaniards in 1372; the king himself after the death of his wife, in 1369, was completely under the influence of Alice Perrers; the court became more extravagant than before, and ministers were suspected of corruption, The Commons, supported by the Prince of Wales and William of Wykeham, attacked some of these evils in the "Good Parliament" of 1376. Lord Latimer, the king's chamberlain, and Richard Lyons, his financial agent, were impeached and imprisoned; and though Edward sent a message begging Parliament to deal gently with Alice Perrers for the sake of his love and his honour, she was banished from court. But the death of the Black Prince immediately afterwards was a great blow to the Commons. John of Gaunt was able, on Parliament's dismissal, to recall the impeached ministers, and by Edward's wish Alice Perrers returned. The struggle between the anti-ecclesiastical party, led by John of Gaunt, in alliance with John Wyclif, and the clergy, led by William of Wykeham, is scarcely connected with Edward personally, except in so far as this and other evils were due to Edward's neglect of the affairs of his kingdom. Discontent and conflicts at home, and failure abroad brought his reign to a close. He died deserted by all except one priest who attended him out of compassion. He was buried in Westminster Abbey.

THOMAS WILLIAMS.

St. Edward the Confessor

St. Edward the Confessor

King of England, born in 1003; died 5 January, 1066. He was the son of Ethelred II and Emma, daughter of Duke Richard of Normandy, being thus half-brother to King Edmund Ironside, Ethelred's son by his first wife, and to King Hardicanute, Emma's son by her second marriage with Canute. When hardly ten years old he was sent with his brother Alfred into Normandy to be brought up at the court of the duke his uncle, the Danes having gained the mastery in England. Thus he spent the best years of his life in exile, the crown having been settled by Canute, with Emma's consent, upon his own offspring by her. Early misfortune thus taught Edward the folly of ambition, and he grew up in innocence, delighting chiefly in assisting at Mass and the church offices, and in association with religious, whilst not disdaining the pleasures of the chase, or recreations suited to his station. Upon Canute's death in 1035 his illegitimate son, Harold, seized the throne, Hardicanute being then in Denmark, and Edward and his brother Alfred were persuaded to make an attempt to gain the crown, which resulted in the cruel death of Alfred who had fallen into Harold's hands, whilst Edward was obliged to return to Normandy. On Hardicanute's sudden death in 1042, Edward was called by acclamation to the throne at the age of about forty, being welcomed even by the Danish settlers owing to his gentle saintly character. His reign was one of almost unbroken peace, the threatened invasion of Canute's son, Sweyn of Norway, being averted by the opportune attack on him by Sweyn of Denmark; and the internal difficulties occasioned by the ambition of Earl Godwin and his sons being settled without bloodshed by Edward's own gentleness and prudence. He undertook no wars except to repel an inroad of the Welsh, and to assist Malcolm III of Scotland against Macbeth, the usurper of his throne. Being devoid of personal ambition, Edward's one aim was the welfare of his people. He remitted the odious "Danegelt", which had needlessly continued to be levied; and though profuse in alms to the poor and for religious purposes, he made his own royal patrimony suffice without imposing taxes. Such was the contentment caused by "the good St. Edward's laws", that their enactment was repeatedly demanded by later generations, when they felt themselves oppressed.

Yielding to the entreaty of his nobles, he accepted as his consort the virtuous Editha, Earl Godwin's daughter. Having, however, made a vow of chastity, he first required her agreement to live with him only as a sister. As he could not leave his kingdom without injury to his people, the making of a pilgrimage to St. Peter's tomb, to which he had bound himself, was commuted by the pope into the rebuilding at Westminster of St. Peter's abbey, the dedication of which took place but a week before his death,

and in which he was buried. St. Edward was the first King of England to touch for the "king's evil", many sufferers from the disease were cured by him. He was canonized by Alexander III in 1161. His feast is kept on the 13th of October, his incorrupt body having been solemnly translated on that day in 1163 by St. Thomas of Canterbury in the presence of King Henry II.

G.E. PHILLIPS

St. Edward the Martyr

St. Edward the Martyr

King of England, son to Edgar the Peaceful, and uncle to St. Edward the Confessor; b. about 962; d. 18 March, 979. His accession to the throne on his father's death, in 975, was opposed by a party headed by his stepmother, Queen Elfrida, who was bent on securing the crown for her own son Ethelred, then aged seven, in which she eventually was successful. Edward's claim, however, was supported by St. Dunstan and the clergy and by most of the nobles; and having been acknowledged by the Witan, he was crowned by St. Dunstan. Though only thirteen, the young king had already given promise of high sanctity, and during his brief reign of three years and a half won the affection of his people by his many virtues. His stepmother, who still cherished her treacherous designs, contrived at the last to bring about his death. Whilst hunting in Dorsetshire he happened (18 March, 979) to call at Corfe Castle where she lived. There, whilst drinking on horseback a glass of mead offered him at the castle gate, he was stabbed by an assassin in the bowels. He rode away, but soon fell from his horse, and being dragged by the stirrup was flung into a deep morass, where his body was revealed by a pillar of light. He was buried first at Wareham, whence three years later, his body, having been found entire, was translated to Shaftesbury Abbey by St. Dunstan and Earl Alfero of Mercia, who in Edgar's lifetime had been one of his chief opponents. Many miracles are said to have been obtained through his intercession. Elfrida, struck with repentance for her crimes, built the two monasteries of Wherwell and Ambresbury, in the first of which she ended her days in penance. The violence of St. Edward's end, joined to the fact that the party opposed to him had been that of the irreligious, whilst he himself had ever acted as defender of the Church, obtained for him the title of Martyr, which is given to him in all the old English calendars on 18 March, also in the Roman Martyrology.

1883); Butler, *Lives of the Saints* (Dublin, 1872); Stanton, *Menology of England and Wales* (London, 1892).

G.E. Phillips

St. Edwin

St. Edwin

(Æduini.)

The first Christian King of Northumbria, born about 585, son of Ælla, King of Deira, the southern division of Northumbria; died 12 October, 633. Upon Ælla's death in 588, the sovereignty over both divisions of Northumbria was usurped by Ethebric of Bernicia, and retained at his death by his son Ethelfrid; Edwin, Ælla's infant son, being compelled until his thirtieth year to wander from one friendly prince to another, in continual danger from Ethelfrid's attempts upon his life. Thus when he was residing with King Redwald of East Anglia, Ethelfrid repeatedly endeavoured to bribe the latter to destroy him. Finally, however, Redwald's refusal to betray his guest led in 616 to a battle, fought upon the river Idle, in which Ethelfrid himself was slain, and Edwin was invited to the throne of Northumbria. On the death of his first wife, Edwin, in 625, asked for the hand of Ethelburga, sister to Eadbald, the Christian King of Kent, expressing his own readiness to embrace Christianity, if upon examination he should find it superior to his own religion. Ethelburga was accompanied to Northumbria by St. Paulinus, one of St. Augustine's fellow missionaries, who thus became its first apostle. By him Edwin was baptized at York in 627, and thenceforth showed himself most zealous for the conversion of his people. In instance of this, Venerable Bede tells how, at their royal villa of Yeverin in Northumberland, the king and queen entertained Paulinus for five weeks, whilst he was occupied from morning to night in instructing and baptizing the crowds that flocked to him. By Edwin's persuasion, moreover, Eorpwald, King of East Anglia, son of his old friend Redwald, was led to become a Christian. In token of his authority over the other kings of Bretwalda, Edwin used to have the *tufa* (a tuft of feathers on a spear, a military ensign of Roman origin) borne publicly before him, and he received tribute from the Welsh princes. Under him the law was so respected, that it became, as the Venerable Bede attests, a proverb that "a woman might travel through the island with a babe at her breast without fear of insult". St. Edwin was slain on 12 October, 633, in repelling an attack made on him by Penda, the pagan King of Mercia, who, together with the Welsh prince Cadwallon (a Christian only in name), had invaded his dominion. Perishing thus in conflict with the enemies of the Faith, he was regarded as a martyr and as such was allowed by Gregory XIII to be depicted in the English College church at Rome. His head was taken to St. Peter's

church at York, which he had begun. His body was conveyed to Whitby. Churches are said to have been dedicated to him at London and at Breve in Somerset.

G.E. PHILLIPS

Edwy

Edwy

(Or Eadwig.)

King of the English, eldest son of Edmund and St. Aelfgifu, born about 940; died 959. Though but fifteen years old at the death of his uncle Edred, he was unanimously chosen king, and was crowned at Kingston in January, 956. Too young, almost, to know his own mind, and surrounded by counsellors who pandered to all that was worst in him, his reign was of short duration. Despite the exhortations of St. Dunstan and Archbishop Odo, both of whom fell under his displeasure, he put imposition after imposition upon his subjects. His relatives were removed from court, honest thanes were despoiled of their lands and inheritances, and his grandmother Eadgive, who, by her piety and dignity, had endeared herself to the entire nation, was deprived of all her possessions.

At length, in 957, the Mercians and Northumbrians, who felt his course most keenly, rose against him. Edgar, Edwy's younger brother, withdrew from the court with Archbishop Odo and put himself at the head of the insurgents. Edwy advanced to meet him but was defeated at Gloucester and obliged to flee for his life. Unwilling to prolong a civil war, the men of Kent and Wessex assented to a general meeting of the thanes from North and South to arrange for peace. It was decided that the country should be divided in half at the Thames, and that each brother should rule over a part. To Edwy was allotted the southern portion, and to Edgar the northern. Taught prudence by his reverses, Edwy governed his portion from that time forward with commendable justice and moderation, but died, prematurely, in 959.

His relations with St. Dunstan were not the happiest, and constitute the chief interest of Edwy's career. His opposition to the saint dated from the refusal of the latter to countenance his relations with Ethelgive, by some presumed to be his foster mother, and her daughter. Seeing that he was in disfavour, Dunstan withdrew for a time to his cloister, but the anger of the king, kept alive by Ethelgive, followed him into that

sanctuary. The monks were incited to revolt, the abbey was plundered. Dunstan fled and, though hotly pursued, managed to escape to the Continent, where he remained until after Edwy's death. Osbern's story to the effect that Edwy engaged in a general persecution of the monks may, however, be safely rejected, as the revolt against him was not concerned with the dispute between the regulars and seculars which began only after Edwy's death. On the other hand, Edwy's dislike for Dunstan may have helped to impede the saint's monastic reforms.

STANLEY J. QUINN

Boetius Egan

Boetius Egan

Archbishop of Tuam, born near Tuam, Ireland, 1734; died near Tuam, 1798. He belonged to a family owning large estates in the County Galway. In the eighteenth century they were reduced in position and means. The penal laws made it then difficult for an Irish Catholic to receive Catholic education at home; nor do we know where young Egan received his early education. Neither is it certain at what age he went to France to be trained for the priesthood. This training he received at the College of Bordeaux, founded by Irish exiles and endowed by Anne of Austria in the seventeenth century. After his ordination he returned to Ireland and laboured in the ministry for some years till, in 1785, he was appointed Bishop of Achonry. Two years later he became Archbishop of Tuam. Accustomed during his whole life in Ireland to the barest toleration of his religion, he joyfully welcomed the Catholic Relief Act of 1793, and hastened to express his gratitude to George III. When Maynooth College was founded in 1795, he was named one of its trustees. One of his last public acts was to sign an address to the Irish viceroy, Lord Camden, condemning the revolutionary associations then in Ireland. In this address George III was described as "the best of kings", and the Irish Parliament as "our enlightened legislature". It was strange language to use of a such a king and of such a parliament.

Burke, *Catholic Archbishops of Tuam* (Dublin, 1882); Healy, *History of Maynooth College* (Dublin, 1895).

E.A. D'ALTON

Michael Egan

Michael Egan

First bishop of Philadelphia, U.S.A., b. in Ireland, most probably in Galway, in 1761; d. at Philadelphia, 22 July, 1814. Entering the Order of St. Francis he was rapidly advanced to important offices. In his twenty-sixth year he was appointed guardian of St. Isidore's, the house of the Irish Franciscans, at Rome, and held this position for three years, when he was transferred to Ireland. After labouring for several years as a missionary in his native land, he responded to an earnest appeal of the Catholics of Lancaster, Pennsylvania, and went to the United States. Though lacking the constitution demanded by the pastoral duties of that pioneer age, and suffering often from sickness, Father Egan's priestly zeal and his eloquence in the pulpit gained universal recognition, and, in April, 1803, he was appointed by Bishop Carroll one of the pastors of St. Mary's church in Philadelphia. On 8 April, 1808, Pope Pius VII erected this city into an episcopal see, with Michael Egan as first bishop. Archbishop Carroll describes him to the Roman authorities as "a man of about fifty who seems endowed with all the qualities to discharge with perfection all the functions of the episcopacy, except that he lacks robust health, greater experience and a greater degree of firmness in his disposition. He is a learned, modest, humble priest who maintains the spirit of his Order in his whole conduct." Owing to the Napoleonic troubles, the papal Bulls did not reach America until the year 1810. On 28 Oct. Bishop Egan was consecrated by Archbishop Carroll in St. Peter's church, Baltimore. His brief episcopate was embittered and his health shattered by the contumacious behaviour of the lay trustees of St. Mary's church, which he had chosen for his cathedral. These trustees, who were tainted with the irreligious notions of the times, without any legal right, and contrary to the canons of the Church, claimed the privilege of electing and deposing their pastors and of adjusting their salaries. This un-Catholic contention that "the laity own the churches and the clergy are their hired servants" disturbed the peace, retarded the progress, and threatened the existence of the Catholic religion in Pennsylvania during two episcopates. Bishop Egan's troubles were aggravated by the insubordination of two Irish priests whom he had admitted to the diocese, James Harold and his better-known nephew, William Vincent Harold. Bishop Egan died worn out by his struggles to maintain his episcopal authority.

JAMES F. LOUGHLIN.

St. Egbert

St. Egbert

A Northumbrian monk, born of noble parentage c. 639; d. 729. In his youth he went for the sake of study to Ireland, to a monastery, says the Venerable Bede, "called Rathmelsigi", identified by some with Mellifont in what is now County Louth. There, when in danger of death from pestilence, he prayed for time to do penance, vowing amongst other things to live always in exile from his own country. In consequence he never returned to England, though he lived to the age of ninety, and always fasted rigorously. Having become a priest, he was filled with zeal for the conversion of the still pagan German tribes related to the angles, and would himself have become their apostle, if God had not shown him that his real calling was to other work. It was he, however, who dispatched to Friesland St. Wigbert, St. Willibrord, and other saintly missionaries. St. Egbert's own mission was made known to him by a monk, who, at Melrose, had been a disciple of St. Boisil. Appearing to this monk, St. Boisil sent him to tell Egbert that the Lord willed him instead of preaching to the heathen to go to the monasteries of St. Columba, "because their ploughs were not going straight", in consequence of their schismatic practice in the celebration of Easter. Leaving Ireland therefore in 716, Egbert crossed over to Iona, where the last thirteen years of his life were spent. By his sweetness and humility he induced the Iona monks to relinquish their erroneous mode of computation; in 729 they celebrated Easter with the rest of the Church upon 24 April, although their old rule placed it that year upon an earlier day. On the same day, after saying Mass and joining joyfully in their celebration, the aged Egbert died. Though he is now honoured simply as a confessor, it is probable that St. Egbert was a bishop. By Alcuin he is expressly called *antistes* and *episcopus*, and an Irish account of a synod at Birra names him "Egbert Bishop", whilst the term *sacerdos* used by the Venerable Bede, is sometimes applied by him to bishops.

G. E. PHILLIPS.

Egbert (King)

Egbert

(ECGBERHT or ECGBRYHT)

Frequently though incorrectly called "First King of England", died A.D. 839. He styled himself in 828 *Rex Anglorum*, i.e. "Overlord of East Anglia", a title used by Offa fifty years before; in 830 he described himself as "King of the West Saxons and

Kentishmen", and in 833 he is "King of the West Saxons". He came of the royal race descended from Ine of Wessex and, owing to his pretensions to power, was exiled by the joint action of Beorhtric of Wessex and Offa of Mercia. The date and duration of his exile are unknown, but he returned in 802 and was chosen King of the West Saxons. In 815 he ravaged Cornwall and conquered the West Welsh who dwelt there. They rebelled in 825, when he again defeated them just in time to repel a Mercian invasion at the battle of Ellandune. Shortly afterwards Kent, Surrey, Sussex, and Essex accepted him as king and East Anglia submitted to his overlordship. War with Mercia again broke out, and ended in Egbert driving out Wiglaf and receiving the submission of that kingdom. In 829 he attacked Northumbria, but the Northumbrians met him at Dore and recognized him as overlord.

Thus for the first time he had united the whole English race under one overlordship, in this way substantially justifying the title *King of England*, though the idea of territorial kingship had not at that time come into being. Nor was he actually king of all the subject tribes, for the under-kings still ruled, though they were under him as Bretwalda. Thus he restored Wiglaf to the throne of Mercia and made his own son Ethelwulf King of the Kentishmen. In his own Kingdom of Wessex he developed the shire system, carefully regulating the relations of the ealdorman and the bishop to the shire. He also organized the *Fyrd*, or militia. His ecclesiastical policy was very favourable to the Church, and at the Council of Kingston, in 838, he gave the archbishop assurances of friendship and certain privileges which considerably strengthened the primatial see. In 831 he forced the North Welsh (the people of Wales) to accept his overlordship, but three years later he had to defend his realm from Scandinavian pirates who were invading Sheppey. He beat them off, but they returned in 835 and defeated him at Charmouth in Dorsetshire. In 837 he again had to meet a great fleet of Northmen, who on this occasion were helped by an insurrection of the West Welsh. He, however, won a great victory over the allies at Hengestdune, on the borders of Cornwall, after which he remained at peace till his death.

The chronology of the Anglo-Saxon chronicle is often two, and sometimes three, years out with regard to the events of his reign. His coins, which are rare, though specimens from nineteen different mints are known, bear his name and the title *Rex*, the additions *Saxo*, "*M*", or "*A*" denoting Wessex, Mercia, and East Anglia respectively.

EDWIN BURTON.

Egbert, Archbishop of Trier

Egbert, Archbishop of Trier

Died 8 or 9 December, 993. He belonged to the family of the Counts of Holland. His parents, Count Theodoric I and Countess Hildegarde, sent him to be educated in the Abbey of Egmont, located within their dominions. Egbert is first mentioned in history as head of the imperial chancery, then under Archbishop Willigis of Mainz. Documents of 976 and 977 record him as holding this office. In 977 he was made Archbishop of Trier, which see was vacant by the death of Theodoric. Here he remained till 993. He sought particularly to remove from this great diocese all traces of the ravages caused by the Northmen at the end of the ninth century, and to foster the ecclesiastical reforms that had been progressing since the days of Otto I. He completed the restoration, begun by his predecessor, of the Abbey of S. Maria ad Martyres near Trier. Just outside the city he built the abbey-church of St. Eucharius (St. Mathias), to which Otto II contributed generously. On this occasion the body of St. Celsus was discovered. The abbey itself was richly endowed and its monastic school flourished again. The collegiate church of St. Paulinus, near Trier, was similarly endowed, a regular income for its clergy assured, and a fitting solemnity in Divine Worship made possible. Abbot Hetzel of Mettlach was deposed for conduct unworthy of his vows and station. The monastery was reformed, and its school became an active centre of studious occupations. In Mÿnstermaifeld St. Martin's was raised to the dignity of a collegiate church and was correspondingly endowed. From all these regenerated centres, likewise from the Abbeys of Echternach and St. Maximin, that needed no reformation, a beneficent, spiritual, and intellectual influence radiated in all directions through the diocese.

Egbert was an intimate friend of Otto II, and with Willigis of Mainz exerted a wholesome influence over the emperor, whom he accompanied on his journey to Italy in 983. After Otto's death he stood at first for Henry the Wrangler (Zſnker), but soon went over to Otto III and his mother Theophano. Other evidence of the religious renaissance in the Diocese of Trier is found in the admirable works of ecclesiastical art inspired by Egbert and executed mostly in Trier itself. Among these are several valuable manuscripts: the famous "Codex Egberti", a book of Gospels written at Reichenau and richly adorned with miniatures, now preserved in the city library of Trier; the "Psalterium Egberti", written in 981 and now in the chapter library of Cividale (Italy), to which it was donated by St. Elizabeth of Thuringia (also called the "Codex Gertrudianus", after the Russian Grand Duchess Gertrude, who became its possessor in 1085); the "Codex Epternacensis", which contains also the Four Gospels and is kept in the Gotha library; likewise several Sacramentaries, transcripts from the "Letter Book"

(Registrum) of St. Gregory the Great (596-604), etc. The arts of the goldsmith and of the worker in enamel were particularly well cultivated at Trier. Among valuable specimens still extant are: at Trier a portable altar, at Limburg the golden case or covering with richly adorned head of the so-called St. Peter's Staff, once a part of the relics of the Trier cathedral, now in the sacristy of the Franciscan church at Limburg. Egbert was buried in the chapel of St. Andrew, built by him near the cathedral of Trier.

J.P. KIRSCH

Egbert, Archbishop of York

Egbert, Archbishop of York

Archbishop of York, England, son of Eata, brother of the Northumbrian King Eadbert and cousin of King Ceolwulf, to whom the Venerable Bede dedicated his history; date of birth unknown; d. 19 November, 766. He received his early education in a monastery, and then went to Rome with his brother Ecgred, where he was ordained a deacon. Ecgred died in Rome and Egbert immediately returned to Northumbria. On the resignation of the Bishopric of York by Wilfrid II in 732, King Ceolwulf appointed Egbert his successor. Shortly after his accession Bede wrote a long letter to him advising him to give much time to study and prayer, to ordain more priests for the administration of the sacraments, and to translate the Creed and the Lord's Prayer into the Saxon tongue. He also urged him to strive to obtain the subdivision of many of the dioceses of the North in order that episcopal visitations might be more frequently made. He called his attention to many disorders that were prevalent and particularly urged him to secure the pallium for himself. Acting upon this advice Egbert obtained the pallium from Gregory III at Rome in 735, and thus became the second Archbishop of York, that title having been lost to the Church of York ever since Paulinus had fled into Kent more than a century before. During all those years no one sought for the restoration of that lost dignity, and this neglect was afterwards used as a strong argument in favour

of the precedence of Canterbury, when the well-known controversy arose between the two sees. The restoration of the pallium to Egbert increased his power and authority over the Northern bishops, who thus became his suffragans; and his power was still more strengthened in 738 when his brother Eadbert succeeded to the throne of Northumbria. Egbert was thus placed in a position which enabled him to carry out many reforms, and in the performance of these he proved himself a strict disciplinarian; but though stern when correction and rebuke were justly deserved, he was remarkable for his sweetness and gentleness. His pupil Alcuin frequently speaks of his piety and energy and always refers to him in terms of the deepest affection. "He is said to have been the first prelate who possessed a mint at York. He paid great attention to the services and music of his church, introducing the observance of the Hours. He was also a benefactor to the fabric of the minster, bestowing upon his cathedral the choice work of the jeweller and the goldsmith, and giving to it figured curtains of silk of foreign workmanship. He was, in all probability, the first introducer of the parochial system into the North" (*Fasti Ebor.*). One of his greatest works, perhaps, was the foundation of the famous School of York and its celebrated library. The renown of its masters and scholars soon spread through every Christian country, and noble youths from all parts flocked to York to be taught by the great archbishop. He himself taught divinity, whilst his assistant Albert, who afterwards succeeded him as archbishop, gave lessons in grammar and in the arts and sciences. The fact that the illustrious Alcuin was Egbert's pupil, sheds no little lustre on this famous school. The archbishop's daily work has been thus described by Alcuin himself: "As soon as he was at leisure in the morning, he sent for some young clerks, and sitting on his couch taught them successively till noon, at which time he retired to his private chapel and celebrated Mass. After dinner, at which he ate sparingly, he amused himself with hearing his pupils discuss literary questions in his presence. In the evening he recited with them the service of complin, and then calling them in order, he gave his blessing to each as they knelt in succession at his feet" (*Mabillon, Acta SS. Ord. S. B., ad an. 815*). Towards the end of his life he left the care of the school to Albert and Alcuin, giving himself more time and opportunity to prepare for his end in peace and tranquillity. In this life of retirement and prayer he was joined by his brother King Eadbert, who voluntarily resigned his throne to enter the monastery in 757. Egbert died before his brother, having ruled over the Diocese of York nearly thirty-four years. He was buried in one of the porches of his cathedral at York. His best-known work is the "*De Jure Sacerdotali*", a collection of canonical regulations. Extracts from it made in the eleventh century, under the title of "*Excerptiones e dictis et canonibus SS. patrum*" (*Mansi, XII, 411-32; Wilkins, I, 101-12*), were long current as a work of Egbert. Among the writings attributed to him are a "*Pontificale*", or series of special offices for the use of a bishop; a "*Dialogus Ecclesiast-*

ic³/₄ Institutionis"; a "Confessionale", and a "Pñitientiale", both of which were written in the vernacular as well as in Latin. The "Pontificale", an important liturgical text, has been published by the Surtees Society, and his other works may be found in the second volume of Thorpe's "Ancient Laws and Institutes of England". In its present shape the "Pñitientiale Egberti" (P.L., LXXXIX, 411 sqq.) contains but little from the hand of Egbert, and is a ninth-century Frankish compilation, put together mostly from Halitgar. Similarly, the "Dialogus Eccl. Institutionis" (Mansi, XII, 482-88) is said not to be from Egbert in its present form (see YORK; PENITENTIAL BOOKS; LIBER PONTIFICALIS).

For the writings of EGBERT see P.L., LXXXIX. Cf. RAINE, *Fasti Eboracenses* (London, 1863), I, 94 sqq.; MABILLON, *Acta SS. Ord. S. B.* (Venice, 1733), s³/₄c. III, 548-9, and s³/₄c. G.E. HIND

Egfrid (King of Northumbria)

Egfrid

(Also known as ECFRID, ECHGFRID, EGFERD).

King of Northumbria, b. 650; d. 685. He ascended the Northumbrian throne at Oswy's death in 670, and after defeating the Picts who had thought to impose upon his youth by asserting their independence, turned his attention to Wulphere, King of Mercia, and broke, for a time, the power of the southern kingdom. In 679 new trouble with Mercia arose, and in the course of the subsequent struggle Aelfwin, Egfrid's brother, was slain. Through the intervention of Theodore, Archbishop of Canterbury, peace was at last restored and in lieu of vengeance Egfrid was prevailed upon to accept the legal wergild (fine) for his brother's death.

Egfrid now consolidated his kingdom by diplomacy, annexation, and treaty, bringing Cumberland, Galloway, and North Lancashire under Northumbrian influence. The desire for conquest, however, had entered his veins, and in 684 he dispatched an expedition into Ireland. The invasion was unsuccessful, but nevertheless was productive of much damage and bitterness to a hospitable, friendly people who had conferred numerous benefits on the Angles and who found violence where they expected gratitude. Disregarding the advice of his counsellors, Egfrid led an expedition against the

Picts the next year, and, being decoyed into the mountain passes, was trapped and slain. He was buried by the victors in the cemetery on the isle of Hii or Iona, and his brother succeeded to the Northumbrian throne.

STANLEY J. QUINN.

Frederick W. von Egloffstein

Frederick W. von Egloffstein

Born at Aldorf, near Nuremberg, Bavaria, 18 May, 1824; died in New York, 1885. He served in the Prussian army in his early manhood and then emigrated to the United States. Von Egloffstein has been called "The Father of Half-tone Engraving" in the United States, for the reason that he was the first one to employ ruled glass screens, together with photography, to produce engravings. In 1861 he engaged Samuel Sartain, a steel engraver, to rule with wavy lines numbering 250 to the inch glass plates covered with an opaque varnish, and he was engaged in perfecting his experiments in this direction when the Civil War broke out. Abandoning his business, he joined the Union army as a volunteer from New York and was commissioned a colonel. While leading a skirmish in North Carolina, 17 April, 1862, he was severely wounded and retired from the service with the brevet rank of brigadier general. Under the patronage of archbishop McCloskey he then took up his new system of engraving again, and one of Murillo's madonnas and a picture of the facade of St. Francis Xavier's College, New York, were produced by his patented process. Von Egloffstein thought to circumvent counterfeiting, so prevalent at that period, by having bank-notes engraved by his method. Through Baron Gerolt, Prussian Minister at Washington, he was introduced to a number of officials and prominent men, who organized The Heliographic Engraving and Printing Company, with a plant in New York City. There the von Egloffstein process of engraving was carried on in a secret manner. Each group of workmen was taught a part of the work, but no one was permitted to see the whole process. The United States Government refused to adopt von Egloffstein's method of engraving, and the company abandoned the project. The common method of engraving now is by means of ruled glass screens and photography. Glass screens ruled with wavy lines, such as von Egloffstein adopted in 1861, are also being used (1909). Von Egloffstein, as a member of the United States engineering department, later performed valuable services for the Government in the submarine work at Rock Island, Illinois, and in the blasting operations at Hell Gate in New York Harbour.

S. H. HORGAN

The Count of Egmont

Lamoral, Count of Egmont, Prince of Gâvre

Born at the Château de La Hamaide, in Hainault, 18 Nov., 1522; beheaded at Brussels, 5 June, 1568. He was a descendant of one of the oldest families of the Low Countries; his patrimonial castle, near the abbey of the same name, was on the coast of the North Sea, about three miles west of Alkmaar, Holland. In 1538 he went to Spain with his elder brother, Charles, and both took part in the expedition to Algiers in 1541, in which Charles was injured. Charles died the following year. Lamoral succeeded to the title and estates, which, beside those of Holland, comprised the principality of Gâvre, seven or eight baronies, and a number of seigniories. When, in 1544, he married Sabina, Duchess of Bavaria and Countess Palatine of the Rhine, the emperor and the King of the Romans assisted at his wedding. Egmont distinguished himself in various campaigns during the reign of Charles V, who, when he was only twenty-six years of age, invested him with the Order of the Golden Fleece, and appointed him to several confidential missions such as sending him to England to seek the hand of Queen Mary for Philip II. His principal titles to military glory are two battles which he won against the French: the battle of St-Quentin, which was fought through his vehement persuasion (1557), and that of Gravelines, the honour of which is due to him exclusively. As a reward for his services he was nominated by Philip II, in 1599, stadtholder of the province of Flanders, and a member of the Council of State for the Low Countries.

But these honours did not satisfy Egmont. Though handsome, brave, rich, generous, and popular, still he viewed with jealousy the prominence given Cardinal Granvella, who was in the confidence of the king. He entered a vigorous protest against the proceedings of this minister and clamoured for his removal, going so far as to refuse to sit in the Council of State if Granvella were allowed to remain. His hatred of the king's favourite led him into the plots of William of Orange against the Spanish Government. Later, when religious troubles broke out in Flanders, it was evident that he did not rise to the occasion; he granted the sectarians concessions emphatically disapproved of by the king and assumed a quite equivocal attitude in the matter of the iconoclasts. It is true that he alleged, in excuse, that there were no troops for his disposal and that he was therefore rendered powerless. On the other hand, he refused to take part in the plots against the Government, and when the Duke of Alva arrived in the Netherlands, he would not follow the Prince of Orange into exile, saying that his was a clear conscience. This attitude cost him his life. With the Count of Hoorn he was arrested by the orders of the duke and condemned to death, despite his appeal to the privilege of the Golden Fleece. Both were declared guilty of high treason and condemned to death

by the Conseil des Troubles, a court established by the Duke of Alva, and which was his servile instrument. The two friends were beheaded amid universal grief. Egmont met his death with dignity and Christian resignation; he protested to the last moment his devotion to his religion and his king, and to the latter's compassion recommended his wife, who, through the confiscation of his property, was left penniless with the care of eleven children. Egmont had been imprudent, but was guilty of no crime. His death was thenceforth one of the principal grievances of the Low Countries against the Spanish Government.

GODEFROID KURTH

Egoism

Egoism

(Lat. *ego*, I, self), the designation given to those ethical systems which hold self-love to be the source of all rational action and the determinant of moral conduct. In a broad use of the term any system might be called egoistic which makes any good of the ego the end and motive of action. The name, however, has been appropriated by usage to those systems which make happiness, pleasure, or personal advantage the sole end of conduct. In one form or another and with various modifications, the principle pervades the theories of the Cyrenaic, Epicurean, Utilitarian, and Evolutionary Schools; and, slightly disguised, it lurks at the bottom of utilitarian altruism. Its typical expression is to be found in Hobbes and Mandeville, while Jeremy Bentham, combining it with the other cognate principle, that pleasure and pain are the only good and evil, formulates it in its full character as egoistic hedonism. Two of Bentham's statements, when taken together, set forth concisely the egoistic doctrine.

"Pleasure is itself a good, nay, setting aside immunity from pain, the only good. Pain is in itself an evil, and indeed without exception, the only evil, or else the words good and evil, have no meaning." (Principles of Morals and Legislation, chap. ix.)

"The search after motives is one of the prominent causes of man's bewilderment in the investigation of the question of morals. But this is a pursuit in which every moment employed is a moment wasted. All motives are absolutely good, no man has ever had, can, or could have a motive different from the pursuit of pleasure or shunning of pain." (Deontology, vol. I, p. 126.)

The undisputed fact that men do experience sentiments of benevolence and perform disinterested actions offers an obvious difficulty to the egoist. Hobbes seeks to evade it by resolving altruistic impulses into personal hopes and fears. Later hedonists, recurring to the principle of the association of ideas, contend that virtue, which at first is pursued only for the pleasure it brings, comes later on, through a confusion of means and end, to be pursued for its own sake. Innumerable analyses have shown that pleasure and pain are not measurable, and still less for estimating the quantity of different pleasures by considering their various dimensions--intensity, duration, nearness, certainty, purity (freedom from pain), fruitfulness--is commonly regarded as a piece of absurdity.

This fundamental postulate of egoistic hedonism is, therefore, fallacious. But a deeper and more pernicious vice of the system lies in its primary principle that self-interest is the only motive of human action. This doctrine reduces all virtue to mere selfish calculation, it outrages our liveliest moral feelings by resolving the highest and noblest impulses into a base pursuit of personal pleasure. To say that man is incapable of acting from any motive other than self-interest is to degrade human nature. Mankind at large understands very clearly that self-interest is one thing and virtue quite another; that self-sacrifice and heroic devotion do exist, and are not vice and immorality; that a worthy action challenges our approbation in proportion to the disinterestedness of the agent. Let it become known that the hero of what we at first considered a brilliant act of self-sacrifice had after all no other motive than to obtain some advantage for himself, and immediately he appears but a vulgar mercenary. As Lecky says: "No Epicurean could avow before a popular audience that the one end of his life was the pursuit of his own happiness without an outburst of indignation and contempt, no man could conscientiously make this--which according to the selfish theory is the only rational and indeed possible motive of action--the deliberate object of all his undertakings without his character becoming despicable and degraded." (European Morals, vol. I, p. 35.) Besides, if the egoistic impulse is made the sole and unconquerable motive of

action, it is idle to speak of obligation and duty. Nor can the hedonist, consistently with his theory, claim that he safeguards the pre-eminent value of virtue by recognizing the happiness derivable from it to be the highest form of pleasure. For if one kind of conduct yields this pleasure, while another does not, then evidently there must be some essential difference, unaccounted for in the egoistic and hedonistic theories, between right and wrong conduct, in virtue of which they produce contrary results of happiness and pain for the agent. But moral judgments are not resolvable into estimates of self-interest; and if we commit ourselves to classifying conduct purely by the advantages, in terms of the pleasure and pain, to be reaped from it, we shall be forced to appraise as virtuous actions which the reasonable judgment of men condemns as immoral; while, on the other hand, we shall be compelled to brand as wrong acts of self-sacrifice such as, in all life and literature, challenge the highest honour and reverence.

At the bottom of the errors of egoistic hedonism there lies a truth which this system misinterprets and perverts. However complete and disinterested we may be, we can never strip ourselves of self. The constitution of his nature compels man to seek his good, however he may err in the deliberate choice that he makes among the various goods that solicit his efforts. The end constituted for him by God is to reach that highest good which consists in realizing the moral perfection of his nature. This good is to be sought for its own sake chiefly, and in its train follows happiness as, if the expression may be permitted, an automatic consequence. Hence in pursuing the moral good, I am implicitly pursuing my own happiness. This self-realization is not egoism; for egoism makes self the centre, the beginning and the end of action. On the other hand, the virtuous man sub-ordinates himself to the moral good, which in the last analysis is identified with God. In this sense, as Aristotle points out, the good man may be said to be a self-lover.

For he gives to himself what is most honourable, and the greatest goods, and gratifies the authoritative part of himself, and obeys it in everything. Therefore, he must be a self-lover, after a different manner from the person who is reproached for it, and differing in as great a degree as living in obedience to reason differs from living in obedience to passion, and as desiring the honourable differs from desiring what seems to be advantageous. (Nich. Ethics., Bk. IX, ch. viii, 6, 7.)

When Kant declared that duty must be fulfilled exclusively for duty's sake, with disregard of all considerations of happiness or welfare, he ignored the fact that by annexing happiness as a concomitant of the good the Creator evidently intends that we may legitimately aim at our own happiness, provided we do not invert the order which makes

happiness subordinate to the good. Duty is not the be-all and the end-all. It is a means to reach our supreme end and good.

JAMES J. FOX

St. Egwin

St. Egwin

Third Bishop of Worcester; date of birth unknown; d. (according to Mabillon) 20 December, 720, though his death may have occurred three years earlier. His fame as founder of the great Abbey of Evesham no doubt tended to the growth of legends which, though mainly founded on facts, render it difficult to reconcile all the details with those of the ascertained history of the period. It appears that either in 692, or a little later, upon the death of Offfor, second Bishop of Worcester, Egwin, a prince of the Mercian blood royal, who had retired from the world and sought only the seclusion of religious life, was forced by popular acclaim to assume the vacant see. His biographers say that king, clergy, and commonalty all united in demanding his elevation; but the popularity which forced on him this reluctant assumption of the episcopal functions was soon wrecked by his apostolic zeal in their discharge.

The Anglo-Saxon population of the then young diocese had had less than a century in which to become habituated to the restraints of Christian morality; they as yet hardly appreciated the sanctity of Christian marriage, and the struggle of the English Benedictines for the chastity of the priesthood had already fairly begun. At the same time large sections of England were more or less permanently occupied by pagans closely allied in blood to the Anglo-Saxon Christians. Egwin displayed undaunted zeal in his efforts to evangelize the heathen and no less in the enforcement of ecclesiastical discipline. His rigorous policy towards his own flock created a bitter resentment which, as King Ethelred was his friend, could only find vent in accusations addressed to his ecclesiastical superiors. Egwin undertook a pilgrimage to seek vindication from the Roman Pontiff himself. According to a legend, he prepared for his journey by locking shackles on his feet, and throwing the key into the River Avon. While he prayed before the tomb of the Apostles, at Rome, one of his servants brought him this very key — found in the maw of a fish that had just been caught in the Tiber. Egwin then released himself from his self-imposed bonds and straightway obtained from the pope an authoritative release from the load of obloquy which his enemies had striven to fasten upon him.

It was after Egwin's triumphant return from this pilgrimage that the shepherd Eoves came to him with the tale of a miraculous vision by which the Blessed Virgin had signified her will that a new sanctuary should be dedicated to her. Egwin himself went to the spot pointed out by the shepherd (*Eoves ham*, or "dwelling") and to him

also we are told the same vision was vouchsafed. King Ethelred granted him the land thereabouts upon which the famous abbey was founded. As to the precise date of the foundation, although the monastic tradition of later generations set it in 714, recent research points to some year previous to 709. At any rate it was most probably in 709 that Egwin made his second pilgrimage to Rome, this time in the company of Coenred, the successor of Ethelred, and Offa, King of the East Saxons, and it was on this occasion that Pope Constantine granted him the extraordinary privileges by which the Abbey of Evesham was distinguished. One of the last important acts of his episcopate was his participation in the first great Council of Clovesho.

E. MACPHERSON.

Egypt

Egypt

This subject will be treated under the following main divisions:

- I. General Description;
- II. Ancient Egyptian History;
- III. Ancient Egyptian Religion;
- IV. Literary Monuments of Ancient Egypt;
- V. The Coptic Church;
- VI. Coptic Literature;
- VII. Copto-Arabic Literature.

I. GENERAL DESCRIPTION

The name *Egypt* proper applies only to the rather narrow valley of the Nile from the Mediterranean, 31° 35' N. latitude, to the First Cataract, at Assuân (Syene), 24° 5' 30" N. latitude, a stretch of about 680 miles by rail. However, from remote antiquity, as now, Egypt held sway over Nubia, reaching by degrees as far as Napata (Gebel Barkal), 18° 30' N. latitude, which, under the eighteenth dynasty, was the southernmost city of the empire -- another stretch of about 590 miles by rail. Distances by water are somewhat greater owing to the winding course of the river. From Napata the Nile continues for a while in the south-west direction which it follows from Abu-Hamed, but soon assumes its ordinary sinuous course to the north, describing two great principle curves -- one to the west down to Wâdi Halfa, just below the second cataract, Soleb being the westernmost point, then another to the east as far as Assiût (Lycopolis), Assuân forming its apex, or easternmost point. As far as Edfu (Appollinopolis Magna) the valley is rather narrow, rarely as much as two or three miles wide. Indeed, "in Lower Nubia the cultivable land area is seldom more than a few hundred yards in width and

at not a few points, especially on the west bank, the desert advances clear up to the river bank" (Baedeker, Egypt, 1908, p. 376). The general aspect of the Nubian desert is that of a comparatively low table-land, stony in the north, studded with sandy hills in the south. At Assuân the course of the river is broken by the first cataract, where its waters rush between numberless more or less diminutive islands, the most famous of which is the island of Philæ above and Elephantine in front of Assuân. The cataract, however, has lost much of its grandeur since the building of the great dam which now regulates the supply for the irrigation of the country in time of low water. From Assuân to Edfu (about 48 miles) the banks are so high that even in the annual inundation they are above the level of high water, and consequently remain barren. Near Edfu the valley widens out and becomes wider still in the neighbourhood of Esneh (Latopolis). At Luxor (part of Thebæ) it again narrows for a few miles, but after that it maintains a respectable breadth, averaging between twelve and fifteen miles. At Assuân begin the two high ranges of the Libyan and Arabian deserts, between which the valley extends. The range to the left is somewhat farther from the river, so that most of the towns are built on the western bank.

Near Girgeh (Abydos) begins the Bahr-Yûsef, Joseph's Canal. It was formerly a branch of the Nile; it runs parallel to the main stream at a distance of from 5 to 6 miles along the left bank, and empties into the Fayûm (nome of Arsinoe). One hundred ten miles above Memphis the Libyan mountains bend to the north-west, and then, facing north-east, they draw nearer against to the Nile, thus surrounding a large extent of territory, which of old was known as Te-She, or Lakeland, from the great inland lake frequently mentioned and described by the Greek Moeris. It is still called Fayûm, from the Coptic "*piiom*, "the sea". This lake once occupied almost the entire basin of the Fayûm, but within the historical period its circumference does not seem to have exceeded 140 miles. It lay 73 feet above the sea level, and was very deep, as shown by its last vestige, the Birket-el-Karûn, which lies 144 feet below the same level (Baedeker, *op. cit.*, p. 186 sq.).

A little before reaching Cairo the Nile flows along the rocky and sandy plateau on which the three best-known pyramids stand. There, too, the two ranges of Arabian and Libyan mountains, which above this point run for many miles close to the river, turn sharply aside in the direction of the north-east and north-west, thus forming a triangle with the Mediterranean shore. The immense alluvial plain thus encompassed was called by the Greeks the Delta, owing to its likeness to the fourth letter of their alphabet (*Delta*). As soon as the river enters this plain its waters divide into several streams which separately wind their way to the sea and make it a garden of incredible fertility. In ancient times there were seven of these branches, five natural and two artificial. Only two are now of importance for navigation, the Damietta (Tamiathis) and

the Rosetta branches, both named for the towns near which they discharge into the sea. It is to be remarked that, as a natural result of the incessant struggle between sea and land the outline of the Delta is even now somewhat indefinite, and was probably much more so in the remote past. The shore is always partly covered with lagoons which move from one place to another. The most extensive of these are now, from east to west, Lake Menzaleh between the ancient Ostium Phatniticum and Ostium Pelusiacum, Lake Borolos (Lacus Buto or Paralus) east and Lake Edkû west of the Rosetta mouth (Ostium Bolbitinum), and Lake Mariût (Mareotis Lacus) south of the narrow strip of land on which Alexandria stands. Between Lake Menzaleh and the Red Sea, on a line running first south, and then south-south-east, are Lake Balah, Lake Timsâh, and the Bitter Lakes (Lacus Amari), now traversed by the Suez Canal. Wâdi Tumulât connects Lake Timsâh with the Delta across the Arabian desert, and forms the natural entrance to Egypt from the Asiatic side. West of the Delta, in a depression of the Libyan Desert, lies the Wâdi Natrûn (Vallis Nitria), famous in early Christian times, under the name of the Desert of Scete, for its Coptic monasteries, four of which exist to this day.

Geology. The low Nubian table-land through which the Nile meanders consists of a red sandstone, belonging to the upper cretaceous formation. It has furnished the Egyptians with an excellent building stone which they have exploited from remote antiquity, especially at Gebel Silsileh (Silsilis), 26 miles south of Edfu, where the sandstone beds, in sharp contrast to their former low level, rise in steep banks overhanging the river, thus offering unusual facilities for quarrying and transporting the stone. Near Edfu the sandstone is replaced by nummulitic limestones (Eocene) of the Tertiary period, which form the bulk of the Libyan desert and a considerable portion of the Arabian desert as well. The Libyan Desert is a level, or almost level, table-land averaging 1000 feet above the sea. On the east it is fringed with craggy cliffs overhanging the valley, while its outward border, running aslant to the north-west, offers here and there deep bays in which lie the oases of Khârgêh and Dâkhleh (Great Oasis), Farâfreh (Tringtheos Oasis), and Siweh (Jupiter Ammon). The oasis of Bahriyeh (Small Oasis), north-east of Farâfreh, lies, on the contrary, in a depression entirely surrounded by the higher plateau. The Fayûm, in fact, is nothing but such an oasis on a larger scale. The plateau itself is waterless and practically without vegetation. Its strata are gently inclined to the north-west, so that the highest level is in the south, near Luxor, where the oldest (lower Eocene) strata appear, and valleys (Bibân-el-Molûk) take the place of the cliffs, undoubtedly for the same reason as in the Arabian desert (see below).

East of the Nile the limestone formation originally presented much the same appearance as in the Libyan counterpart. This appearance, however, was changed by a high (6000 to 7000 feet) range of crystalline rocks (granite, gneiss, diotite, porphyry,

etc.) which sprang up along the Red Sea, lifting and tilting both the limestone formation and the sandstone beds (which extend farther north on the eastern than on the western side of the river), thus creating numerous deeply eroded valleys. Some of these run north and south, but most of them slope down to the Nile. The Wâdi Hammâmât (the Rehrnu Valley of the Egyptians) runs almost straight across the desert from Keft (Coptos) on the Nile in the direction of Koseir (*Leucos Limên* of the Greeks) on the Red Sea. In spite of this the Arabian Desert still preserves its general appearance of a table-land. The open plains, of course, are almost devoid of vegetation, but numerous plants can be seen in the valley after rain, and they thrive in the sheltered ravines among the hills where springs occur. Near Assuân a spur of the eruptive range just mentioned runs in a western direction to the Nile, extending clear across the bed of the river and thus occasioning the so-called first cataract.

The formation of the present Valley of the Nile, in Egypt proper, dates from the Pliocene times, when it first appeared as a fiord into which the water of the Mediterranean Sea flowed at least as far as Keneh (Caenepolis) and perhaps even as far as Esneh (in the older Miocene times, the valley did not exist at all, the Arabian and Libyan deserts forming one continuous table-land). Intimately connected with the formation of the valley are the sands and loams occurring to the south of the pyramids of Gizeh, as is shown by numerous Pliocene fossils they contain (Baedeker, Egypt, p. 1). The silicified wood which abounds in the district of Moghara, west of the Wâdi Natrûn (see above), belongs to the Miocene times, as do also the marine limestones of the Plateau of Cyrenaica, north of the Oasis of Siweh, on the eastern edge of the Arabian Desert, and on the shore of the Gulf of Suez. The so-called petrified forests near Cairo consist of the stems of trees silicified by the action of the siliceous thermal springs which bubbled forth amid the networks of lagoons existing in these parts in Oligocene times. Those forest trees are still more common in the Fayûm, where innumerable bones of extinct terrestrial and marine mammals and reptiles have been found in sands of the same geological age (Baedeker, loc. cit).

Deposits of alabaster are to be found in the neighbourhood of El 'Amerna, where the alabaster quarries of Hetnub were worked by the Egyptians from the time of the Fourth Dynasty. The cultivated plains of the Delta and the Nile valley consist of recent alluvial deposits, ranging from fine sand to the finest silt laid down by the water of the annual inundation. Under these lie coarser yellowish sands and gravels of the Pleistocene age, which here and there reach the surface in the Delta as islands of sandy waste among the rich cultivation of the surrounding country (Baedeker, Egypt, p. xlix). Gold-bearing quartz and iron ore are plentiful in the eruptive range of the eastern desert both in Nubia and in Egypt, and gold mines were exploited there by the pharaohs. No

workings of iron ore have been found (Breasted, "History of the Ancient Egyptians", 122, 142, 154, 155).

Flora and Agriculture. Since the remotest antiquity Egypt has been famous for its fertility. The black soil, really a gift of the Nile, annually enriched by a fresh layer of silt, requires but little care in tilling and plowing. Hence the primitive character of the agricultural implements -- the plough, in particular, which is precisely the same now as it was 5000 years ago, a pole to which is fastened a piece of wood bent inward at an acute angle and shod, at least in later periods, with a three-pronged piece of iron. There is no trace of large forests similar to our own ever having covered the valley proper of the Nile in quaternary times, much less the Libyan or Arabian ranges, but the Delta still has, and may have had in the past, large groves of palm trees. So far as we can judge from the paintings of the early tombs, the whole cultivatable land was laid out in fields, orchards, or gardens. The fields gave rich crops of wheat, barley, millet (*Sorghum vulgare*), flax, lentils, peas, and beans. The orchards were stocked with trees, which, as a rule, were planted as much for the shade they afforded as for their refreshing fruit. There were palms of two species, the ordinary date-palm and the dùm-palm, the latter growing in Upper Egypt only. Oranges and lemons were peculiar to Lower Egypt, while sycamores, tamarisks, acacias of various kinds, the vine, the pomegranate, and the olive were common; oleanders, roses, carnations and geraniums were, as they still are, the principal decorative plants. In the kitchen gardens grew cabbages, cucumbers, melons, and garlic, which the Israelites seem to have regretted no less than the excellent fish (Num., vi, 5) and the fat fleshpots (Ex., xvi, 3) of the land of bondage. Reeds of various kinds grew abundantly in the marshes of Lower Egypt especially; the most important reed was the papyrus; its stalks served to make boats (Is., xvii, 2), ropes, sandals, clothes, and baskets. It was in such a basket that Moses was put by his mother and exposed in the flags by the river brink (Ex., ii, 3). But it was especially as a writing material that the papyrus became famous. Its large, fibrous stalks, being first stripped of their rind, were sliced length-wise. Two layers of such slices were disposed at right angles to one another and fastened with a sort of glue under some pressure, and the sheet of paper was ready for use as soon as it dried. When written upon the sheet was rolled up with the writing inside, and the title of contents was then added on the back end of it. In ancient Egypt the tuft of papyrus was the coat of arms or symbol of the Northern Kingdom. This reed, so common in Egypt up to the first centuries of our era, has now completely disappeared from that country, very likely on account of the high tax which the Roman emperors imposed on its cultivation. It exists still, however, on the upper course of the Nile, and, according to Bruce, the Abyssinians still make boats of its stalks. Among the many other aquatic plants must be mentioned the lotus, a water-lily, of which two species, the *Castalia*

scutifolia (*Nymphaea coerulea*), with blue flowers, and the *Castalia mystica* (*Nymphaea lotus*), with white blossoms, are often found figured on Egyptian monuments, particularly on columns. The flower of the lotus was the emblem of Upper Egypt, as the tuft of papyrus was of Lower Egypt.

The inundation of the Nile is of utmost importance to Egypt; it is no exaggeration to say that but for its annual recurrence the rich valley would soon become a desert similar to those of Libya and Arabia. The overflow is due principally to the torrents of rain that fall almost uninterruptedly in Abyssinia during the four months of summer and swell the Blue Nile (Astapus), which discharges into the Nile proper, or White Nile, at Khartûm. The rise of the Nile begins in Egypt a few days before the summer solstice, that is between the 10th and 20th of June; but the inundation does not begin until fully two months later. It reaches its maximum height about the autumnal equinox when it begins gradually to subside until the vernal equinox, so that the whole process of inundation lasts about nine months. The maximum height of the water varies in different places, decreasing as the area covered by the inundation increases. The mean difference between the highest and lowest stages of the river is 21 feet at Khartûm, 20 feet at Wâdi Halfa, 23 feet at Asûan, 22 feet at Asiût, and 22 feet at Minieh. Below the last-named point controlling works now prevent the rise of the river. (Baedeker, Egypt, p. xlvi.) At Cairo to-day the average rise is 16 feet. Some twenty-five years ago it used to be 25 feet at Cairo, 24 feet at Rosetta. When stated generally the height of the inundation must be understood as the height of the nilometre on the island of Rôdah, near Cairo (close by the ancient Babylon. Formerly, a rise of 18 to 20 feet was poor, 20 to 24 insufficient, 24 to 27 good, and 27 and above too much. For seven years, A. H. 475-464 (A.D. 1065-1072) the inundation failed altogether. The long duration of the overflow is due to the fact that it is controlled by artificial means without which it would undoubtedly prove as detrimental as it is beneficial. The only part left to nature is the process of infiltration which is due to the pressure of the water on the banks and is favoured by the porous nature of the soil, also by the fact that the subsoil, like the surface of the valley, gently slopes down to the mountains. It is only when this natural process is completed that the river is ready to overflow its banks, and then begins man's work. The sluices of the canals are opened, and the waters are led first to the higher level lands nearer the banks, then to the lower lands, for in its general configuration the soil to be submerged, as the subsoil, is convex -- not concave as in the case of ordinary rivers. This is brought about by building earthen dykes across the canals and the fields; the dyke is removed when the preceding tract has been sufficiently irrigated. The reverse is done when the river begins to fall, and the waters are kept in the remotest parts of the valley as high as possible above the level of the river, and they are let out slowly so as to secure irrigation for the low-water months, March to June. This process,

however, is not always possible, either because the irrigation is insufficient or because the canals and sluices are not kept in good condition. The fellaheen (tillers of the soil) then have to raise the water from the river, the canals, or the numerous wells fed by natural infiltration, so as to water their fields.

Two machines chiefly are used for this purpose; the *sâkyeh* and the *shâdûf*. The *sâkyeh* consist of two cog-wheels working at right angles to each other. The perpendicular wheel carries an endless chain, to which are attached leathern, wooden, or clay buckets. As the wheel turns the buckets are dipped in the water and filled, when they are lifted and emptied into a channel which carries the water into the fields. These machines are worked by asses or buffaloes in Egypt and by camels in Nubia. The *shâdûf* is a roughly made pair of gigantic scales in which the trays are replaced by a bucket on one end and a stone on the other, the stone being a little more than the weight of the bucket when filled. A man stands on the bank and, pulling on the rope to which the bucket is attached, submerges the latter, then letting go, the weight of the stone pulls the bucket out, when it can be emptied into the proper channel. In the Lower Delta, where the level of the water in the canals remains nearly the same, they use a wooden wheel called *tâbût*, which raises the water by means of numerous compartments in the hollow felloes. Such methods, however, while absorbing all the energies of the population for most of the year, are far from exhausting the irrigation power supplied by the Nile during inundation, nine-twelfths of the annual outpour being contributed during the three months of maximum rise. It allows one crop only for the irrigated lands, and leaves many districts desert-like for lack of water. The pharaohs of the twelfth dynasty, it seems, tried partly to obviate these defects by using the natural lake of the Fayûm as a reservoir where the surplus of the inundation waters were stored during their highest rise, which allowed them to double the volume of the river below the Fayûm during the three months of low Nile. The immense waterworks necessitated by the undertaking, at the point where the lake was most commonly visited by foreigners, gave the impression that the lake itself was an artificial excavation, as reported by classic geographers and travellers.

This great enterprise was not resumed until the close of the last century, when a series of gigantic dams at different points on the Nile was planned by the Egyptian Government; these, in part at least, have been completed. The Barrage du Nil (about twelve miles below Cairo) was completed in 1890. It extends across the Rosetta and Damietta branches and two of the principal canals of the Delta, thus ensuring constant navigation on the Rosetta branch and perennial irrigation through most of the Delta. The dam of Assiût, constructed 1898-1902, regulates the amount of water in the Ibrâhimieh Canal, and thus insures the irrigation of the provinces of Assiût, Minieh, Beni-Suef (10 miles east of the Heracleopolis Magna), and through Bahr-Yûsef, of the

Fayûm. Finally the dam of Assuân, also completed in 1902, below the island of Philæ, maintains such a supply of water in the canals of Lower and Middle Egypt that upwards of 500,000 acres have been added to the area of cultivatable land in the summer. This dam, the largest structure of the kind in the world, rises 130 feet above the foundation, and dams up the water of the Nile to a height of 83 feet, thus forming a lake of 234,000,000,000 gallons. Its length is 2150 yards; its width 98 feet at the bottom, and 23 feet at the top. The Egyptian government has lately decided to raise it 23 feet, which will more than double the huge reservoir's capacity and will afford irrigation for about 930,000 acres of land now lying waste in Upper Egypt (Baedeker, Egypt, p. 365). In addition to these gigantic waterworks, the number and capacity of the canals have been considerably increased, thus allowing the inundation waters to reach further on the outskirts of the desert; to this, probably, is due the fact that the average level of high waters is lower than it used to be -- 25 feet at Assuân instead of 40, although for the region below Minieh this change is also to be explained by the manipulation of the controlling waterworks (Baedeker, Egypt, p. lxvi).

II. ANCIENT EGYPTIAN HISTORY

Chronology. The ancient Egyptians practically had only one kind of year: a vague year consisting of twelve months, each of thirty days, and five supplementary days which were intercalated between the thirtieth day of the last month of the year just elapsed and the first day of the first month of the following year. Technically, those five days did not belong to the year; the Egyptians always said the "year and the five days to be found thereon". The five extra days were sacred to Osiris, Horus, Set, Isis, and Nephthys. They were days of bad omen. The year was divided into three periods, or seasons, of four months each: the inundation (Egyptian *Echut*, or *Echet*), the sowing-time (*Proyet*), and the harvest (*Somu*). In ancient times months had no special names, they were simply designated by ordinal numbers in each season, as "the first month of the inundation" and so on. Each month (as also the decades and hours), however, had as a patron one of the divinities who feast occurred during that month, and the patrons, it seems, varied according to time and locality. At a rather later period the names of those patrons passed over to the months themselves, hence the names transmitted to us by the classic writers (see table below). Each month was divided into three decades (the Egyptians do not seem to have ever used, or even known, the week of seven days); each day into 24 hours, 12 hours of actual day time and 12 hours of actual night time. The hours of day and night, consequently, were not always of the same length. The sixth hour of night corresponded to midnight, and the sixth hour of day to noon. There were further subdivisions of time, but their relation to the hour is unknown. The day most likely began with the first day-time hour; some, however, think it began with the first hour of night.

The year began with the first day of Thoth (Inundation I) which, of course, was supposed to coincide with the first rise of the river. The first of Thoth was also supposed to coincide with the day of the heliacal rising of Sirius, which was called New Year's Day and celebrated as such each year with a great festival. Isis, typified by Sirius, her star, was believed to bring with the inundation a promise of plenty for the new year; this takes us back to the first centuries of the fifth millennium, when the summer solstice, which precedes by a few days only the inundation, actually coincided with the heliacal rising of Sirius. We know, besides, from the classical writers that the latter phenomenon occurred on the 19th or 20th of July (according to the Julian calendar), which points to Memphis as the home of the Egyptian Calendar. The Egyptians, however, must have perceived in the course of time (if they had not foreseen it) that their calendar of 365 days would not, as they evidently believed at first, bring back the seasons every years at their respective natural times. Their year being about one-fourth of a day shorter than the Sirius year, on the fourth anniversary of its adoption, it had retroceded a whole day on the heliacal rising of Sirius; 486 years later, the retrocession was of about 120 days, so that the calendar indicated the opening of the inundation time when in fact the harvest was only beginning; and so on until, after 1461 revolutions of the civil year and 1460 only of Sirius, the first of Thoth fell again on the heliacal rising of that star. This period of 1460 Sirius years (1461 Egyptian years) received later the name *Sothic period* from *Sothis*, a Greek form of Sopdet, the Egyptian name of Sirius. Long before the end of the first Sothic period it was found necessary to consider the first of Thoth as a New Year's Day also, the civil New Year's Day. As early as the Fourth Dynasty we find the two Near Year's Days recorded side by side in the tombs.

To the common people who, as usual, were guided by the appearances, the calendar was steady while Sirius and the natural seasons were moving around it. Consequently Sirius's New Year's Day -- which seems to be all they knew or ever cared to know of the Sirius year -- was a movable feast, the date of which was to be announced every year. The fact that they estimated its precession on the calendar at six hours exactly, which was not correct except in 3231 B.C. (see E. Meyer, "Aegyptische Chronologie", p. 14) tends to show that the date was not obtained from astronomical observation, but in a mechanical way on the supposition that every four years it would fall one day later, this rule having been ascertained astronomically once for all, and considered as correct (E. Meyer, *op. cit.*, p. 19).

The cycle of the Sothic periods has been established in different ways by various scholars, with slight variations in the years of beginning of the several periods (see Ginzel, "Handbuch der mathematischen und technischen Chronologie", 187 sqq.). According to F. Meyer (*op. cit.*, 28), a new period began:--

19 July, A.D. 140-141

19 July, 1321-20 B.C.

19 July, 2781-80 B.C.

19 July, 4241-40 B.C.

These dates have been adopted by Breasted in his chronology (*Ancient Records of Egypt*, I, sec. 44), which we shall follow in the chronological arrangement of the Egyptian dynasties (see below).

We have no evidence of the Egyptians ever having become aware of the difference between the Sirius year and the solar year, which accounts for the shifting of the summer solstice and, consequently, of the beginning of the inundation from 25 July, in 4236 B.C., to 21 June, in 139 A.D. (see Ginzler, *op. cit.*, 190). This divergence, however, was too slow, and amounted to so little, even in the course of several centuries, that the Egyptian astronomers might well have overlooked, or at least ignored, it with regard to the calendar. It is still more remarkable that, after noting the retrocession of their vague year, they should not have tried to even it up with the Sirius year. But the astronomers were also priests and, as such, custodians of the religious side of the calendar, which in their eyes could not have been less important. The simple insertion of an intercalary day would have been sufficient when two years agreed, but that happened rarely; and the need of a reform was not felt by the contemporary generation. When that need was most acute, as in the middle of a Sothic period, the intercalation was not enough; the reform, to be satisfactory, would have demanded the bringing back of the seasons to their right times (at least in the measure allowed by the shifting of the summer solstice), which could not have been done without passing over several months and days (cf. the Gregorian Reform) and consequently almost as many feasts and popular festivals. Indeed, in Ptolemaic times, when, prompted by pressing politico-religious reasons, the priests finally undertook a reform, they were satisfied with the insertion of a sixth epagomene day every four years. This fixed year, known as the Canopic or Tanitic year, began on 22 October, 238 B.C. (Julian), the first day of Thoth happening then to coincide with that date. It met with but scant favour and was abandoned under Ptolemy IV (Philopator), in honour of whose predecessor, Ptolemy III, the decree had been issued. A second attempt on the same limited scale, and probably in the same spirit of flattery, was made in the early years of August, in connexion with the establishment of the era of Alexandria. The Egyptian year was then brought into harmony with the fixed Julian year, inasmuch as it received every four years an intercalary day. That day was inserted after the fifth epagomene, preceding the Julian intercalary year. The first of Thoth, however, remained where it was when the reform overtook it, viz., on 29 August, except after an intercalary year, when it fell on 30 August. The first year with an intercalary day, it seems, was 23 B.C. (see Ginzler, *op. cit.*, I, 224-228). This fixed year, which is still in use in the Coptic church, was first

adopted by the Greek and Roman portions of the population, while the Egyptians proper for several centuries clung still to the old vague year.

As we have seen in the beginning of this section, the whole arrangement of the Egyptian year and its relation to the astronomical and climatic phenomena of chief importance to the ancient Egyptians indicate that it must have been established at a time when one of the heliacal risings of Sirius coincided with the beginning of the inundation, which takes place shortly (according to the Coptic Calendar three days) after the summer solstice. This points clearly to the beginning of the Sothic period the first year of which fell on 19 July, 4241 B.C., when the summer solstice was on 25 July, and the inundation on 28 July. At the beginning of the preceding period, 19 July, 2781 B.C., the summer solstice had already retroceded to 13 July, so that the inundation (16 July) preceded the heliacal rising of Sirius, while at the beginning of the following period, 19 July 5701 B.C., the summer solstice was due only on 6 August, and the inundation on 9 August, or 21 days after the heliacal rising of Sirius (cf. Ginzel, *op. cit.*, 190; E. Meyer, *op. cit.*, 144 sqq.). The date 2781, as a possible date for the inauguration of the Egyptian calendar, is also excluded by the fact that the intercalary days (proving the use of the shifting year of 360 plus 5 days) are mentioned in the so-called Pyramid Texts, which are far older than the Fifth and Sixth Dynasties, although they occur for the first time on the monuments of these dynasties (E. Meyer, *op. cit.*, 40; Breasted, "Ancient Records of Egypt", I, 30). The date of the heliacal rising of Sirius varies according to the latitude from which it is observed. The fact that most of the classical writers and Egyptian documents fix that date at 19 July shows that the Egyptians observed it from the 30th degree of N. latitude, which points to one of the ancient cities of the Southern Delta as the home of the Egyptian year, probably Memphis or Heliopolis (E. Meyer, *op. cit.*, 41; Ginzel, *op. cit.*, I, 186; Breasted, *op. cit.*, I, sec. 45).

The following table exhibits the seasons and the 12 months of the Egyptian year and their Greek names (still in use with slight changes of orthography in the Coptic Calendar) and their respective dates of beginning according to the Julian Calendar, when I Thoth fell on the heliacal rising of Sirius, i.e., at the opening of the Sothic periods:

Inundation I:	Thoth	19 July
Inundation II:	Phaôphi.	18 August
Inundation III:	Athyr.	17 September
Inundation IV:	Choiac.	17 October
Sowing I:	Tybi.	16 November
Sowing II:	Mechir.	16 December
Sowing III:	Phamenoth.	15 January
Sowing IV:	Pharmouthi.	14 February
Harvest I:	Pachon.	16 March
Harvest II:	Payni.	15 April
Harvest III:	Epiphi.	15 May
Harvest IV:	Mesôri.	14 June
The Five Epagomene days:		14 July

The following table shows the correspondence of the present Egyptian (and Coptic) calendar, as reformed under Augustus, with our own calendar, both before and after intercalation:--

Thoth I:	29 Aug. (After Intercalation: 30 Aug.)
Phaôphi:	28 Sept. (After Intercalation: 29 Sept.)
Athyr:	28 Oct. (After Intercalation: 29 Oct.)
Choiac:	27 Nov. (After Intercalation: 28 Nov.)
Tybi:	28 Dec. (After Intercalation: 29 Dec.)
Mechir:	26 Jan. (After Intercalation: 29 Jan.)
Phamenoth:	25 Feb. (After Intercalation: 26 Feb.)
Pharmouthi:	27 Mar. (After Intercalation: 28 Mar.)
Pachon:	26 Apr. (After Intercalation: 27 Apr.)
Payni:	26 May (After Intercalation: 27 May)
Epiphi:	25 June (After Intercalation: 26 June)
Mesôri:	25 July (After Intercalation: 26 July)
Epagomene day:	24 Aug. (After Intercalation: 25 Aug.)

Although the Egyptians kept track of the Sirius year, in so far as its beginning was the official New Year's day, they do not seem to have made use of it for chronological purposes. The same may be said of the other methods of reckoning the year which may have been in use among some classes of the population, as, for instance, the natural year based on the recurrence of the natural seasons. It is not uncommonly taken for granted or advanced that the Egyptian vague year of 365 days was preceded by a round year of 360 days, and that the former was obtained by adding 5 days to the latter.

Arguments in favour of that view are few and not convincing. A year of 360 days neither lunar or solar is hardly imaginable (cf. Ginzel, *op. cit.* 69; E. Meyer *op. cit.*, 10). It is even more likely that, even before the arrangement of 360 plus 5 days, the Egyptian year (originally a lunar year) had become luni-solar, and increased to 365 days, either as a fixed number for every year by intercalary days distributed over the whole year (as in the Julian year), or as an average number in a series of years by a process of embolism (as for instance in the Hebrew year). Finally it was decided to adopt the far simpler and rational arrangement of 12 even months followed by 5 intercalary days; the distribution of the days was changed, not their number. This recast of the calendar found expression at a very early period, if not at the time when it took place, in the following fable by preserved by Plutarch (*De Iside et Osiride*, xii), but undoubtedly very ancient, as judged from the fact that the divinities mentioned in it belonged to the earliest stages of the Egyptian pantheon. Rhea (Egyptian *Nût*) having had secret intercourse with Kronos (*Geb*), Hêlos (*Re*) cast a spell on her to prevent her from bringing forth during any month of any year. But Hermes (*Thoth*) who loved her played dice with the Moon and won from her the 73rd part (not 60th as Maspéro, "Histoire ancienne", p. 87; nor 70th as E. Meyer, *op. cit.*, p. 9; nor 72nd, as Ginzel, *op. cit.* p. 171) of her courses (literally lights, *photon*), which he added to the (remaining) 360 days. During these five days *Nût* brought forth her children (Osiris, Horus, Set, Isis, and Nephthys).

The ancient Egyptians never had eras in the usual sense of the word, i.e., epochs from which all successive years are counted regardless of political or other changes in the life of the nation. Instead of eras, in the first five dynasties, they used to name each civil year for some great political or religious event (a usage which had its parallel in Babylonia), as "the Year of the Smiting of the Troglodytes", "the Year of the Conquest of Nubia", "the Year of the defeat of Lower Egypt", "the Year of the Worship of Horus"; or from some fiscal process recurring periodically, as "the Year of [or after] the Second Occurrence of the Census of all Cattle, Gold", etc. which was often abbreviated to "the Year of the Second Occurrence of the Census", or, still more briefly, "the Year of the Second Occurrence". The census having become annual, each year of any given reign came to be identified as the year of the first (or whatever might be the proper ordinal) census of that reign, a new series beginning with each reign. From the Eleventh Dynasty on, the years were always numbered from the first of the current reign, and the second year of the reign was supposed to begin with the first day of Thoth next following the date of the kings' accession, no matter how recent that date might be. The absence of eras in ancient Egypt is all the more remarkable as there were several periods which could easily have been utilized for that purpose, the Sothic period especially. (On other periods -- Phoenix, Apis, etc. -- mentioned by the classical writers but not yet

found on Egyptian monuments, as also on the so-called Great and Small years, and the supposed Nubti Era, see Ginzel, *op. cit.*, I, sec. 38 and 45.)

In later times several eras were created or adopted in Egypt, the principal of which was the Era of Alexandria. Its epoch, or starting-point, has conventionally been fixed at 30 (or 31) August of the first year of Augustus (Julian, 30 B.C.), although, as we have seen, it did not acquire its intercalary character until 26, or even 23, B.C., so that its first years were ordinary Egyptian vague years (for further details see Ginzel, *op. cit.*, I, pp. 224-28). The Philippic, or Macedonian Era (more generally known as the Era of Alexander) was introduced into Egypt in the third century B.C., after the death of Alexander the Great (323 B.C.). Up to Ptolemy Philadelphus (285-47 B.C.), Egyptian monuments were dated according to the old Egyptian system, but after that time the Macedonian dates are generally found together with the Egyptian. Macedonian dating was gradually superseded by the use of the fixed eras, yet it is found, sporadically at least, as late as the second century after Christ (Ginzel, *op. cit.*, I, p. 232). The Philippic Era begins on I Thoth, 425 (12 November., 324 B.C., Julian style) of the era of Nabonassar; like the latter it is based on a vague year on the same pattern, months' names included, as the old Egyptian year. The Era of Nabonassar begins as noon, 26 February, 747 B.C. (Julian style). It is the basis of the famous Canon of Ptolemy. It was used in Egypt especially for astronomical purposes, and it met with great favour with chronographers, on account of the certainty of its starting-point and its well-established accuracy. The reduction of Nabonassar's years into the corresponding usual Christian reckoning is rather complicated and requires the use of special tables (see Ginzel, *op. cit.*, I, p. 143 sqq.).

Only a very small portion of the colossal mass of inscriptions, papyri, etc. so far discovered in Egypt has any bearing on, or can be any assistance in, chronological questions. The astronomical knowledge of the ancient Egyptians does not seem to have gone very far, and, as everyone knows, accurate astronomical observations rightly recorded in connexion with historical events are the basis of any true chronology of ancient times. It is remarkable that the Egyptian Claudius Ptolemy (second century after Christ) took from the Babylonians and the Greeks all the observations of eclipses he ever used and started his canon (see above) with Babylonian, not with Egyptian kings. Evidently he held no records of sun observations made in Egypt. Yet, for religious reasons, the Egyptians noted the Heliacal risings of Sirius on the various dates of their movable calendar. A few have reached us, and have been of no small assistance in astronomically determining, within four years at least, some of the most important epochs of Egyptian history. The Egyptians also recorded the coincidence of new moons with the days of their calendar. Such data in themselves have no chronological value, as the phases of the moon return to the same positions on the calendar every nineteen

years; taken, however, in conjunction with other data, they can help us to determine more precisely the chronology of some events (Breasted, *op. cit.*, I, sec. 46). Moreover, ancient Egypt has bequeathed to us a number of monuments of a more or less chronological character: (1) The calendars of religious feasts [Calendars of Dendera (Tentyris), Edfu, Esneh, all three of which belong to the late period, Calendar of Papyrus Sallier IV] are especially interesting because they illustrate the nature of the Egyptian year (see Ginzler, *op. cit.*, p. 200 sqq.). (2) The lists of selected royal names comprise: the so-called Tablets of Sakkâra, Nineteenth Dynasty, forty-seven names beginning with the sixth of the First Dynasty; Karnak (part of Thebæ), Eighteenth Dynasty, sixty-one names, unfortunately not chronologically arranged; Abados, Nineteenth Dynasty, seventy-six names beginning with Menes. (3) Two chronological compilations known as the Turin Papyrus, Nineteenth Dynasty, and the Palermo Stone, Fifth Dynasty, from the places where they are now preserved. Unfortunately, the first of these last two monuments is broken into many fragments and otherwise mutilated, while the second is but a fragment of a much larger stone. These two documents (cf. E. Meyer, *op. cit.*, pp. 105-205, and Breasted, *op. cit.*, I, pp. 51 sqq.) are, though fragmentary, of the greatest importance, in particular for the early dynasties and the predynastic times. The Turin papyrus contains, besides the name of the kings chronologically arranged in groups or dynasties, the durations both of the individual reigns and of the various dynasties or groups of dynasties, in years, months, and days. On the Palermo Stone each year of a reign is entered separately and is often accompanied with short historical notices. -- All these documents combined furnish the chronological frame for the vast amount of historical matter contained in thousands of mural inscriptions and *stelæ* collected and worked out with almost incredible patience by several generations of Egyptologists during the last hundred years.

Of secondary importance are the data furnished by the Greek and Latin writers. Still we must mention here the *Aigyptiaka Hypomnemata* of the Egyptian priest Manetho of Sebennythus, third century B.C. Of this work we have: (a) Some fragments which, preserved by Josephus (*Contra Apion*, I, xiv, xv, xx), were used by Eusebius in his "Præparatio Evangelica" and the first book of his "Chronicon"; (b) by an epitome which has reached us in two recensions; one of these recensions (the better of the two) was used by Julius Africanus, and the other by Eusebius in their respective chronicles; both have been preserved by Georgius Syncellus (eighth-ninth century) in his *Egloge Chronographias*. We also have a Latin translation by St. Jerome and an Armenian version of the Eusebian recension, while fragments of the recension of Julius Africanus are to be found in the so-called "Excerpta Barbara". Judging from that epitome, the work of Manetho was divided into three parts, the first of which contained the reigns of the gods and demi-gods (omitted in the African recension) and eleven dynasties of

human kings; the second, eight dynasties of such kings; the third, twelve (the last one added after Manetho's death). Besides a few short notices, the epitome contains nothing but names and figures showing the duration of each reign and dynasty. Those figures are summed up at the end of each book. In the shape it has reached us Manetho's work is of comparatively little assistance, on account of its chronology, which seems to be hopelessly mixed up, besides being grossly exaggerated; and it must be used with the greatest caution. (For further details on Manetho and his work see the preface of C. Müller in the Didot edition of the second volume of "Fragmenta Historicorum Græcorum", and E. Meyer, *op. cit.*, pp. 69-99.) In the next place should be mentioned a list of so-called Theban kings handed down by Erotosthenes of Cyrene (third century B.C.) and preserved by Syncellus. It seems to be a translation of some Egyptian royal list similar to the Table of Karnak [see C. Müller in the Didot edition of Herodotus (*Fragmenta chronographica*, p. 182) and E. Meyer, *op. cit.*, pp. 99-103]. Lastly, Herodotus's *Historiai* (fifth century B.C.) and Diodorus Siculus's *Bibliothèque* (first century B.C.) deserve at least a passing mention. Although their interest lies chiefly in another direction, yet we may glean from them occasional chronological data for the times during which these two writers lived.

We cannot enter here upon even a cursory analysis, much less a discussion, of the various systems of Egyptian chronology. The older systems of Champollion, Lepsius, Lesueur, Brugsch, Mariette were, to a considerable extent, based on theories which have since been proved false, or on an imperfect study and an erroneous interpretation of the chronological material. These scholars, however, paved the way for the present generation of Egyptologists, of the German school especially, who have at last succeeded in placing the chronology of ancient Egypt on a firm basis. The following chronological table up to the Twenty-sixth Dynasty is condensed from the excellent work of Professor J. H. Breasted, "Ancient Records of Egypt", I, pp. 40-47. The other dynasties up to the Thirtieth are taken from Professor G. Steindorff's "Outline of the History of Egypt" in Baedeker's "Egypt" (6th ed., 1908), with the exception of the year 408, the last of the Twenty-seventh Dynasty and first of the Twenty-eighth, which we copy from Maspéro, "Guide to the Cairo Museum" (Cairo, 1903, p. 3:--

4241*	B.C.	--	Introduction of the Calendar
3400	B.C.	--	Accession of Menes and beginning of the dynasties
3400-2980	B.C.	--	First and Second Dynasties
2980-2900	B.C.	--	Third Dynasty
2900-2750	B. C.	--	Fourth Dynasty
¹ 2750-2625	B.C.	--	Fifth Dynasty
¹ 2625-2475	B.C.	--	Sixth Dynasty
2475-2445	B.C.	--	Seventh and Eighth Dynasties
2445-2160	B.C.	--	Ninth and Tenth Dynasty
2160-2000	B.C.	--	Eleventh Dynasty
2000*-1788*	B.C.	--	Twelfth Dynasty
² 1788*-1580	B.C.	--	Thirteenth to Seventeenth Dynasties (including Hyksos times)
¹ 1580-1350	B.C.	--	Eighteenth Dynasty
¹ 1350-1205	B.C.	--	Nineteenth Dynasty
¹ 1205-1200	B. C.	--	Interim
¹ 1200-1090	B.C.	--	Twentieth Dynasty
¹ 1090-945	B.C.	--	Twenty-first Dynasty
¹ 945-745	B.C.	--	Twenty-second Dynasty
¹ 745-718	B.C.	--	Twenty-third Dynasty
¹ 718-712	B.C.	--	Twenty-fourth Dynasty
¹ 712-663	B.C.	--	Twenty-fifth Dynasty
663-525	B.C.	--	Twenty-sixth Dynasty
525-408	B.C.	--	Twenty-seventh Dynasty
408-398	B.C.	--	Twenty-eighth Dynasty
398-378	B.C.	--	Twenty-ninth Dynasty
378-341	B.C.	--	Thirtieth Dynasty

Dates marked with an asterisk in the above table are astronomically computed and correct within three years, while the date 525 is attested by the Canon of Ptolemy. Several dates besides, within the period of the Eighteenth Dynasty and the initial date of Shebataka, second king of the twenty-fifth Dynasty, are also astronomically determined. The superscript "1" (¹) indicates that the numerical difference between the two following dates is the minimum duration allowed by the monuments for the corresponding dynasties. The superscript "2" (²) on the contrary, indicates the maximum of duration. this is the case only for the period from the Thirteenth to the Seventeenth dynasties. What this period may lose some day will be the gain of the nine following dynasties, but the extreme dates, 1788 and 662, will not be affected. The duration of 285 years for the Ninth and Tenth Dynasties, indicated by the two extreme dates 2445-

2160, is an estimate, in round numbers, based on an average of 16 years for each of their 18 kings. The uncertainty which attaches to that period affects the dates of all the preceding dynasties, which, consequently, may some day have to be shifted as much as a century either way.

Ethnology. Scholars are at variance as to the origin of the Egyptians. Some, chiefly philologists, suppose that the Egyptians of historical times had come from Western Asia either directly, through the Isthmus of Suez, or, as most will have it, through the straits of Bab-el-Mandeb and Ethiopia. Others, principally naturalists, think they came from, or at least through, Libya, while others still place the original home of the Egyptians in Central Africa. The first hypothesis is now the most commonly received. Several considerations tend to make it plausible: the fact, for instance, that wheat and barely, which have been found in the most ancient tombs dating from before the first dynasty, are originally indigenous to Asia, as well as linen, wine, and the produce of other cultivated plants which are represented among the funeral offerings in the tombs of the earliest dynasties. And the same can be said of the two sacred trees of the Egyptian pantheon, the sycamore and the *persea*. Finally, the fact that the ancestor of the domesticated Egyptian ass had its home in the wilderness in the south of Egypt would show that the Asiatic invaders or settlers came through Ethiopia. This theory tallies with the Biblical narrative, Gen., x, 6, which makes the ancestor of the Egyptians, under the ethnic name of Misraim, the brother of Cûsh the Ethiopian, of Phût (e.g. *Puanit*, the *Poeni* of the Latins), and Canaan, all three of whom certainly had their original homes in Asia. What seems more certain is that the Egyptians of historical times belong to the same stock as the Libyans and other races, some of which were absorbed, while other were totally or partly driven away by them. Five at least of these are given in the Bible (Gen., x, 13, 14) under ethnic names as sons of Misraim, i.e. Ludim (according to Maspéro, "Histoire Ancienne des peuples de l'Orient", Paris, 1908, p. 16, the *Rotu* or *Romitu* of the hieroglyphics, i.e. the Egyptians proper), Laabim (the Libyans), Naphtûchim (the inhabitants of No-Phtah, or Memphis), Patrûsim (the inhabitants of the To-rêsi, i.e. Upper Egypt), Anamim (the Anûs, who, in prehistoric times founded On of the North, or Heliopolis, and On of the South, or Hermonthis).

Predynastic History. At all events, in the predynastic times, when the light of history begins to dawn on Egypt, various races which at different periods had settled in Egypt, had been blended under the molding influence of the climate of their new home, and turned into a new race, well-characterized and easily distinguished from any other race, Asiatic, European, or African -- the Egyptian race. Naturally, a difference of occupation created a certain variety of types within that race. While the tiller of the soil was short and thick-set, the men of the higher classes and the women generally were rather tall and slender, but all were broad-shouldered, erect, spare, flat-footed.

The head is rather large, the forehead square and rather low, the nose fleshy, the lips thick but not turned up, the mouth rather large with an undefinable expression of instinctive sadness. The type perpetuated itself through thirty or forty centuries of revolutions, invasions, or pacific immigrations and survives to this day in the peasant class, the fellaheen, who form the bulk of the population and the sinews of the national strength. All agree that, even before the Egyptian race had attained that remarkable degree of ethnological permanence, Egypt, from a merely pastoral region, had become an agricultural country, as a result of the immigration (or invasion) of Asiatic tribes, for, before the dawn of historical times, they had learned to grow wheat and barley, using the plow in their cultivation. Next came the political organization of the country. It was subdivided into a number of small independent States, which became the *nomes* of pharaonic times, each with its own laws and religion. In the course of time some of these States were merged into one another, until they formed two large principalities, the Northern Kingdom (*To-Mehi*) and the Southern Kingdom (*To-Rêsi*), an arrangement which must have lasted some time, for when the final degree of centralization was reached, and the two countries united under one rule, the king took the title of "Lord of Both Lands", or "King of Upper and Lower Egypt" (never "King of Kimit", i.e. of Egypt) and often wore a double crown consisting of the white crown of the South and the red crown of the North; the arms of the United Kingdom were formed by a union of the lotus and the papyrus, the emblems of the two countries.

The capital of the Northern Kingdom was Bûto, under the protection of the serpent goddess of the same name (now Tell-el-Ferâ'in, 20 miles south-west from Rosetta). Nekheb (the modern el-Kâb, a few miles north of Edfu) was the capital of the Southern Kingdom; the vulture-goddess, Nekhabet, was its protecting deity. But at both capitals the hawk-god, Horus, was worshipped as the distinctive patron-deity of both kings. That ancient population of Egypt, referred to in later texts as the "Horus-worshippers", have recently emerged from the mythical obscurity to which their kings have been relegated before the days of Manetho, who knows them as the xxx, "the shades", i.e. the deified ancestors. The Palermo Stone has revealed to us the names of six or seven rulers of the Northern Kingdom; and in Upper Egypt, thousands of sepulchres (none of the kings, unfortunately) have recently been excavated. The bodies, unembalmed, lie sideways, in what is called the "embryonic" posture, surrounded by pottery or stone jars, where remains of food, drink, and ointment can still be discerned, with toilet utensils, flint weapons, and clay models of various objects which the deceased might need in the life hereafter -- boats especially, to cross the waters to the Elysian Fields. From those early times date, as to the essentials of concept and expression, the Pyramid Text alluded to in a former section of this article. We have seen, under *Chronology*, that the institution of the calendar dates from predynastic times (4241 B.C.), and that

its original home was in the Northern Kingdom, probably at Memphis or at On (Heliopolis). The computations necessary for that calendar show clearly that we must trace to predynastic times the hieroglyphic system of writing which we find fully developed in the royal tombs of the first two dynasties (Breasted, "Ancient History of the Egyptians", pp. 35-39).

Dynastic History. Since Manetho of Sebennytus (see above) it has been customary to arrange the long series of kings who ruled over ancient Egypt, from the beginning of history until the conquest of Alexander the Great, in thirty dynasties, each of which corresponds, or as a rule, seems to correspond, to a break in the succession of legitimate rulers, resulting from internal dissensions or military reverses, the latter almost invariably leading to an invasion and, eventually, the establishment of a foreign dynasty. Manetho's claim, that his history was compiled from lists of royal ancestry, is fairly borne out by the monuments -- the so-called Tablets (royal lists) of Sakkarah, Abydos, Karnak, and especially the Palermo Stone, as well as annals of individual kings recorded on the walls of temples, tombs, etc.

These thirty dynasties are very unevenly known to us; of a good many we know next to nothing. This is in particular the case for the Seventh and Eighth dynasties (Memphites), the Ninth and Tenth (Heracleopolites), the Eleventh (Theban -- contemporary with the Tenth), the Thirteenth (Theban) and the Fourteenth (Xoite -- in part simultaneous), the Fifteenth, and the Sixteenth (Hyksos), and the Seventeenth Dynasty (Theban -- partly contemporary with the Sixteenth. Other dynasties are known to us by their monuments, especially their tombs, which are often extremely rich in information as to the institutions, arts, manners, and customs of Egypt during the lifetime of their occupants, but almost totally devoid of historical evidence proper. Such is the case, for instance, for the first five dynasties, of which all we can say is that they must have ruled successively over the whole land of Egypt and that their kings must have been conquerors as well as builders. We know little or nothing of the peoples they battled with, nor can we detect the political reasons which brought about the rise and fall of the several dynasties. Evidently, in some cases the lack of information on some periods, which must have been very momentous ones in the political life of Egypt, should be attributed to the disappearance of monuments of an historical character, or to the fact that such monuments have not yet been discovered; it is very likely, however, that in many cases no historical evidence was ever handed down to posterity. In Egypt, as in Assyria and Babylonia, it was not customary for kings to place their defeats on record, nor did the chieftain or the soldier or fortune who after a period of internal dissensions succeeded in establishing himself as the founder of a new dynasty, care to take posterity into his confidence as to his origin and previous political career. Manetho, who, as a rule, does not seem to have been much better informed than we are, resorts

in such cases to traditions, strongly tinged with legend, which were in the keeping of the priests and belonged, very likely, to the same stock as most of those related by Herodotus on matters that could not fall under his personal observation. Such traditions, until confirmed by the monuments, or at any rate purified of their legendary elements by comparison with them, must of course be kept in abeyance. For the present the royal names are almost all that we can regard as certain for several of the dynasties. Such is the case for the first two dynasties, which until about 1888 A.D. were considered by most scholars as entirely mythical. Their tombs, however, have since been discovered at Ûmm-el-Ga'âb, near Abydos, in the territory of the ancient This (Thinis), and the names of Menes, Zer, Usaphais, and Miebis have already been found. A good many other kings of Manetho's list cannot be identified with the owners of the tombs discovered, owing to the fact that, while Manetho gives only the proper names of the kings, the monuments contained, as a rule, nothing but their Horus names (Maspéro, "Histoire Ancienne", 56 sq.). Monuments of these kings have been discovered in Upper Egypt and at Sakkarah, which shows that they must have ruled over the whole land of Egypt. The various articles found in these royal tombs point to a high degree of civilization by no means inferior to that of the immediately following dynasties. Religion in general, and the funerary rites in particular, were already fixed, and the hieroglyphic system of writing had reached its last stage of alphabetic development (Maspéro, loc. cit.; Breasted, "History of Ancient Egyptians", 40 sqq.).

The history of Egypt can be divided into two large periods, the first of which comprises the first seventeen and the second the other thirteen dynasties. In current literature Dynasties Three to Eleven are often variously referred to as the Old Kingdom (*ancien empire*), Dynasties Twelve to Seventeen as the Middle Kingdom (*moyen empire*), Dynasties Eighteen to Twenty as the Empire (*nouvel empire*). The simpler division which we propose here seems to us more rational.

First Period: First to Seventeenth Dynasty. -- During this period Egypt and the Asiatic empires never, so far as we know, came into contact, except possibly in a pacific and commercial way; their armies never met in battle. Some of the ancient Babylonian and Chaldean kings, like Sargon I (third millennium B.C.), may have occasionally extended their raids as far as the Mediterranean Sea, but it does not seem that they ever established their rule in a permanent way. They were fully occupied with the war waged among themselves, or with the Elamites who for centuries contended with Babylonia and Chaldea for supremacy in Western Asia. On their side the kings of Egypt had to secure their own borders (principally the southern) against the neighbouring tribes, a necessity which led them, after many centuries of warfare, to the conquest of Nubia. As early as the reign of Pepi (Sixth Dynasty) Nubia had been brought under control so far as to receive Egyptian colonies. Under the kings of the Twelfth Dynasty, chiefly

under Usertasen III (the Sesostris of the Greeks), the conquest was achieved, and the valley of the Upper Nile as far as the Second Cataract was organized into an Egyptian province. The Libyans, also, and the tribes settled between the Nile and the Red Sea had to be repeatedly repelled or conquered. The brief records of such punitive expeditions, which appear on the Palermo Stone, attribute them to dates as early as the first two dynasties. Extensive commercial relations were maintained with the Syrian coast (whither King Snefrû, of the third dynasty, sent a fleet to procure cedar logs from Mount Lebanon), with the Upper Nile districts, with Arabia to the south, and with the Somali coast (*Punt, Pûanit*) to the east. Roads were built for this commerce between Coptos and the different points of the Red Sea. The chief of these roads led through Wâdi Hammamat (*Rohanû* or *Rehenu Valley*), the rich quarries of which were operated by the Egyptians from the time of the Fifth Dynasty; it furnished the *niger*, or *Thebaicus, lapis*, a hard dark stone which was used for statues and coffins. In Asia proper the pharaohs of that time sought no extension of territory, with the exception of a few points in the Peninsula of Sinai, where, as early as the First Dynasty, but especially since the time of Snefrû, they operated mines of copper and turquoise. As a rule on the north-west border they kept on the defensive against the raids of the nomadic tribes established on the Syrian desert and, like the modern Bedouins, always ready for plunder. On that side the frontier was protected by a wall across the Wadi Tumilat and a line of forts extending from the Nile to the Red Sea. Occasionally the Egyptians resorted to counter-raids on the Syrian territory, as in the case of the Amus and Hirûshaitus under Pepi I, but, the punishment inflicted, they invariably returned to their line of defense.

The seat of government during the first period was several times shifted from one city to another. Menes, before the union of the two kingdoms, very likely resided at This, in his native nome of Abydos, in Upper Egypt. Having succeeded in bringing Lower Egypt under his rule, he appropriately selected Memphis for the capital of the new kingdom, as being more central. During the Ninth and Tenth Dynasties, Heracleopolis, only a short distance south of Memphis, became the official seat of government, for no special known reason -- perhaps simply because the pharaohs of the reigning dynasties had originally been natives and princes of these nomes. They were opposed by the princes of Thebes (Eleventh Dynasty) who finally (Twelfth Dynasty) succeeded in overthrowing them and selected their own city as capital. This radical change had the advantage of bringing Nubia within closer range, and it may have contributed substantially to the conquest of that province; but it weakened the northern border, which was now too far from the center of political life.

The pharaohs of the Thirteenth Dynasty (most of whom were called Sebek-hotep or Nofir-hotep), without abandoning Thebes, seemed to have paid more attention

than their predecessors to the cities of the Delta, where -- at Tanis in particular -- they occasionally resided, and it was from Xoïs (Sakha), a city of Lower Egypt that the next following (Fourteenth) dynasty arose. It seems that the kings of that dynasty never succeeded in establishing a firm and lasting government. Their rapid succession on the throne and the famous invasion of the Hyksos which Manetho registers at that time, point to internal dissensions and a condition of affairs verging on anarchy. "At this time there came to us king Timæos by name. Under this king, God, why I do not know, sent an adverse wind to us, and against all likelihood from parts of the East of ignoble race, coming unexpectedly, invaded the country and conquered it easily and without battle." This testimony contains contradictory elements. It is difficult to imagine how an invasion could result in a conquest unless it took place gradually and consequently not "unexpectedly". The most probable interpretation of Manetho's words seems to be: that the invaders came in a peaceful quest for new homes, and not all in one body, though in comparatively large numbers at one time; that they first settled, with their flocks, in the rich pasture lands of the Delta, then, little by little, adapted themselves to the political life of the country, some succeeding in occupying important situations in the army or in the administration; that finally one of them, favoured by the rivalry of competitors for the vacant throne, seized the reigns of government and was recognized as king not only by the men of his own race, but also by quite a considerable party of the natives.

The identity of the Hyksos has been the subject of long discussions. Some, with De Cara, think they were the same as the Hittites, others (Baedeker, "Egypt", p. lxxix) see in them simple Syrian bedouins. The opinion which seems most probably and best agrees with the tradition preserved by Manetho, identifies them with the large Canaanitic family once settled in Lower Chaldea, along the Persian Gulf and the Arabian coast. According to Professor Maspéro (op. cit., 194 sqq.), it was the invasion of the lower Euphrates by the Elamites under Kudurnakhunte (2285 B.C.) that forced his family to migrate to the west in search of a new home. The seafaring tribes settled along the eastern shore of the Mediterranean Sea to which they gave their name (Phoenicians, *Phoinikes*, Poeni; Egyptian *Puanit*, *Punt*; Bible, *Phut*). Others settled in the mountainous district of Palestine (Canaan proper), where they resumed their nomadic life, and gradually developed into an agricultural race. Others, finally, shepherds also, probably prevented from taking the northern direction by the powerful and well-organized nation of the Hittites, turned to Egypt, where they settled as explained above. Manetho assigns them to three dynasties, the Fifteenth, Sixteenth, and Seventeenth, of which only the Sixteenth held sway over all Egypt. During the Fifteenth Dynasty, the princes of the southern nomes, for a least a time, managed to retain a certain independence. They regained it under the Third Hyksos Dynasty, with which they share

the honour of being recognized as the Seventeenth Dynasty. The last of them, Amosis, after a war of six years, finally succeeded in driving the intruders out of Egypt, pursuing the remnant of their army as far as Sharhuna (perhaps Sharukhen, Jos., xix, 6) in Southern Syria, where the last battle was fought and won by the Egyptians. From the monuments we know the names of at least four of the Hyksos kings, three of the name of Apophi and one Khian. An alabaster vase bearing the names of the last has been found under a wall of the palace of Cnossis in Crete, and a lion in Bagdad Their capital seems to have been Avaris on the north-eastern border of the Delta. Some think that their rule extended over Palestine and Southern Syria, which would explain the location of their capital. The usage of carrying on official correspondence with the local princes of Syria and Palestine in the Babylonian language and script probably dates from the period of the Hyksos. Few of the monuments of the Hyksos have been preserved, enough of them, however, to show us that as a rule the Shepherd kings conformed to the ancient culture of Egypt, adopting its language, art, religion (cf. however, Maspéro, *op. cit.*, 203) and political institutions. But they oppressed their Egyptians subjects, and posterity held their memory in abomination.

It is in the Hyksos period that we must place the arrival of the Israelites in Egypt. The migration of the Terachites from Ur in Chaldea may have coincided with, or at all events was posterior to, that of the great Canaanitic family. Although of different stock, the two families had long been thrown together in their former common home and spoke the same language; and this may partly explain the favour which the children of Israel found at the hands of an Egyptian ruler, himself of Canaanitic, or possibly of Semitic, origin. "The scarabs of a Pharaoh who evidently belonged to the Hyksos time give his name as Jacob-her or possibly Jacob-El, and its is not impossible," remarks Professor Breasted, "that some chief of the Jacob-tribes of Israel for a time gained the leadership in this obscure age" (*Hist. of Anc. Egypt*, 181).

Second Period: Eighteenth to Thirtieth Dynasty. -- The second period is chiefly characterized by the Asiatic victories of the pharaohs when it opens, and by the repeated invasions of Egyptian territory by Asiatic powers, which was the reaction of those victories. During the first period Egypt could be great at home, within her natural borders along the Nile valley Every page of her history is her own. During the second period her greatness is in proportion to her conquests abroad on another continent; almost every page of her history belongs to the history of the world.

The first ambition of the kings of the Eighteenth Dynasty, inaugurated by Ahmosis (1580-1557 B.C.), was to secure their own borders against the Libyans, who had encroached upon the Delta during the period of confusion preceding the expulsion of the Hyksos, and, against the Nubians, who had availed themselves of the same opportunity to shake off the yoke of Egyptian domination. The first point was achieved by

Amenhotep I, the second by Thotmes I, whose two successive reigns lasted from 1557 to 1501 B.C. Not satisfied with recovering and reorganizing the ancient province of Nubia, Thotmes I pushed more than 400 miles further south to Napata, below the Fourth Cataract, where the southern border of Egypt remained fixed for the next eight hundred years or so. Both Amenhotep I and Thotmes I, and perhaps Ahmosis, too, had already undertaken the conquest of Syria. But it was reserved for Thotmes III (1501-1447 B.C.) to complete it and organize the conquered territory as a permanent dependency of Egypt. Circumstances were favourable. Both Assyria and Babylonia were in decline, and the powerful Hittites were restricted within their own borders beyond the Cilician Gates in Asia Minor. Nevertheless the great confederation of the Canaanitic cities (perhaps to be identified with the Hyksos), backed the Phoenician cities, the States, or State, of Naharin (from the Mediterranean to the bend of the Euphrates), and the Aryan kingdom of Mitanni (between the Euphrates and the Belik), was not an enemy to be despised, and it cost the army and fleet of the pharaoh no less than seventeen campaigns to achieve a permanent victory. The Kings of Assyria and Babylonia, and even the Hittites, sent presents which Thotmes took for tribute; but he does not seem to have invaded their territories; he probably never crossed the Belik or the Cilician Gates, which mark the limits of the greatest extension of Egyptian control in Asia. The whole region conquered was organized as a simple tributary territory under the supervision of a governor general backed by Egyptian garrisons in the chief cities. The local rulers were otherwise left unmolested except in the case of rebellion, when the punishment was prompt and severe in the extreme. Their sons were educated in Egypt, and were generally appointed to succeed them at their death. The administration of this territory, which included also the island of Cyprus, and was, like Nubia, the source of immense wealth to Egypt, gave rise to considerable correspondence between suzerain and vassals. On the part of the latter it was written on clay tablets in the Babylonian language and characters -- at that time the official language and characters of Western Asia. From that correspondence (so-called Tell-Amarna tablets) we learn that under Amenhotep IV (1375-1358 B.C.) the vigilance of the Egyptian court had considerably relaxed; the local dynasties were constantly and vainly asking for Egyptian troops against the encroachments of the Hittites and the Khabiri. This led, toward the end of the dynasty, to a complete loss of the Asiatic territory conquered by Thotmes III.

The Eighteenth Dynasty was an era of great international prosperity. With the single exception of Amenhotep IV, who allowed himself to be drawn into a scheme to reform the Egyptian religion, all its kings were wise and just rulers. They were also great builders and devoted their vast resources in men -- chiefly captives taken in war -- in gold, and silver, derived from tribute, to the erection of magnificent temples and

temple-like mortuary chapels, all of which they richly endowed. The reform attempted by Amenhotep IV consisted in proclaiming Aton (an old form of Re, or Ra, the sun-god of Heliopolis) the sole god, and in enforcing his worship at the expense of others, particularly Amon for whom the priesthood of Thebes claimed precedence over the others. He ordered the word *god*, as applied to the other deities, to be chiselled out wherever it could be found on the temples and other monuments. He changed his own name to *Ikhnaton*, "Spirit of Aton", in honour of the new god, to whom he erected a temple at Thebes called Gem-Aton. Lastly, he changed his residence from Thebes to Akhetaton, "Horizon of Aton" (now El 'Amarna), a city which he founded in a like spirit, and he also founded two other cities of the same name, each with a Gem-Aton temple, one in Nubia, at the foot of the Third Cataract (where it was discovered in 1907 by Professor Breasted), and the other in Syria, the site of which is still unknown. This reform was violently opposed by the established priesthood, and the land was soon thrown into a state of general confusion verging on anarchy. The temples and cities dedicated to Aton were destroyed and abandoned soon after the royal reformer's death.

Harmhab (1350-1315 B.C.), the founder of the Nineteenth Dynasty, was principally engaged in bringing the land out of the confusion into which it had fallen during the last years of the preceding dynasty, and restoring the temples of the ancient gods to their former splendor. Seti I (1313-1218) attempted to recover the Asiatic provinces lost by Amenhotep IV, but he does not seem to have pushed his advance farther than Hauran and the southern slopes of Mount Lebanon. He probably did no more than skirmish with the Hittites, who were now in possession of the valley of the Orantes, and had occupied the strong post of Kadesh on that river; even his conquest of Palestine does not appear to have been permanent. At all events Seti's son, Ramses II (1218-1225), had to begin all over again. After three years spent in recovering Palestine, Ramses finally succeeded in dislodging the Hittites from the valley of the Orantes. The war nevertheless continued some ten or eleven years longer without great results, the Hittites returning to their former positions as soon as Ramses had retired to Egypt for the winter season; when the Hittites proposed to him a treaty of permanent peace and alliance he gladly accepted it (1272 B.C.). This treaty, of which we have two Egyptian transcripts and a Hittite copy in the Babylonian language and character, does not stipulate anything with regard to the boundary between the two countries, which was, very likely, about the same as under Seti, save possibly on the coast, where it may have been extended to the Nahr-el-Kelb as suggested by the presence of three stelæ carved there on the rocks by Ramses. Thirteen years later the Hittite king visited Egypt on the occasion of the marriage of his eldest daughter with the pharaoh. Diplomatic unions of that kind had already taken place during the preceding dynasty. The treaty

was faithfully observed by both parties, at least until the second year of Merneptah (1225-1215), the son and successor of Ramses II, when the Hittites seem to have taken part in an invasion of the Delta by the Libyans and various peoples of the northern Mediterranean, their allies.

Neither this, however, nor the disaffection which at the same time was rampant among his Asiatic vassals spurred Merneptah to new conquests. The Hittite war of Ramses II, it seems, had completely exhausted the military enterprise of Egypt. Her armies from that time kept to the defensive. Merneptah was satisfied to bring back Palestine to submission and defeat and drive out the Libyans -- among whom the Tehenu tribe was prominent apparently because they were settled on the Egyptian border -- and their allies, the Sherden (Sardinians), the Shekelesh (Sicilians?), the Ekweh (Achæans?), and the Lycians. But even these were considered great achievements, and the people sang:--

The Kings are overthrown, saying "Sâlâm!"
Not one holds up his head among the nine nations of the bow.
Wasted is Tehenu,
The Hittite land is pacified,
Plundered is the Canaan, with every evil,
Carried off is Askalon,
Seized upon is Gezer,
Yenoam is made as a thing not existing,
Israel is desolated, her seed is not,
Palestine has become a [defenceless] widow for Egypt.
All lands are united, they are pacified,
Everyone that is turbulent is bound by King Merneptah.

(Breasted, *op. cit.*, 330; "Ancient Records of Egypt", III, 603 sqq.) The situation at home was no brighter, and it became worse under Merneptah's successors, Amenmeses, Memepthah-Siptah, and Seti II, until complete anarchy prevailed. Thrusting aside a host of less daring pretenders, a Syrian named Irisu (or Yerseu), who held an important position as head of one of the nomes, seized the power and for five years ruled the land in tyranny and violence. (Breasted, "Ancient Records of Egypt", IV, §. 398.) Thus ended the Nineteenth Dynasty.

Of Setnakht (1200-1198 B.C.), the founder of the following dynasty, we know little except that he was a strong man who succeeded in restoring order. His son, Ramses III (1198-1167) was confronted by very much the same situation as Merneptah some twenty-five years before, only a great deal more serious. The allies of the Libyans defeated by Merneptah were only the vanguard of a far more dreadful army of invasion.

This was now approaching. It was followed at close range by motley hordes of immigrants from the islands and the northern shores of the Mediterranean, "peoples of the sea", as the Egyptians called them. Besides those already mentioned we find now the Peleset (Philistines) and the Denyen (Danaoio). Some of the invaders were coming by sea, along the coast, others by land. Ramses III showed himself equal to the occasion. Having defeated a first contingent who had already landed in the Delta and joined the Libyans, he sent a strong fleet to check the advance of the main body of the invaders' ships and hastened by land, with his army, to Syria, where he expected to find the enemy. Both the land and the naval battles were fought in about the same region, for Ramses, having routed the land forces of the enemy, was in time to co-operate with the Egyptian fleet in defeating that of the invaders. This brilliant campaign stayed the advance of the immigrants who now came straggling along, settling here and there as vassals of Egypt, in Syria and in Palestine, where, later, one of their tribes, the Peleset, or Philistines, offered a stubborn resistance to the invasion of the Hebrews. On the other hand the great Hittite confederation had been very much weakened, if not entirely disintegrated, as a result of the invasion. Ramses III had to repel another invasion of the Libyans, impelled this time by Meshwesh (the Maxyes of Heroditus), and shortly after he found it necessary to appear again with his army in Northern Palestine, where rebellion had broken out against some of his vassals. The boundary remained, probably, where it was under the Nineteenth Dynasty, including the whole course of the River Leontes (or Litany) and possibly a small portion of the upper Orantes, excluding Kadesh. Ramses III had not further trouble with his Asiatic vassals.

With the successors of Ramses III, nine weak pharaohs of the same name (Ramses IV-XII), national decay sets in. Egypt entirely loses her prestige abroad, particularly in Asia, where Syria is expanding under Tiglath-Pileser I; at home everything is confusion. Priests, officials, and mercenaries whose wealth and prerogatives have been steadily growing at the expense of both pharaoh and his people, now fight among themselves for the controlling political influence, the pharaoh being reduced to a mere puppet. Such a state of disorganization prevails everywhere that, in the necropolis of Thebes, in sight of the temple of Amon, where the high-priest is so powerful, the tombs of the pharaohs are desecrated and plundered by a band of robbers, and the royal mummies despoiled of all their most costly ornaments.

At some period during the Nineteenth Dynasty the pharaohs had their capital at Tanis (Sân-el-Hagar) in the Delta, Thebes remaining the religious capital of the empire. There Ramses XII resided when a local noble, Nesubenedded, seized the power (1113 B.C.) and established himself as king over the Delta. The weak pharaoh retired to Thebes, where he was soon overshadowed by Hrihor, the high-priest of Amon, who, when Ramses XII died as ingloriously as he had lived, was finally proclaimed supreme

ruler of Egypt by an oracle of Khonsu followed by the approval of Amon (1090). Hrihor's rule, in fact, never extended over Lower Egypt, and his independence was not even suspected by Manetho who, after Ramses XII, introduces the Twenty-first Dynasty with Nesubenebde as its founder. The division between the two countries was to continue, save for short intervals, for about four hundred and fifty years. Thebes, however, rarely during that time enjoyed complete independence, and still more rarely ruled over the whole country. Her relations to the Delta were usually those of a vassal to a suzerain. Her influence was particularly felt in Nubia, whither descendants of Hrihor seem to have retired at an early period, eventually founding an independent nation at Napata. Confusion and disorder still prevailed all over the land. To save them from desecration, the royal mummies had to be concealed in an old, and probably unused, tomb of Amenhotep I, near the temple of Deir el-Bahri, where they remained hidden until they were rifled some thirty-five years ago by the Arabs. Most of them are now at the Museum of Cairo. The capital of this dynasty was at Tanis. Its last king, Psibkhenno II, may be the pharaoh mentioned in III Kings, xi, 18; iii, 1; ix, 16 (see below). Assyria was then on the decline and we can best represent to ourselves David and Solomon as at least nominal vassals of Egypt.

Sheshonk (945-14), founder of the Twenty-second Dynasty, was a powerful mercenary prince, or chief of hired troops, of Heracleopolis, where his ancestors, of Libyan origin, had settled early in the Twenty-first dynasty. In 945 B.C. he proclaimed himself king, establishing his residence at Bubastis, in the Delta. Sheshonk seems to have been an ambitious and energetic ruler. He certainly led a successful campaign in Palestine, perhaps the same mentioned in III Kings, xiv, 25 (cf. II Paralip., xii, 2 sqq.), where it is said that he came to Jerusalem in the fifth year of Roboam, and took away the treasures of the house of the Lord, although Jerusalem is not among the one hundred and fifty-six Palestinian cities recorded in his inscription. In Solomon's time, Sheshonk had given hospitality to Jeroboam (III Kings, xi, 40). According to Professor Breasted (*Ancient Egyptians*, 362), Sheshonk is also to be identified with the pharaoh who gave his daughter as a wife to Solomon (III Kings, 3, iii, 1) and later on conquered Gezer and turned it over to his daughter, Solomon's wife, as a dowry (III Kings, ix, 16) while Professor Maspéro (*Hist. Anc.*, 416) refers to these episodes and that of Hadad (III Kings, xi, 14 sqq.) to Psibkhenno II, the last king of the Twenty-first Dynasty. During the following reigns of this dynasty history records nothing but endless civil wars between the two principalities of Thebes and Heracleopolis and feuds between the mercenary lords of the Delta. On the other hand, Assyria was more powerful than ever. Shalmaneser defeated, at Karnak on the Orontes, a Syrian coalition to which one of Sheshonk's successors -- probably Takelot II -- had contributed one thousand men

(854 B.C.). Under such circumstances Egypt's influence in Palestine must have dwindled to nothing.

One of the Delta lords, Pedibast, at the death of Sheshonk IV, last king of the Twenty-second Dynasty, succeeded in establishing a new dynasty, which Manetho places at Tanis, although Pedibast was of Bubastite origin. But neither he himself nor his successors could control the situation. Under his successor, Osorkon III, a dynast of Sais, Tefnakhte undertook to supplant him and the many other dynasts, several of whom were claiming the titles and prerogatives of royalty. He had partly succeeded when Piankhi, ruler of the independent kingdom of Napata (see above), overran Egypt as far as the Mediterranean, obliging all the pretenders, Orsokon and Tefnakhte included, to recognize his suzerainty. But as soon as the invaders had withdrawn, Tefnakhte resumed his designs and was eventually successful in subduing Orsokon, who acknowledged himself as vassal. (We must refer to this period the King of Egypt mentioned in IV Kings, xvii, 4, as inciting Osee of Samaria to rebel against Shalmaneser IV.) Tefnakhte's son Bochoris, however, was regarded as the founder of a new dynasty, his father, probably, having died before Orsokon. Scarcely had he reigned six years when Shabaka, Pianki's brother, invaded Egypt in his turn, and so firmly did he entrench himself there that he became the founder of the Twenty-fifth, or Ethiopian Dynasty. Unfortunately for him and his successors, Assyria, having absorbed all the principal states of Syria and Palestine, and holding the others well under control, was now threatening to invade the territory of Egypt. Shabaka, alive to the danger, formed an alliance with Philistia, Juda, Moab, Edom, and Tyre, against Sennacherib, and sent to Syria an army under the command of his nephew Taharka (cf. IV Kings, xix, 9, where Taharka is called King of Ethiopia). The allies were completely defeated, and Sennacherib was beleaguering Jerusalem, which alone, so far, with Tyre, when, to use the words of the Bible, "an angel of the Lord came, and slew in the camp of the Assyrians a hundred and weighty-five thousand. And when he arose early in the morning he saw all the bodies of the dead. And Sennacherib King of the Assyrians departing went away, and he returned and abode in Ninive" (IV Kings, xix, 35, 36). But the power of Assyria was not broken for all that, although Taharka, who was now reigning, might have believed it when, twenty-seven years later, he succeeded in repelling Easar-haddon, of which repulse he made great display on the pedestal of a statue of his, drawing on the lists left by Ramses II of Asiatic captured cities to swell his own victory. In 670 the Assyrians appeared again, more formidable than ever, defeated Taharka, captured Memphis, and withdrew after having organized at least Lower Egypt into an Assyrian dependency. Among the princes who hastened to do homage to the King of Assyria the first place is given to Necho of Sais, a descendant of Tefnakhte through Bochoris. Taharka had fled to the south, where he raised fresh troops, and marched on Lower

Egypt hoping to recover the lost provinces, but with no other result than to bring back the Assyrians, who routed him again and pursued him almost as far as Thebes (668 B.C.). The reigning family of the Delta, who had sided with him, were sent to Ninevah in chains. Necho was one of them, but he knew how to ingratiate himself with Assurbanipal, who restored him to his Kingdom of Sais. Tanutamoni, having succeeded his father Taharka (663 B.C.), undertook in his turn the recovery of Lower Egypt, but with no better success. This time Assurbanipal's army pursued the enemy to Thebes, which was sacked and plundered.

Psamtik, son of Necho, took advantage of the struggle in which his protector, Assurbanipal, had now become involved with Babylonia to free himself from the Syrian allegiance. He succeeded in suppressing practically all the mercenary lords and local dynasties, repaired the long-neglected irrigation system, and gave a strong impulse to commerce. The Twenty-sixth Dynasty, which he introduces, was, as a whole, a period of restoration and great internal prosperity. It was also a period of renaissance in art, religion, and literature, marked by a return to archaic traditions. Industrial art flourished as never before. The army was reorganized and strengthened with large contingents of Greek mercenaries, the Libyans having lost their efficiency in becoming Egyptianized. Psamtik does not seem to have made much use of the army, but Necho and his successors could not refrain from interfering with the affairs of Asia. The temptation was great. During the long reign of Psamtik I Assyria had been constantly declining. In 609 he was succeeded by his son Necho, and three years later Ninevah was finally captured, and Assyria had come to an end forever. Necho though this a favourable chance to recover the old Asiatic possessions of Egypt, and marched on Carchemish (cf. II Paralip., xxxv, 20; Jerem., xlvi, 7-9). At Magiddo the King of Juda, Josias, who foolishly persisted in disputing his passage, was routed and mortally wounded (II Paralip. xxxv, 22). This incident brought Necho to Jerusalem, where he deposed Joahaz, the successor of Josias, and put in his place his brother Eliakim, changing his name to Jehoiakim. As for Joahaz, he took him to Egypt (II Paralip., xxxvi, 1-4; cf. IV Kings, xxiii, 29-34). Hearing of Necho's conquest, Nabopolassar, to whom that country had fallen in the division of Assyria's possessions, sent his son Nebuchadnezzar (Nabuchodonosor) to check his advance. Necho was so completely defeated at Charchemish (605 B.C.) that he did not dare to make another stand, and retreated to Egypt; "And the king of Egypt came not again any more out of his own country; for the king of Babylon had taken all that belonged to the king of Egypt, from the river of Egypt, unto the river Euphrates" (IV Kings, xxiv, 7). Apries (588-569 B.C.), Necho's second successor, was not more fortunate in a similar attempt. Zedekiah had sent to him for assistance against Nebuchadnezzar (Ezech. xvii, 15), but Apries either retired without fighting (Jerem, xxxvi, 6) or was defeated (Josephus, Antiq. Jud., X,

vii, §3), and Jerusalem was captured, and her temple destroyed (587 B.C.). When, however, the remnant of the Jews fled to Egypt, taking Jeremiah with them, Apries received them and allowed them to settle in different cities of the Delta, at Memphis, and in Upper Egypt (Jer., xli, 17-18; xliv, 1) -- Such, very likely was the origin of the Jewish colony established in the island of Elephantine, "before Cambyses", as related in the Judeo-Aramaic papyri recently discovered there (see below, under Twenty-seventh Dynasty). Later, probably after Tyre had finally surrendered to the Chaldeans (574), Apries successfully carried out a naval expedition against Phoenicia (Masp., *Hist. anc.*, 639; Breasted, *Hist. of the Anc. Egypt.*, 409, places that expedition in 587 B.C.).

The reverses of Necho and Apries in Asia did not affect the prosperity of Egypt during the reign of these two pharaohs, any more than did the rivalry of one of his officials, Amasis, whom Apries had sent to suppress a mutiny of the native troops, and who was proclaimed king by them. Apries and Amasis reigned together for some time, and when, a conflict having arisen between the two, Apries was defeated and slain, Amasis gave him an honourable burial. Strange to say, Amasis, who had been the champion of the native element as against the Greeks, now favoured the latter far more than any of his predecessors. He founded for them the city of Naucratis, in the Delta, as a home and market, and they soon made it the most important commercial centre of Egypt. The foreign policy of Amasis, as a rule, was one of prudence; his only conquest was Cyprus, over which, since the days of Thotmos III, Egypt had often exercised suzerainty. He made, however, one fatal mistake: he joined the abortive league formed by Croesus, King of Lydia, against Cyrus, and, although he afterwards carefully avoided crossing the path of the Persian conqueror, the latter's son, Cambyses, taking the word for the deed, did not fail to resent his past inclination.

Cambyses invaded Egypt in 525 B.C., shortly after Psamtik III had succeeded his father. The pharaoh was put to death under cruel circumstances, the tomb of Amasis was violated, his mummy burnt to ashes, and a Persian governor was appointed. Otherwise Cambyses did all he could to conciliate his Egyptian subjects. He assumed the traditional pharaonic titles and ceremonial, and caused himself to be initiated into the mysteries of the goddess Neit. He made good the damages sustained by the temples during the conquest, led an unsuccessful expedition against the oases of the Libyan desert, and was not much happier in a campaign against the independent Kingdom of Napata. Embittered by these reverses he departed, in later years, from his earlier conciliatory policy, and committed sacrilegious acts which exasperated the people against him. Darius I (521-486) completed the canal begun by Necho between the Nile and the Red Sea. He reopened the road from Keft (Coptos) to the Red Sea, garrisoned the oases, and otherwise furthered the prosperity and security of Egypt. In his reorgan-

ization of the Persian Empire, which he divided into a number of governments under a central administration, Egypt, with Cyrene, Barca, and Lower Nubia, formed the sixth government, or satrapy. This, however, affected only the garrisoned cities and their respective territories. Elsewhere the old feudal organization was left untouched, and from time to time the local princes availed themselves of their semi-independence to rebel.

After the battle of Marathon (487) the Egyptians revolted and expelled the Persians. But in the following year Achemenes, who had just been appointed satrap by his brother Xerxes I (486-465), brought them back to submission. Of a far more serious character was the insurrection which broke out in 463 under Artaxerxes I (465-425), and which was not quelled until its leader, Inaros (of the house of Psamtik), aided by the Athenians, had routed two successive Persian armies (454). Under Darius II the power of the Persians began to decline. The weakness of their administration at that time is attested by the Judeo-Aramaic papyri recently discovered at Elephantine. From these documents we learn that, while the provincial governor was absent, the commander of the garrison at Syene had been bribed by the Egyptian priests of Chnûb (Chnûm), to plunder and destroy the temple of the Jewish colony at Elephantine. The culprits, it seems, were put to death by the Persian authorities, yet when the victims applied for permission to rebuild their temple, their request was granted only on the condition that they should not in future offer up bloody sacrifices -- a concession, evidently, to the priests of Chnûb, who probably objected to the slaughtering of the ram, an animal sacred to their god. The little colony, we may suppose, did not long enjoy its curtailed privileges; it very probably succumbed to Egyptian fanaticism during the two following dynasties (Stähelin, "Israel in Aegypten nach neugefundenen Urkunden", 14 sqq.).

Finally, in 404 B.C., the last year of Darius II (424-404) and first year of Artaxerxes II (404-362), a certain Amyrtæos of Saitic birth succeeded in proclaiming Egypt's independence. His six years of reign constitute the Twenty-eighth Dynasty. The Twenty-ninth Dynasty (Mendesian), comprising the reigns of Nepherites, Achoris, and Psammuthis, who took an active part in the wars against Artaxerxes II, lasted twenty years. The Thirtieth Dynasty (Sebennyitic) begins with Nectanebo I (378-361), who successfully repelled the Persians. Tachos (360-359), his successor, attempted to invade the Syrian territory, but, as a result of rivalries and dissensions between himself and his namesake Tachos, whom he had appointed as regent, he was supplanted by Nectanebo II (358-342), a cousin of Tachos the regent, and took refuge with Artaxerxes II, at whose court he died. Nectanebo II was at first successful in repelling the attack of Artaxerxes III (Ochus -- 362-338); later, however, he was defeated, and the Persians once more became masters of Egypt (341). The king fled to Ethiopia, and the temples

were plundered. It was then that Egypt lost forever the right of being governed by rulers of her own.

III. ANCIENT EGYPTIAN RELIGION

God and man, those two essential terms of every religion, are but imperfectly reflected in the Egyptian religious monuments. A book similar in scope to our Bible certainly never existed in Egypt, and if their different theological schools, or priests of some particular theological school, ever agreed on certain truths about God and man, which they assigned to official didactic writings, such writings have not reached us. Nor is the vast body of religious monuments bequeathed to us by ancient Egypt of such a nature as to compensate for this lack of positive and systematic information. The figured and inscribed monuments discovered in the temples, and especially in the tombs, acquaint us with the names and external aspects of numerous deities, with the material side of the funerary rites, from which they may safely conclude that they admitted the dependency of man on superior beings, and a certain survival of man after death. But as to the essence of these gods, their relation to the world and man as expressed by the worship of which they were the objects, the significance and symbolism of the rites of the dead, the nature of the surviving principle in man, the nature and mode of the survival itself as depending on earthly life, and the like, the monuments are either silent about, or offer us such contradictory and incongruous notions that we are forced to conclude that the Egyptians never evolved a clear and complete system of religious views. What light can be brought out of this chaos we shall concentrate on two chief points: (a) *The Pantheon*, corresponding to the term *God*; and (b) *The Future Life*, as best representing the term *Man*.

(a) **The Egyptian Pantheon.** By this term we understand such gods as were officially worshipped in one or more of the various nomes, or in the country at large. We exclude, therefore, the multitude of dæmons or spirits which animated almost everything man came into contact with -- stones, plants, animals -- and the lesser deities which presided over every stage of human life -- birth, naming, etc. The worship they received was of an entirely local and private nature, and we know almost nothing of it.

Each nome had its own chief deity or divine lord, male or female, apparently inherited from the ancient tribes. With each deity an animal, as a rule, but sometimes also a tree or a mineral, was associated. Thus Osiris of Busiris was associated with a pillar, or a trunk of a tree; Hathor of Denderah, with a sycamore; Osiris of Mendes, with a goat; Set of Tanis, with an ass; Buto of the city of the same name, with a serpent; Bast of Bubastis, with a cat; Atûm, or Tûm, of Heliopolis, with a serpent, a lion, or possibly later the bull Mnevis; Ptah of Memphis, with the Bull Apis; Sovek, in the Fayûm and at Ombos (Kôm Ombo), with a crocodile; Anubis of Assiût, with a jackal;

Thoth of Hermopolis, with an ibis or a baboon; Amon of Thebes, and Chnûm, at the Cataract, with a ram; Horus of el-Kâb and Edfu, with a hawk. According to some scholars, this association at first was merely symbolical; it was not until the Nineteenth Dynasty that sacred animals, having gradually come to be considered as incarnations, or at least dwelling-places, of the various gods, began to be worshipped as gods (Breasted, "Hist. Anc. Egypt.", 59, 324). But this view, once quite common, is now generally abandoned, and fetishistic animal-worship is now considered as the true basis of the Egyptian religion [cf. Chantepie de la Saussaye, "Lehrbuch der Religionsgeschichte" (1905), I, 194, sqq.]. In any case the origin of the association of certain animals with certain gods, whether symbolical or not, is unknown; as a rule the same may be said of the various attributes of the various gods and goddesses. We understand that Thoth, being a lunar god, could have been considered the god of time, computation, letters, and science (although we do not know how, being associated with the ibis or baboon, he became a lunar god); but we do not see why the ram-god Chnûm should have been represented as a potter, nor why the cow-goddess, Hathor, and the cat-goddess, Bast, were identified with beauty, joy, and love, while the lioness-deity, Sekhmet, was the goddess of war, and Neith was identified both with war and with weaving. The names of the gods, as a rule, give no clue. At an early date the crude primitive fetishism was somewhat mitigated, when the deities were supposed to reside in statues combining human figures with animal heads.

Triads.-- In other respects gods and goddesses were imagined to be very much like men and women; they ate, drank, married, begat children, and died. Each nome, besides its chief god or goddess, had at least two secondary deities, the one playing the part of a wife or husband to the chief deity, the other that of a son. Thus, in Thebes the group of Amon, Mût (or Ament), and Chons; in Memphis the group of Ptah, Sekhmet, and Nefertem; etc. Sometimes the triads consisted on one god and two goddesses, as at Elephantine, or even three male deities. Those groups were probably first obtained by the fusion of several religious centres into one, the number three being suggested by the human family, or possibly by the family triad Osiris, Isis, and Horus, of the Osiris cycle. In some cases the second element was a mere grammatical duplicate of the first, as Ament, wife of Amen (Amon), and was considered as one with it; it was then natural to identify the son with his parents, and so arose the concept of one god in three forms. There was in this a germ of monotheism. It is doubtful, however, whether it would have developed beyond the bounds of henotheism but for the solar religion which seems to have sprung into existence toward the dawn of the dynastic times, very likely under the influence of the school of Heliopolis. But before we turn to this new phase of the Egyptian religion, we must consider another aspect of the

ancient gods which may have furnished the basis of unification of the various local worships.

The Gods of the Dead.-- Gods, being fancied like men, were, like them, subject to death, the great leveller. Each community had the mummy of its god. But in the case of gods, as in that of men, death was not the cessation of all life. With the assistance of magical devices the dead god was simply transferred to another world, where he was still the god of the departed who had been his devotees on earth. Hence two forms of the same god, frequently under two different names, which eventually led to the conception of distinct gods of the dead. Such were Chent-Ament, the first of the Westerners (the dead) at Abydos, Sokar (or Seker), probably a form of Ptah, at Memphis. Sometimes, however, the god of the dead retained the name he had before, as Anubis at Assiût, Knonyu at Thebes, and Osiris, wherever he began to be known as such.

Legend of Osiris.-- Each of the gods had his own legend. Osiris was the last god who reigned upon the earth, and he was a wise and good king. But his brother Set was a wicked god and killed Osiris, cutting his body into fragments, which he scattered all over the land. Isis, sister and wife of Osiris, collected the fragments, put them together, and embalmed them, with the assistance of her son, Horus, Anubis (here, perhaps, a substitute for Set, who does not seem to have been originally conceived as his brother's slayer), and Nephthys, Set's wife. Isis, then, through her magical art, revives her husband who becomes king of the dead, while Horus defeats Set and reigns on the earth in his father's place. According to another version, Qeb, father of Osiris, and Set put an end to the strife by dividing the land between the two competitors, giving the South to Horus and the North to Set.

Sidereal and Elemental Gods.-- It is generally conceded that some of the gods had a sidereal or elemental character. Horus, of Edfu and el-Kâb (Ilithyaspolis), and Anher, son of This, represented one or other aspect of the sun. Thoth of Hermopolis and Knonthu of Thebes were lunar gods. Min, of Akhmin (Chemmis) and Coptos, represented the cultivable land and Set, of Ombos (near Nakadeh), the desert. Hapi was the Nile, Hathor the vault of heaven. In some cases this sidereal or elemental aspect of the local gods may be primitive, especially among the tribes of Asiatic origin; but in other cases it may be of later date and due to the influence of the solar religion of Re, which, as we have already said, came into prominence, if not into existence, during the early dynastic times.

Solar Gods, Re or Ra.-- That Re was such a local god in representing the sun, is generally taken for granted although by no means proven. We cannot assign him to any locality not furnished with another god of its own. We never find him, like the vast majority of the local gods, associated with a sacred animal, nor is he ever repres-

ented with a human figure, except as a substitute for Atûm, or as identified with Horus or some other god. His only representative among men is the pharaoh, who in the earliest dynastic monuments appears as his son. Finally it is difficult to understand how the kings of the southern kingdom, after having extended their rule to the north, should have given up their own patron god, Horus, for a local deity of the conquered land. It looks as if the worship of Re had been inaugurated some time after the reunion of the two lands, and possibly for political reasons. At all events, the solar religion soon became very popular, and it may be said that to the end it remained the state religion of Egypt. Re, like the other gods, had his legend -- or rather myth -- excogitated by the theological school of Heliopolis in connection with the comogenic system of the same school. He had created the world and was king over the earth. In course of time the mortals rebelled against him because he was too old, whereupon he ordered their destruction by the goddess of war, but on the presentation of 7000 jars of human blood he was satisfied and decided to spare men. Tired of living among them, he took his flight to heaven, where, standing in the sacred bark, he sails in the celestial ocean. The fixed stars and the planets are so many gods who play the parts of pilot, steersman, and oarsman. Re rises in the east, conquers the old foe (darkness), spreads light, life, wealth, and joy on all sides, and receives everywhere the applause of gods and men; but now he comes to the western horizon, where, behind Abydos, through an enormous crevice, the celestial waters rush down to the lower hemisphere. The sacred bark follows the eternal river, and, unretarded, the god passes slowly through the kingdom of the night, conquering his foes, solacing his faithful worshipers, only, however, to renew his course over the upper hemisphere, as bright, as vivifying, as beautiful as ever. Soon each phase of the sun's course received a special name and gradually developed into a distinct god; thus we find Harpochrates (Horus's Child) representing morning sun; Atûm, the evening sun; Re, the noon sun; while Harmakhuti (Horus on the two horizons -- Harmachis, supposed to be represented by the great Sphinx) is both the rising and the setting sun.

Cosmogony and Enneads.-- Different cosmogonic systems were excogitated at a very early date (some of them, possibly, before dynastic times) by the various theological schools, principally by the school of Heliopolis. Unfortunately, none of these systems seems to have been handed down in the primitive form. According to one version of the Heliopolitan cosmogony, the principle of all things is the god Nûn, the primordial ocean, in which Atûm, the god of light, lay hidden and alone until he decided to create the world. He begat all by himself Shu, the atmosphere, and Tefnût, the dew. In their turn Shu and Tefnût begat Qeb, the earth, and Nût, the vault of heaven. These two were lying asleep in mutual embrace in the Nûn when Shu, stealing between them, raised Nût on high. The world was formed, and the sun could begin its daily course

across the heavens. Qeb and Nût begat Osiris, the cultivatable land and the Nile united in one concept, Set the desert, and the two sisters Isis and Nephthys. To this first ennead, of which Tûm (later supplanted by Re) appears as the head, two others were added, the first of which began with Horus, as son of Osiris and Isis. The three enneads constituted as many dynasties of gods, or demi-gods, who reigned on the earth in predynastic times. We have seen above that the third of these dynasties, called "the shades" (*nekues*) by Manetho, represents the predynastic kings mentioned on the Palermo Stone. The Heliopolitan Ennead became very popular, and every religious center was now ambitious to have a similar one, the same gods and order being generally retained, except that the local deity invariably appeared at the head of the combination.

It has long been customary to assert that in Egypt human life was compared to the course of the sun, and that Osiris was nothing but the sun considered as dead. It is far more correct, however, to say, with Professor Maspéro [Revue de l'histoire des religions (1887), XV, 307 sqq.], that the course of the sun was compared to that of human life. Osiris is not a sun that has set, but the sun that has set is an Osiris; this is so true that when the sun reappears on the eastern horizon, he is represented as the youth, Horus, son of Osiris.

The great prominence given to Re and Osiris by the Heliopolitan School of theology not only raised the Egyptian belief to a higher plane, but brought about a certain unification of it -- a consolidation, so to speak, of the local worships. Naturally, the local gods retained their original external appearance, but they were now clothed with the attributes of the new Heliopolitan deity, Re, and were slowly identified with him. Every god now became a sun-god under some aspect; and in some cases the name of the Heliopolitan god was added to the name of the local god, as Sobek-Re, Chnûm-Re, Ammon-Re. It was a step toward monotheism, or at any rate towards a national henotheism. This tendency must have been encouraged by the pharaohs in their capacity rather of political than religious rulers of the nation. There could be no perfect and lasting political unity as long as the various nomes retained their individual gods.

It is significant that in the only two periods when the pharaohs seem to have had absolute political control of Egypt -- viz. from the Fourth to the Fifth and from the Eighteenth to the Twentieth Dynasty -- the systems of Re, in the former period, and his Theban form, Ammon-Re, in the latter period, come clearly to the front, while the local religious systems fall into the background. These, however, though they were no more than tolerated, seemed to constitute a menace to political unity. The effort of Amenhotep IV to introduce the cult of his only god, Aton (see above, in *Dynastic History*; Second Period), was perhaps not prompted exclusively by a religious ideal, as is generally believed. A similar attempt in favour of Re and his ennead was perhaps made by the Memphite kings. From Khafre, the second king of the fourth dynasty, to

the end of the sixth dynasty, the name Re is a part of the name of almost every one of those kings, and the monuments show that during that period numerous temples were erected to the chief of the Heliopolitan Ennead in the neighbouring nomes. Such encroachments of the official religion on the local forms of worship may have caused the disturbance which marked the passage from the fifth to the sixth dynasty and the end of the latter. That such disturbances were not merely of a political nature is clear in the light of the well-known facts that the royal tombs and the temples of that period were violated and pillaged, if not destroyed, and that the mortuary statues of several kings, those of Khafre in particular, were found, shattered into fragments, at the bottom of a pit near these pyramids. Evidently, those devout "sons of Re" were not in the odour of sanctity with some of the Egyptian priests, and the imputation of impiety brought against them, as recorded by Heroditus (II, 127, 128; cf. Diodrus Siculus, I, 14), may not have been quite as baseless as is assumed by some modern scholars (Maspéro, *Histoire Ancienne*, pp. 76 sq.).

If the foregoing sketch of the Egyptian religion is somewhat obscure, or even produces a self-contradictory effect, this may perhaps be attributed to the fact that the extremely remote periods considered (mostly, in fact, prehistoric) are known to us from monuments of a later date, where they are reflected in superimposed outlines, comparable to a series of pictures of one person at different stages of life, and in different attitudes and garbs, taken successively on the same photographic plate. The Egyptians were a most conservative people; like other people, they were open to new religious concepts, and accepted them, but they never got rid of the older ones, no matter how much the older might conflict with the newer. However, if the writer is not mistaken, two prominent features of their religion are sufficiently clear: first, animal fetishism from beginning to end in a more or less mitigated form; secondly, superposition, in the early Memphite dynasties, of the sun-worship, the sun being considered not as creator, but as organizer of the world, from an eternally pre-existent matter, perhaps the forerunner of the demiurge of the Alexandrine school.

(b) The Future Life. As early as the predynastic times the Egyptians believed that man was survived in death by a certain principle of life corresponding to our soul. The nature of this principle, and the conditions on which its survival depended, are illustrated by the monuments of the early dynasties. It was called the ka of the departed, and was imagined as the counterpart of the body it had animated, being of the same sex, remaining throughout its existence of the same age as at the time of death, and having the same needs and wants as the departed had in his lifetime. It endured as long as the body, hence the paramount importance the Egyptians attached to the preservation of the bodies of their dead. They generally buried them in ordinary graves, but always in the dry sand of the desert, where moisture could not affect them; among

the higher classes, to whom the privilege of being embalmed was first restricted, the mummy was sealed in a stone coffin and deposited in a carefully concealed rock-ex-cavation over which a tomb was built. Hence, also, the presence in the tombs of life-like statues of the deceased to which the *ka* might cling, should the mummy happen to meet destruction. But the *ka* could also die of hunger or thirst, and for this reason food and drink were left with the body at the time of burial, fresh supplies being deposited from time to time on top of the grave, or at the entrance to the tomb. The *ka*, or "double" as this word is generally interpreted, is confined to the grave or tomb, often called "the house of the *ka*". There near the body, it now lives alone in darkness as once, in union with the body, it lived in the sunny world. Toilet articles, weapons against possible enemies, amulets against serpents, are also left in the tomb, together with magic texts and a magic wand which enable it to make use of these necessities.

Along with the *ka*, the texts mention other surviving principles of a less material nature, the *ba* and the *khu*. Like the *ka*, the *ba* resides in the body during man's life, but after death is free to wander where it pleases. It was conceived as a bird, and is often represented as such, with a human head. The *khu* is luminous; it is a spark of the divine intelligence. According to some Egyptologists, it is a mere transformation which the *ka* undergoes when, in the hereafter, it is found to have been pure and just during lifetime; it is then admitted to the society of the gods; according to others, it is a distinct element residing in the *ba*. Simultaneously with the concepts of the *ba* and the *khu*, the Egyptians developed the concept of a common abode for the departed souls, not unlike the Hades of the Greeks. But their views varied very much, both as to the location of that Hades and as to its nature. It is very likely that, originally, every god of the dead had a Hades of his own; but, as those gods were gradually either identified with Osiris or brought into his cycle as secondary infernal deities, the various local concepts of the region of the dead were ultimately merged into the Osirian concept. According to Professor Maspéro, the kingdom of Osiris was first thought to be located in one of the islands of the Northern Delta whither cultivation had not yet extended. But when the sun in its course through the night had become identified with Osiris, the realm of the dead was shifted to the region traversed by the sun during the night, wherever that region might be, whether under the earth, as more commonly accepted, or in the far west, in the desert, on the same plane with the world of the living, or in the north-eastern heavens beyond the great sea that surrounds the earth.

As the location, so does the nature of the Osirian Hades seem to have varied with different schools; and here, unfortunately, as in the case of the Egyptian pantheon, the monuments exhibit different views, superimposed one upon the other. We seem, however, to discern two traditions which we might call the pure Osiris and the Re-Osiris traditions. According to the former tradition, the aspiration of all the departed

is to be identified with Osiris, and to live with him in his kingdom of Earu, or Yalu, fields -- such a paradise as the Egyptian peasant could fancy. There ploughing and reaping are carried on as upon the earth, but with hardly any labour, and the land is so well irrigated by the many branches of another Nile that wheat grows seven ells. All men are equal; all have to answer the call for work without distinction of former rank. Kings and grandees, however, can be spared that light burden by having *ushebtis* (respondents) placed in their tombs. These *ushebtis* were small statuettes with a magical text which enabled them to impersonate the deceased and answer the call for him.

To procure the admission of the deceased to this realm of happiness his family and friends had to perform over him the same rites as were performed over Osiris by Isis, Nephthys, Horus, and Anubis. Those rites consisted mostly of magical formulæ and incantations. The mummification of the body was considered an important condition, as Osiris was supposed to have been mummified. It seems, also, that in the beginning at least, the Osirian doctrine demanded a certain dismemberment of the body previous to all other rights, as the body of Osiris had been dismembered by Set. Possibly, also, this took place in the pre-dynastic times, when the bodies of the dead appear to have been intentionally dismembered and then put together again for burial (Chantepie de la Saussaye, op. cit., I, 214). At all events, Diodorus narrates that the surgeon who made the first incision on the body previous to the removal of the viscera had to take to flight immediately after having accomplished his duty, while the mob pretended to drive him away with stones (Diodorus Siculus, I, 91), as though he impersonated Set. This custom, however, of dismembering bodies may be older than the Osirian doctrine, and may explain it, rather than being explained from it (Chantepie de la Saussaye, op. cit., I, 220). When all the rites had been duly performed the deceased was pronounced Osiris so-and-so -- he had been identified with the god Osiris. He could now proceed to the edge of the great river beyond which are the Earu fields. Turn-face, the ferryman, would carry him across, unless the four sons of Horus would bring him a craft to float over, or the hawk of Horus, or the ibis of Thoth, would condescend to transport him on its pinions to his destination. Such were, during the Memphite dynasties, the conditions on which the departed soul obtained eternal felicity; they were based on ritual rather than on moral purity. It seems, however, that already at that time some texts show the deceased declaring himself, or being pronounced, free of certain sins. He is represented appearing before Osiris, surrounded by forty-two judges. His heart is weighed on scales by Horus and Anubis, over against a feather, a symbol of justice, while Thoth registers the result of the operation. In the meantime the deceased recites a catalogue of forty-two sins (so-called "negative confession") of which he is innocent. Between the scales and Osiris there is what seems to be a female hippopotamus, appearing ready to devour the guilt souls; but there was no danger of

falling into her jaws, as the embalmers had been careful to remove the heart and replace it by a stone scarab inscribed with a magical spell which prevented the heart from testifying against the deceased. The concept of retribution implied by the judgment very likely originated with the School of Abydos [see Maspéro, "Revue de l'histoire des religions" (1887), XV, 308 sqq.].

According to another tradition, which is represented along with the foregoing in the Pyramid Texts, the deceased is ultimately identified not with Osiris himself, but with Re identified with Osiris and his son Horus. His destination is the bark of Re on the eastern horizon, wither he is transported by the same ferryman Turn-face. Once on the sacred bark, the deceased may bid defiance to all dangers and enemies, he enjoys absolute and perfect felicity, leaves the kingdom of Re-Osiris, and follows Re-Horus across the heavens to the region of the living gods. The same concept was resumed by the Theban School. An important variant of this Re-Osiris tradition is to be found in two books due to the Theban Ammon-Re School of theology, the "Book of what there is in the Duat" (Hades) and the "Book of the Gates". In both compositions the course of Re in the region of darkness is divided into twelve sections corresponding to the twelve hours of night, but in the latter book each section is separated by a gate guarded by giant serpents. Some of these sections are presided over by the old gods of the dead, Sokar and Osiris, with their faithful subjects. The principle feature of these two books is the concept of a retribution which we now meet clearly expressed for the first time. While the innocent soul, after a series of transformations, reaches at last, on the extreme limit of the lower world, the bark of Re, where it joins the happy crowd of the gods, the criminal one is submitted to various tortures and finally annihilated (see, however, below under IV).

IV. LITERARY MONUMENTS OF ANCIENT EGYPT

The earliest specimens of Egyptian literature are the so-called *Pyramid Texts* engraved on the walls of the halls and rooms of the pyramids of Unis (Fifth Dynasty) and Teti II, Pepi I, Mernere, and Pepi II (Sixth Dynasty). They represent two ancient rituals of the dead, the older of which, as is generally conceded, antedates the dynastic times. The texts corresponding to this one are mostly incantations and magic prayers supposed to protect the deceased against serpents and scorpions, hunger and thirst, and old age. The gods are made to transmit to the deceased the offerings placed in the tomb; nay, these offerings are so placed in his power that he positively eats and digests them, thus assimilating their strength and other desirable qualities. In these last two features Professor Maspéro sees an indication that although the concept of the *ba* had already been superimposed on that of the *ka*, when that ritual first came into existence, yet anthropophagical sacrifices, if no longer in use, were still fresh in the memory of the Egyptians. This high, probably predynastic, antiquity, is confirmed by peculiarities

of language and orthography, which in more than one case seem to have puzzled the copyists of the Fifth and Sixth Dynasties (Maspéro, in *Revue de l'hist. des religions*", XII (1885), pp. 125 sqq.]. The other ritual represented in the Pyramid Texts is the Book of Funerals, already known in several recensions and published by Professor E. Schiaparelli (*Il libro de' funerali degli Antichi Egiziani*, Rome, 1881-2). It is supposed to be the repetition of the rites by which Isis and Horus had animated the mummy of Osiris with the life he had as god of the dead. The principal ceremony consisted in the opening of the mouth and eyes of the mummy, so that the deceased, in his second life, could enjoy the mortuary offerings and guide and express himself in the next world. For the details of this exceedingly interesting ritual, we refer the reader to the excellent analysis of Professor Maspéro in the "*Revue de l'Histoire des Religions*" [XV (1887), 158 sqq.]. These two books were very popular with the Egyptians down to the end of the Ptolemaic times, especially the second one, which is profusely illustrated in the tomb of Seti I.

The Book of the Dead. Next in antiquity comes the Book of the Dead, the most widely known monument of Egyptian literature. Numerous copies of it are to be found in all the principle museums of Europe. It may be best described as a general illustrated guidebook of the departed soul in Amenti (the Region of the West). There, whatever his belief as to the survival of man in the hereafter, the deceased found what he had to do to be admitted, what ordeals he would have to undergo before reaching his destination, what spirits and genii he would have to propitiate, and how to come out of all this victorious. Broadly speaking, the book can be divided into three sections: (1) "Book of the Going Out by Daytime" (cc. i-xvi), a title generally, though wrongly, extended to the whole book; (2) Chapters xvii-cxxiv: fitting the deceased for admission (xvii-xci) to the kingdom of Osiris, his itinerary thereto, whether by water or overland (xcii-cii, cxii-cxix), and his settlement therein (ciii-cx), without further formality than conciliating the ferryman or the guardian genii with certain incantations and magical prayers recited with the right intonations; in case the deceased believed in retribution, before gaining admission he had to repair to the Hall of Justice, there to be tried by Osiris (cxxiii-cxxv); (3) Chapter cxxv to the end; practically another guidebook for the special profit of the followers of the School of Abydos. It begins with the trial, after which it goes over pretty much the same ground as the common guide, with variations peculiar to the doctrine of the school. For further details see the masterly review by Maspéro of Naville's edition of the Book of the Dead during the Eighteenth to Twentieth Dynasties, in "*Revue de l'histoire des religions*", XV (1887), pp. 263-315. The most important chapters, from a theological viewpoint, are perhaps the seventeenth, a compendius summary of what the deceased was supposed to know on the nature of the gods with whom he was to identify himself, and the one hundred and twenty-fifth,

where, along with the disclaimer of forty-two offenses, we find also an enumeration of several good works, as feeding the hungry, clothing the naked, making offerings to the dead, and sacrificing to the gods. The Book of the Dead naturally received many additions in the course of centuries, as new concepts evolved from the older ones. It would not be correct, however, to conclude that all the chapters not found in the older copies are of recent date. Comparison between various copies of known date show that, as a rule, they were mere abstracts from the standard copies preserved by the corporations of embalmers, or undertakers, the deceased individual having, as a rule, ordered during his lifetime a copy to be prepared according to his own belief and means. The fact that certain chapters, like lxiv, were assigned by the manuscripts to what seem to us remote dates, such as the reigns of King Khufu (Cheops), of the fourth, or King Usaphais, of the first, dynasty, does not prove that these chapters were thought to be older than the others; the reverse is more likely to be the correct view. The bulk of the chapters were believed by the Egyptians to antedate the human dynastic times, and, as Professor Maspéro remarks, the discovery of the Pyramid Texts, to which the Book of the Dead is closely related, shows that this idea was not altogether futile (op. cit., XV, 299). The Book of the Dead contains several passages in common with the ritual of the dead represented by the Pyramid Texts, and its first fifteen chapters were likewise read at burials, but otherwise it constitutes a distinct type. The Book of the Dead occurs in two recensions: the Theban (Eighteenth to Twentieth Dynasty) and the Saitic (Twenty-sixth Dynasty). The latter which, naturally, is the longer (165 chapter), was published by Lepsius (*Das Todtenbuch der Aegypter*, Leipzig, 1842), from a Turin papyrus. The first two translations of the Book of the Dead by Birch (in Bunsen, "Egypt's Place in Universal History", V, 66-333) and Pierret (*Le Livre des Morts des Anciens Egyptiens*, Paris, 1882) are based on that edition. In 1886 E. Naville published a critical edition of the Theban recension, "*Das ägyptische Todtenbuch der XVIII. bis XX. Dynastie*", Berlin, 1886. In 1901 Dr. E. A. W. Budge published a translation of that same recension, but augmented with a considerable number of chapters (in all, 160) from the new Theban manuscripts and 16 chapters from the Saitic recension (*The Book of the Dead*, London, 1901). For further bibliographic details see Budge, "*The Papyrus of Ani*" (London, 1895, 371 sqq.).

Substitutes for the Book of the Dead. Other books similar in scope to the Book of the Dead, and often substituted for it in tombs, are: (1) "The Book of the Respirations communicated by Isis to her brother Osiris to restore a new life to his soul and body and renew all his limbs so that he may reach the horizon with his father Re, and his soul may rise to the heavens in the disk of the moon, and his body shine in the stars of Orion on the bosom of Nût; in order that this may also happen to Osiris N." This book has so far been found only with the mummies of the priests and priestesses of

Amon-Re. It not only makes allusion to the formulæ and acts by means of which the resurrection is effected, but also treats of the life after death (tr. by P. J. Horrack in "Records of the Past", IV, 119 sqq.). A variation of this book under the title "Another Chapter of Coming Forth by Day, in order not to let him [the deceased] absorb impurities in the necropolis, but to let him drink truth, eat truth, accomplish all transformations he may please, to restore a new life" etc. (as above) was published by Weidemann, "Hieratische Texte aus den Museen zu Berlin u. Paris" (Leipzig, 1879). (2) "The Lamentations of Isis and Nephthys" (tr. by Horrack, *op. cit.*, II, 117 sqq.). (3) "The Book of the Glorification of Osiris", a variation of the preceding, published by Pierret from a Louvre papyrus. (4) The "Book of the Wandering of Eternity" published by Bergmann, "Das Buch vom Durchwandel der Ewigkeit" in "Sitzungsber. d. K. K. Ak. d. Wiss. in Wien", 1877.

Mythological Compositions. A different group of funeral books is represented by certain mythological compositions. They consist principally of figures relating to the various diurnal and nocturnal phases of the sun, accompanied with explanatory legends. The oldest of such compositions can be assigned to the Eighteenth Dynasty, and refers to both daily and nightly courses of the sun, the two being often combined in one picture in two sections. In later times the nocturnal aspect of the sun prevails, and the composition becomes more and more funereal in scope, until the diurnal solar symbols disappear almost entirely (see Devéria, "Catalogue" etc. pp. 1-15). Several of the figures are borrowed from the Book of the Dead.

Book of the Duat. Closely related to these mythological compositions is the "Book of what there is in the Duat" (or Lower Hemisphere, as commonly, though perhaps wrongly, understood. See below, under Astronomy). It consists of a hieroglyphic text with numerous mythological or symbolical illustrations describing the nocturnal navigation of the sun (represented as the ram-headed god Chnûm) on the river Uernes (cf. the *xxx* of the Greeks) during the twelve hours of the night, through as many halls. To each hall corresponds one of the successive modifications through which every being was supposed to be brought back from death to a new life. Such modifications are effected by the deities in charge of the various halls, who, in addition, contribute, either by towing or some other mysterious way, to the progress of the solar bark on the Uernes, typifying that of the regeneration. However, this process of regeneration is not accomplished in Chnûm himself but in the god Sokari, who plays the part of the dead sun. The deceased, who is never mentioned by name, appears as a mere figurant, or rather an onlooker. All those who take part in the action seem to be permanently settled in the Duat, with no other apparent purpose than to play their own parts on the passage of the solar bark. This is the case even with the damned, who, when the time of retribution comes at the end of the tenth, and during the eleventh, hour, im-

personate the enemies of Osiris, and for the time being are submitted to atrocious torments and even annihilated. Whether one is justified, as is generally granted, in seeing in this last point a proof that the Egyptians as a people believed in eternal retribution, does not appear quite certain if we consider the highly mystical character of the book, the understanding of which was the privilege of a few initiated. For further details see the introduction to and analysis of that book by Devéria ("Catalogue" etc., pp. 15-39. See also Jéquier, "Livre de ce qu'il a dans l'Hades", Paris, 1894).

Ritual of the Embalming. To close the above remarks on the funereal literature we must mention the Ritual of Embalming, published by Professor Maspéro (Notices et Extraits des Manuscrits etc., t. XXIV, Paris, 1882).

Liturgies. The religion of the living, if we may so express ourselves, is far from being as largely represented in Egyptian literature as that of the dead. Yet we have a few important works, such as the ritual, or rather the liturgy, of Osiris in his temple at Abydos, of which an illustrated edition has been preserved on the walls of that temple (published by Loret, "Le Rituel dy culte divin journalier en Egypte", 1902), and the liturgy of the Amon-worship contained in a Berlin papyrus (O. v. Lemm, Ritualbuch des Amondienstes, 1882). The litany of the sun has been translated by Neville, in "Records of the Past", VIII, 103 sqq.; also a fragment of the legend of Re to which we have already alluded (op. cit. VI, 103 sq.) and several hymns to Osiris (op. cit., New Series, VI, 17 sq.), the Nile (op. cit., New Series, III, 46 sqq.), and Amon-Re (in Maspéro, "Histoire ancienne", pp. 328 sqq.; Grébaut, "Hymne à Ammon-Ra", Paris, 1875; cf. Stern in Zeitschrift für ägyptische Sprache", 1877, and Brugsch, "Religion u. Mythologie der alten Aegypter", Leipzig, 1885, pp. 690 sqq.). From the point of view of composition and style these hymns are the most remarkable literary products of Egypt, as they are the most striking specimens of the monotheistic tendencies which developed under the Eighteenth-Twentieth Dynasties as a result of the political supremacy of Thebes. Not less worthy are the hymns composed by Amenophis IV in honour of his sole god Aton (see the specimen published by Breasted, "History of the Ancient Egyptians", pp. 273 sqq.).

Moral. Several Egyptians literary compositions of a moral nature have reached us. The two oldest are attributed to Kagemme, vizier of King Snefrû, and Ptahhotep, vizier and chief judge under King Isesi, last but one of the fifth dynasty. Both compositions, preserved in a manuscript of the Twelfth Dynasty, consist of apophthegms and proverbs of a rather positive and practical nature, as "A slight failure is enough to make vile a great man" (Kagemme), or "A docile son shall be happy on account of his obedience; he shall grow old and get favour", or "If you are a wise man, fix your house pleasantly, love your wife, do not quarrel with her, give her food and jewels, because this makes her comely, give her perfumes and pleasures during your life. She is a

treasure which must be worthy of its owner" (Ptahhotep). Under the Twelfth Dynasty we have the teaching of Amenemhet I, where the old king warns his son and successor, Usertesen, against placing too much confidence in, and being too intimate with, those around him, exemplifying his teaching from his own experience (translated in "Records of the Past", II, p. 9 sqq.). Of a much higher order and wider scope are the counsel that Ani, a scribe of the Nineteenth Dynasty, gives to his son, Khons-Hotep: "Let thine eyes observe the deeds of God; it is he that strikes whatsoever is stricken. Piety to the gods is the highest virtue"; "It is I that gave thee to thy mother, but it is she that bore thee, and while she was carrying thee she suffered many pains. When the time of her delivery arrived thou wert born and she carried thee like the veriest yoke, her pap in thy mouth, for three years. Thou didst grow, and thy filthiness never so far disgusted her as to make her cry out: 'Oh! what am I doing?' Thou wert sent to school. She was anxious about thee every day, bringing thee meat and drink from home. Thou didst take a house and wife of thine own, but never forget the pains of childbed that though didst cost to thy mother; give her not cause to complain of thee, lest perchance she lift up her hands to the divinity, and he give ear to her will"; "Keep this in mind whenever thou hast to make a decision: Even as the most aged die thou also shalt lie down among them. There is no exception; even for him whose life is without blame, the same lot awaits him as well. Thy death messenger will come to thee, too, to carry thee away. Discourses will avail thee nothing, for he is coming, yea, he is ready even now. Do not begin to say: 'I am still but a child, I whom thou takest off.' Thou knowest not how thou shalt die. Death comes to the suckling babe; yea, to him who is yet in the womb, as well as to the old, old man. See, I tell thee things for thy good, which thy shall ponder in thy heart before acting. In them thou shalt find happiness and all evil shall be put far from thee" (tr. of Chabas, "L'Egyptologie", Paris, 1876-8).

History. Egyptian historical literature is somewhat illustrated from what we have said of the sources of chronology (see above, II, subsection *Chronology*). In sharp contrast with the aridity which generally characterizes such documents, the so-called prose-poem of Pentaur stands alone so far. Pentaur was the name of the copyist, not of the author, as was long believed. Its subject is an episode of the famous campaign of Ramses II against the Hittites. When taken by surprise he, with only the household troops and a few officers who happened to be there, bravely charged the van of the enemy who were in pursuit of his defeated army, and so brilliantly successful was he that the rout was turned into a victory. The work displays a good deal of literary skill and is the closest approach to an epic to be found in Egyptian literature (Breasted, "Hist. of the Anc. Egyptians", 320; cf. Maspéro, "Hist. Anc.", 272 sq.). Note less remarkable, perhaps, although less pretentious in point of style are: (1) the long autobiography of Uni, under three successive kings (Teti II, Pepi I, and Mernere) of the sixth dynasty,

the longest funerary inscription and the most important historical document of that time (Breasted, "Anc. Rec. of Egypt", I, 134 sq.); (2) the famous stele of Piankhi (see above, II. under *Dynastic History*; Second Period) which Professor Breasted calls the clearest and most rational account of a military expedition which has survived from ancient Egypt (Hist. of the Anc. Egyptians, 370); (3) the great Papyrus Harris, a huge roll one hundred and thirty feet long, the longest document from the Early Orient. It contains an enormous inventory of the gifts of Ramses III to the three chief divinities of Egypt, a statement of his achievements abroad, and his benefactions to his people at home (op. cit., 347).

Fiction. If history proper is not more largely represented in Egyptian literature, it is because its naturally positive and dry character, which the structure of the Egyptian language made it difficult to disguise, was not in harmony with the highly imaginative Egyptian mind. No doubt the Egyptians were proud of their kings; but from one end of the country to the other the waters of the Nile reflected temples and mortuary chapels without number, on the walls of which the achievements of the pharaohs were spread in gorgeous inscriptions and reliefs. That was all the history they needed. It furnished them with historical outlines which their fertile imaginations filled out with stories or tales in their own taste, tales in the style of the "Arabian Nights", where animals and mummies spoke like ordinary folks, as for instance in the tale of "The Two Brothers", from the Nineteenth Dynasty ("Records of the Past", II, 137 sqq.) and the story of Satni-Khâmois from Ptolemaic times (op. cit., IV, 131 sq.). In "The Doomed Prince", Twentieth Dynasty (op. cit. II, 153 sq.), men fly like birds; in "The Shipwrecked", Twelfth Dynasty (translated, with all the others, in Maspéro, "Les contes populaires de l'Égypte ancienne", 3rd ed., Paris, 1905) the hero is shipwrecked on the island of Ka (one of the popular conceptions of the Land of the Dead), where a gigantic serpent addresses him with a human voice and treats him with the utmost kindness. In "The Daughter of the Prince of Bakhtan", Twentieth Dynasty, the prince's younger daughter is delivered from a demon or spirit by a statue of the god Khansu for which he had sent to Thebes. Sometimes, however, the action remains within the limits of the natural order, and the interest consists in some extraordinary change of fortune, as in the case of Sinuhit, Twelfth Dynasty, or in some clever stratagem, as in "How Thutiy captured Joppa", Twentieth Dynasty, and in the story of Ramsinitos (Herod, II, 121), Saitic times. The *dramatis personæ* of such tales and stories are often persons of royal blood, the pharaoh himself not infrequently playing the principal part; and the names which they bear, as a rule, are real historic names, so that in some cases it is not clear, at first sight, whether one has to deal with history or with fiction. More frequently, however, the names have been selected at random, sometimes from proper names, sometimes from the *prænomina*, or even from popular nicknames. Moreover,

chronology, as is usual in popular fiction, is grossly disregarded. In the story of "Satni-Khâmois", for instance, Memephtah, instead of appearing as the brother of the hero, is alluded to as a remote predecessor of Ramses II (Usirmari of the tale, a *prænomina* of Ramses II in his youth). This literature of historical fiction was evidently very popular in Egypt at all times and in all classes of society. That it was chiefly from this source that Herodotus collected most of his notices of the ancient kings of Egypt is evident from the chronological confusion and the great mixture of names, *prænomina*, and nicknames which prevail in his writings. See on this all-important point the very interesting introduction of Prof. Maspéro to his "Contes populaires de l'ancienne Egypte" (3rd ed., Paris, 1905).

Astronomy. We have no special treatise on astronomy written by ancient Egyptians in book form. The monuments, however, the temples and tombs especially, give us a fair idea of their astronomical knowledge. On the whole their notions were rather elementary. They knew the zodiac and the principal constellations, and had special names for Orion (*Sahu*) and Sirius (*Sopdit*), the former being sacred to Osiris and the latter to Isis, and for the thirty-six *decani* which presided over the thirty-six decades of the year. They had compiled tables of the rising and setting of a great many, if not all, of the stars visible to the naked eye. They knew the difference between fixed stars and planets, and the apparently retrograde motion of Mars at certain points of the year had not escaped their attention. Beyond this they knew probably little or nothing (see Ginzler, "Handbuch der mathematischen u. technischen Chronologie", I, 153). We have seen above (II., subsection *Chronology*) how the Egyptians used what they knew of astronomy for the division of time and its computation. They fancied the earth round and flat, surrounded with mountains beyond which flowed a large river which they called Uernes (cf. the *Ouranos* of the Greeks). At the four cardinal points the mountains rose higher and supported the celestial vaults, which they imagined as solid, although transparent. Over this vault flowed the celestial waters on which the sun, and the moon, and the stars floated in barks. The sun at the end of every day went out through the western mountains, and sailed on the Uernes first northward, then southward to the mountain of the east, where he entered our world again through a large gate. Egyptian mythology saw in the celestial vault an immense cow (Hathor), or a woman, the goddess Nût, whom Shu (the atmosphere) had separated from her husband Qeb, or Sib (the earth) and who brought forth the sun every morning, and swallowed it every evening (Maspéro in *Revue de l'histoire des religions*", XV, 269 sqq.). The many representations of the celestial vault in tombs and on the inner sides of the lids of sarcophagi are purely mythological (op. cit., I, 151).

Mathematics. Our earliest Egyptian treatise on mathematics is the Rhind Papyrus of the British Museum [ed. Eisenlohr, *Ein mathematisches Handbuch der alten Aegypter*,

1877; L. Rodet in Jour. de la Soc. Math. de France, VI (1878), 139 sqq.]; it dates back to the Nineteenth Dynasty. It contains: (a) several theorems of plane geometry with rules for measuring solids; (b) a manual of the calculator on a purely arithmetical basis, not algebraic. [Rodet in Jour. Asiatique (1881), XVIII, 184 sq., 390 sq.]. The numerical system was decimal, and it contained figures for one and for each power of ten; these figures were repeated as many times as contained in the number to be expressed. With the exception of *two-thirds*, the only fraction which they could write with one sign were those having one as a numerator.

Astrology. Among the documents belonging to this science the most important is a fragmentary astrological calendar (British Museum) written during the Nineteenth Dynasty. It contains a list of the things which it is proper to do or to avoid on each day of the year. The reason why such a day was *fas* or *nefas* was ordinarily taken from some mythological tradition. The Greeks and Romans were not ignorant of this science, but the name "Egyptian days" (*dies Ægyptiaci*), by which they designated it, shows clearly that they borrowed it from Egypt.

Medicine. The Museum of Berlin preserves a copy of an Egyptian treatise on medicine, said to have been completed by, or at least under, kings of the First and Second Dynasties. There is besides, in the University Library of Leipzig, a papyrus commonly known as the Ebers papyrus, containing a copy (Eighteenth Dynasty) of another treatise attributed to King Cheops of the Fourth Dynasty. From these two documents and others of less importance we may infer that the Egyptians knew little about theoretical medicine, as, for religious reasons, they were not allowed to study anatomy. Practical medicine, on the other hand, was so far developed among them that the Egyptian physicians were those most highly esteemed by the Greeks and the Romans. The names given to diseases are not always clear, but the description of symptoms is often sufficiently detailed to enable a physician to identify them. Pharmaceutical science was till more advanced. Four kinds of remedies are to be found in the recipes: ointments, potions, plasters, clysters; they were usually taken from vegetables, sometimes from minerals (as sulphate of copper, salt, nitre, memphitic stone); the raw flesh, blood (fresh or dried up), hair, and horn of animals were also used, especially to reduce inflammations. The elements of such remedies were first mashed, boiled, and strained, then diluted in water, beer, infusions of oats, milk, oil, and even human urine. But the Egyptians believed that not all diseases were of natural origin; some were caused by evil spirits who obsessed the patients.

For *Egyptian Art* see Temple.

V. THE COPTIC CHURCH

The Church of the Copts or Egyptians, the usual modern name for the Church of Alexandria, though very often arbitrarily restricted to the period beginning with its

secession (451) from the Catholic Church under its patriarch Dioscurus (q. v.) when it became a distinctly national church. The word *Copt* is an adaptation of the Arabic *Qibt* or *Qubt* (a corruption of Greek *Agyptios*). The Arab conquerors thus designated the old inhabitants of Egypt (in vast majority followers of Dioscurus) in contradistinction both to themselves and to the Melchites of Greek origin and language who were still in communion with the Catholic Church, but have since drifted within the orbit of the so-called Orthodox, i.e., schismatic Greek, Church. A general article on the Coptic Church will be found under ALEXANDRIA, CHURCH OF. Special features of importance are treated under the titles ALEXANDRIA, COUNCILS OF; GnosticISM; MONASTICISM; PERSECUTION; SACRAMENTS; VERSIONS OF THE BIBLE. See also ATHANASIUS; CYRIL OF ALEXANDRIA; DIONYSIUS OF ALEXANDRIA; MARK; THEOPHILUS, PATRIARCH OF ALEXANDRIA; CLEMENT OF ALEXANDRIA; ORIGEN; DIOSCURUS; MELCHITES; MISSIONS. In the present article we shall treat in particular the origins and constitution of the Coptic Church, especially the question of its episcopate, to the Council of Nicea (325). We shall close with a short sketch of the present condition of both the Jacobite and the Uniate branches of the Coptic Church, chiefly from the point of view of their organization.

1. Early Christianity in Egypt. We have no direct evidence of Christianity having existed in Egypt until Clement of Alexandria (A.D. 150-220) when it had already spread over the land. What we know of the Church of Egypt before that time is exclusively through inferences or unconfirmed traditions preserved principally by Eusebius (see below). Thus we may infer the existence of Christianity in Egypt during the second century from the fact that under Trajan a Greek version of the "Gospel According to the Hebrews" was being circulated there (Duchesne, *Histoire Ancienne de l'Eglise*, I, 126). We know that this gospel was the book of the Judeo-Christians. Its very name points to the existence at the same date of another Christian community, recruited from among the Gentiles. This, presumably, followed another Gospel which Clement of Alexandria calls "the Gospel According to the Egyptians". (On the Gospel of the Egyptians, see Harnack, *Chronologie der altchristlichen Litteratur*, I, 1, pp. 612-622; on the Gospel of the Hebrews, *ibid.*, pp. 631-49). This writer quotes it along with the "Gospel According to the Hebrews". However, he clearly distinguishes both from the canonical Gospels, which shows that those two apocrypha were then mere relics of the past, or were at least old enough to be entitled to some consideration in spite of their uncanonical character. Some writers, as Bardenhewer, (*Geschichte der altchristliche Litteratur*, I, 387), think that the "Gospel According to the Egyptians" owed its name to its diffusion among the Egyptians throughout the land, in contradistinction to some other Gospel, canonical or uncanonical, in use in Alexandria. In this case we might conclude furthermore to the existence of a third Christian community, consisting

of native Egyptians, as it is difficult to suppose that two Hellenistic communities would have used two different Gospels. But we have no evidence of a native church having existed at as early a period as suggested by the elimination of the Gospel of the Egyptians from the canon at the time of Clement of Alexandria.

Again, organized Christianity at an early date in Egypt is, indirectly at least, attested by the activity of the Gnostic schools in that country in the third and fourth decades of the second century. Eusebius is authority that "Basilides the heresiarch", founder of one of these schools, came to prominence in the year 134. Other Egyptian founders of such schools, Valentinus and Carpocrates, belong to the same period. Valentinus had already moved to Rome in 140, under the pontificate of Pope Hyginus (Irenæus, *Adv. Hær.*, III, iv, 3), after having preached his doctrines in Egypt, his native country. As Duchesne (*op. cit.*, I, 331) well remarks, one cannot believe that these heretical manifestations represented all the Alexandrine Christianity. These schools, precisely because they are nothing but schools, suppose a Church, "the Great Church", as Celsus calls it; such aberration, precisely because labelled with their authors' names, testify to the existence of the orthodox tradition in the country where they originated. This tradition, from which heresies of such a power of diffusion could separate themselves without putting its very existence in jeopardy, must have been endowed with a vitality which cannot be accounted for without at least half a century of normal growth and organization under the guidance strong and vigilant bishops. We may, therefore, safely conclude as that as early as the middle decades of the first century there was in Alexandria, and probably in the neighboring nomes, or provinces, Christian communities consisting principally of Hellenistic Jews and of those pious men (*phoboumenoi ton Theon*) who had embraced the tenets and practices of Judaism without becoming regular proselytes. These communities must have had some numerical importance, for on the one hand the Jews were exceedingly numerous (over one million) in Egypt, and particularly in Alexandria, where they constituted two-fifths of the whole population; and on the other hand the philosophical eclecticism that generally prevailed in Alexandria at that time co-operated in favour of Christian ideas with the great doctrinal tolerance then obtaining throughout Judaism, to the extent, indeed, as Duchesne tersely puts it, that one might think like Philo or like Akiba, believe in the resurrection of the flesh or in its final annihilation, expect the Messiah or ridicule that hope, philosophize like Ecclesiastes or like the Wisdom of Solomon (*op. cit.*, I, 122). Along with this Judaizing church, whose hopes and expectations were centered in Jerusalem and the Temple, who accepted Christianity and yet continued to observe the Law, there was another Church, decidedly Gentile -- we might say, Christian -- in its character and aspirations, as well as in its practices. It is difficult to surmise what the relations of those two churches to one another were in their details. It is very probable that the destruction

of Jerusalem and the Temple by Titus, by putting an end to the hopes of many among the judaizing Church, brought them over to the Great Church, which henceforth gained rapidly in numbers and prestige and soon became the only orthodox Christian Church.

2. Chronology of Early Episcopate. Eusebius, both in his "Chronicles" and in his "Ecclesiastical History" (cf. Harnack, "Chronologie der altchristlichen Litteratur", I, 1, pp. 70-208), registers the names and years of pontificate of ten bishops supposed to have occupied in succession the see of Alexandria prior to the accession of Demetrius (188-9). Those names he took from the now-lost "Chronology" of Julius Africanus, who visited Egypt in the early portion of the third century. They are as follows: Anianus, 22 years; Abilius, 13; Cerdo, 11; Primus, 12; Justus, 11; Eumenes, 13; Marcus, 10; Celandion, 14; Agrippinus, 12; Julianus, 10. Dates are also given, each bishop being entered under the year of reign of the Roman Emperor in which his accession took place. Thus Anianus is listed under the eighth year of Nero (A.D. 62-3). It seems certain, however, that these synchronistic indications do not belong to the list as found by Julius Africanus, but were computed by himself, from Demetrius down, on the years of pontificate of the several bishops. The same writer (Harnack, "Chronologie", I, 1, p. 706) is authority for another tradition preserved also by Eusebius, to the effect that Christianity was first introduced in Egypt by St. Mark the Evangelist in the third year of Claudius (A.D. 43), only one year after St. Peter established his see in Rome, and one year before Evodius had been raised to the see of Antioch. He preached there his gospel and founded Churches in Antioch. Little is added by Eusebius, viz., that according to Clement of Alexandria Mark had come to Rome with St. Peter (probably after Agrippa's death in 44), and that, according to Papias, after Peter's death (probably 64) Mark had written there the Gospel that bears his name (see Harnack, Chronologie, I, 1, pp. 652-3). This latter point is confirmed by Irenæus, *op. cit.*, III, i, 2: "Post vero horum [Petro et Pauli] excessum, Marcus, discipulus et interpres Petri, et ipse quæ Petro nuntiata erant per scripta nobis tradidit."

Other chronological traditions, often mere variations of those just related, concerning the apostolate and death of St. Mark, have been handed down mostly by the Oriental compilers of chronicles. They are strongly legendary and often conflict with one another and with the Eusebian traditions. In more than one instance they seem to have originated from a misunderstanding of Eusebius's text, of which we know there was a Coptic translation, or from an effort to harmonize or supplement the traditions reported (but not confirmed) by that writer. Until these Oriental sources have been critically edited and their chronology brought out of its chaotic state, it is impossible to make use of them to any considerable extent. It seems, however, certain (1) that St. Mark died a martyr, though the constant tradition that his martyrdom was on Easter

day, and on the 24th or 25th of April seems to be worthless, seeing that from the year 45 to the end of the first century Easter never fell on either of those dates; (2) that, having temporarily left Egypt to go (or to return) to the Pentapolis, St. Mark had appointed Anianus his successor several years prior to his own death. Severus of Nesteraweh, a bishop of the ninth century, says that it was seven years before his martyrdom. It is remarkable that Eusebius, while stating that Anianus succeeded St. Mark in the eighth year of Nero (AD 62-3), does not mention Mark's death (as in the case of St. Peter). Probably he had found no tradition on that point. The fact, however, that he gives Anianus as the first bishop of Alexandria shows that, in his mind, the two events were not contemporaneous. For if Anianus had taken possession of the see on St. Mark's death, he would have been the second, not the first bishop. There is some reason to suspect the correctness of traditions transmitted by Julius Africanus through Eusebius. The round number of ten bishops for a period of which we otherwise know nothing, the fact that in every case the pontificate existed of complete years only without extra months and days, the further fact that we find in that short list, two pontificates of ten years, two of eleven, two of twelve, two of thirteen, which would seem to indicate that the other two were originally fourteen years each -- all this might suggest that the list of Julius Africanus is to at least some extent artificial, and based on a uniform number of twelve years for each pontificate, giving a sum total of one hundred and twenty years for the list. One might surmise that the list was originally supposed to start from St. Mark's death, and later on the enthronement of Anianus was taken as its beginning, his pontificate being, as a consequence, increased by from four to eight years. Nor is it, perhaps, entirely fortuitous that the different recensions of the "Chronicon" of Eusebius (the Armenian recension, for instance) count so very near 144 years (12 x 12) from St. Mark's arrival in Egypt to Demetrius. It would not be difficult to find other instances of chronologies of predocumentary times thus artificially rounded out on the basis of the numbers ten and twelve.

We have, perhaps, a relic of an entirely different tradition in a remark to found in the "Chronicon Orientale" of Peter Ibn Râhib, namely, that after the pontificate of Abilius there was a vacancy of three years, owing to the destruction of the Temple of Jerusalem under Titus. If we had not the list of Julius Africanus, such a statement might not seem devoid of plausibility. As we have seen before, the first Christian community of Alexandria consisted chiefly of Jews and we should naturally suppose that its first pastors were chosen from among the Jews. At any rate they were regarded as Jews by the Government. Now it is known that, after the destruction of the Temple of Jerusalem, Vespasian adopted measures of extreme rigor against the Jewish population of Egypt, lest they should try to make their temple of Leontopolis the national centre of their race, and thus defeat his very purpose in wiping out the existence of the

Temple of Jerusalem. It was not until A.D. 73, when this obnoxious temple was, in its turn, destroyed, that the persecution ceased and the Jews were restored to their former privilege of free worship. Supposing that the predecessor of Abilius died in A.D. 70, it would appear likely enough that the see should have remained vacant during the time of the persecution.

3. Nature of Early Episcopate. There is much discussion as to the nature of the early episcopate in Egypt. Tradition seems to point to a collective episcopate consisting of twelve presbyters with a bishop at their head. St. Jerome, in a letter to Evangelus (P.L., XXII, 1194), insisting on the dignity of the priesthood, says, "At Alexandria, from the time of St. Mark the Evangelist to that of the Bishops Heraclas and Dionysius [middle of the third century] the presbyters of Alexandria used to call bishop one they elected from among themselves and raised to a higher standing, just as the army makes an emperor, or the deacons call archdeacon, one from their own body whom they know to be of active habits". This is confirmed by: (1) a passage of a letter of Severus of Antioch, written from Egypt between 518 and 538. Speaking of a certain Isaias who adduced an ancient canon to prove the validity of his episcopal ordination although performed by a single bishop, Severus says: "It was also customary for the bishop of the city famous for the orthodoxy of its faith, the city of Alexandria, to be appointed by priests. Later, however, in agreement with a canon which obtained everywhere, the sacramental institution of their bishop took place by the hands of the bishops." (2) A passage of the annals of Euty chius, Melchite Patriarch of Alexandria who flourished in the early decades of the tenth century: "St. Mark along with Ananias [Anianus] made twelve priests to be with the patriarch; so that when this should be wanting they might elect one out of the twelve priests and the remaining eleven should lay their hands upon his head and bless him and appoint him patriarch; and should after this choose a man of note and make him priest with them in the place of the one who had been made patriarch from among the twelve priests, in such sort that they should always be twelve. This custom, that the priests of Alexandria should appoint the patriarch from the twelve priests, did not come to an end till the time of Alexander patriarch of Alexandria, one of the three hundred and eighteen [the fathers of Nicæa] who forbade the presbyters [in the future] to appoint the patriarch, but decreed that on the death of the patriarch the bishops should convene and appoint the patriarch, and he furthermore decreed that on the death of the patriarch they should elect a man of note from whichever place, from among those twelve priests or not . . . and appoint him" (tr. from the Arabic text ed. Cheikho in "Corpus. Script. Christ. Orientalium; Scriptores Arabici", Ser. IIIa. tom. VI, 95, 96). Finally, we read in the apophthegms on the Egyptian monk Poemen (Butler, "Lausiac History of Palladius") that certain heretics came to Poemen and began to scoff at the Archbishop of Alexandria as having ordination

(*cheirotonian*) from priests. The old man did not answer, but he said to the brothers: "Prepare the table, make them eat, and dismiss them in peace." It is generally supposed that the heretics in question were Arians and really intended to make Poemen believe that the then Archbishop of Alexandria had been ordained by priests, and St. Athanasius is supposed to have been that archbishop. Now, as it is a well-known fact that St. Athanasius was consecrated by bishops, that accusation is considered one of the many calumnies the Arians used to spread against him. If this interpretation be true, the Lausiac text proves nothing for the nature of the early Alexandrian episcopate. But it seems highly improbable that the Arians should have dared to assert what everyone in Egypt in the least familiar with contemporary events, must have known to be false. In fact, the Lausiac text is susceptible of a more plausible interpretation, to wit, that the episcopal character of the Archbishop of Alexandria was to be traced to simple presbyters, while in other churches the Apostolic succession had been transmitted from the very beginning through an uninterrupted line of bishops. In this case the Lausiac would have been the oldest case of the tradition transmitted by Jerome, Severus, and Eutychius, for Poemen flourished in the first half of the fifth century (Dict. Christ. Biogr. s. v.), or even as early as the latter half of the fourth century, if Charles Gore is right in his argument that Rufinus visited that holy hermit in 375 (Journal of Theological Studies, III, 280). Moreover, that the bishops of Alexandria originally were not only elected but also appointed by presbyters is, indirectly at least, confirmed by another tradition for which Eutychius is the authority, to wit, that, till Demetrius, there was no other bishop in Egypt than the Bishop of Alexandria. This was denied by Solerius (Hist. Chron. Patr. Alex., 8* = 10*) and others, but we shall see in the following section that their reasons are not conclusive (cf. Harnack, "Miss u. Ausbreitung", 2d. ed. II, 133, n. 3). The tradition that the early bishops of Alexandria were elected and appointed by a college of presbyters is therefore, if not certain, at least highly probable. On the other hand, it seems almost certain that that custom came to an end much earlier than Eutychius, or even Jerome, would have it. Significant is the fact that they disagree on the *terminus ad quem*; still more significant that Severus of Antioch is silent on that point. Besides, several passages of the works of Origen and Clement of Alexandria can hardly be understood without supposing that the mode of episcopal election and ordination was then the same throughout the rest of the Christian world (see Cabrol in his "Dict. d'archéologie chrét", s. v. Alexandrie: Election du Patriarche).

We may not dismiss the question without recalling the use which Presbyterians, since Selden, have made of that tradition to uphold their views on the early organization of the Church. It suffices to say that their theory rests, after all, on the gratuitous assumption (to put it as mildly as possible) that the presbyters who used to elect the

Bishop of Alexandria, were priests as understood in the now current meaning of this word. Such is not the tradition; according to Euty chius himself, Selden's chief authority, the privilege of patriarchal election was vested not in the priests in general, but in a college of twelve priests on whom that power had been conferred by St. Mark. They were in that sense an episcopal college. Later on, when it became necessary to establish resident bishops in the provinces, the appointees may have been selected from the college of presbyters, while still retaining their former quality of members of the episcopal college. So that, little by little, the power of patriarchal election passed into the hands of regular bishops. The transfer would have been gradual and natural; which would explain the incertitude of the witnesses of the tradition as to the time when the old order of things disappeared. Euty chius may have been influenced in his statement by the fourth Nicene canon. As for St. Jerome, he may have meant Demetrius and Heraclas, instead of Heraclas and Dionysius, for he may have been aware of the other tradition handed down by Euty chius, to the effect that those two patriarchs were the first to ordain bishops since St. Mark (see below).

4. The Episcopate in the Provinces.-- Delegated Bishops or Itinerant Bishops.

We have said that according to the ancient tradition handed down by Euty chius, the bishop of Alexandria was for a long time the only bishop in Egypt. Euty chius's words are as follows: "From Anianus, who was appointed the Patriarch of Alexander by Mark the Evangelist, until Demetrius, Patriarch of Alexandria (and he was the eleventh Patriarch of Alexandria), there was no bishop in the province [*sic* -- read *provinces* -- see below] of Egypt [Arabic *Misr*], and the patriarchs his predecessors had appointed no bishop. And when Demetrius became patriarch he appointed three bishops, and he is the first Patriarch of Alexandria who set the bishops over the provinces. And when he died, Heraclas was made Patriarch of Alexandria, and he appointed twenty bishops (translated from the edition of L. Cheikho, in Corp. Scrip. Christ. Orient.: Script Arabici", ser. III, tom. VI, I, p. 96). It has been objected against this tradition that the Emperor Hadrian, writing to Servanius on the religious conditions of Egypt (Vopiscus, "Vita Saturnini", 8), speaks of Christian bishops; but this letter is now generally considered a forgery of the third century (cf. Harnack, "Mission u. Ausbreitung des Christentums", 2d ed., II, 133, n. 3), and even if it were genuine it would be necessary to know exactly what Hadrian meant by the word *bishop*; we shall see that it could be used in a sense rather different from the current meaning. A stronger objection is taken from the "Livers of the Patriarch of Alexandria" by Severus of Ashmunein, where we read that three of the early patriarchs -- Cerdo, Celadion, and Julian -- were elected by bishops as well as by the people. It is far from certain, however, that the word bishop in these three cases has its ordinary meaning. In the case of Cerdo, the text reads: "When the priests and the bishops, who were representing the patriarch in the

towns, heard of his death they were grieved, and they all went to Alexandria and, having taken counsel with orthodox people", etc. It seems evident that these "bishops" were nothing but delegated bishops, acting in virtue of a special and temporary, not an ordinary and permanent delegation of powers as ordinary bishops (see below); for in this case, delegation, being a matter of course, would not be mentioned. They were not bishops in the ordinary canonical sense of the word. In Celadion's case the text says: "The bishops who were in Alexandria in those days" -- i.e., probably *who were stationed* there, resided there, which certainly cannot be understood of ordinary bishops, whose residence would have been in their respective dioceses. There was room for but one such bishop in Alexandria. Still clearer is the passage concerning Julian: "A party of bishops from the synod assembled with the people of Alexandria", etc. What was that synod? Evidently not a council which happened to be in session, for in that case all certainly would have taken part in the election. Besides, if Celadion's predecessor had called a synod or council, Severus, or the author from whom he borrowed that meagre biography, would not have failed to swell it with this important event. There seems to be no other solution but to see in that synod a body of presbyters or delegated bishops who were habitually in residence in Alexandria, a body of men who could be called bishops, and yet had no ordinary jurisdiction, as is evidenced, first, by the express statement in Cerdo's case and, secondly, by the fact that they usually resided in Alexandria, as stated or implied in the other two cases. Such a body of men the twelve presbyters of Eutychius must have been; so that those three passages, far from contradicting Eutychius's testimony, rather confirm it. We find, however, a more direct confirmation of Eutychius's statement in another, so far equally misinterpreted, passage of Severus. In the biography of Julian, the immediate predecessor of Demetrius, we read: "After this patriarch, the bishop of Alexandria did not remain always there, but he used to go out secretly and organize the hierarchy [*yausim kahanat*, literally, "ordain clergy"], as St. Mark the Evangelist had done." The same remark is found in the "Chronicon Orientale" of Peter Ibn Râhib, with the variation, "No bishop always remained in Alexandria"; and the omission of the last words "as St. Mark" etc. We know that the words *yausim kahanat* have so far been rendered "ordinationes sacerdotum faciebant" (Renaudor, *Hist. Patr. Alexandr.* p. 18), "ordained priests" (Evetts, "Hist. of the Patriarchs of the Coptic Church of Alexandria" in Graffin-Nau's "Patrologia Orientalis", I, 154). There is no doubt, however, that the word *kahanat* (plural of *kâhin*) as a rule stands for bishops and deacons as well as for priests. That it really is so in this case is made clear from a comparison of three versions of the same episode of the life of St. Mark. The author of the second biography in Severus's work says that the Evangelist, seeing that the people of Alexandria were plotting against his life, went out from their city (secretly, adds Severus of Nesteraweh, Bargés, *op. cit.*, p. 56), and

returned to the Pentapolis, where he remained for two years, *appointing bishops, priests, and deacons in all its provinces*. The Melchite Martyrology of Alexandria, under 25 April, says that St. Mark went from Alexandria to Barca (Pentapolis) and beatified the Churches of Christ, "instituting bishops and the rest of the clergy [*kahanat*] of that country". It is evident that in the mind of the author of that latter passage *kahanat*, on the one hand, and "bishops, priests, and deacons", on the other, are interchangeable.) Finally, in the "Chronicon Orientale", where the same episode of St. Mark's life is related, we find simply: "appointing clergy [*kahanat*] for them", without special mention of the bishops. And the argument will appear all the more convincing if we notice that the remark of Julian's biography must have had in view the labours of St. Mark in the Pentapolis, when he added "as St. Mark the Evangelist had done", for neither the oriental nor any other sources record a further instance of ordinations performed by St. Mark outside of Alexandria.

Before we dismiss this interesting passage of Julian's biography, let us call attention to another detail of it. The patriarch is styled simply the bishop of Alexandria, which shows that the source from which the remark was borrowed must belong to a time when the expressions *archbishop* and *patriarch* had not yet come into use. It may, therefore, be considered absolutely certain that, according to all the oriental sources, there was from the time of St. Mark to Julian's death only one diocese in the whole territory of Egypt proper, namely the Diocese of Alexandria, and only one bishop, the Bishop of Alexandria. That bishop was assisted by a college of presbyters. These were bishops to all intents and purposes, excepting jurisdiction, which they had by delegation only. If Eutychius calls them presbyters, it is because he found that word in the source he was using, possibly the very same in which the author of Julian's biography found the word *bishop* used to designate the patriarch. In the "Lives of the Patriarchs" by Severus of Ashmunein, they are called bishops, in agreement with the current use of the time when those biographies were first written down. On so much the oriental sources agree, and substantially they confirm the traditions preserved by St. Jerome and Severus of Antioch. They disagree as to the number of presbyters created by St. Mark; Makrizi, who probably copied Eutychius, gives the same number (twelve) and does not speak of deacons. Severus's second biography of St. Mark, Al-Makin, and the "Chronicon Orientale" say three presbyters and seven deacons. According to Severus of Nesteraweh, St. Mark "ordained priests the sons of Anianus, who were but few, and eleven deacons". It is impossible to reconcile these data. If Eutychius's figure, as is very likely, has no historical foundation, it might be based on Mark, iii, 14. The number three in the other sources, if fictitious, might reflect the fourth canon of Nicæa. Although we have no means of determining, even approximately, to what extent Christianity had spread over Egyptian territory over the first two centuries of our era, there

is hardly any doubt that the number of communities, as well as the area over which they were scattered, very much exceeded the proportions of any ordinary diocese in the primitive Church. Christianity, says Clement of Alexandria, (Strom, VI, xviii, 167), had spread *kata ethnos kai komen kai polin pasan*, i.e. whole houses and families have embraced the faith, which has found adherents in all classes of society. And this statement is borne out by Eusebius (Hist. Eccl. VI, i), who says that in the year 202, during the Severian persecution, Christians were dragged to Alexandria, for trial *ap Aigyptou kai Thebaidos apases*. It would seem that under ordinary circumstances there must have been a call for an ordinary resident bishop at least in each of the three great provinces of Heptanomis (Middle Egypt), Thebais (Upper Egypt), and Arsinoe (the Fayûm).

But in Egypt, as elsewhere, the Church in its infancy naturally copied the political organization of the country, and Egypt, in that respect, was entirely different from the rest of the Roman Empire. Rome, or rather Augustus, in taking possession of Egypt as his person spoil, took in almost bodily the old political organization created by the Pharaohs and developed and strengthened by the Ptolemies, simply replacing the king by a prefect in whom, as his representative, all authority, judicial and military, was vested. That organization was characterized by the total absence of municipal institutions; no organized cities, as in the rest of the Roman Empire, no magistrate elected by a senate, and governing in its name. The country was divided, as of old, into nomes, each of which was administered by a strategos (formerly, nomarch) under the prefect, though occasionally two nomes were temporarily united under one strategos, or one nome was divided between two strategoi. The strategos appointed all subaltern officials throughout the nome, subject to approval from the prefect, and transmitted to them his orders. In judicial matters they could initiate proceedings, but could deliver judgment only when specially empowered as delegates by the prefect. In each village there was a council of elders who acted as intermediaries for the payment of taxes, and were held responsible to the authorities of the nome for the good order of their fellow villagers; they had, however, no authority except by delegation. Alexandria was no exception to that rule; it was not until the reign of Septimius Severus that the city was granted a senate, and even then the citizens were not permitted to elect their own magistrates. The situation was probably the same in other cities which at a still later period secured the privilege of a senate. For convenience' sake the Ptolemies had grouped the nomes of Upper Egypt into one province governed by an epistrategos; the Romans at first did the same for the nomes of Middle Egypt (including the Arsinoite nome, the modern Fayûm) and the Delta, or Lower Egypt. But this and other later arrangements of the nomes into provinces never affected the political organization of the country. The epistrategoi were the usual delegates for many of the powers nominally exercised by

the prefect. They appointed the strategoi and other local officials, subject to confirmation by the prefect. In a general way they acted as intermediaries for the transmission to the authorities of the nome of the orders issued by the prefect (Milne, p. 4-6). In each nome there was a metropolis which was the residence of the strategos, and, as such, the political center of the nome. It was a religious centre as well, as it contained the chief sanctuary of the special god of the whole nome. The chief priest in charge of that sanctuary naturally ruled in religious matters over all the secondary temples scattered throughout the territory of the nome. There was in Alexandria a "High Priest of Alexandria and all Egypt", appointed by the emperor, and probably a Roman, like the prefect upon whom he depended and whose substitute he was in religious matters. He had supreme authority over the priests and control of the temple treasures all over Egypt. In course of time, particularly under Diocletian, several changes took place in that organization; but these changes affected in no way the workings of the administration of the country which, through a chain extending from the prefect to the last and least subaltern of the smallest village, brought every inhabitant under the control of the imperial prefect.

A more striking example of centralized power can hardly be imagined: one master, supreme in all branches of administration; between him and the people, ministers who transmit his orders, but never act except on his behalf, and refer to him all cases of any importance. Such, also, was the organization of the Coptic Church in the first one hundred and twenty years of its existence: one master only, one seat and source of jurisdiction, one judge -- the bishop of Alexandria. It is, therefore, this fullness of jurisdiction, rather than the fullness of the priesthood -- *plenitudo sacerdotii* -- that is understood by the title of *bishop*. The presbyters who elect the bishop of Alexandria, also have the fullness of the priesthood, but they have no jurisdiction of their own. We found them temporarily in charge in the provinces, but they were acting on behalf of the bishop; and for that reason, in the older sources, they are not called bishops. With Demetrius (188-232) a new era opens. The bishops of Alexandria, as we have seen, began to leave the city *secretly*, and ordained bishops, priests, and deacons everywhere, as St. Mark himself had done when he went to the Pentapolis. The word *secretly* is suggestive of times of persecution (cf. Abraham Ecchellensis, "Eutychius vindicatus", 126; Renaudot, "Hist. Patriarcharum Alexandrinorum", I). It would seem that this new departure of Demetrius took place in the very first years of the third century, when the Severian persecution broke out. The dangers then threatening the Christian communities -- which by this time had greatly increased in all parts of Egypt -- may have been the chief consideration which prompted the bishop to come to the assistance of his flock by giving it permanent pastors (see, however, Harnack, "Mission", II, 137, note 2, quoting Schwartz). According to the tradition of Eutychius, Demetrius created

three bishops: Heraclas (232-48) as many as twenty. The number of bishops so increased, under Dionysius (248-65); Maximus (265-82), Theonas (282-300), Peter Martyr (300-311), Achillas (312), and Alexander (313-326), that the last of these could, in 320, muster nearly one hundred bishops against Arius (Socrates, *Hist. Eccl.*, I, vi) from Egypt, Libya, and the Pentapolis. The Egyptian hierarchy was then fully organized (cf. Harnack, *op. cit.*, II, 142), a fact which explains, and is explained by, the wholesale Christianization of Egypt during the third century. In spite, however, of that astonishing development of the hierarchy, the old institution of itinerant bishops had not yet entirely disappeared. It happened often during the persecutions that bishops were incarcerated pending trial, and therefore were unable to hold ordinations. Their places were then filled by *periodeutai*, or itinerant bishops ordained for that purpose, and resident in Alexandria when not engaged in their sacred functions. It was for having presumed to usurp the function of such *periodeutai*, that Meltius, Bishop of Lycopolis (in Upper Egypt) was censured by the Patriarch Alexander, and finally condemned and deprived of his jurisdiction by the Council of Nicæa (see Hefele-Leclercq, *Hist. des Conciles*, Paris, 1907, I, 488-503, where all the sources are indicated).

The existence of metropolitans (in the canonical sense of the word) in the church of Egypt is a matter of considerable doubt (see Harnack, *op. cit.*, II, 150, note 3, where reference is made to Schwartz, "Athanasiana", I, in "Nachricht. d. K. Gesellschaft d. Wiss. zu Göttingen", 1904, p. 180, and Lübeck, "Reichseintheilung u. kirchliche Hierarchie", pp. 109 sq., 116 sqq.). If some bishops (which is very likely; see Hefele, "Conciliengeschichte", I, pp. 391, 3i) bore that title they could not have differed from the ordinary Egyptian bishops in their relation to the Bishop of Alexandria. It is a well known fact that the Bishop of Alexandria was wont to ordain not only his metropolitans, as did other patriarchs, but also their suffragans, with the sole proviso that their election should have been sanctioned by their respective metropolitans (Hefele, *op. cit.* I, p. 393). St. Epiphanius, writing of Meletius, whom he calls *archiepiskopos* (*Hæres*, lxix, c, iii), by which he means really *metropolitan* (Hefele, *ibid*), says: "Ille quidem cæteris Ægypti episcopis antecellens, secundum a Petro [Alexandrino] dignitatis locum obtinebat, utpote illius adjutor sed eidem tamen subjectus et ad ipsum rebus ecclesiasticus referens" [He indeed, being preeminent over all the other bishops of Egypt, held the position next in dignity with that of Peter (of Alexandria), as being his helper, yet subject to him and dependent on him in ecclesiastical affairs. In what concern Meletianism St. Epiphanius is not to be implicitly trusted. In this case, however, his testimony is probably correct; his words depict just such a condition of affairs as we would naturally expect from the general analogy of the church organization with the civil government. The existence of the epistrategoï and the nature of their relations to the prefect of Egypt might well have suggested the appointment of metropolitans with just as

limited an independence of the Bishop of Alexandria as St. Epiphanius attributes to Meletius.

PRESENT STATE OF THE COPTIC CHURCH

The Jacobite Church has thirteen dioceses in Egypt: Cairo under the Patriarch of Alexandria, with 23 churches and 35 priests; Alexandria, with a metropolitan, having charge also of the provinces of Bohaireh and Menufiyeh, 48 churches, 60 priests; the three provinces of Dakalieh, Sharkieh, and Garbieh, 70 churches, 95 priests; Gizeh and Fayûm, 25 churches, 40 priests; Beni-Suef, 24 churches, 70 priests; Minieh, 40 churches, 90 priests; Sanabû, 32 churches, 65 priests; Manfalût, 28 churches, 55 priests; Assiût (metropolitan see), 25 churches, 66 priests; Abûtig (metropolitan see) 45 churches, 105 priests; Akhmim and Girgeh (metropolitan see), 50 churches, 101 priests; Keneh, 24 churches, 48 priests; Luxor and Esneh (metropolitan see) 24 churches, 48 priests. By way of summary it may be said that the Jacobite Coptic Church has 1 patriarch, 6 metropolitans, 6 bishops, 856 priests, 449 churches, and about 600,000 souls. There are in addition, outside of Egypt, a metropolitan in Jerusalem, a bishop for Nubia and Khartûm, a metropolitan and two bishops in Abyssinia. Some ten years ago the abbots of the monasteries of Moharrak (province of Assiût), St. Anthony, St. Paul (both in the Arabian Desert), and Baramûs (in the desert of Notria) were raised to the dignity of bishops.

There are three categories of schools. (a) Church schools, under the patriarch (conservative); 1 ecclesiastical college, 50 pupils; 6 boys' schools, 1100 pupils; 2 girls' schools, 350 pupils. (b) Tewfik schools, under the society of the same name (rather liberal and in opposition to the patriarch): 1 boys' school, 290 pupils; 1 girls' school, 140 pupils. (c) Private schools: 5 boys's schools, 300 pupils; 1 girls' school, 5 pupils. -- In all 2235 pupils attend these Jacobite schools.

The Uniat Church.-- The Catholic, or Uniat branch of the Coptic Church dates from 1741, when Benedict XIV, seeing that the patriarch and the majority of the bishops could not be depended on to effectuate union with Rome, granted to Amba Athanasius, Coptic Bishop of Jerusalem, jurisdiction over all Christians of the Coptic Rite in Egypt and elsewhere. Athanasius continued to reside in Jerusalem, where he ministered to his charge in Egypt through his vicar-general. Justus Maraghi. During his administration flourished Raphael Tuki, a native of Girgeh, and an alumnus of the Urban (Propaganda) College at Rome. After a few years of fruitful labours in his native land he was recalled to Rome (where he received the title of Bishop of Arsinoe) to superintend the printing of the Coptic liturgical books (Missal, 1746; Psalter, 1749; Breviary, 1750; Pontifical, 1761; Ritual, 1763; Theotokiæ, 1764). Athanasius was succeeded (1781) by John Farargi as Vicar Apostolic of the Coptic Nation, with the title of Bishop of Hysopolis; but he never received episcopal consecration, there being no

Catholic bishop of the Coptic Rite to perform it. The same can be said of his successor Matthew Righet, appointed in 1788, and made Bishop of Uthina in 1815; he died in 1822, and was succeeded by Maximus Joed, also made Bishop of Uthina in 1824, and a few months later Patriarch of Alexandria, by decree of Leo XII, who, at the request of the Khedive Mehemet-Ali, had decided to restore the Catholic Patriarchate of Alexandria. That decree, however, never went into effect, owing, apparently, to the opposition of Abraham Cashoor, then at Rome, where he had been consecrated Archbishop of Memphis by the pope himself. Maximus died in 1831. His successor was Theodore Abû-Karim, made bishop of Alia in 1832, and appointed delegate and Visitor Apostolic of Abyssinia in 1840. He died in 1854 and was succeeded in 1856 by Athanasius Khûzam, Bishop of Maronia, who in turn was succeeded in 1866 by Agapius Bshai, Bishop of Cariopolis, representative of his nation at the Vatican Council in 1869-70. Owing to regrettable differences with his flock, this bishop, more learned and pious than tactful, was recalled to Rome in, or soon after, 1878, and did not return to Egypt until 1887, forty days before his death. During his absence, and after his death, the church was administered by an Apostolic Visitor, Monsignor Anthony Morcos (not a Copt or a bishop) with the title of pro-vicar Apostolic. His successor was also a simple Apostolic Visitor, and governed the Uniat Copts until 1895, when the patriarchate of Alexandria was restored by Leo XIII (Litter. Apost. "Christi Domini") with a bishop, Cyril Macaire, as Apostolic administrator, and two suffragan sees, Hermopolis (residence at Minieh) and Thebes (residence at Tartah), which were entrusted respectively to Bishops Maximus Sedfaoui and Ignatius Berzi, both consecrated in 1896. In 1899 Bishop Cyril Macaire was promoted to the title and rank of Patriarch of Alexandria, with residence at Cairo, taking the name of Cyril II; he resigned in 1908, and Bishop Sedfaoui was named administrator. The Uniat Coptic Diocese of Alexandria counts (Lower Egypt and Cairo) 2500 souls, 4 churches or chapels, 14 priests (2 married), a *petit séminaire* with 8 pupils (under the direction of the Jesuits), and 1 school for boys (under the Christian Brothers). In the Diocese of Hermopolis (Middle Egypt) there are 2500 Catholics, 10 priests (4 married), 7 churches or chapels, 12 stations, 9 schools for boys, with 240 pupils, and 1 for girls, with 50 pupils. The Diocese of Thebes (part of Upper Egypt) has 15,250 souls, 31 priests (15 married), 35 churches or chapels, 18 stations, 1 theological seminary (for all three diocese), with 17 pupils, 21 schools for boys, with 240 pupils, and 5 schools for girls, with 253 pupils. In addition to the above-mentioned clergy and institutions, there are several houses of Latin religious (both men and women) whose members minister to the Catholic Copts.

VI. COPTIC LITERATURE

The literature of Christian Egypt, at first written in the Coptic language and later translated into, or written outright in, Arabic. That literature is almost exclusively re-

ligious, or rather (with the exception of the Gnostic writings and a few magical texts) ecclesiastical, either as to its contents (Bible, lectionaries, martyrologies, etc.) or as to its purpose (grammars and vocabularies composed with reference to the ecclesiastical books). Thus defined, however, Coptic literature is by no means the equivalent of literature of the Egyptian Church, as this would include as well the Greek writings of the Fathers of the Church, and other Greek monuments of Egyptian origin. They will be found under the headings of their respective authors; see for instance ALEXANDER; ATHANASIUS; CLEMENT OF ALEXANDRIA; CYRIL OF ALEXANDRIA; ORIGEN; THEOPHILUS, PATRIARCH OF ALEXANDRIA, etc.

The Coptic Language is an offspring of the Egyptian, or rather it is that very same language in the various popular forms it had evolved when Egypt as a whole became Christian (third and fourth centuries). Consequently it appears in several dialects; the Sahidic (formerly called Theban), or dialect of Upper Egypt (Arab, *Essa'id*, "the high"); the Akhmimic, originally in use in the province of Akhmim, afterwards superseded by Sahidic; the Fayûmic, or dialect of the Fayûm; the Middle Egyptian; and the Bohairic (formerly Memphitic), i.e. the dialect of Bohaireh or the Region of the Lake (Mariût?) a name now applied to the north-western province of the Delta, of which Damanhûr is the seat of government. From the literary point of view the Sahidic and the Bohairic are by far the most important, although, as we shall see, the most ancient, and in some respects most valuable, Coptic manuscripts are in the Akhmimic dialect. The question of priority between these dialects -- if understood of the greater or lesser similarity which they bear to the respective dialects of the ancient Egyptian from which they derived, or of the time when they first came into use as Christian dialects -- cannot, in the opinion of the present writer, be safely decided. All we can say is that we have no Bohairic manuscript or literary monument as old as some Sahidic manuscripts or literary monuments. The Coptic alphabet, some letters of which are peculiar to one or the other of the dialects, is the Greek alphabet increased by six or seven signs borrowed from the Demotic to express sounds or combinations of sounds unknown to the Greeks. On the one hand, some of the Greek letters like *Xi* and *Psi* never occur except in Greek words. In all Coptic dialects Greek words are of frequent occurrence. Some of these undoubtedly had crept into the popular language even before the introduction of Christianity, but a good many must have been introduced by the translators to express ideas not familiar to the ancient Egyptians, or, as in the case of the particles, to give more suppleness or roundness to the sentence. Almost any Greek verb in common occurrence could be used in Coptic by prefixing to its infinitive auxiliaries, which alone were inflected. Thus, also, abstract substantives could be obtained by joining a Greek adjective to certain abstract Coptic prefixes, as *met-agathos*, goodness, kindness. Frequently a Greek word is used along with its Coptic equivalent. Greek

words which had, so to speak, acquired a right of citizenship were often used to translate other Greek words such as *molis* for *mogis*, *pyle* for *thyra*. The relation of Coptic to Greek, from that point of view, is about the same as that of French or English to Latin, although in lesser proportion.

Scripture and Apocrypha. Greek being the original language of the Church of Egypt, the first Coptic literary productions were naturally translations from the Greek. Undoubtedly the most important of such translations was that of the Bible into several dialects spoken by the various native Egyptian communities. For these see VERSIONS OF THE BIBLE. The apocrypha were also translated and widely diffused, judging from the many fragments of manuscripts, especially in Sahidic, which have reached us. Such translations, however, unlike the versions of the Bible, are far from being faithful. The native imagination of the translators invariably leads them to amplify and embellish on the Greek original. Among the Apocrypha of the Old Testament we must mention, first, the "Testament of Abraham, Isaac, and Joseph", in Bohairic, published by professor I. Guidi in the "Rendiconti della Reale Accademia dei Lincei", 18 March, 1900; "Il testo copto del Testamento di Abramo", and 22 Apr., 1900: "Il Testamento di Abramo"; and 22 Apr., 1900: "Il Testamento d'Isaaco e il Testamento di Giacobbe (testo Copto)"; then three Apocalypses of late Jewish origin: one anonymous (in Akhmimic) and the other two attributed to Elias (Akhmimic and Sahidic) and Sophonias (Sahidic). They have been published by G. Steindorf in Gebhart and Harnack's "Texte u. Untersuchungen zur Geschichte der altchristlichen Literatur", N. S., II; "Die Apokalypse des Elias: Eine unbekannte Apokalypse und Bruchstücke der Sophonias-Apokalypse" (text and translation, Leipzig, 1899). Parts of the same texts had already been published and translated by Bouriant, "Les papyrus d'Akhmim" in "Mémoire publiés par les membres de la Mission Archéologique Française au Caire", I (1881-4), pp. 261 sqq., and by Stern, "Die koptische Apokalypse des Sophonias" in "Zeitschrift für ägyptische Sprache", etc., XXIV (1886), pp. 115 sqq. There is also a Sahidic fragment of an Apocalypse of Moses-Adam published by G. Schmidt and Harnack ("Sitzungsberichte d. Kgl. Preuss. Akad. d. Wiss.", 1891, p. 1045) and one in Sahidic, too, of the Fourth Book of Esdras, published by Leipolt and Violet ("Ein sahidisches Bruchstück d. vierten Esrabuches" in "Texte u. Untersuchungen", N. S. XI, I b.).

The New Testament class is of course much more largely represented. Several apocryphal writings of the Gospel class have been published by F. Robinson, "Coptic Apocryphal Gospels, Translations together with the texts of some of them", etc., Cambridge, 1896 (Texts and Studies, IV, 2). The chief documents produced in this work are the "Life of the Virgin" (Sahidic), the "Falling Asleep of Mary" (Bohairic and Sahidic), and the "Death of St. Joseph" (Bohairic and Sahidic). The "Life of the Virgin" is somewhat similar to the "Protoevangelium Jacobi". The "Falling Asleep of Mary"

exists also in Greek, Latin, Syriac, and Arabic, and the Coptic texts may serve to throw light on the relations of those various recensions and on the origin of the tradition. The only other known text of the "Death of St. Joseph" is an Arabic one, more closely related to the Bohairic than to the Sahidic text. There is also among the papyri preserved at Turin a Sahidic version of the "Acta Pilati" published by Fr. Rossi, "I Papyri Copti Museo Egizio di Torino" (2 vols., Turin, 1887-8), I, fasc. 1, "Il Vangelo di Nicodemo". Some Sahidic fragments published by Jacoby ("Ein neues Evangelium fragment", Strasburg, 1900), and assigned by him to the Gospel of the Egyptians, are thought by Zahn to belong to the Gospel of the Twelve [Neue kirchliche Zeitschrift, IX (1900), pp. 361-70]. To the Gospel of the Twelve Revillout assigns not only the Strausburg fragments and several of those published both by himself ("Apocryphes coptes du Nouveau Testament, Textes", Paris, 1876) and Guidi (see below), but also a good many more Paris fragments which he publishes and translates. Other Paris fragments Revillout thinks belong to the Gospel of St. Bartholomew (Les Apocryphes coptes; I, Les Evangiles des douze Apôtres et de S. Barthélemy" in Graffin-Nau, "Patrologia Orientalis", II, 1, Paris, 1907). However, before the publication of Revillout appeared, the Paris texts had been published by Lacau, who found them to belong to five different codices corresponding to as many different writings all referring to the Ministry or Passion and Resurrection of Christ. One would be the Gospel of Bartholomew and another the Apocalypse of the same Apostle ("Fragments d'Apocryphes de la Bibliothèque Nationale" in "Mémoires de la Mission française d'archéologie orientale", Cairo, 1904). According to Leipoldt we have the first evidence of a Coptic recension of the "Proto-evangelium Jacobi" in a Sahidic folio published by him [Zeitschrift für Neutestamentliche Wissenschaft, VI (1905), pp. 106, 107].

The apocryphal legends of the apostles are still more numerous in the Coptic literature, where they constitute a group quite distinct and proper to Egypt, which seems to be their original home, although in vast majority translated from Greek originals into the Sahidic dialect. They were always popular, and long before Coptic ceased to be universally understood, some time between the eleventh and fourteenth century, they were translated into Arabic and then from Arabic into Ethiopic. Among the principal are the Preachings of St. James, son of Zebedee, St. Andrew, St. Philip, Sts. Andrew and Paul, and Sts. Andrew and Bartholomew; the martyrdoms of St. James, son of Zebedee, St. James the Less, St. Peter, St. Paul; also the life of Pseudo-Prochoros and the *metastasis* of St. John and a Martyrdom of St. Simon (different from the documents generally known under the names of "Preaching" and "Martyrdom" of that apostle and of which short fragments only have been preserved in Coptic). The texts of all these have been published by Professor I. Guidi in his "Frammenti Copti" (Rendiconti della Reale Accademia dei Lincei, III and IV, 1887-88), and "Di alcune perga-

mene Saidiche" (Rendiconte della R. Acc. dei Lincei, Classe di Scienze morale, storiche e filologiche, II, fasc. 7, 1893), and the translation in the same author's "Gli ati apocriphi degli Apostoli" (Giornale della Società Asiatica Italiana, vol. II, pp. 1-66, 1888), and in his "Di alcune Pergamene", just mentioned. The same documents have been to no small extent supplemented from St. Petersburg manuscripts by Oscar v. Lemm, in his "Koptische apocryphe Apostelacten" in "Melanges Asiatiques tirés du Bulletin de l'Académie impériale de St. Pétersbourg", X, 1 and 2 [Bulletin, N. S., I and III (XXXIII and XXXV), 1890-1].

We close this section with the mention of two documents of more than usual interest: first, seven leaves of papyrus (Berlin P. 8502) of the *praxis Petrou* and a considerable portion of the Acta Pauli (Heidelberg Copt. Papyrus I), in their original form (i.e., including the so-called "Acta Pauli et Theclæ"). Both of these documents have been published, translated into German, and thoroughly discussed by C. Schmidt ["Die alten Petrusakten", etc. in "Texte u. Unters.", N. S., photographic reproduction of the Coptic text]; 2d edit. (without photographic plates), Leipzig, 1905, 1 vol.].

Patrology. *Ante-Nicene Fathers.*-- But few Coptic translations from the Ante-Nicene Fathers have been preserved. As Dr. Leipoldt justly remarks, when the native Church of Egypt began to form its literature, the literary productions of the early church had lost much of their interest. We have, however, two fragments of the letters of Ignatius of Antioch, published by Pitra (Anal. sacra, 255 sqq.) and Lightfoot (Apost. Fathers, II, III, London, 1889, 277 sqq.) and several of the "Shepherd" of Hermas, published by Leipoldt (Sitzungsberichte der K. Gesellsch. d. Wissensch. in Berlin, 1903, pp. 261-68), and Delaporte [Revue de l'Orient Chrétien, X (1905), pp. 424-433; XI (1906), pp. 31-41], and, what is more, two papyrus codices in Akhmimic dialect, one (Berlin) of the fourth, and the other (Strausburg) of the seventh or eighth century, both containing the first epistle of Clement to the Corinthians under its primitive title (Epistle to the Romans). The Berlin codex, which is almost complete, has just been published, with a German translation and an exhaustive commentary, by C. Schmidt (Der 1. Clemensbrief in altkoptischer Ueberlieferung untersucht u. herausgegeben, Leipzig, 1908). Extracts from the commentaries of Hippolytus of Rome, Irenæus, and Clement of Alexandria are to be found in the famous Bohairic *catena* (dated A.D. 888) of Lord Zouche's collection (Parham, 102; published by de Lagarde, "Catenæ in Evangelia Ægyptiaca quæ supersunt". Gottingen, 1886). But it is very likely that this manuscript was translated from a Greek *catena*, and consequently it does not show that the writings of those Fathers existed independently in the Coptic literature. Clement of Alexandria, in any case, and also Origen, were considered as heretics, which would explain their absence from the repertory of the Coptic Church.

Post-Nicene Fathers.-- The homilies, sermons, etc. from the Greek Fathers of the Council of Nicæa to that of Chalcedon were well represented in the Coptic literature, as we may judge from what has come down to us in the various dialects. In Bohairic we have over forty complete homilies or sermons of St. John Chrysostom, several of St. Cyril of Alexandria, St. Gregory Nazianzen, Theophilus of Alexandria, and St. Ephraim the Syrian, while in Sahidic we find a few complete writings and a very large number of fragments, some quite considerable, of the homiletic works of the same Fathers and of many others, like St. Athanasius, St. Basil, Proclus of Cyzicus, Theodotus of Ancyra, Epiphanius of Cyprus, Amphilocius of Iconium, Severianus of Gabala, Cyril of Jerusalem, Eusebius of Cæsarea, and the pseudo-Dionysius the Areopagite. Liberius of Rome and St. Ephraem are also represented by several fragments of sermons. We need not say that these writings are not infrequently spurious, and and that they can in no case be held up as models of translation.

The Bohairic part of this great mass of literature is still almost entirely unedited, we might say unexplored. Two sermons of St. Ephraem have been published, one, on the adulterous woman of the Gospel, by Guidi (Bessarione, Ann. VII, vol. VI, Rome, 1903), the other (fragment) on the Transfiguration by Budge (Proceedings of the Soc. of Bibl. Archæology, IX, 1887, pp. 317 sq.). Budge published also a large fragment of an encomium on Elijah the Tishbite attributed to St. John Chrysostom (Transactions of the Soc. Bibl. Arch., IX, 1893, pp. 355 ff.), and Amélineau, a sermon of St. Cyril of Alexandria on death ("Monuments pour servir à l'Histoire du Christianisme en Egypte aux IVe et Ve siècles -- Mémoires publiés par les Membres de la Mission Archéologique Française au Caire, IV, 1888). As for the Sahidic portion, two homilies of St. John Chrysostom, of doubtful genuineness if not altogether spurious, and all the homiletical fragments of the Turin museum, were published and translated into Italian by Rossi in his "Papiri del Museo Egizio di Torino" (2 vols., Turin, 1887-î), and quite a number of fragments, often unidentified, were published in the catalogues of the various collections of Coptic manuscripts, principally in the catalogue of the Borgian collection by Zoega ("Catalogus codicum copticorum manuscriptorum", etc., Rome, 1810; Latin translations generally accompany the texts). Among the Sahidic versions of Greek writings of this class and period we must mention, in view of their importance, first a fragment of the *Agchyrotos* of St. Epiphanius (J. Leipoldt, "Epiphanius" von Salamis 'Ankoratus', in *Säidischer Uebersetzung* in "Berichte d. philo-hist. Klasse d. Gesellsch. d. Wiss. zu Leipzig", 1902); secondly, several fragments of the lost Festal Letters of St. Athanasius (C. Schmidt, "Der Osterbrief des Athanasius vom Jahre 367" in "Nachrichte d. K. Gesellsch. d. Wiss. zu Göttingen, Philol.-Hist. Kl. 1898; "Ein Neues Fragment des Osterbriefs des Athanasius vom Jahre 367", Göttingen, 1901; O. v. Lemm, "Zwei coptische Fragmente aus den Festbriefen des heiligen Athanasius" in "Recueil

des travaux rédigés en mémoire du jubilé scientifique de M. Daniel Chwolson", Berlin, 1899).

Post-Chalcedon Fathers.-- Only a few of these had the honor of a place in Coptic literature. The separation of the Church of Egypt from the Catholic world was complete after the deposition of her patriarch Dioscursus (451), and, in spite of the efforts of the Byzantine Court to bring back Egypt to unity by forcing orthodox pontiffs on her and by other means of coercion, the native Egyptians stubbornly refused their allegiance to the "intruders", and from that time on would have nothing to do with the Greek world, the very name of which became an abomination to them. The chief exception was in favour of the works of Severus, the expelled Monophysite Patriarch of Antioch, who had taken refuge and died in Egypt. We have a complete encomium of his on St. Michael, in Bohairic, published by E. A. Wallis Budge ("St. Michael the Archangel: Three Encomiums", etc., London, 1894), several fragments of homilies in Sahidic, and a letter in Bohairic to the Deaconess Anastasia (cf. Wright, "Catalogue of Syriac manuscripts in the British Museum", No. DCCCCL, 10). We may also mention here a panegyric of St. George, Martyr, by Theodosius, Monophysite Bishop of Jerusalem (d. after 453), published and translated into English by E. A. Wallis Budge, "The Martyrdom and Miracles of St. George of Cappadocia" (Oriental Text Series, I, London, 1888). The constant political agitation in which the successors of Dioscursus were involved accounts probably for the almost complete absence of their works from Coptic literature in general and in particular from this section. The only homilies or sermons we can record are, first, a sermon on the Assumption of the Virgin (already mentioned in the Apocrypha) and an encomium on St. Michael by Theodosius (the latter published by Budge, "Three Encomiums", mentioned above), both in Bohairic and probably spurious; also a Sahidic fragment of a discourse pronounced by the same on the 11th of Thoth; secondly a sermon on the Marriage at Cana, by Benjamin, in Bohairic; thirdly, the first sermon of Mark II on Christ's burial, also in Bohairic. Rarer still are the sermons or homilies of other bishops of Egypt. The only two names worthy of mention are those of John, Bishop of Parallou (Burlos), and Rufus of Shôtep, both of unknown date; of the former we have one short Sahidic fragment of a discourse on "St. Michael and the blasphematory books of the heretics that are read in the orthodox churches"; of the latter, several important fragments of homilies on the Gospels of St. Matthew and St. Luke, also in Sahidic. (See MARTYRS; MONASTICISM.)

Church Discipline. Among the various early collections of Apostolic precepts and church regulations which the Copts incorporated from the Greek into their native literature, we shall mention:--

(1) The Didache. -- It is true that up to the present this document is not known to be extant in Coptic except in so far as chapters iv-xiv of the Apostolic Church ordin-

ance (see below) are but a paraphrase of the first four chapters of the Didache as revealed to us by Bryennios. Towards the end of the last century, however, the first part of the Didache (chapters i-x, the so-called "Duæ Viæ") was discovered embedded in Shenûte's Arabic life published by Amélineau (*Monuments pour servir à l'histoire de l'Égypte chrétienne aux IV^e et V^e siècles. Vie de Schnoudi*", pp. 289 sqq., in *Mémoires publiés par les membres de la Mission archéologique française au Caire*", IV, Paris, 1888); and although that insertion is in Arabic, like the rest of the Life, its grammar is so thoroughly Coptic that there can be no doubt that it, also, was translated from a Coptic original. For further details see Iselin and Heusler, who were first to make the discovery ("Eine bisher unbekannte Version des ersten Teiles der Apostellehre" in *Texte u. Untersuchungen*", XIII, I, 1895), and U. Benigni, who, three years later, quite independently from Iselin and Heusler, had reached the same conclusions [*Didache Coptica: 'Duarum viarum' recensio Coptica monastica per arabicam versionem superstes*, 2d ed., Rome, 1899 (Reprint from "Bessarione", 1898)].

(2) The so-called Apostolic Church Ordinance, consisting of thirty canons, and extant both in Bohairic and Sahidic. The former text was published and translated into English by H. Tattam (*The Apostolic Constitutions or Canons of the Apostles*, London, 1848, pp. 1-30), and re-translated into Greek by P. Bötticher (later P. de Lagarde) in Chr. C. Bunsen's *"Analecta Ante-Nicæna"* (London, 1864, II, 451-460); the latter text was edited, without translation, both by P. de Lagarde, in his *"Ægyptiaca"* (Göttingen, 1883, pp. 239-248, Canons 0-30), and U. Bouriant, in *"Les Canons Apostoliques de Clément de Rome; traduction en dialecte théban d'après un manuscrit de la Bibliothèque du Patriarche Jacobite du Caire"* [in *"Recueil de travaux relatifs à la philologie et à l'archéologie égyptienne et assyrienne"*, V (1884), pp. 202-206].

(3) The Egyptian Church Ordinance, consisting of thirty-two canons and extant, likewise, both in Bohairic and in Sahidic. The Bohairic was published and translated into English by H. Tattam (op. cit., pp. 31-î), and re-translated into Greek by P. Bötticher (in Bunsen's *"Analecta"*, pp. 461-477). The Sahidic was published by de Lagarde, *"Ægyptiaca"* (pp. 248-266, can. 31-62) and Bouriant (op. et loc. cit., pp. 206-216). A translation into German by G. Steindorff, from the edition of de Lagarde, is found in Achelis, *"Die Kanones Hippolyti"* (Leipzig, 1891, in *"Texte u. Untersuchungen"*, VI, 4 pp. 39 sqq.).

(4) An epitomized recension of sections 1-46 of the Eighth Book of the Apostolic Constitutions; also both in Bohairic (published and translated into English by H. Tattam, op. cit., pp. 93-172) and in Sahidic (published by de Lagarde, *"Ægyptiaca"*, pp. 226-291, canons 68-73, and Bouriant, op. cit., VI, pp. 97-109; examined and translated into German from the Lagarde edition, by Leipoldt, *"Säidische Auszüge"*, etc., in *"Texte u. Untersuchungen"*, new series, I, b, Leipzig, 1894). According to Leipoldt (op. cit.,

pp. 6-9), this abstract, in which the liturgical sections are either curtailed or entirely omitted has much in common with the "Constitutiones per Hippolytum" not only in the choice of the selection, as already shown by Achelis, but also in point of style; the Coptic document is beyond doubt of Egyptian origin. Besides the above Bohairic and Sahidic texts, there is a fragment (de Lagarde, can 72-78, 24) of another Sahidic text which, according to Leipoldt (who first published it and translated it into German, *op. cit.*), belongs to an older recension. The text published by de Lagarde and Bouriant is derived from an older recension, with corrections from the Greek Apostolic Constitutions as they were when the "Constitutiones per Hippolytum" were taken from them. On this theory of Leipoldt's, however, see Funk, "Das achte Buch der apostolischen Konstitutionen in der Koptischen Ueberlieferung" in "Theologische Quartalschrift", 1904, pp. 429-447).

The above three documents, (2), (3), (4) form one collection of 78 canons, under the following title: "These are the canons of Our Holy Fathers the Apostles of Our Lord Jesus Christ, which they established in the Churches". As a whole they are known, since de Lagarde's edition, as "Canones Ecclesiastici". The Bohairic manuscript (Berlin, or 4° 519) used by Tattum was translated, and the Sahidic one (library of the Jacobite Coptic patriarch) used by Bouriant was copied on the manuscript (British Museum or. 1320 dated A.D. 1006) reproduced by de Lagarde. Bouriant's edition is faulty. A complete edition of the Canones Ecclesiastici and Canons of the Apostles (see below), with the Ethiopic and Arabic texts and an English translation, is due to G. Homer (The Statutes of the Apostles or Canones Ecclesiastici, London, 1904). The author gives variant readings from several manuscripts for each version, and in a long introduction he examines the mutual relations of the various texts.

(5) Canones Apostolorum. -- A recension of Book VIII, 47, of the Apostolic Constitutions entitled: "The Canons of the Church which the Apostles gave through Clémès [Clement]". These canons are usually called Canones Apostolorum, with de Lagarde, by whom a Sahidic recension was first published (*op. cit.*, pp. 201-238; published also by Bouriant, *op. cit.*, VI, pp. 109-115). This recension contains 71 canons. A Bohairic recension of 85 canons, as in the Greek, was published and translated in English by H. Tattam (*op. cit.*, pp. 173-214); published also by de Lagarde along with the Sahidic text (*op. et loc. cit.*).

(6) Canones Hippolyti. -- A Sahidic fragment of the Paris collection (B. N. Copte 129 11 ff. 71-78) contains a series of canons under the title of "Canons of the Church which Hippolytus, Bishop of Rome, wrote". So far as the present writer knows, these canons have not yet been the object of a critical study; nor does it seem that they were ever published.

(7) The Canons of Athanasius, or rather the Coptic writing which underlies the Copto-Arabic collection of 107 canons bearing that name, are undoubtedly one of the oldest collections of Church regulations and very likely rightly attributed by the tradition to St. Athanasius of Alexandria, and, in that case, perhaps to be identified with the "Commandments of Christ" which the Chronicle of John of Niki attributes to this Father of the Church and the "Canons of Apa Athanasius" mentioned in the catalogue of a library of a Theban monastery which catalogue dates from about A.D. 600. The Sahidic text, unfortunately not complete, was published and translated (along with the Arabic text by Riedel) by Crum from a British Manuscript papyrus (sixth or seventh century) and two fragments of a manuscript on parchment (tenth century) preserved in the Borgan collection (Naples) and the Rainer collection (Vienna), in Riedel and Crum's "Canons of Athanasius of Alexandria", London, 1904. To this work we are indebted for the information contained in this brief notice. Although this interesting document is a pure Egyptian production, there is but little doubt that it was originally written in Greek.

(8) The Canons of St. Basil, preserved in a Turin papyrus broken into many hopelessly disconnected fragments, which Fr. Rossi published and translated although he could not determine to what writing they belonged (*I Papiri Copti del Museo Egizio di Torino*, II, fasc. IV). Of late those fragments were identified by Crum, who, despairing of establishing their original order, arranged them for convenience according to the Arabic recension published by Riedel (*Die Kirchenrechtsquellen des Patriarchats Alexandrien*, Leipzig, 1900, p. 231) and translated them into English ["Coptic version of the Canons of St. Basil" in "*Proceedings of the Society of Biblical Archaeology*", XXVI (1904), pp. 81-1].

History. Among the historical productions of Coptic literature, none of which can be highly recommended, we shall mention:--

(1) An Ecclesiastical History in twelve books, extending from a period we cannot determine, to the re-establishment of Timothy Ælurus as patriarch of Egypt. If we suppose that in this, as often in similar works, the author continued his narrative until his own times it would seem almost certain that he wrote it in Greek. At all events the prominence given to the affairs of the Church of Alexandria shows him Egyptian, as from his tone it is clear that he professed Monophysitism. Like so many other Coptic literary productions, the Ecclesiastical History reached us in the shape of fragments only. They are all in Sahidic, and one belonged to two different copies of the same work, or perhaps to two copies of two works very similar in scope and method. Both copies (or works) contain a number of passages translated (more frequently paraphrased, sometimes abridged) from the "Ecclesiastical History" of Eusebius. On the other side the Coptic work was heavily laid under contribution by Severus of Ashmun-

ein in his "History of the Patriarchs of Alexandria". Some of the fragments were published by Zoega in "Catalogus Codicum Copticorum", with a Latin translation, some by O. v. Lemm, "Koptische Fragmente zur Patriarchengeschichte Alexandriens" ("Mémoires de l'Acad. Imp. de S. Pétersb.", VIIe sér., XXXVI, 11, St. Petersburg, 1888; and "Bulletin de l'Acad. Imp. de S. Pétersb.", 1896, IV, p. 237, in both cases with German translation; the others by Crum, "Eusebius and Coptic Church Histories" in "Proceedings of the Soc. of Bibl. Archæology", XXIV, 1902, with English translation).

(2) The Acts and Canons of the Council of Nicæa, preserved in Sahidic fragments in the Turin and Borgian collections. They have been published, translated into French, and discussed at length by Revillout, "Le Concile de Nicée d'après les textes coptes et les diverses collections canoniques, I, textes, Traductions et dissertation critique", Paris 1881 (*Journal Asiatique*, 1873-1875); vol. II, "Dissertation critique (Suite et fin)", Paris 1899. The author believes in the genuineness of this collection; see, however, the two excellent reviews of Vol. II by Batiffol (*Revue de l'histoire des religions*, XII, 1900, pp. 248-252) and Duchesne (*Bulletin critique*, 1900, I, pp. 330-335).

(3) The Acts of the Council of Ephesus, of which we have considerable fragments of a Sahidic text in the Borgian and Paris collections. The fragments of the former collection were published by Zoega, "Catalogus", pp. 272-280, with a Latin translation; those of the latter collection by Bouriant, "Actes du concile d'Ephèse: texte Copte publié et traduit" ("Mémoires publiés par la Mission archéol. française au Caire", VIII, Paris, 181). The Paris fragments have also been translated into German and thoroughly discussed by Kraatz, with the help of C. Schmidt, "Koptische Acten zum Ephesinischer Konzil vom Jahre 431" (*Texte u. Untersuchungen*, new series, XI, 2, Leipzig, 1904). Kraatz thinks that this recension is the work of an Egyptian and, in substance, a good representative of the Greek documents already known. These fragments contain, however, additional information not entirely devoid of historical value.

(4) The so-called "Memoirs of Dioscursus", a Monophysitical counterpart of the Acts of the Council of Chalcedon. It is in the shape of a Bohairic panegyric of Macarius, Bishop of Tkhôu, delivered by Dioscursus during his exile at Gangræ in presence of the Egyptian delegates who had come to announce to him the death of Macarius. The publication of that curious document with French translation and commentary was begun by Revillout under the title of "Récits de Dioscore exilé à Gangres sur le concile de Chalcédoine" (*Revue Egyptologique*, I, pp. 187-189, and II, pp. 21-25, Paris, 1880, 1882) published and translated into French by E. Amélineau, "Monuments pour servir" (*Mémoires publiés*, etc., IV, Paris, 1888), pp. 1-164. As against Revillout, Amélineau asserts the spuriousness of these Acts. Almost immediately after the latter's publication, Krall published and translated some Sahidic fragments which exhibited a better recension of the same document, and show that in this, as in other cases, the Bohairic text

was translated from the Sahidic. In disagreement with Amélineau, Krall thinks it more probable that the *Memoirs of Dioscursus* were originally written in Greek, and sees no reason to doubt their genuineness ("Koptische Beiträge zur ägyptischen Kirchengeschichte" in "Mittheilungen aus der Sammlung der Papyrus Erzherzog Rainer", IV, p. 67, Vienna, 1888). In 1903 Crum published copies by A. des Rivières of ten leaves of a papyrus codex, once part of the Harris collection, now lost. Three of those leaves belonged to the panegyric of Macarius, while the others were part of a life of Dioscursus, of which a Syriac recension was published by Nau ("Histoire de Dioscore, patriarche d'Alexandrie écrite par son disciple Théophiste" in "Journal Asiatique", Série X, t. I, pp. 5-108, 214-310). Nau thinks that the Syriac and Coptic recensions of the life are independent of each other, which points to a Greek original for that document, and probably also for the panegyric (Notes sur quelques fragments coptes relatifs à Dioscore, *ibid.*, t. II, pp. 181-4).

(5) A correspondence in Bohairic between Peter Mongus, Patriarch of Alexandria, and Acacius, Patriarch of Constantinople. It includes the *Henoticon*, which Zeno issued at the suggestion of Acacius. It was published in a French translation by E. Revillout, "Le premier schisme de Constantinople" [*Revue des questions historiques*, XXIII (1877), Paris, pp. 83-134], and by Amélineau, "Lettres de Pierre Monge et d'Acace" (*Monuments pour servir, etc.; Mémoires publiés par les Membres de la Mission Archéologique française au Caire*, IV, pp. 196-228). This correspondence is obviously spurious.

(6) On another document possibly of greater historical interest, but too short or too badly preserved to be of any practical use, see Crum, "A Coptic Palimpsest" in "Proceed. of the Soc. of Bibl. Arch.", XIX (1897), pp. 310-22 (Justinian times; name of Zoilus occurs). Two Sahidic fragments of the lives of a certain Samuel, superior of a monastery, and Patriarch Benjamin, both of whom lived at the time of the Arabic conquest, furnished E. Amélineau with the basis of a new solution of the problem as to the identity of the Makaukas ["Fragments coptes pour servir à l'hist. de la conquête de l'Égypte par les Arabes" in "Journal Asiatique" VIIIe Série., t. XII, pp. 361-410. Cf. A. J. Butler, "On the Identity of Al Mukaukis" in "Proceedings Soc. of Bibl. Arch.", XXIII (1901), pp. 275 sqq.].

There is also quite a number of Sahidic fragments of lives or encomiums of patriarchs and bishops, et. which either have not yet been examined or have proved to contain none of the historical information often to be found in documents of their nature.

Liturgy. The Coptic liturgy was derived from the ancient Alexandrine liturgy by the simple way of translation. The fact that in all the principal Coptic liturgical books most of the parts recited by the deacon (*Diakonika*), the responses by the people, and

several prayers by the priest appear in Greek, even to this day, bears sufficient witness to the correctness of this statement. The change of language did not take place everywhere at the same time. At any rate it was gradual. The vernacular Coptic appeared first in the side column, or on the opposite page, as an explanation of the Greek text, which was no longer sufficiently intelligible to the people. In the course of time the Greek disappeared entirely, with exception of the Diakonika and corresponding responses which, on account of their shortness and frequent recurrence, continued to be familiar to the people. The most ancient relics of Coptic liturgy are all in Sahidic dialect, a fact which by itself, perhaps, would not be a sufficient reason for asserting that in the north of Egypt Bohairic was not used as a liturgical language as early as the Sahidic in Upper Egypt; although, for reasons which time and space do not allow us to discuss, this seems quite probable. For several centuries Bohairic, which was the liturgical language adopted by the Jacobite patriarchs when they gave up Greek, has been the sole sacred idiom all over Egypt. The substitution of the Northern dialect for the Southern one probably took place by degrees and was not completed until about the fourteenth century, when Sahidic ceased to be generally understood by the faithful. It was not a mere substitution of language, but one of recension as well, as evidenced by the remains of the Sahidic liturgy.

The literature of the Coptic Liturgy, as now in force, comprises the following books:--

Euchologium (Arabic, *Khulâgi*). -- Like the *Euchologion to mega* of the Greeks, it is a combination of the *Euchologion* with the *leitourgikon*. It includes, therefore, not only the Liturgy proper, or Mass, with the Diaconicum (which contains the part of the deacon and the responses of the people), but also the various liturgical matter pertaining to the Pontifical and Ritual. It contains in addition the services of the morning and of the evening incense, performed at Vespers, Matins, and Prime. The Mass consists of (1) the Ordo Communis (Prothesis and Mass of the catechumens), which never varies; (2) the Mass of the Faithful or Anaphora, of which there are three varieties: St. Basil's for ordinary days; St. Cyril's (a recension of the Alexandrine Anaphora of St. Mark) for the month of the Choiac (Advent) and Lent, and St. Gregory Nazianzen's for feast days.

The Euchologium was edited by Raphael Tuki in three books under both Coptic and Arabic titles, which we translate as follows: (1) "Book of the three Anaphoras, namely, those of St. Basil, St. Gregory the Theologian, and St. Cyril, with other holy prayers", Rome, Propaganda, 1736, pp. 282, 389 -- Contents: Evening Incense and Morning Incense with *proprium temporis* thereto; Mass, including the three Anaphoras; Prayers before and After Meals, Blessing of the Water, and the Ordo Renovacionis Calicis. (2) "Book containing all the holy prayers", *ibid*, 1761-2, 2 vols. -- Contents: I,

Ordinations, Blessing of Religious Habit, Enthronization of Bishops, Consecration of *myron* (Holy Chrism) and Churches (676 pages): II, Consecration of Altars and Sacred Vessels, Blessing of Church Vestments, Sacred Pictures, Relics, Consecration of Churches (if rebuilt) and Baptismal Fonts; Blessing of the Boards used for the *Heikel* (Holy of holies); Reconciliation of the same if replaced because decayed or if desecrated; Special Services for the Epiphany, Maundy Thursday, Pentecost, the Feast of St. Peter and St. Paul; Reconciliation of persons guilty of apostasy and other special crimes; Blessing of the Oil, water, and Loaf for one bitten by a mad dog, etc., etc. (515 pages). (3) "Book of the service of the Holy Mysteries, Funerals of the Dead, Canticles, and one month of the Katameros" (this last item, a reduction of the work of the same name described hereunder, is printed here for convenience). The three books just described are generally referred to as "Missale Copto-Arabice", Pontificale Copto-Arabice", and "Rituale Copto-Arabice", although these designations do not appear on the title pages nor elsewhere in the books. Neither does the name of the editor (Tuki) appear.

The Missale has been edited anew with a slightly different arrangement, both in Coptic and Arabic, under the title: "Euchologium of the Alexandrine Church", Cairo, Catholic Press of St. Mark, Era of the Martyrs 1614 (A.D. 1898). Another Egyptian edition (Jacobite?) of the Missale (Cairo, 1887) is mentioned by Brightman (Liturgies Eastern and Western, I, p. lxxvii), and a Jacobite "genuine" edition of the "Euchologium [complete?] from manuscript sources" (Cairo, 1902), by Crum (Realencyklopädie für protestantische Theologie, 3d edition, XII, p. 810). The Missale edited by Tuki does not differ from the oldest manuscript of the Vatican Library (thirteenth cent.), except that the names of Dioscursus, Severus of Antioch, and Jacobus Baradaeus have been expunged from the diptychs, and that of the pope added to them, the mention of Chalcedon introduced after that of Ephesus, and the *Filioque* inserted in the Creed. As for his Pontificale and Ritual, they certainly contain everything that is essential and common to the majority of good codices. Naturally the latter vary both in the arrangement and the selection of prayers according to their origin and date of compilation. Tuki's Ordo Communis, and St. Basil's Anaphora, with rubrics in Latin only, were reprinted by J. A. Assemani, "Missale Alexandrinum", pars II, pp. 1-90, in "Codex Liturgicus", VII (Rome, 1754). John, Marquess of Bute, published also an edition of the Morning Incense, Ordo Communis (from Tuki's text with some additions), and St. Basil's Anaphora (from Tuki's?): "The Coptic Morning Service for the Lord's Day" (London, 1882), pp. 35 sqq. (See Brightman, op. et loc. cit.)

There has been no complete translation. The Ordo Communis and the three Anaphoras have been translated into (1) Latin, (a) from an Arabic (Vienna?) manuscript by Victor Scialach, "Liturgicæ Basilii Magni, Gregorii Theologi, Cyrilli Alexandrini ex Arabico conversæ" (Vienna, 1604 -- reprinted in "Magna Bibliotheca Patrum". Paris,

1654, t. VI); (b) from a Paris Coptic manuscript by Renaudot, "Liturgiarum Orientalium Collectio" (2 vols., Paris; Frankfurt, 1847), I; (2) English, (a) from "an old manuscript", by Malan, "Original Documents of the Coptic Church; V, the Divine xxx" (London, 1875); (b) from a manuscript now in the library of Lord Crawford, by Rodwell, "The Liturgies of St. Basil, St. Gregory, and St. Cyril from a Coptic manuscript of the thirteenth century" (London, 1870). The Ordo Communis and St. Basil's Anaphora in Latin, by Assemani, from Tuki's Arabic (op. et loc. cit.); in English from Renaudot's Latin by Neal, "History of the Eastern Church" (London, 1850), introduction, pp. 381 sqq., 532 sqq. The Ordo Communis and St. Cyril's Anaphora (from Bodelian manuscripts of the thirteenth and fourteenth centuries), by Brightman (op. cit., pp. 144-188). Morning Incense, Ordo Communis, and St. Basil's Anaphora, by John, Marquess of Bute (op. cit.).

Horarium (Arab. *Agbiah*, *Egbieh*), corresponding to our Breviary, edited by R. Tiko under the following title (Coptic and Arabic): "A Book of the seven prayers of the day and of the night" (Rome, 1750), generally referred to as "Diurnum Alexandrinum Copto-Arabicum" [Morning (Prime), Terce, Sext, None, Evening (Vespers), Sleep (Complin), Prayer of the veil (extra-canonical?), Midnight (Matins)]. This book is intended for private recitation and gives but an imperfect idea of the office as performed in the monasteries or even in the churches where a numerous clergy is in attendance.

Katameros (Gr. *Kata meros*, Arab. *Kutmârus*) contains the portions of the Psalms, Acts, Catholic Epistles, St. Paul's Epistles, and the Gospels which are read at the canonical hours and Mass. It is divided into three volumes: (I) from Thoth to Mechir; (II) from the beginning of Lent to Pentecost inclusive; (III) from Pachon to the Epagomene days which the Copts called the "little month" or in Arabic, the "forgotten days". The Katameros for the two weeks from Palm Sunday to Easter Sunday has been published under the Coptic and Arabic title "Book of the Holy Pasch according to the rite of the Alexandrine Church" (Catholic Press of St. Mark, Cairo, 1899). This portion of the Katameros contains numerous lessons from the Old Testament (see VERSIONS OF THE BIBLE). Its arrangement is attributed to Gabriel Ibn Tureik, seventieth patriarch (d. 1145). Mai (*Scriptorum veterum nova collectio*, IV, Rome, 1831, pp. 15-34) gives a table of the Gospels for feasts and fasts and for Saturdays, Sundays, Wednesdays, and Fridays of the year. Malan (*Original Documents of the Coptic Church*, IV, London, 1874) gives the Sunday Gospels and versicles for Vespers, Matins, and Mass for the year. De Lagarde tabulated all the lessons and Psalms from Athyr to Mechir, and from Epiphi to the "little month", also those for Lent and the Ninevites' fast, for the Sundays of Eastertide, and for the principal feasts (*Abhandlungen d. histor-philol. Klasse d. Kgl. Gesellsch. d. Wiss. zu Göttingen*, XXIV, 1879).

The Psalmodia. -- This is a collection of poetical compositions in honour of Our Lord and the Blessed Virgin, the saints and the angels, sung during the various services, especially at Vespers, Matins, and Prime. They form two distinct systems, one of which, called *Theotokia*, is most elaborate, and, as its name indicates, deals exclusively with the Mother of God. The other, the *Doxologia*, extends to all the saints. A compendium of this book has been published by Tuki, under the Coptic and Arabic title "Book of the Theotokia and Katataxis of the month of Choiac" (Rome, 1746), 344 pp. The book is the subject of an interesting study by Mallon, "Les Théotokies ou office de la Sainte Vierge dans le rite copte" in "Revue de l'Orient Chrétien" (1904), IX, pp. 17-31.

The Antiphonarium (Arab. *Andifnâr=i, Difnar=i*), a collection of anthems in honour of the saints. The composition or the arrangement of this book is attributed to Gabriel Ibn Tureik. (See MONASTICISM.)

Of the Sahidic recension (or recensions) of the Egyptian Liturgy we have fragments from the various books, which books seem to have been the same as in the Bohairic recension. The most interesting of those relics belong to the Liturgy proper or Mass, to the Anaphoras principally. Of these the Churches of Upper Egypt apparently had a large number, for we have portions of those of St. Cyril, St. Gregory, St. Matthew, St. James, St. John of Bosra, and of several others not yet identified. Some have been published and translated by Giorgi (Lat. tr.), Krall (Ger. tr.), and Hyvernât (Lat. tr. only). For the titles of the publications and further information on nature of fragments published, see Brightman, "Liturgies Eastern and Western" (Oxford, 1896), I, pp. lxxviii-lxix. There are also important relics of the Diaconicum, probably enough to reconstruct that book entirely (one fragment published by Giorgi, "Fragmentum Evangelii Sti. Joannis" etc., Rome, 1789, a very large number of fragments of the Katameros, lectionaries, and not a few hymns (some of them popular rather than liturgical) which of late have aroused the interests of students of Coptic poetry [see Junker, "Koptische Poesie des 10. Jahrhunderts" in "Orient Christianus" (1906), VI, pp. 319-410; with literature on the subject complete and up-to-date]. The fragments in British Museum and Leiden Collections have been published in full in the catalogues of Crum (pp. 144-161, 969-978) and Pleyte-Boeser. A complete edition and translation of the Sahidic liturgy is being prepared (1909) by the writer of this article for the "Corpus Scriptorum Christianorum Orientalium".

VII. COPTO-ARABIC LITERATURE

Long before Coptic became extinct as a spoken idiom it had ceased to be a literary language. The change seems to have taken place about the tenth century. The old Coptic literature continued for some centuries to be copied for the benefit of a few but at the time the work of translating it into Arabic was being carried on on a large scale and must have been completed early in the thirteenth century, at the latest. John of

Semenûd, who about 1240 composed a Coptic lexicon of the liturgical language, is highly praised by one of his successors, Abû Ishâq Ibn al-'Assâl, for having realized the uselessness of composing, as used to be done before, dictionaries of the whole literature. This remark would hardly be intelligible if the translating of the non-liturgical part of Coptic literature had not then been completed, much less if it had not yet begun. Those early translations include not only the works already reviewed in the preceding section of this article, but a good many more now lost in the Coptic version or translated anew from the Greek of the Syriac originals. Among the latter are quite a number of Nestorian writers, expurgated when necessary. But the glory of the Copto-Arabic literature lies in its original writings. We have already mentioned (see above, V.) the three historians of the Coptic Church, Severus of Ashmûnein, Eutychius, and al-Makin. The authors of the new Canons are: Christodulos, sixty-sixth patriarch, 1047-77; Cyrillus II, sixty-seventh patriarch, 1078-î; Macarius, sixty-ninth patriarch, 1103-29; Gabriel Ibn Tureik, seventieth patriarch, 1131-45; Cyrillus III Ibn Laqlaq, seventy-fifth patriarch, 1235-43, and Michael, Metropolitan of Damietta, twelfth century. -- Collectors of Canons: Abû Solh Ibn Bânâ, eleventh cent., Macarius, fourteenth cent. (if not to be identified with the Simeon Ibn Maqârâ, mentioned by Abû 'l-Barakât). -- Compilers of Nomo-Canons: Michael of Damietta, twelfth cent., Abû 'l-Fadâil Ibn al'Assâl, thirteenth cent., etc. (see Riedel, "Die Kirchenrechtsquellen des Patriarchats Alexandrien, Leipzig, 1900). -- Hagiographers are represented by Peter, Bishop of Melig, twelfth and thirteenth cent., credited by Abû 'l-Barakât with the composition of the Sinaksâri or martyrology, and Michael, also Bishop of Melig, fifteenth cent., to whom the same book is also attributed (probably because he revised and completed the work of his predecessor). -- Severus of Ashmûnein, Peter of Melig, Abû Ishâq Ibn al'Assâl and his brother Abû 'l-Fadâil Ibn al'Assâl, are the chief representatives of theology, as Severus of Ashmûnein and Abû 'l-Faraq Ibn al'Assâl, thirteenth cent., are of Scriptural studies, and John Abu Zakariah Ibn Saba and Gabriel V, eighty-eighth patriarch (fifteenth century), of liturgy; John's treatise "Gauharat an-nafisah" (Precious Gem) has been published (Cairo, 1902). -- For the grammarians and lexicographers, several of whom have already been mentioned in one connexion or another, see the excellent study of A. Mallen, S.J., "Une école de savants Egyptiens au moyen âge" in "Mélanges de la faculté Orientale de l'université Saint Joseph", I, pp. 109-131, II, pp. 213-264. There remains to mention the great ecclesiastical encyclopedia of the Coptic Church, the "Lamp of Darkness and Illumination of the Church Service" of Shams al-Ri'âsah Abû 'l-Barakât Ibn Kibr (1273-1363). This stupendous work sums up, so to speak, the four centuries of literary activity we have just reviewed. (See Reidel, *op. cit.*, pp. 15-80).

I. RECLUS, *Nouvelle géographie universelle* (Paris, 1885), X; tr. of same, *The Earth and Its Inhabitants*; BAEDEKER, *Egypt and Sudan* (Leipzig, 1908); CLOT-BEY, *Aperçu général sur l'Égypte* (2 vols., Paris, 1840); BRUCE, *Travels to Discover the Source of the Nile in the Years 1768-1773* (7 vols., London and Edinburgh, 1813); BURCKHARDT, *Travels in Nubia* (London, 1819); CAILLIAUD, *Voyage à Méroé . . . 1819-1822* (Paris, 1826-28); DROVETTI, *Voyage à l'Oasis de Dakel* (Paris, 1821); CAMPOLLION, *Lettres écrites d'Égypte et de Nubie* (Paris, 1833); RUSSEGGER, *Reisen in Europa, Asien und Afrika, 1835 bis 1831* (Stuttgart, 1841), II; LEPSIUS, *Discoveries in Egypt, Ethiopia, and the Peninsula of Sinai in the Years 1842-1845* (London, 1852; 2d ed., 1853); Id., tr. HORNER, *Letters from Egypt, Ethiopia and Sinai* (London, 1853); BRUGSCH, *Die Geographie des alten Aegypten* (Leipzig, 1857); BROWN, *The Fayum and Lake Moeris* (London, 181); LYONS, *The Physiography of the River Nile and its Basin* (London, 1906); EBERS, *Egypt, Descriptive, Historical, Picturesque* (London, 1881).

Ia. GINZEL, *Handbuch des mathematischen und technischen Chronologie: I, Zeitrechnung der Babylonier, Aegypter, Mohammedaner, Perser, etc* (Leipzig, 1906) -- pp. 234 sqq. contains a complete bibliography of Egyptian chronology -- LEHMAN, *Zwei Hauptprobleme der altorientalischen Chronologie* (Berlin, 1898); MEYER, *Aegyptische Chronologie* (publication of the Berl. Akad., 1904); NIEBUHR, *Die Chronologie der Geschichte Israels, Aegyptens, Babyloniers und Assyriens* (Leipzig, 1896); also chapters in works cited in bibliography at the end of the next section, especially in BREASTED, *Ancient Records*, and PETRIE, *Illustrated History of Egypt*, I.

Iib. MASPÀRO, *Histoire ancienne des peuples de l'Orient classique* (3 vols., Paris, 1897-9); also McCLURE, tr. of same, ed. SAYCE, *The Dawn of Civilization* (Egypt, Chalæe), and *The Struggle of the Nations* (Egypt, Syria, and Assyria) (3rd ed., 2 vols., London, 1897); MASPÀRO, *Histoire ancienne des peuples de l'Orient* (7th ed., Paris, 1908); BREASTED, *The Ancient Records of Egypt* (the Egypt historical documents in English, complete from the earliest times to the Persian Conquest -- 5 vols., Chicago, 1906-7); BREASTED, *A History of Egypt* (New York, 1905); Id., *A History of the Ancient Egyptians* (New York, 1908); MEYER, *Geschichte des alten Aegyptens* (Berlin, 1887); Wiedeman, *Aegyptische Geschichte* (Gotha, 1884-1885); BISSING, *Geschichte Aegyptens* (Berlin, 1904); BUDGE, *History of Egypt* (7 vols., London); PETRIE (ed.), *Illustrated History of Egypt I-III, From the Earliest Times to the End of the XXXth Dynasty* (3 vols., London, 1887--); MAHAFFY, *History of Egypt under the Ptolemaic Dynasty* (London, 1899); MILNE, *History of Egypt under Roman Rule* (London, 1898); LANE-POOLE, *History of Egypt in the Middle Ages* (London, 1901) -- these three forming vols. IV-VI in Petrie's series.

EGYPT AND THE BIBLE -- VIGOUROUX, *La Bible et les découvertes modernes* (4 vols., Paris, 1884 --); MEYER, ed. *Die Israeliten und ihre Nachbarstämme*; STEINDORFF in *Recent Research in Bible Lands*, ed. HILPRICHT (Philadelphia, 1906); GRIFFITH in *Authority and Archæology*, ed. HOGARTH (New York, 1899); MÜLLER, *Asien und Europa nach altägyptischen Denkmälern* (Leipzig, 1893); SPIEGELBERG, *Aegyptische Randglossen zum Alten Testament* (Strasburg, 1904); Idem, *Aufenthalt Israels in Aegypten* (Strasburg, 1904).

IV. DEVÂRIA, *Catalogue des manuscrits égyptiens etc. qui sont conservés au musée égyptien de Louvre* (Paris, 1872); MASPÂRO, *Les inscriptions des pyramides de saqqarah* (Paris, 1894 -- reprint from *Recueil de travaux, etc.*, vols. III-V, VII-XII, XIV); NAVILLE, *Das ägyptische Todtenbuch der 18-20 Dynastie* (Berlin, 1886); BUDGE, *The Book of the Dead* (3 vols., London, 1898; London and Chicago, 1901); LEPSIUS, *Das Todtenbuch der Aegypter nach dem hieroglyphischen Papyrus in Turin* (Leipzig, 1842); LEFÂBURE, *Hypogées royales in Mém de la Mission archéolog. française*, II-III, 1-2; JÂQUIER, *Livre de ce qu'il a dans l'Hades* (Paris, 1894); ERMAN, *A Handbook of Egyptian Religion*, tr. by GRIFFITH (London, 1907); STEINDORF, *The Religion of the Ancient Egyptians* (New York and London, 1905); WIEDEMAN, *Die Religion des alten Aegypter* (Munster, 1890) -- also to be had in English; MASPÂRO, *Etudes de Mythologie et d'archéologie égyptiennes* (3 vols., Paris, 1893-98); LANGER, *Die Aegypter in de la SAUSSAYE, Lehrbuch der Religionsgeschichte* (Tubingen, 1905), I, 172-274; ERMAN, tr. TIRARD. *Life in Ancient Egypt* (London, 1895 -- chapter xv is a general sketch of Egyptian literature proper); MASPÂRO, *Les contes populaires de l'Egypte ancienne* (3rd ed., Paris, 1905); GRIFFITH, *Stories of the High Priests of Memphis* (London, 1900); PETRIE, *Egyptian Tales* (London -- after GRIFFITH and MASPÂRO).

V. KRUGER in *Grande Encycl.*, s. v. *Eglise copte*; CRUM in *Realencykl. für prot. Theol. u. Kirche*, s. v. *Koptische Kirke* (concise and complete, generally accurate); FULLER in *Dict. of Christ. H. HYVERNAT

Egyptian Church Ordinance

Egyptian Church Ordinance

The Egyptian Church Ordinance is an early Christian collection of thirty-one canons regulating ordinations, the liturgy, and other main features of church life. It is called Egyptian because it first became known to the Western world in languages connected with Egypt. In 1677 the Dominican Wansleben first gave a brief account of these canons, which were found in the "Synodos", or what may be called the Ethiopic "Corpus Juris". In 1691 Ludolf published a fragment of this Ethiopic collection and added a Latin translation. In 1895 a further fragment, i. e. to the end of the ordination prayer for deacons, was published in German by Franz Xaver von Funk. In 1848 H. Tattam published all the canons in Bohairic (Lower Egyptian) with English translation. In 1883 Lagarde published the same canons in Sahidic (Upper Egyptian) from an excellent manuscript of a.d. 1006. This text was translated into German by G. Steindorff and this translation was published by H. Achelis (Harnack. "Texte und

Untersuchungen", VI, 4). In 1900 E. Hauler discovered a very ancient Latin translation in a manuscript of the fifth or sixth century. This translation is of great value because it apparently is slavishly literal, and it contains the liturgical prayers, which are omitted in the Bohairic and Sahidic. The original text, though not yet found, was doubtlessly Greek.

The Egyptian Church Order is never found by itself, but is part of the Pseudo-Clementine Legal Hexa- or Octateuch in the form in which it was current in Egypt. In Hauler's Latin "Fragmenta Veronensia" (Leipzig, 1900) the order is: Didascalia, Apostolic Church Order, Egyptian Church Order, Book VIII of the Apost. Constit.; in the Syrian Octateuch, "The Testament of the Lord", Apostolic Church Order, "On Ordinations" (by Hippolytus), Book VIII of the Apostolic Constitutions, Apostolic Canons; in the Egyptian Heptateuch, Apostolic Church Order, Egyptian Church Order (or Ordinance), Book VIII Apost. Constit., Apostolic Canons. The Egyptian Church Order is one of a chain of parallel and interdependent documents, viz.

- (1) the Canons of Hippolytus,
- (2) the "Canones per Hippolytum",
- (3) "The Testament of the Lord",
- (4) Book VIII of Apost. Constit.

For some time a scholarly duel has been fought between two eminent men as to the relation between these documents. Document No. 3, "The Testament of the Lord" only came into consideration after its discovery and publication by Rahmani in 1899. H. Achelis strenuously maintained that the "Canones Hippolyti" are the oldest in the series and were written early in the third century; on it, according to him, the other documents depend, the Eighth Book of the Apostolic Constitutions being the latest development. Von Funk maintained the same order of documents as Achelis, only inverting their sequence, beginning with Book VIII of the Apostolic Constitutions, and ending with the "Canons of Hippolytus". Gradually, however, Funk's thesis seems to be winning almost universal acceptance, namely that Book VIII of the Apostolic Constitutions was written about 400, and the other documents are modifications and developments of the same, the Egyptian Church Order in particular having arisen in Monophysite Egyptian circles between the years 400 and 500.

J. P. ARENDZEN.

Freiherr von Eichendorff

Freiherr von Eichendorff

JOSEF KARL BENEDIKT, FREIHERR VON EICHENDORFF.

"The last champion of romanticism", b. 10 March, 1788, in the Upper-Silesian castle of Lubowitz, near Ratibor; d. at Neisse, 26 Nov., 1857. Till his thirteenth year he remained on the parental estate under a clerical tutor; then he was sent with his brother William to Breslau where he attended the Maria-Magdalenen gymnasium, at that time still Catholic. During those student years (1804) were written the first of Eichendorff's extant poems; no doubt his poetical talent had already been awakened in his romantic home. In the spring of 1805 he matriculated at the University of Halle. Here, under the influence of Professor Steffens, he became a follower of the Romantic School of poetry, and at the same time became acquainted with Calderon, some of whose plays were performed by the ducal company of Weimar in the neighbouring town of Lauchstädt. In later years he translated several *autos sacramentales* in truly poetical language. Eichendorff's development was even more strongly influenced by his sojourn in Heidelberg (1807), where the triumvirate of romanticism, Görres, Arnim, and Brentano, had, in the "Einsiedler Zeitung", taken the field against pedantry and philistinism. With the two last-named the young poet did not then cultivate a closer acquaintance -- he certainly did so in 1809 at Berlin -- but the lectures of the great Görres made a deep impression on him. Recommended by Count Loeben, Eichendorff's first poems were printed in Ast's periodical, among them the famous song "In einem kühlen Grunde". The first of his larger works, the novel "Ahnung und Gegenwart", was written partly at home, in Lubowitz, where he spent several years after the completion of his studies, partly in Vienna, where he had gone to qualify himself for the Austrian civil service; his friendly relations with Fr. Schlegel and his adopted son, the painter Veit, kept awake the poet's romantic enthusiasm.

In 1813, when Prussia and Austria were preparing for the War of Liberation, Eichendorff abandoned his poetry, his professional studies, and his preparation for the civil service, and joined the famous volunteers of Lützow at Breslau. Again, in 1815, when Napoleon had returned from Elba, he followed the call to arms; although he had just married (Oct., 1814) Luise von Larisch, and entered Paris with the conquerors. It was only in 1816 that the chivalric baron left the army and entered the Prussian civil service as a lawyer at Breslau. The next three years passed in quiet seclusion; their

principal literary production is the story "Das Marmorbild". He received his first appointment in 1820 on the Catholic board of education at Danzig; there he took a lively interest in the restoration of the Marienburg, a house of the Teutonic Order; later (1844) he wrote its history at the request of the Government. His tragedy "Der letzte Held von Marienburg" was suggested by this circumstance. At the same time appeared his most popular production, "Aus dem Leben eines Taugenichts". In the year 1831 he was called to Berlin as councillor in the ministry of public worship. In this high office he found many opportunities to be useful to the Church; but he also met with difficulties under a government which did not shrink from imprisoning the Archbishop of Cologne, Clemens August. When Eichendorff, who was a staunch Catholic, was asked to defend the measures of the Government in public, he asked for his dismissal, which, however, was not granted till 1844. The succeeding years were passed mostly in Berlin, where the poet was occupied more with literary and historical than with poetical work; after the death of his wife (1855) he lived with his family at Neisse. Two years later, having finished his swan-song, the epic "Lucius", he died.

What has established the fame of Eichendorff as a poet and has given him a place not only in literature, but also in the heart of the people, are his simple but heartfelt songs. Many of them have become *Volkslieder* (popular songs) in the truest sense of the word; almost all are fitted for singing owing to their spirit and their melodious language. There is hardly another German poet, who has found so many composers for his songs. The great lyrical talent which made Eichendorff the master of the short story ("Aus dem Leben eines Taugenichts", "Das Marmorbild", "Schloss Dürande"), was prejudicial to the novel "Ahnung und Gegenwart", and to the longer story "Dichter und ihre Gesellen", inasmuch as the action is neglected for discursive discussions. Lack of compression and of action has also been censured in the two dramas, "Ezelin von Romano" and "Der letzte Held von Marienburg". Still, "Ezelin", the tragedy of a consuming pride ruined through the very abuse of its gigantic strength, no less than "Der letzte Held", in which Plauen fails on account of his exceeding magnanimity and bravery, amply testify to the dramatic talent of the poet. His best comedy "Die Freier" has been found very well adapted to the stage. In his later years Eichendorff devoted his genius more to the history of literature. His history of the poetical literature of Germany (Kempten, 1907), especially the description of romanticism, outlined as it is by one of its best representatives, is of lasting value, also the sketch of the German novel in the eighteenth century. His solid character and his strong religious faith raise "the champion of romanticism" far above his fellow poets. Not only did his genius never lead him away from the duties which religion and custom imposed upon him, but he also knew how to distinguish between poetical ideal and reality, and to avoid the underlying want of truth to which the earlier romanticism had succumbed.

GÖDEKE (GÖTZE), *Grundriss zur Gesch. der deutsch. Dichtung*, VIII, 176-196, where everything pertaining to his bibliography up to 1905 can be found. Important publications after 1905 are: NOWACK, *Lubowitzer Tagebuchblätter* (Gross Strehlitz, 1907); a critical edition of EICHENDORFF'S complete works has been begun.

N. SCHEID

Eichstatt

Eichstätt

DIOCESE OF EICHSTÄTT (EYSTADIUM) [EYSTETTENSIS or AYSTETTENSIS]

The Diocese of Eichstätt, in Bavaria, lies north of the Danube, and is suffragan to Bamberg. The diocese was founded by St. Boniface, who consecrated his nephew St. Willibald (born 700 of an Anglo-Saxon royal family) first as abbot and regional bishop (741), and then (745) circumscribed and organized the diocese. Willibald called to his aid his brother Wunibald, who, together with St. Boniface, had been active on the German mission of Thuringia, and also his sister St. Walburga. He erected for them the monastery of Heidenheim on the Hahnenkamm, where the saintly pair laboured most effectively and found their resting-place (Wunibald d. 761, Walburga d. 779). Willibald, well known for his knowledge of the Christian Orient and as a pilgrim to Palestine, founded in Eichstätt a flourishing school over which he presided as magister. He died in 781. The unbroken series of his successors down to the present time (1909) counts seventy-five names. Bishop Erchanbold (882-912) of the Carolingian line laid the foundation for the secular power of the see. Gradually this increased, especially through the inheritance of the Counts of Hirschberg (extinct in 1305), under Bishop Johann von Dirpheim (1305-1306), who was also chancellor of Emperor Albrecht I. Like other German princes, the bishops of Eichstätt acquired sovereignty (under Bishop Hartwig in 1220), and after various struggles became, from the fourteenth century, independent rulers over a territory which at one time comprised 437 square miles with 56,000 subjects. In the "secularization" of 1803 these domains were made over to Bavaria.

There were many illustrious incumbents of the See of Eichstätt. Bishop Reginold (965-989) was admired as a poet, musician, scholar, and orator. Bishop Heribert (1022-1042) was a patron of the cathedral school. Gundekar II (1057-1075) rebuilt the cathedral, composed the "Pontificale", in which the lives of his predecessors, the "Vitae Pontificum Eystettensium", and many other subjects, especially liturgical, are treated. This work, still preserved in the original (Codex M), is of great value for the history of the diocese. Gundekar is venerated as a saint. His predecessor was Gebhard I (1042-1057), the chancellor and friend of Henry III. Hildebrand, afterwards Gregory VII,

did not rest until this emperor allowed the reluctant Gebhard to assume the papal dignity. He was the first pope whom in a long time the clergy and people of Rome had chosen freely. As Victor II (1055-1057) he was friendly to reforms, an extremely energetic man, and saintly in his life. Had he lived longer he would have taken rank among the greatest of the popes; he died in 1057 at the age of thirty-nine. Bishops Eberhard I (1099-1112), Ulrich II (1112-1125), Gebhard II (1125-1149), and Otto (1182-1195) vigorously inaugurated reforms that were perfected and confirmed in the diocesan synod of 1186. A similar activity was displayed by Bishops Henry IV (1246-1259), Reunboto (1279-1297), and Philipp von Rathsamshausen (1306-1322). The last-named was a prolific writer, patron of the cathedral school, and by synods tried to raise clergy and people to a higher level. Berthold (1354-1365), a Hohenzoller by birth, built the Willibaldsburg, provided for the material welfare of the clergy, and protected them against the attacks of laity, nobility, and princes (*Constitutio Bertholdiana*). On all sides we meet with evidence of his regulating and stimulating zeal (*Synodal statutes of 1354*).

The Western Schism left its traces on the diocese. Bishop Johann III von Eich (1446-1464), a saintly man, did all in his power to efface them. He reformed the monasteries, organized the instruction of the clergy, issued pastoral directions, protected vigorously the property of the Church, and attracted to Eichstätt a number of scholars (among them the Humanist Albert of Eyb). Having been, before his election, chancellor of the emperor and his representative at the Council of Basle, he continued as bishop to serve the State on diplomatic missions of great importance. Thus, he represented the emperor in the congress of princes which Pius II called at Mantua. His friend and successor, Wilhelm von Reichenau (1464-1496), the tutor of Maximilian I, was a Statesman, diplomat, and patron of the fine arts, but also a bishop who walked in the footsteps of his predecessor and left after him the memory of a brilliant administration. In 1480 he made a visitation of the whole diocese. The original records of this visitation, the oldest thus far known, are still extant, and give us an interesting picture of religious life in the Middle Ages, in which, however, there are not lacking deep shadows. His successors, the cultured Gabriel von Eyb (1496-1535) and the noble Moritz von Hutten (1539-1552), were men who fully understood the critical situation and set themselves against the perilous innovations of their time, but they could not prevent the imperial, cities of Nuremberg and Weissenburg, the margraves of Ansbach and the palgraves of the Rhine, from annexing a large part of the territory of the diocese in order to restore their finances by means of church property, and from forcing the people to apostatize. Bishop Moritz gathered about him men of ability (Vitus von Ammerbach, Cochläus), and convoked (1548) a diocesan synod whose records exhibit the spreading spiritual desolation.

Bishop Martin von Schaumberg (1560-1590) founded the first Tridentine seminary (1564) one year after the close of the Council, and secured for it excellent teachers (Robert Turner, Peter Stewart, Frederick Staphylus). Bishop Konrad von Gemmingen (1593-1612) rebuilt the Willibaldsburg, founded the "Hortus Eystettensis", a garden well known to all European botanists, ordered frequent visitations of the diocese, and embellished the cathedral with precious jewels. Bishop Christoph Johann von Westerstetten (1612-1636) invited the Jesuits to Eichstätt built a magnificent (Renaissance) church for them, and committed the episcopal seminary to their care. In 1634 the Swedes reduced almost the whole episcopal city to ashes, but it soon rose to new splendour under the long and prosperous reign of Bishop Marquard II (1636-1685), a scion of the family of Schenk von Castell. He reorganized the ecclesiastical and secular administration of the diocese, won part of its territory (in the Upper Palatinate) back to Catholicism and was for years imperial plenipotentiary at the diets and eminent as a diplomat.

The eighteenth century brought peace and prosperity, and many a magnificent structure in city and diocese rose under the gifted prince-bishops of those days (residence and garden, the fountains called Marienbrunnen and Willibaldsbrunnen, castle of Hirschberg, monastery of Notre-Dame). Bishop Raymund Anton, Count of Strassoldo (1757-1781), prepared for his clergy the well-known "Instructio Pastoralis", a book of pastoral direction, which in its latest (fifth) edition (Freiburg im Breisgau; 1902) is even yet much admired. The "secularization" (1803) robbed the Bishop of Eichstätt of his ancient secular authority, but the diocese remained and was reorganized by the Bull of circumscription of 1821. Cardinal Karl August von Reisach (Bishop of Eichstätt, 1835-1846) renewed its ecclesiastical and religious life, opened the seminary for boys (1838) and the lyceum (1844), with a philosophical and a theological faculty, and in union with Joseph Ernst (d. 1869), president (*Regens*) of the latter institution, breathed into it the true spirit of the Church, a spirit which since then has never failed. Bishop Georg von Oetl (1847-1866) and his Successor, Franz Leopold von Leonrod (1867-1905), faithfully continued and completed the work begun by Reisach. The conditions of the diocese are as well regulated as is possible; its people are solidly grounded in the Faith, while the learning, life, and labours of the clergy are considered exemplary throughout Germany.

The diocese is rich in monuments of ecclesiastical architecture and art: The Gothic cathedral exhibits many excellent works of art from the fourteenth to the eighteenth century; especially noteworthy is its *mortuarium*. The Gothic church of Our Lady in Irigolstadt and the conventual churches of Kaste (Romanesque) and Freystadt (Renaissance): are important monuments. Among ecclesiastical artists may be mentioned: Hans Paur (fifteenth century), Hans Pildschnitzer (fifteenth century),

Loy Hering (sixteenth century), Gabriel de Gabrielis (seventeenth-eighteenth century), Ignaz Breitenauer (eighteenth century). In the Middle Ages Eichstätt possessed a flourishing cathedral school dating from the time of St. Wulibald. Mostly with ecclesiastical funds and through the zeal of Wilhelm von Reichenau, the University of Ingolstadt was founded in 1472. Many of its professors became famous. Among its theologians are Johann Eck, P. Canisius, Gregory of Valencia, Salmeron, Jacob Gretser; among its canonists: Reiffenstuel, Pirhing, Schmalzgrueber; among its jurists, Wiguleus Kreittmayr, Ad. Ickstatt; among its philosophers, scientists, and mathematicians: Johann Reuchlin, Conrad Celtes, Christoph Scheiner, Caspar Scioppius, Philipp and Petrus Apian, Fuchs Leonhard, and others. Early in the nineteenth century the university was transferred to Landshut, thence to Munich.

The most important monastery of the diocese in olden times was the Benedictine abbey founded by St. Willibald in 740 and out of which grew the diocese. At the end of the tenth century it became the cathedral chapter with secular canons. Heidenheim was at, first a double monastery, founded by St. Willibald; it was changed (800) to a chapter of canons; later it became again a Benedictine monastery. Before the change the monks moved to Herrieden and erected there, under Abbot Dietker and through the benevolence of Charlemagne, a new monastery, which was changed to a chapter of canons in 888 and secularized in 1804. The nuns moved from Heidenheim to Monheim, taking with them some of the relics of St. Walburga, which were lost in the "secularization" of the sixteenth century. St. Walburg (Benedictine nuns) in Eichstätt (founded 870) was endowed in 1035 by Count Leodegar and reorganized by Bishop Heribert. It is yet flourishing despite its temporary secularization (1802-1835), and possesses some relics of St. Walburga. Kastel in the Upper Palatinate, founded 1098 (Benedictines from the Cluniac congregation), took a prominent part in the reforms of the twelfth century; it was secularized in 1556, and in 1636, during the Counter-Reformation, its domains were transferred to the Jesuit college in Amberg, and after the suppression of the Jesuits (1773) to the Knights of Malta; in 1806 it was secularized once more. Plankstetten (Benedictines, founded 1129) was also secularized in 1802. Heilsbronn (Cistercians, founded 1132), also zealous for ecclesiastical reforms, was secularized in 1530 by the margraves of Ansbach. Rebdorf (Augustinian canons, founded 1159 through the powerful help of Frederick Barbarossa) was the home of Prior Kilian Leib (1471-1552), linguist and historian; the abbey was secularized in 1802. Bergen (Benedictine nuns, founded 976) was suppressed in 1552 by the Protestant princes of Neuburg; its estates passed later into the hands of the Jesuits, who used them to found the seminary and gymnasium in Neuburg on the Danube (1664). The "Schottenkloster zum heiligen Kreuz" (The Irish Monastery of the Holy Cross), an Irish foundation of 1140 in Eichstätt, passed over to the Capuchins in 1623, lived through

the "secularization" of the early nineteenth century, and is still flourishing. In the thirteenth century arose the monasteries of Engelthal (suppressed in 1550 by the people of Nuremberg); Seligenporten (Cistercian nuns), secularized in 1556, after the re-Catholicizing of the Upper Palatinate given to the Salesian nuns of Amberg and Munich, and again secularized in 1802; Gnadenthal in Ingolstadt (Franciscan nuns, founded in 1276), still flourishing. In the fifteenth century were founded: Gnadenberg (Brigitines), Mariastein near Rebdorf (Augustinian nuns), Königshofen, Marienburg near Abenberg, all of which disappeared during the last secularization (1802-1806). Eichstätt had still other monasteries in the Middle Ages: thus the Dominicans had a monastery in the city (founded 1279, secularized in 1802); the Carmelites in Weissenburg, the Franciscans in Ingolstadt (1275). From the seventeenth century the Jesuits had flourishing colleges in Eichstätt and Ingolstadt, the Capuchins in Eichstätt and Wemding (1669). The Teutonic Knights had a flourishing commandery in Ellingen which was secularized in 1802.

At present (1909) the diocese numbers one monastery of the Benedictines (Plankstetten), four of the Franciscans (Ingolstadt, Dietfurt, Berching, Freystadt), two of the Capuchins (Eichstätt, Wemding), two convents of nuns (St. Walburg and Gnadenthal), and about forty-six houses of female congregations, among them the flourishing institute of the English Ladies in Eichstätt. The seminary, restored by Reisach, was enlarged in 1844 by the addition of a philosophico-theological academy (lyceum), and under eminent scholars has attained a high degree of prosperity and scientific fame. (Professors: Johann Pruner, d. 1907; G. Suttner, d. 1888; Franz Morgott, d. 1900; Valent. Thalhofer, d. 1891; Alb. Stöckl, d. 1895; Math. Schneid, d. 1893; Phil. Hergenröther, d. 1890; Mich. Lefflad, d. 1900.) Since about 1898 bishops of the United States have been sending students to the Lyceum for training in philosophy and theology. During the nineteenth century the Diocese of Eichstätt also contributed several prominent men to the Church in the United States, among them Archbishop Michael Heiss of Milwaukee. Foundations of Benedictine nuns were also made in the United States from the convent of St. Walburg. In 1908 the diocese had about 185,000 Catholics, 206 parishes, 63 benefices, 79 assistancies, 373 secular and 39 regular priests.

The sources of the diocesan history were compiled by SUTTNER, *Bibliotheca Eystett. dioecesis* (Eichstätt, 1866-67); original records may be found in LEFFLAD, *Regesten der Bischöfe von Eichstätt* (Eichstätt, 1875--), which goes (1909) as far as 1306 and is being continued. Much material is published in the *Pastwalblatt*, the organ of the diocese (Eichstätt, 1854--). Earlier accounts of the diocesan history are: GRETSER, *Opp. omn.* (Ratisbon, 1734), X; FALKENSTEIN, *Antiquitates Nordgavienses*, 2 parts, and *Codex diplomaticus* (Frankfort, 1733); IDEM, *Analecta Nordgaviensia* (Schwabach, 1734-47); STRAUSS. *Viri insignes, quos Eichstadium genuit vel aluit* (Eichstätt, 1799).

See also SUTTNER, *Gesch. des (alten) bischöfl. Seminars in Eichstätt* (Eichstätt, 1859); HOLLWECK, *Gesch. des neuen bischöfl. Seminars* (Eichstätt, 1888); HERB-MADER-THURNHOFER-SCHLECHT, *Eichstätts Kunst* (Eichstätt, 1902); SCHWERTSCHLAGER, *Der Eichstätter botanische Garten* (Eichstätt, 1890); ROMSTÖCK, *Statistik des bischöfl Lyzeums in ichstätt* (Eichstätt, 1894); GROTHB, *Der hl. Richard und seine Kinder* (Berlin, 1908). There are many modern monographs on scholars and artists of the diocese, e. g. MADER, *Loy Hering*; THURNHOFER, *Adelmann. v. Adelmansfelden*; HAEMMERLE, *Pappenheimer Altar*; IDEM, *Die Kirche in Bergen*. See GÖTZ, *Die Glaubensspaltung im Gebiete der Markgrafschaft Ansbach-Kulmbach, 1520-1535* (Freiburg, 1907). Abundant material may also be found in the *Sammelblatt d. hist. Vereins Eichstätt* (Eichstätt, 1886--); SAX, *Gesch. des Hochstifts u. der Stadt Eichstätt* (Nuremberg, 1884); IDEM, *Gesch. der Fürstbischöfe v. Eichstätt* (Eichstätt, 1882); SUTTNER in *Kirchenlex. s. v. Eichstätt*.

JOSEF HOLLWECK

St. Eimhin

St. Eimhin

Abbot and Bishop of Ros-mic-Truin (Ireland), probably in the sixth century. He came of the royal race of Munster, and was brother of two other saints, Culain and Dairmid. Of the early part of his religious life little is known. When he became abbot of the monastery of Ros-mic-Truin, in succession to its founder, St. Abban, he had been apparently connected with one of the religious houses of the south of Ireland, since it is recorded that a number of monks "followed the man of God from his own country of Munster". Ros-mic-Truin lies in South Leinster on the bank of the River Barrow, and is distant only eight miles, by water, from the confines of Munster, at the point where the Suir and Barrow meet, and in confluence enter the Atlantic. Although the Abbey of Ros-mic-Truin was founded by St. Abban, it is said to have been colonized by St. Eimhin, and from the number of religious and students belonging to the south of Ireland who dwelt there the place came to be called "Ros-glas of the Munstermen". St. Eimhin is said by some to have been the author of the life of St. Patrick, called the "Vita Tripartita" (ed. Whitley Stokes in R.S.), originally published by Father John Colgan, O.S.F. It contains a greater variety of details concerning the mission of the Apostle of Ireland than any other of the lives extant. St. Eimhin was famous for many and great miracles. The date of his death has not been recorded; however competent authorities assign it to the earlier half of the sixth century. After St. Eimhin's death, it is said, his consecrated bell was held in great veneration, and was used as a swearing relic down to the fourteenth century, oaths and promises made upon it being deemed

inviolable. Among the MSS. of the library of the Royal Irish Academy, Dublin, is a prose tract entitled "Caine Emine" (i.e. the tribute or rule of Eimhin), also a poem of several stanzas relating to the saint's bell. St. Eimhin is given in the Irish calendars on 22 December.

J. B. CULLEN.

Einhard

Einhard

(Less correctly EGINHARD), historian, born c. 770 in the district watered by the River Main in the eastern part of the Frankish Empire; d. 14 March, 840, at Seligenstadt. His earliest training he received at the monastery of Fulda, where he showed such unusual mental powers that Abbot Baugulf sent him to the court of Charlemagne. His education was completed at the Palace School, where he was fortunate enough to count among his masters the great Alcuin, who bears witness to his remarkable talent in mathematics and architecture, and also to the fact that, in spite of his unattractive person, he was among the emperor's most trusted advisers. Charlemagne gave Einhard charge of his great public buildings, e. g. the construction of Aachen cathedral and the palaces of Aachen and Ingelheim, for which reason he was known in court circles as *Beseleel*, after the builder of the tabernacle (Ex., xxi). Charlemagne also availed himself of Einhard's tact and prudence to send him on various diplomatic missions. Thus, in 802 he placed in his hands the negotiations for the exchange of distinguished Saxon hostages, and in 806 he was dispatched to Rome to obtain papal approbation for the partition of the empire the emperor had just decided upon.

During the reign of Louis the Pious he retained his position of trust, and proved a faithful counsellor to Louis's son Lothair. Unsuccessful, however, in his attempts to settle the contests for the crown which had been stirred up by Empress Judith, and unable to bring about a lasting reconciliation between Louis and his sons, Einhard, in 830, withdrew to Mühlheim (Mulinheim) on the Main, which he had been granted as early as 815, together with other estates, as a mark of imperial favour. He transferred thither the relics of Sts. Marcellinus and Peter, and called the place Seligenstadt. Moreover, between 831 and 834 he established here a Benedictine abbey, where, after the death of his wife, Emma (or Imma), sister of Bishop Bernhar of Worms (not daughter of Charlemagne), he spent the rest of his life as abbot. It is not certain whether he was ordained priest. His epitaph was written by Rabanus Maurus.

The most important of Einhard's works is the "Vita Caroli Magni." This, the best biography of the whole period of the Middle Ages, written in close imitation of Suetonius, particularly his "Vita Augusti", shows the emperor from the standpoint of the most

intimate personal acquaintance with all sides of his character, and with a genuine attempt at truth of portrayal. The diction is in general elegant, though not polished. The annals of the Carolingian Empire, which have been handed down as Einhard's (ed. Kurze, 1895), are, in their present form, older materials worked over. Those for the years between 796 and 820 may date back to Einhard. In addition, we have from his hand the "Translatio et Miracula SS. Marcellini et Petri", containing data which are important for the history of culture. The seventy-one letters, written by Einhard between 825 and 830 in a clear, simple style, constitute an important source for the history of Louis the Pious.

PATRICIUS SCHLAGER

Abbey of Einsiedeln

Abbey of Einsiedeln

A Benedictine monastery in the Canton of Schwyz, Switzerland, dedicated to Our Lady of the Hermits, that title being derived from the circumstances of its foundation, from which the name *Einsiedeln* is also said to have originated. St. Meinrad, of the family of the Counts of Hohenzollern, was educated at the abbey school of Reichenau, an island in Lake Constance, under his kinsmen Abbots Hatto and Erlebold, where he became a monk and was ordained. After some years at Reichenau, and the dependent priory of Bollingen, on Lake Zurich, he embraced an eremitical life and established his hermitage on the slopes of Mt. Etzel, taking with him a wonder-working statue of Our Lady which he had been given by the Abbess Hildegarde of Zurich. He died in 861 at the hands of robbers who coveted the treasures offered at the shrine by devout pilgrims, but during the next eighty years the place was never without one or more hermits emulating St. Meinrad's example. One of them, named Eberhard, previously Provost of Strasburg, erected a monastery and church there, of which he became first abbot. The church was miraculously consecrated, so the legend runs, in 948, by Christ Himself assisted by the Four Evangelists, St. Peter, and St. Gregory the Great. This event was investigated and confirmed by Pope Leo VIII and subsequently ratified by many of his successors, the last ratification being by Pius VI in 1793, who confirmed the acts of all his predecessors. In 965 Gregory, the third Abbot of Einsiedeln, was made a prince of the empire by Otto I, and his successors continued to enjoy the same dignity up to the cessation of the empire in the beginning of the nineteenth century. In 1274 the abbey, with its dependencies, was created an independent principality by Rudolf of Hapsburg, over which the abbot exercised temporal as well as spiritual jurisdiction. It continued independent until the French Revolution. The abbey is now what is termed *nullius dioecesis*, the abbot having quasi-episcopal authority over ten

parishes served by the monks and comprising nearly twenty thousand souls. For the learning and piety of its monks Einsiedeln has been famous for a thousand years, and many saints and scholars have lived within its walls. The study of letters, printing, and music have greatly flourished there, and the abbey has contributed largely to the glory of the Benedictine Order. It is true that discipline declined somewhat in the fifteenth century and the rule became relaxed, but Ludovicus II, a monk of St. Gall who was Abbot of Einsiedeln 1526-44, succeeded in restoring the stricter observance. In the sixteenth century the religious disturbances caused by the spread of the Protestant Reformation in Switzerland were a source of trouble for some time. Zwingli himself was at Einsiedeln for a while, and used the opportunity for protesting against the famous pilgrimages, but the storm passed over and the abbey was left in peace. Abbot Augustine I (1600-29) was the leader of the movement which resulted in the erection of the Swiss Congregation of the Order of St. Benedict in 1602, and he also did much for the establishment of unrelaxed observance in the abbey and for the promotion of a high standard of scholarship and learning amongst his monks.

The pilgrimages, just mentioned, which have never ceased since the days of St. Meinrad, have tended to make Einsiedeln the rival even of Rome, Loreto, and Compostela, and constitute one of the features for which the abbey is chiefly celebrated. The pilgrims number from 150,000 to 200,000 annually, from all parts of Catholic Europe. The miraculous statue of Our Lady, originally set up by St. Meinrad, and later enthroned in the little chapel erected by Eberhard, is the object of their devotion. This chapel stands within the great abbey church, in much the same way as the Holy House at Loreto, encased in marbles and precious woodwork, elaborately decorated, though it has been so often restored, rebuilt, and adorned with the offerings of pilgrims, that it may be doubted whether much of the original sanctuary still remains. The fourteenth of September and the thirteenth of October are the chief pilgrimage days, the former being the anniversary of the miraculous consecration of Eberhard's basilica, and the latter that of the translation of St. Meinrad's relics from Reichenau to Einsiedeln in 1039. The millenary of St. Meinrad was kept there with great splendour in 1861. The great church has been many times rebuilt, the last time by Abbot Maurus between the years 1704 and 1719, and one of its chief treasures now is a magnificent corona presented by Napoleon III when he made a pilgrimage there in 1865. The library, which dates from 946, contains nearly fifty thousand volumes and many priceless MSS. The work of the monks is divided chiefly between prayer, the confessional, and study. At pilgrimage times the number of confessions heard is very large. The community numbers about one hundred priests and forty lay brothers, and attached to the abbey are a seminary and a college for about two hundred and sixty boys, both of which are taught by the monks, who also direct six convents of nuns. In 1854 a colony was sent

to America from Einsiedeln to work amongst the native Indian tribes. From St. Meinrad's Abbey, Indiana, which was the first settlement, daughter-houses were founded, and these in 1881 were formed into the Swiss-American Congregation, which comprised (in 1906) seven monasteries and nearly four hundred religious. Dom Thomas Bossart, the fifty-third Abbot of Einsiedeln and former dean of the monastery, was elected in 1905.

Gallia Christiana (Paris, 1781), V; Album Benedictinum (St. Vincent's, Pennsylvania, 1880); MIGNE, Dict. des Abbayes (Paris, 1856); RÉGNIER, Chronique d'Einsiedeln (Paris, 1837); Précis Historique de l'Abbaye et du Pèlerinage de Notre-Dame-des-Ermites (Einsiedeln, 1870); MOREL, Die Regesten der Benediktiner-Abtei Einsiedeln (Chur, 1848); BRUNNER, Ein Benediktinerbuch (Würzburg, 1880); RINGHOLZ, Geschichte des fürstlichen Benediktinerstiftes L. F. von Einsiedeln (Einsiedeln, 1904), the most important work on the history and antiquities of the abbey.

G. CYPRIAN ALSTON

Eisengrein, Martin

Martin Eisengrein

A learned Catholic theologian and polemical writer, born of Protestant parents at Stuttgart, 28 December, 1535; died at Ingolstadt, 4 May, 1578. He studied the humanities at the Latin school of Stuttgart, and the liberal arts and philosophy at the University of Tübingen. To please his father, who was burgomaster of Stuttgart, Eisengrein matriculated as student of jurisprudence at the University of Ingolstadt, 25 May, 1553, but before a year had passed he was at the University of Vienna, where he took the degree of Master of Arts in May, 1554. During the tolerant rule of Ferdinand I, Eisengrein, though still a Protestant, became in 1555 professor of oratory and, two years later, of physics at the University of Vienna, a Catholic institution. Though his Catholic surroundings and especially his frequent intercourse with the Jesuits of Vienna may have had great influence in bringing about his acceptance of the Catholic Faith, still his conversion was one of conviction, as is apparent from his numerous controversial writings and his scrupulous solicitude for the integrity of Catholic Faith and morals at the University of Ingolstadt. His conversion took place about 1558. In 1559 he received a canonry at St. Stephen's in Vienna, and a year later he was ordained priest. In 1562 he went to the University of Ingolstadt whither he had been invited by the superintendent of the university, Frederick Staphylus. He was appointed pastor of the church of St. Maurice, which was incorporated with the university, and in April of the same year he was elected rector of the university. Besides being professor, he devoted much of his time to the study of theology and, after receiving the degree of

licentiate in this science on 11 November, 1563, he began to teach it in January, 1564. Duke Albert V of Bavaria chose him as councillor, appointed him provost of the collegiate church of Moosburg, and shortly afterwards of the collegiate church of Altötting and the cathedral church of Passau. In 1563 and 1564 he took part in the politico-religious conferences at the imperial court of Vienna; in 1566 Duke Albert sent him to Pope Pius V to advocate the appointment of Prince Ernest as Prince-Bishop of Freising, and in 1568-9 he was imperial court chaplain at Vienna. In 1570 he was appointed superintendent of the University of Ingolstadt, and henceforth he turned his whole attention to the advancement of the university.

Just at this time the friction between the lay professors and the Jesuits, which dated from the time when the latter began to hold professorial chairs at the university in 1556, threatened to become serious. In 1568 Eisengrein and Peter Canisius had peacefully settled certain differences between the two factions, but when in 1571 Duke Albert decided to put the *pædagogium* and the philosophical course into the hands of the Jesuits, the other professors loudly protested. By his tact Eisengrein succeeded in temporarily reconciling the non-Jesuit professors to the new arrangement. Soon, however, hostilities began anew, and in order to put an end to these quarrels, the Jesuits transferred the *Pædagogium* and philosophical course to Munich in 1573. It seems that the Jesuits were indispensable to the University of Ingolstadt, for two years later they were urgently requested by the university to return, and in 1576 they again went to Ingolstadt. In the settlement of the differences between the Jesuit and non-Jesuit professors, Eisengrein always had the welfare of the university at heart. He publicly acknowledged the great efficiency of the Jesuits as educators in an oration which he delivered before the professors and students of the university on 19 February, 1571, and he was pleased to see their influence gradually increase at Ingolstadt. There were, indeed, some differences between Eisengrein and the Jesuits in 1572, but the estrangement was only temporary, as is apparent from the fact that he bequeathed 100 florins to the Jesuit library.

The greatest service which Eisengrein rendered the University of Ingolstadt was his organization of its library. It was owing to his efforts that the valuable private libraries of John Egolph, Bishop of Augsburg, Thaddeus Eck, chancellor of Duke Albert, and Rudolph Clenek, professor of theology at Ingolstadt, were added to the university library. Eisengrein's activities were not confined to the university. By numerous controversial sermons, some of which are masterpieces of oratory, he contributed not a little to the suppression of Lutheranism in Bavaria. Many of his sermons were published separately and collectively in German and Latin during his lifetime. Some have been edited by Brischar in "Die kath. Kanzelredner Deutschlands" (Schaffhausen, 1867-70), I, 434-545. He is also the author of a frequently reprinted history of the shrine of the

Blessed Virgin at Altötting (Ingolstadt, 1571) and a few other works of minor importance.

MICHAEL OTT.

St. Eithene

St. Eithene

Styled "daughter of Baite", with her sister Sodelbia, are commemorated in the Irish calendars under 20 March. They were daughters of Aidh, son of Caibre, King of Leinster, who flourished about the middle of the sixth century. The designation "daughters of Baite" usually coupled with their names would seem not to refer to any title of their father, but might be more correctly interpreted as the "children of Divine or ardent love". This interpretation is further strengthened by an account of a vision, accorded the two virgins, in which it is related that Christ in the form of an infant rested in their arms. In one of the legends contained in the "Acts" of St. Moling, Bishop of Ferns, it is told that Eithene and her sister were visited by this venerable saint. The abode of St. Eithene, called *Tech-Ingen-Baithe*, or the "House of the daughters of Baite" lay near Swords, in the present Barony of Nethercross, County Dublin. This saint is also venerated at Killnais, the former name of a townland in the same locality.

J.B. CULLEN

St. Eithne

St. Eithne

St. Eithne, styled "of the golden hair", is commemorated in the Irish martyrologies under the 11th of January. She was daughter of Leoghaire, Ard-Righ, or Hy-Sovereign of Ireland at the time of St. Patrick's first visit, as a missionary, to the court of Tara (433). According to the prevailing custom of those days the children of kings and princes were frequently placed, at an early age, in charge of the family of some of the chieftains who coveted the honour of guardianship of the royal offspring. Hence it was assumed that Eithne and her younger sister were fostered close to Cruachan Magh Ai, the dwelling-place, or royal residence, of the Gaelic kings of Connaught. However

the brief story of the saint's life centres in the one scene, which took place beside the brook of Clebach, County Roscommon, and is described in the "Acts" of the national apostle of Ireland.

On his way to the royal abode, during his mission to the western province, it is told that St. Patrick and his disciples camped one evening close to the Well of Clebach. On the following day the clerics rose at dawn to chant the Divine Office, and prepare for the mystic sacrifice. It would appear that the two royal princesses were accustomed to visit the same fountain in the early morn, and on this occasion were surprised at the appearance of the strange company who were in possession of the place. They were not, however, dismayed, and Eithne, the elder of the sisters, accosted Patrick and his companions, asking who they were and whence they came. Whereupon the apostle said -- "It were better for you to confess your faith in our true God than ask about our race." Then, at their request, St. Patrick unfolded to them the doctrines of Christianity, which, under the influence of Divine grace, they accepted with heart and soul. Having baptized them, the saint placed on their brows the veil of virginity.

Then, it is related, Eithne and her sister asked "to see the face of Christ, the Son of the true God", but Patrick said: "You cannot see the face of Christ unless you taste death, and receive the Sacrifice". Whereupon they besought him to give them the Sacrifice that they might see their Spouse, the Son of God. So, by the brink of the fountain, the Sacrifice was offered, and having received their First Communion, Eithne and her sister, in an ecstasy of rapture, swooned away and died. When the days of mourning were ended both were laid side by side, close by the scene of their death, where afterwards a church was raised over the grave.

J.B. CULLEN

Ekkehard

Ekkehard

Name of five monks of the (Swiss) Abbey of St. Gall from the tenth to the thirteenth century.

(1) EKKEHARD I (MAJOR, "the Elder"), d. 14 Jan., 973. He was of noble birth, of the Jonschwyl family in Toggenburg, and was educated in the monastery of St. Gall; after joining the Benedictine Order, he was appointed director of the inner school there. Later, under Abbot Kralo, who trusted him implicitly, he was elected dean of the monastery, and for a while directed all the affairs of the abbey. Ekkehard made a pilgrimage to Rome, where he was retained for a time by Pope John XII, who presented him with various relics of St. John the Baptist. After Kralo's death Ekkehard refused the abbatial succession, because of lameness resulting from a fractured leg. However,

he directed the choice of Burkard, son of Count Ulrich of Buchhorn, who governed St. Gall with the advice and co-operation of Ekkehard. The latter erected a hospice in front of the monastery for the sick and strangers, and was in many other ways a model of charity. He was also distinguished as a poet, and wrote a Latin epic "Waltharius", basing his version on an original German text. He dedicated this poem to Bishop Erkanbald of Strasburg (965-991). It describes the elopement of Walter of Aquitaine with the Burgundian princess Hildegunde, from the land of the Huns, followed by the battle of Wasgenstein between Walter and the followers of Gunther and Hagen (ed. Peiper, Berlin, 1873). He also composed various ecclesiastical hymns and sequences, e. g. in honour of the Blessed Trinity, St. John the Baptist, St. Benedict, St. Columbanus, St. Stephen (Meyer, "Philologische Bemerkungen zum Waltharius" in "Abhandl. der bayr. Akad. d. Wissenschaften", Munich, 1873; Streeker, "Ekkehard und Virgil" in "Zeitschrift f. deutsches Altertum", 1898, XLII, 338-366).

(2) EKKEHARD II (PALATINUS, "the Courtier"), d. 23 April, 990. He and Ekkehard III were nephews of the preceding, who educated also at St. Gall his other nephews, Notker the physician and Burkard, later abbot of the monastery. Ekkehard II was taught by his uncle and the monk Geraldus, and was later a teacher in the monastery school. A number of his pupils joined the order; others became bishops. According to the "Casus Sancti Galli" he was called later to Hohentwiel, the seat of the Duchess Hadwig of Swabia, widow of Burkard II. The duchess was wont occasionally to visit St. Gall, and eventually (973) asked for and obtained the services of Ekkehard as her tutor in the reading of the Latin classics. Nevertheless, he continued to render great services to his monastery, especially on the occasion of the differences between St. Gall and Reichenau (Abbot Ruodmann); in many other ways also he proved himself useful to the monks by the influence he had obtained as tutor of the duchess. Ekkehard was also prominent at the imperial court of Otto I. Later he became provost of the cathedral of Mainz, where he died 23 April, 990. He was buried in the church of St. Alban, outside the city gates. He was the author of various ecclesiastical hymns, known as sequences, all of which are lost, except one in honour of St. Desiderius.

(3) EKKEHARD III, also a nephew of Ekkehard I and a cousin of the preceding. He shared the educational advantages of his cousin and, at his invitation, accompanied him to Hohentwiel to superintend and direct the studies of the local clergy. On his return to St. Gall he was made dean of the abbey, and is reported to have filled this office for thirty years. He died early in the eleventh century.

(4) EKKEHARD IV. According to the testimony in his "Chronicle" (especially in view of his statement that he had heard from eyewitnesses of the great conflagration at St. Gall in 937), the date of his birth is usually placed about 980; he died 21 Oct., but the year of his death is unknown (1036?-1060?). The same "Chronicle" indicates Alsace

as his birthplace, though we do not know with certainty either the place of his birth, or his family origin. His boyhood was spent at St. Gall where he had for tutor Notker Labeo the German, one of the most learned scholars of his time. From him Ekkehard acquired a profound knowledge of the Latin and Greek classics; he also studied mathematics, astronomy, and music, and was acknowledged while living as a scholar of note even outside the monastery. After the death of Notker Labeo (1022) Ekkehard was called to Mainz by Archbishop Aribio, where he became director and teacher in the cathedral school, and held both offices until the death of his patron (1031), distinguishing himself as head of the school; indeed, he was noted as a successful teacher and promoter of learning. A treatise on the "Jube me, Domine, benedicere", inscriptions, and benediction prayers remain as evidences of his literary activity. Emperor Conrad II, when at Ingelheim near Mainz, distinguished him by marks of personal favour (Easter, 1030). Shortly after his return to St. Gall Abbot Tietbald died (1034) and Norbert of Stavelot, who introduced the reforms of Cluny, was elected to succeed him. A dissension, therefore, arose among the monks, the seniors being dissatisfied with the new reforms. Ekkehard, meanwhile, began work on the ancient abbey chronicle, the famous "Casus S. Galli", begun by Ratpert and continued to Abbot Salomon (883), and carried it on from that date to Notker (972). This work is a most important document for the contemporary history of St. Gall (ed. von Arx in "Mon. Germ. Historica: Scriptores" II, Hanover, 1829; ed. Meyer von Knonau in "St. Gallische Geschichtsquellen" in "Mitteil. zur vaterländ. Geschichte" (new series, nn. 5 and 6, St. Gall, 1877); it is also the main source of our knowledge concerning the Ekkehards. The "Casus" is mostly a compilation of anecdotes and traditions concerning distinguished monks. They contain, however, many historical errors and misrepresentations, and the Latin diction is often barbarous. Nevertheless, owing to the excellence and simplicity of the narrative, they are a valuable source of contemporary history, especially of its culture. The second important literary work of Ekkehard is his "Liber Benedictionum". It comprises metrical inscriptions for the walls of the Mainz cathedral, and benedictions (also in verse) for use in choir-service and at meals, also poems in honour of the festivals of various saints, partly from his own pen and partly by Notker Labeo. In poetical merit these works are inferior enough, nevertheless they betray a very fair knowledge of Latin. The glosses from his pen, both on his own manuscripts and others belonging to the abbey, remain as proof of his lifelong zeal in pursuit of knowledge. He was also skilled in music, especially ecclesiastical music, always diligently and successfully cultivated at St. Gall.

(5) EKKEHARD V (MINIMUS), d. about 1220. He is the last of the St. Gall Ekkehards, and flourished towards the end of the twelfth, and the beginning of the thirteenth, century. No particulars are known concerning his life, and tradition is silent

as to his origin, the year of his birth and of his death. He was dean of the abbey in the reign of Innocent III. About 1214 he wrote a life of St. Notker Balbulus, a learned monk of St. Gall, who lived towards the end of the ninth, and the beginning of the tenth, century (*Acta SS.*, April, I, 579), from which work we gather that its author was versed in ecclesiastical music.

Vortrage*, etc. (Basle, 1876), III, 10 sq.; WATTENBACH, *Deutschlands Geschichtsquellen* (9th ed., Berlin); DÜMMLER, *Ekkehard IV. von St. Gallen in Zeitschrift f. deutsches Altertum* (1867), II, 1-73; VON ARX, *Gesch. des Klosters St. Gallen*, I, 273 sq.; FABRICIUS, *Bibliotheca mediae et infimae latinitatis* (Florence, 1858), I, 491; *Allg. deutsche Biographic* (Leipzig, 1877), V, 790 sqq.

J.P. KIRSCH

Ekkehard of Aura

Ekkehard of Aura

(URAUGIENSIS)

Benedictine monk and chronicler, b. about 1050; d. after 1125. Very little is known of his life. About 1101 he went on a pilgrimage to the Holy Land, and in 1106 took part in the Council of Guastalla. Apparently he belonged at first to the monastery of St. Michael at Bamberg, and later (1108 or 1113) was abbot of the monastery of Aura, founded by Bishop Otto of Bamberg, on the Franconian Saale, near Kissingen, Bavaria; this monastery followed the Rule of Hirschau. The "Chronicon universale", called after Ekkehard is the chief source for the history of Germany during the years 1080-1125. In its present form it is divided into five books; the first contains ancient history from the Creation to the building of the city of Rome; the second extends to the birth of Christ; the third reaches the time of Charlemagne; the fourth goes to the opening of the reign of Emperor Henry V; the fifth contains an account of the reign of this ruler. No other medieval general chronicle covers so much ground; in the manuscripts now extant it is evidently not the work of one man but represents rather a fusion of various recensions and continuations. Bresslau, in his acute investigation of the subject (*Neues Archiv für altere deutsche Geschichtskunde*, VII), traces these changes, for the most part, to Frutolf, prior of St. Michael's (d. 17 Feb., 1103). It is now believed that Ekkehard simply rewrote the greater part of the chronicle, and that his original contribution is the account of the reign of Emperor Henry V. The chronicle, taken as a whole, is a very skilful compilation, and shows in the selection and arrangement of the matter a sound understanding and mastery of the material at hand. The language is good and simple, and the presentation clear and well summarized. Continuations were written

by various chroniclers, among whom may be mentioned Conrad of Lichtenau and Albert of Stade. Ekkehard's chronicle has been published several times (Mon. Germ. Hist., Script., VI, 13-265; Migne, P.L., CLIV, 450-1060). A German translation was issued by Pflüger (Leipzig, 1893), as vol. LI of the series "Geschichtsschreiber der deutschen Vorzeit".

PATRICIUS SCHLAGER.

Elaea

Elaea

A titular see of Asia Minor. Elaea, said to have been founded by Menestheus, was situated at a distance of twelve stadia from the mouth of the Caicus, one hundred and twenty stadia from Pergamus. It appears in history about 450 B.C., at the time of the Athenian naval league. It belonged to Alexander, then to the kings of Pergamus, and was the port of the latter. In 190 B.C. it was besieged by Antiochus of Syria, in 156 by Prusias, who ravaged all the country. It was partly destroyed in A.D. 90 by an earthquake. In its Roman period it struck coins. As a suffragan of Ephesus Elaea is mentioned by most "Notitiae episcopatum" as late as the twelfth or the thirteenth century. We know only three of its bishops: Isaias in 451, Olbianus in 787, Theodulus in the twelfth century (Lequien, Or. Christ., I, 699). In the tenth century St. Paul the Younger, a monk of Mount Latros, was born there (Analecta Bollandiana, XI, 1-74, 136-182). The city must have been destroyed either by the Mongols or by the Turks. The ruins stand about three kilometres south of Kilise Keui in the vilayet of Smyrna. The Greek Church also gives the title of Elaea to auxiliary bishops.

S. PÉTRIDÈS

Elba

Elba

Elba, the largest island of the Tuscan Archipelago, is to-day a part of the Italian province of Leghorn and is separated from the mainland by the channel of Piombino. The island is traversed throughout by treeless mountain ranges, the highest peak being Monte Capanne (about 3343 feet); its area is 86 square miles; according to the census of 1901 it had 25,556 inhabitants, mostly Catholics.

Politically the island forms the district of Porto Ferrajo; the chief town is Porto Ferrajo on the north coast, a place with 3940 inhabitants; the commune contains 6701 inhabitants. Outside of Porto Ferrajo the principal towns of the island are Orte Rio,

with 2478 inhabitants, and the strongly fortified Porto Longone, which has a good harbour and a population of 4761. Ecclesiastically Elba belongs to the Diocese of Massa Marittima (see MASSA MARITTIMA) and contains eleven parishes; Porto Ferrajo, Porto Longone, Marciana, Marciana Marina, Poggio, Capoliveri, Rio, Rio Marina, Marina Campo, Sant' Ilario in Campo, and San Pietro in Campo. the Sisters of Mercy of St. Vincent de Paul have a house at Porto Longone, and the Sisters of St. Vincent, or Ladies of Christian Love, founded by the Venerable Cottolengo, have one at Porto Ferrajo; these are the only houses of religious on the island. The chief industry of Elba is the mining of the rich iron ore which was famous even in antiquity, but which, on account of lack of fuel, is generally smelted on the opposite coast of the mainland (the Maremma). The agricultural products are wheat, maize, wine, and semi-tropical fruits, and there are very profitable tunny and anchovy fisheries. The commerce is carried on through five ports, which were visited in 1900 by 2549 merchant vessels with a total of 492,418 tons burden. The smaller surrounding islands of Capraja, Pianosa, Palmaola, and Monte Cristo are connected in government with the island of Elba. Concerning the famous monastery of San Mamiliani, now in ruins, on the island of Monte Cristo, see Angelli, "L'Abbazia e l'Isola di Montecristo" (Florence, 1903), and for other information Kehr, "Regesta Pontificum Romanorum; Italia Pontificia" (Berlin, 1908), III, 276-78.

In the tenth century Elba came into the power of Pisa, from which it was wrested in 1290 by the city of Genoa. In 1399 Gian Galeazzo Visconti gave the island and the principality of Piombino to Gherardo Appiano in exchange for the lordship of Pisa. After that the island belonged as a Spanish fief to the Dukes of Sora and the Princes of Piombino. The Emperor Charles V gave a part of Elba to the Grand Duke Cosimo I of Tuscany, who built the citadel of Cosmopoli and thus laid the foundation of the later Porto Ferrajo, the chief town of the island; another district including Porto Longone came into the power of the Kingdom of the Two Sicilies. In 1736 the whole of Elba with the principality of Piombino passed under the jurisdiction of the Kingdom of Naples; in 1801 the Peace of Luneville gave it to the Kingdom of Etruria, and in the following year, by the Peace of Amiens, it was transferred to France. After the first abdication of Napoleon Elba was made over to him as a sovereign principality. He landed on the island, 4 May, 1814, but left it on 26 February, 1815; during his short administration Napoleon did much for the benefit of the island, especially in the improvement of the roads. The Congress of Vienna, in 1815, restored the island to Tuscany, with which it was finally incorporated into the united Kingdom of Italy.

GREGOR REINHOLD

Elcesaites

Elcesaites

(Or Helkesaites).

A sect of Gnostic Ebionites, whose religion was a wild medley of heathen superstitions and Christian doctrines with Judaism. Hippolytus (*Philosophumena*, IX, 13-17) tells us that under Callistus (217-222) a cunning individual called Alcibiades, a native of Apamea in Syria, came to Rome, bringing a book which he said had been received from Parthia by a just man named Elchasai (*'Elchasaí*; but Epiphanius has *'Elksaí* and *'Elkessaíoi*; Methodius, *'Elkesaíos*, and Origen, *'Elkesaítaí*). The contents of the book had been revealed by an angel ninety-six miles high, sixteen miles broad, and twenty-four across the shoulders, whose footprints were fourteen miles long and four miles wide by two miles deep. This was the Son of God, and He was accompanied by His Sister, the Holy Ghost, of the same dimensions. Alcibiades announced that a new remission of sins had been proclaimed in the third year of Trajan (a.d. 100), and he described a baptism which should impart this forgiveness even to the grossest sinners. Harnack makes him say "was proclaimed" instead of "has been proclaimed" (as if *eúaggelísthēnai* and not *eúggelísthai*), and thus infers that a special year of remission is spoken of as past once for all—that Alcibiades had no reason for inventing this, so that Hilgenfeld was right in holding that Elchasai really lived under Trajan, as Epiphanius supposed. If we put aside this blunder of Harnack's (and also his earlier odd conjecture that the remission in the third year of Trajan meant that the first two books of the Pastor of Hermas were published in that year), we see that the remission offered is by the new baptism. Hippolytus represents this doctrine as an improvement invented by Alcibiades on the lax teaching of his enemy Callistus. He does not perhaps expect us to take this seriously—it is most likely ironical—but he seems to regard Alcibiades as the author of the book. Origen, writing somewhat later (c. 246-9), says the heresy was quite new; he seems to have met with Alcibiades, though he does not give his name. There is no reason why we should dissent from these contemporary witnesses, and we must place the first appearance of the book of Elchasai c. 220. A century and a half later, St. Epiphanius found it in use among the Sampsæans, descendants of the earlier Elcesaites, and also among the Ossæans, and many of the other Ebionite communities. En-hedim, an Arabic writer, c. 987, found a sect of Sabæans in the desert who counted El-Chasaiaich as their founder (Chwolsohn, *Die Ssabier*, 1856, I, 112; II, 543, cited by Salmon).

According to Hippolytus the teaching of Alcibiades was borrowed from various heresies. He taught circumcision, that Christ was a man like others, that he had many

times been born on earth of a virgin, that he devoted himself to astrology, magic, and incantations. For all sins of impurity, even against nature, a second baptism is enjoined "in the name of the great and most high God and in the name of His Son the great King", with an adjuration of the seven witnesses written in the book, sky, water, the holy spirits, the Angels of prayer, oil, salt, and earth. One who has been bitten by a mad dog is to run to the nearest water and jump in with all his clothes on, using the foregoing formula, and promising the seven witnesses that he will abstain from sin. The same treatment—forty days consecutively of baptism in cold water—is recommended for consumption and for the possessed. Other Ebionites in Epiphanius's time practised this treatment. That saint tells us that mention was made in the book of Elchasai's brother, Iexai, and that the heresiarch was a Jew of the time of Trajan. Two of his descendants, two sisters, Marthus and Marthana, lived till the days of Epiphanius. They were revered as goddesses and the dust of their feet and their spittle were used to cure diseases. This suggests that Elchasai was not a fictitious personage. He was presumably a primitive leader of an Ebionite community, to whom Alcibiades ascribed his own book. We learn further from Epiphanius that the book condemned virginity and continence, and made marriage obligatory. It permitted the worship of idols to escape persecution, provided the act was merely an external one, disavowed in the heart. Prayer was to be made not to the East, but always towards Jerusalem. Yet all sacrifice was condemned, with a denial that it had been offered by the patriarchs or under the Law. The Prophets as well as the Apostles were rejected, and of course St. Paul and all his writings. It has been customary to find Elcasaite doctrine in the Clementine "Homilies" and "Recognitions", especially in the former. On the groundlessness of this see **Clementines**.

Hippolytus, *Philosophumena*, IX, 13-17; X, 29; Origen in Eusebius, *H. E.*, VI, 38; Methodius, *Conviv.*, VIII, 10; Epiphanius, *Her.*, XIX and LIII, also XXX, 3, 17, 18. Theodoret has simply used Epiphanius. See Hilgenfeld, *N. T., extra canonem receptum* (Leipzig, 1881), fasc. III; cf. also Id., *Judentum und Christentum* (Leipzig, 1886) and the various writers on the *Pseudo-Clementines*, esp. Uhlhorn. A good article by Salmon is in *Dict. Christ. Biog.*, s. v. *Elkesai*; more recent are Harnack, *Gesch. der altchr. Lit.*, I, 207; II, i, 267; II, ii, 16; Bardenhewer, *Gesch. der altkirchl. Lit.*, I, 350; Idem, Shahan tr., *Patrology* (Freiburg im Br., 1908), 81.

John Chapman

George Elder

George Elder

Educator, b. 11 August, 1793, in Kentucky, U.S.A.; d. 28 Sept., 1838, at Bardstown. His parents, James Elder and Ann Richards (a convert), natives of Maryland, emigrated shortly after their marriage to Hardin's Creek, in the present Marion County, Kentucky, where George, the second of their seven children was born. The Elders enjoyed a moderate competency and were full of zeal for their Catholic Faith. George's early education devolved mainly upon his father, who was well versed in the Scriptures and thoroughly acquainted with the teachings of the Church, which he frequently defended in discussion and explained to converts who were preparing for baptism. George Elder imbibed a love for serious study, and in his sixteenth year he entered Mount St. Mary's College, Emmitsburg, Maryland, to pursue classical studies. Here he became the friend of William Byrne, afterwards founder of St. Mary's College, Kentucky. Both studied theology in St. Mary's Seminary, Baltimore, and were ordained priests at Bardstown by Bishop David, 18 Sept., 1819. In addition to the duties of an assistant at the cathedral there, Father Elder was entrusted by Bishop Flaget with the founding of a high-grade school or college for lay students. This was, at first, a day school and was taught in the basement of the theological seminary (erected in 1818). A separate building was erected in 1820-23. The college was then one of the largest and best appointed educational structures in the entire West. The arrival, in 1825, of fifty southern students was the beginning of the extensive patronage the college received from the Southern States, notably Louisiana and Mississippi, and which continued down to the Civil War. In 1827 the Rev. Ignatius A. Reynolds (afterwards Bishop of Charleston) was appointed president and Father Elder was given charge of the congregation of St. Pius, in Scott County. Dr. Reynolds was transferred in 1830 to pastoral work, and Father Elder again became president, a position which he held until his death. He frequently did duty in the cathedral and was one of the editors of the Louisville "Catholic Advocate" newspaper (founded in 1836), to which he contributed a series of well-written articles on the education of children and the obligations of parents in such matters. "Letters to Brother Jonathan", half satirical, half controversial, were also the product of his pen. His sense of justice forced him, in spite of his characteristic amiability, to prosecute a bigoted preacher, Nathan L. Rice, for libelling, after the manner of "Maria Monk", a worthy Kentucky priest, then absent in Europe. Father Elder's last illness was brought on by over-exertion and fatigue at the burning down (25 Jan., 1838) of the main college building.

P.M.J. ROCK

William Henry Elder

William Henry Elder

Third Bishop of Natchez, Mississippi, U.S.A., and second Archbishop of Cincinnati, b. in Baltimore, Maryland, 22 March, 1819; d. in Cincinnati, 31 Oct., 1904. His father, Basil Elder, was a descendant of William Elder, who had emigrated from England to America, in colonial times; his mother, Elisabeth Miles (Snowden) Elder. In 1831 he entered Mt. St. Mary's College, Emmitsburg, Maryland, then presided over by the Rev. John Baptist Purcell, who afterwards became the second Bishop, and later the first Archbishop, of Cincinnati. In 1842 he went to Rome, to complete his theological studies at the College of the Propaganda, where he received the degree of Doctor of Divinity. He was ordained priest in Rome, 29 March, 1846. Returning to Maryland, he became professor at Emmitsburg, which position he held until he was appointed Bishop of Natchez, for which he was consecrated in the cathedral of Baltimore, by Archbishop Kenrick, 3 May, 1857. In 1864 he was brought into prominence by his refusal to obey the order of the Federal troops at Natchez, to have certain prayers for the President of the United States recited publicly in the churches of his diocese. He was arrested, tried, and convicted; but the decision of the military court was reversed at Washington. His devotion to his people during the yellow-fever epidemic of 1878 won universal commendation. On 30 January, 1880, he was made titular Bishop of Avara and transferred to Cincinnati, as coadjutor with the right of succession to Archbishop Purcell, whom he succeeded 4 July, 1883. Great financial difficulties clouded the last years of Archbishop Purcell's life and made the task of his successor a trying one. But the reopening of the theological seminary, Mt. St. Mary's of the West, the founding of St. Gregory's Preparatory Seminary, the enlarging of St. Joseph's Orphan Asylum, besides the building of numerous other religious institutions, show how well Archbishop Elder overcame these difficulties. (See CINCINNATI.)

TIMOTHY J. DEASY

Eleazar

Eleazar

(Heb. *al'wr*, God's help).

1. Eleazar, son of Aaron

Elizabeth, daughter of Aminadab and sister of Nahason, bore to Aaron four sons, Nadab, Abiu, Eleazar, and Ithamar (Ex., vi, 23), all of whom, with their father, "were

anointed ... and consecrated, to do the functions of priesthood" (Num., iii, 2-3; Lev., viii, 1-13). As Nadab and Abiu died without children, punished for offering strange fire before the Lord (Lev., x, 107; I Par., xxiv, 1-2), "Eleazar and Ithamar performed the priestly office in the presence of Aaron" (Num., iii, 4). Thus entitled to succeed his father in the office of high-priest, "Eleazar ... took a wife of the daughters of Phutiel", and so became the father of Phinees (Ex., vi, 25). Prince of the princes of the Levites "that watch for the guard of the sanctuary" (Num., iii, 4), directing the sons of Caath when wrapping up "the sanctuary and the vessels thereof at the removing of the camp" (Num., iv, 15-16), Eleazar was selected as the suitable official, "to whose charge pertaineth the oil to dress the lamps, and the sweet incense, and the sacrifice ... and the oil of unction, and whatsoever pertaineth to the service of the tabernacle, and of all the vessels that are in the sanctuary" (Num., iv, 16). At the very moment when his brothers were punished "by fire coming out from the Lord", Eleazar, though deeply affected by mental anguish, obeyed the order of Moses, and completed their unfinished sacrifice (Lev., x, 1-20). After the terrible punishment inflicted on the daring usurpers, Core, Dathan, and Abiron, as if to make more evident his right to become the high-priest, Eleazar, complying with orders, beat into plates the still smoking censers used by these unfortunate rebels, and for a sign and a memorial, fastened this metal to the altar (Num., xvi, 1-40). Appointed to preside over the immolation of the red cow (Num., xix, 1-10), Eleazar next appears, clothed with the vesture of Aaron, and exercising the office of high priest (Num., xx, 22-29). Hence it is that we find Eleazar associated with Moses, in numbering the children of Israel after the slaughter of the twenty-four thousand (Num., xxvi, 1-4), in settling the inheritance case presented by the daughters of Salphaad (Num., xxvii, 1-3), in distributing the spoils taken from the Madianites (Num., xxxi, 1-54), and, finally, in considering the request of Ruben and Gad for land east of the Jordan (Num., xxxii, 1-5). To Eleazar, Josue, the successor of Moses, is presented by the Jewish lawgiver himself (Num., xxvii, 12-23). On the list of those appointed to divide among the Israelites the lands west of the Jordan, the very first name is that of Eleazar (Num., xxxiv, 16-19); Jos., xiv, 1-2; xix, 51), who was buried "in Gabaath, that belonged to Phinees his son, which was given him in mount Ephraim" (Jos., xxiv, 33). If we except the period from Heli to Solomon, during which the descendants of Ithamar exercised the office of high-priest (I Kings, ii, 30-36; III Kings, ii, 27-27), those holding this most sacred calling, down to the time of the Machabees, belonged to the family of Eleazar (Ex., vi, 25).

Eleazar (surnamed Abaron)

Eleazar was the fourth son of Mathathias (I Mach., ii, 1-5). With some probability, he is identified with the Esdras who before the battle with Nicanor read the Holy Book to the Jewish warriors (II Mach., viii, 22-24). In the engagement at Bethzacharam, he

displayed marvellous courage in attacking and killing the elephant, on which "it seemed to him that the king [Antiochus Eupator] was". Crushed to death beneath the dying elephant, Eleazar "exposed himself to deliver his people and to get himself an everlasting name". (I Mach., vi, 17-46.)

Eleazar (scribe and doctor of the law)

Eleazar, though ninety years of age, bravely preferred to die a most glorious death than to purchase a hateful life by violating the law which forbade to the Israelite the use of swine's flesh. His friends, "moved with wicked pity", were willing to substitute lawful flesh, that Eleazar, feigning to have eaten the forbidden meat, might be delivered from death. But, considering "the dignity of his age ... and the inbred honour of his grey head", Eleazar spurned this well-meant proposal, which if accepted, though securing his deliverance from punishment, might scandalize many young persons, and could not deliver from the hand of the Almighty. Having thus changed into rage the rejected sympathy of his friends, the holy man bravely endured his cruel torture, probably at Antioch, during the reign of Antiochus IV Epiphanes. (II Mach., vi, 18-31; I Mach., i, 57-63.)

D.P. Duffy

Elect

Elect

Denotes in general one chosen or taken by preference from among two or more; as a theological term it is equivalent to "chosen as the object of mercy or Divine favour, as set apart for eternal life". In order to determine the meaning of the word more accurately, we shall have to study its usage both in the Old Testament and the New.

I. THE OLD TESTAMENT

The Old Testament applies the term *elect*, or *chosen*, only to the Israelites in as far as they are called to be the people of God, or are faithful to their Divine call. The idea of such an election is common in the Book of Deuteronomy and in Is., xl-lxvi. In Ps. civ, 6 and 43, and cv, 5, the chosen ones are the Hebrew people in as far as it is the recipient of God's temporal and spiritual blessings; in Is., lxv, 9, 15 and 23, they are the repentant Israelites, as few in number "as if a grain can be found in a cluster" (*ibid.*, 8); in Tob., xiii, 10, they are the Israelites remaining faithful during their captivity; in Wisd., iii, 9, and iv, 15, they are God's true servants; in Eccclus., xxiv, 4, 13, and xlvi, 2, these servants of God belong to the chosen people.

II. THE NEW TESTAMENT

The New Testament transfers (excepting perhaps in Acts, xiii, 17) the meaning of the term from its connection with the people of Israel to the members of the Church of Christ, either militant on earth or triumphant in heaven. Thus I Pet., I, 1, speaks of the elect among the "strangers dispersed" through the various parts of the world; I Pet., ii, 9, represents them as "a chosen generation, a kingly priesthood, a holy nation, a purchased people", called from darkness into God's marvellous light. St. Paul, too, speaks of the elect (Rom., viii, 33) and describes the five degrees of their election: they are foreknown, predestined, called, justified, and glorified (loc. cit., 29, 30). He returns to the idea gain and again: II Thess., ii, 12 sq.; Col., iii, 12; Tit., I, 1, 2; II Tim., ii, 10. St. John gives the title of elect to those who fight on the side of the Lamb against the powers of darkness (Apoc., xvii, 14). According to St. Luke (xviii, 7), God hears the cries of his elect for vengeance; according to the first two Evangelists he will shorten the last days for the sake of the elect (Matt., xxiv, 22, 24, 31; Mark, xiii, 20, 22, 27).

If it be asked why the name *elect* was given to the members of the Church Militant, we may assign a double reason: first, they were freely chosen by God's goodness (Rom., xi, 5-7, 28); secondly, they must show in their conduct that they are choice men (Ephes., iv, 17). In the sentence "many are called, but few are chosen", the latter expression renders a word in the Greek and Latin text which is elsewhere translated by *elect* (Matt., xx, 16; xxii, 14). It is agreed on all sides that the term refers to members of the Church Triumphant, but there is some doubt as to whether it refers to mere membership, or to a more exalted degree. This distinction is important; if the word implies mere membership in the Church Triumphant, then the chosen ones, or those who will be saved, are few, and the non-members in the Church Triumphant are many; if the word denotes a special degree of glory, then few will attain this rank, and many will fail to do so, though many are called to it. The sentence "many are called, but few chosen" does not, therefore, settle the question as to the relative number of the elect and the lost; theologians are divided on this point, and while Christ in the Gospels urges the importance of saving one's soul (Luke, xiii, 23, 24), he alternately so strengthens our hope and excites our fear as not to leave us any solid ground for either presumption or despair.

A.J. MAAS

Election

Election

(Lat. *electio*, from *eligere*, to choose from)

This subject will be treated under the following heads:

- I. Juridical Concept;
- II. Electors;
- III. Persons Eligible;
- IV. The Act of Electing: Forms and Methods;
- V. After Election;
- VI. Elections Now in Use.

I. JURIDICAL CONCEPT

In its broadest sense election means a choice among many persons, things, or sides to be taken. In the stricter juridical sense it means the choice of one person among many for a definite charge or function. If we confine ourselves to ecclesiastical law, canonical election, in a broad sense, would be any designation of a person to an ecclesiastical charge or function; thus understood it includes various modes: postulation, presentation, nomination, recommendation, request or petition, and, finally, free collation. In a narrower sense, election is the canonical appointment, by legitimate electors, of a fit person to an ecclesiastical office. Its effect is to confer on the person thus elected an actual right to the benefice or charge, independently of the confirmation or collation ulteriorly necessary. Hence it is easily distinguished from the aforesaid modes that only in a broad sense can be termed election.

- (a) Postulation differs canonically from election, not as regards the electors, but as regards the person elected, the latter being juridically ineligible on account of an impediment from which the superior is asked to dispense him. For instance, if in an episcopal election the canons designate the bishop of another see, or a priest *postulate* their candidate, this postulation being a matter of favour (*gratia*), not of justice.
- (b) Presentation, on the contrary, differs from election not in respect to the person elected but to the electors; it is the exercise of the right of patronage, and the patron may be a layman, whereas the electors to ecclesiastical dignities must be clerics. In both cases the right of the candidate is the same (*jus ad rem*); but while an election calls for canonical confirmation, presentation by a patron leads to canonical institution by a competent prelate. Moreover, when the right of patronage belongs to a

moral body, e. g. a chapter or an entire congregation, presentation may have to follow along the lines of election. Though frequently called nomination, the designation of bishops and beneficed clergy by the civil authority in virtue of concordats is in reality presentation, and results in canonical institution.

- (c) Correctly speaking, nomination is the canonical act by which the electors propose several fit persons to the free choice of the superior. The rôle of electors in nomination is the same as in election properly so called; as election, however, can fall only on one person, so nomination cannot confer on several a real right to a benefice — rather, their right is real inasmuch as it excludes third parties, though none of them possesses the *jus ad rem* (c. Quod sicut, xxviii, De elect., lib. I, tit. vi).
- (d) Recommendation is the name applied to the designation of one or several fit persons made to the superior by certain members of the episcopate or clergy, chiefly in view of sees to be filled (see BISHOP). It differs from election and nomination in that the bishop or members of the clergy do not act as electors; hence the persons designated do not acquire any real right, the Holy See remaining perfectly free to make a choice outside of the list proposed.
- (e) Still further removed from election is simple request, or petition, by which the clergy or people of a diocese beg the pope to grant them the prelate they desire. The authors of this petition, not being properly qualified, as in the case of recommendation, to make known their appreciation of the candidate, it is needless to say the latter acquires no right whatsoever from the fact of this request.
- (f) Finally, free collation is the choice of the person by the superior who confers canonical institution; it is the method most in use for appointment to inferior benefices, and the practical rule for the filling of episcopal sees, apart from some well-known exceptions. Evidently, where free collation obtains, election, properly so called, is excluded.

II. ELECTORS

Electors are those who are called by ecclesiastical law or statute to constitute an electoral college, i. e. to designate the person of their choice, and who have the qualifications required for the exercise of their right to vote. The law appoints competent electors for each kind of election: cardinals for the election of a pope; the cathedral chapter for the election of a bishop or a vicar capitular; and the various chapters of their order, etc. for the election of regular prelates. In general, election belongs, strictly speaking, to the college, i. e. the body, of which the person elected will become the superior or prelate; if this college have a legal existence, like a cathedral chapter, it can

exercise its right as long as it exists, even if reduced to a single member, though, of course, such a one could not elect himself. Electors called upon to give a prelate to the Church must be ecclesiastics. Hence laymen are excluded from all participation in a canonical election; it would be invalid, not only if made by them exclusively (c. iii, h. t.), but even if they only co-operate with ecclesiastics, every custom to the contrary notwithstanding. Ecclesiastics alone, and those only who compose the college or community to be provided with a head, can be electors. This is well exemplified in the cathedral chapter, all of whose canons, and they alone, are episcopal electors. Other ecclesiastics have no right to associate with the chapter in the election of a bishop, unless; —

- (a) they are in full possession of this right and it is proved by long prescription;
- (b) hold a pontifical privilege, or
- (c) can show a right resultant from the foundation of the chapter or the church in question.

To exercise their right, the electors, whoever they may be, must be full members of the body to which they belong, and must, moreover, be in a condition to perform a juridical, human act. Hence natural law excludes the demented and those who have not reached the age of puberty; ecclesiastical law debars; —

- (1) canons who have not attained full membership in the chapter, i. e. who are not yet subdeacons (Council of Trent, Sess. XXII, c. iv, De ref.), and
- (2) religious who have not made their profession.

Moreover, in punishment of certain offences, some electors may have forfeited their right to elect, either for once or permanently, e. g. those excommunicated by name, those suspended, or those placed under interdict. The Constitution of Martin V, "Ad evitanda scandala", permits the excommunicated known as *tolerati* (tolerated) to take part in an election, but exception may be taken to them, and their exclusion must follow; if, after such exception, they cast a vote, it must be considered null. Apart from censures incurred, privation of an active share in elections occurs frequently in the ecclesiastical law affecting regulars; in common law and for the secular clergy, it exists in only three cases: Electors lose the right to elect, for that time, first, when they have elected or postulated an unworthy person (c. vii, h. t.); second, when the election has been held in consequence of an abusive intervention of the civil authority (c. xliii,

h. t.); finally, when it has not been made within the required time. In all these cases the election devolves upon the superior (c. xli, h. t.).

III. PERSONS ELIGIBLE

Those persons are eligible who meet the requirements of common ecclesiastical law, or special statutes, for the charge or function in question; hence, for each election it is necessary to ascertain what is required of the candidate. In general, for all kinds of elections, the necessary qualifications are mature age, moral integrity, and adequate knowledge (c. vii, h. t.); for each charge or function dependent on an election these conditions are defined with more precision and fullness. Thus, neither a layman nor an ecclesiastic who is not yet a subdeacon can be elected bishop; and no regular can be elected superior, etc., unless he has made his final profession. Some of the aforesaid requirements are easily verified, e. g. the proper age, adequate knowledge, the latter being presumable when the law formally exacts an academic degree (Council of Trent, Sess. XXII, c. ii, De ref.); others, especially an upright life, must usually depend on negative evidence, i. e. on the absence of proof to the contrary, such proof being positive offences, particularly when they have seriously impaired the reputation of the person in question or called for canonical punishment. It is principally candidates of censurable morality who are termed unworthy; the sacred canons constantly repeat that the unworthy must be set aside. Such unworthy persons are:

- (1) all outside the Church, viz, infidels, heretics, and schismatics;
- (2) all who have been guilty of great crimes (*crimina majora*), viz, the sacrilegious, forgers, perjurers, sodomites, and simoniacs;
- (3) all whom law or fact, for whatever reason, has branded as infamous (*in famiâ juris aut facti*);
- (4) all under censure (excommunication, suspension, interdict), unless said censure be occult;
- (5) all whom an irregularity, particularly a penal one (*ex crimine*), debars from receiving or exercising Holy orders.

Those also are excluded who, at the time of election, hold several incompatible benefices or dignities without dispensation (c. liv, h. t.); or who, at a preceding election, have already been rejected as unworthy (c. xii, h. t.), and all who have consented to be elected through the abusive intervention of lay authority (c. xliii, h. t.). There are other cases in which regulars cease to be eligible. The legislation here described was meant for the episcopal elections of the thirteenth century and aims at abuses now impossible.

IV. THE ACT OF ELECTION: FORMS AND METHODS

In this matter, even more than in the preceding paragraphs, we must consider special laws and statutes. Strictly speaking, the common ecclesiastical law, which dates from the thirteenth-century Decretals, considers only episcopal elections (lib. I, tit. vi, De electione et electi potestate; and in VI^o). Since an election is held to appoint to a church or an ecclesiastical charge or office that is vacant, it is obvious that the first condition requisite for an election is precisely the vacancy of said church, charge, or office, in consequence of death, transfer, resignation, or deposition; any election made with a view to filling an office not yet vacant is a canonical offence. When an election becomes necessary, the first step is to convoke the electoral assembly in some specified place, and for a certain day within the legal time-limit. The place is ordinarily the vacant church or, if it be question of an election in a chapter, wherever the deliberations of the chapter are usually held. The time-limit set by common ecclesiastical law is three months, after the lapse of which the election devolves upon the immediate superior (c. xli, h. t.). In an electoral college, the duty of convoking the members belongs to the superior or president; in a chapter this would be the highest dignitary. He must issue an effectual summons, for which no special form is prescribed, to all the electors without exception, whether present in the locality or absent, unless, however, they be too far away. The distance considered as constituting a legitimate excuse for absence (see c. xviii, h. t.) should be more narrowly interpreted today than in the thirteenth century. It is unnecessary to convoke electors publicly known to be incompetent to exercise their electoral right, e. g. canons excommunicated by name or not yet subdeacons. So binding is this convocation that if even one elector be not summoned he can, in all justice, enter a complaint against the election, though the latter is not *ipso facto* null by reason of such absence. Such an election will stand provided the unsummoned elector abides by the choice of his colleagues or abandons his complaint. As no one is bound to use a right, common law does not oblige an elector to attend the assembly and take part in the voting; the absent are not taken into consideration. As a general rule the absent cannot be represented or vote by proxy unless, according to the chapter "Quia propter" (xlii, h. t., Lateran Council, 1215), they are at a great distance and can prove a legitimate hindrance. Moreover, they can choose as proxy only a member of the assembly, but they can commission him to vote either for a particular person or for whomsoever he himself may deem most worthy.

On the appointed day the president opens the electoral assembly. Though the common law requires no preliminary solemnities, such are frequently imposed by special statute, e. g. the Mass of the Holy Ghost, which should be attended by all the assembled electors and those not prevented from assisting; also the recital of certain prayers. Moreover, the electors are often obliged previously to promise under oath

that they will conscientiously vote for the most worthy. However, apart from such oath, their obligation is none the less absolute and serious. These preliminaries over, the electoral assembly proceeds, if necessary, to verify the credentials of certain electors, e. g. those who act as delegates, as happens in the general chapters of religious congregations. Then follows the discussion of the merits (*tituli*) of the candidates. The latter need not have previously made known their candidacy, though they may do so. The electors, nevertheless, have all freedom to propose and sustain the candidates of their choice. Frank and fair discussion of the merits of candidates, far from being forbidden, is perfectly conformable to the law, because it tends to enlighten the electors; indeed, some maintain that an election made without such a discussion would be null or could be annulled (Matthæucci, in Ferraris, "Bibliotheca", s. v. "Electio", art. iv, n. 5). It is more accurate to say that the election would be vitiated if the presiding officer were to oppose this discussion for the purpose of influencing votes. However, though the law strictly prohibits cabals and secret negotiations in the interest of certain candidates, the line between illicit manœuvring and permissible negotiating is in practice not always easily recognizable. [See the Constitution "Ecclesiæ" of Innocent XII (22 Sept., 1695), on the elections of regulars (in Ferraris, art. iii, no. 26), also the regulations that govern a conclave.]

The discussion concluded, voting begins. Actually there is only one customary method, i. e. secret voting (*scrutinium secretum*) by written ballots. The common ecclesiastical law (c. Quia propter, xlii, h. t., Lateran Council, 1215) admits only three modes of election: the normal or regular method by ballot, and two exceptional modes, namely, compromise and quasi-inspiration. Recourse to lots is especially prohibited; nevertheless, the Sacred Congregation of the Council (Romana, Electionis, 2 May, 1857) ratified an election where the chapter, equally divided between two candidates in other respects fit, had drawn lots; just about as was done for the Apostolic election of St. Matthias. As to the two exceptional methods:

- (1) Election by quasi-inspiration takes place when the electors greet the name of a candidate with enthusiasm and acclamation, in which event the ballot is omitted as useless since its result is known in advance, and the candidate in question is proclaimed elected. However, modern custom in this matter differs from ancient habits, and it is wiser, even in the case of such apparent unanimity, to proceed by ballot.
- (2) Compromise occurs when all the electors confide the election to one or several specified persons, either members of the electoral college or strangers, and ratify in advance the choice made by such arbitrator or arbitrators.

Formerly this exceptional method was often resorted to, either to terminate long and fruitless sessions, or when there was a lack of exact information concerning the candidates; it is minutely regulated by the law of the Decretals. The compromise must be agreed to by all the electors without exception, and can be confided to ecclesiastics only. It may be absolute, i. e. leaving the arbitrators quite free, or conditional, i. e. accompanied by certain reservations concerning the manner of election, the persons to be elected, the time-limit within which the election should be held, and so on.

The normal or regular method by ballot, according to the law of the Decretals was necessarily neither secret nor written. The law "Quia propter" (see above) merely calls for the choice of three trustworthy scrutineers from among the electors. These were charged with collecting secretly (in a whisper) and in succession the votes of all; the result was then drawn up in writing and made public. The candidate who had obtained the votes of the more numerous or sounder party (*major vel sanior pars*) of the chapter was declared elected. However, this appreciation, not only of the number but also of the value of the votes, led to endless discussions, it being necessary to compare not only the number of votes obtained, but also the merits of the electors and their zeal, i. e. the honesty of their intentions. It was presumed, of course, that the majority was also the sounder party, but proof to the contrary was admitted (c. lvii, h.t.). The use of the secret and written ballot has long since remedied these difficulties. If the Council of Trent did not modify on this point the existing law, at least it exacted the secret ballot for the elections of regulars (Sess. XXV, c. vi, De regul.). According to this method the scrutineers silently collect the ballots of the electors present; when occasion requires it, certain members are delegated to collect the votes of sick electors beneath the same roof (e. g. at a conclave or at one of the regular chapters) or even in the city (for cathedral chapters), if the statutes so prescribe. This accomplished, the scrutineers count the number of ballots collected, and if, as should be, they tally with the number of electors, the same officers proceed to declare the result. Each ballot is in turn opened, and one of the scrutineers proclaims the name inscribed thereon, then passes it to the second scrutineer for registration, while the third, or secretary, adds up the total number of votes obtained by each candidate. As a general rule, election is assured to the candidate who obtains the majority of votes, i. e. an absolute, not merely a relative, majority; however, certain statutes require, e. g. in a conclave, a majority of two-thirds. When the electors are odd in number, a gain of one vote ensures the majority; if the number be even, it requires two votes. In calculating the majority, neither absent electors nor blank ballots are taken into account; whoever casts a blank vote is held to have forfeited his electoral right for that ballot. If no candidate obtains an absolute majority, balloting is recommenced, and so on until a definitive vote is reached. However, not to prolong useless balloting, special statutes can prescribe, and in fact

have provided, various solutions, e. g. that after three rounds of fruitless balloting the election shall devolve upon the superior; or again, that in the third round the electors can vote only between the two most favoured candidates; or, finally, that in the fourth round a relative majority shall suffice (Rules of the Sacred Congregation of Bishops and Regulars for congregations of women under simple vows, art. ccxxxiii sq.). Other special regulations provide for the case of two candidates receiving the same number of votes (the voters being of even number), in which event the election is decided in favour of the senior (by age, ordination, or religious profession); sometimes the deciding vote is assigned to the presiding officer. For all these details it is necessary to know and observe the special legislation that covers them.

When the final vote is obtained, whatever its character, it should be made public, i. e. officially communicated to the electoral assembly by the presiding officer. The decree of election is then drawn up; in other words, the document which verifies the voting and the election. The rôle of the electoral college thus fulfilled, the election is closed.

The principal duty of an elector is to vote according to his conscience, without allowing himself to be actuated by human or selfish motives, i. e., he must vote for him whom he deems the most worthy and best qualified among the persons fit for the office in question. External law can scarcely go farther, but moralists rightly declare guilty of mortal sin the elector who, against his conscience, casts his vote for one who is unworthy. In order, however, to fulfil his duty, the elector has a right to be entirely free and uninfluenced by the dread of any unjust annoyance (*vexatio*) which might affect his vote, whether such annoyance be in its source civil or ecclesiastical (cc. xiv and xliii, h. t.).

V. AFTER ELECTION

We are confronted here by two hypotheses: either an election is or is not disputed. An election may be disputed by whoever is interested in it, in which case the question of its validity is referred to the superior, in accordance with the same rule as for judicial appeals. Now, an election may be defective in three ways, i. e. as to the electors, the person elected, or the mode of election. The defect concerns the electors if, through culpable neglect, one or more of those who have a right to participate in the election are not summoned; or if laymen, excommunicates *vitandi*, or unauthorized ecclesiastics are admitted as electors. The defect lies with the person elected if it can be proved that he was not fit (*idoneus*), in which case he may be postulated, or that he was positively unworthy, in which event the election is invalid. Finally, the defect concerns the form or mode of election when the legal prescriptions relative to balloting or compromise have not been observed. The challenged election, with proofs of its imperfection, is judged canonically by the proper ecclesiastical superior. If the alleged defect is not

proven, the election is sustained; if it be proven, the judge declares it, whereupon the law provides the following sanctions: An election made by laymen, or with their assistance, is invalid (c. lvi, h. t.); the one at which an excommunicated person has been admitted to vote, as also that to which an elector has not been invited, must be closely investigated, but is not to be annulled unless the absence of the excommunicated person, or the presence of the unsummoned elector might have given a different turn to the vote. The election of a person who is not unworthy, but simply the victim of an impediment, may be treated indulgently; that of an unworthy person is to be annulled, while the electors who, knowing him to be such, nevertheless elected him, are deprived for that time of the right to vote and are suspended for three years from the benefices they hold in the vacant church in question. Finally, the election wherein the prescribed form has not been observed must be annulled. In all of these cases the right to elect (bishops) devolves upon the Holy See (Boniface VIII, c. xviii, h. t., in VI^o); the only case in which it devolves upon the immediate superior is when the election has not been made within the prescribed time-limit.

If, on the contrary, the election meets with no opposition the first duty of the presiding officer of the electoral college is to notify the person elected that choice is made of his person. If he be present, e. g. in the elections of regulars, the notification takes place immediately; if he be absent, the decree of election must be forwarded to him within eight days, barring legitimate hindrance. On his side, the person elected is allowed a month within which to make known his acceptance or refusal, the month dating from the time of receiving the decree of election or the permission of the superior when such is obligatory. If the person elected refuses the honour conferred upon him, the electoral college is summoned to proceed with a new election, under the same conditions as the first time and within a month. If he accepts, it is his right as well as his duty to demand from the superior the confirmation of his election within the peremptory limit of three months (c. vi, h. t., in VI^o); but if, without legitimate hindrance, he allows this time to pass unused, the election has lapsed. From the moment of his acceptance, the person elected acquires a real, though still incomplete, right to the benefice or charge, the *jus ad rem* to be completed and transformed into full right (*jus in re*) by the confirmation of the election; it is his privilege to exact this confirmation from the superior, just as it is the latter's duty to give it, except in the event of unworthiness, of which fact the superior remains judge. However, until the person elected has received this confirmation, he cannot take advantage of his still incomplete right to interfere in any way whatever in the administration of his benefice, the punishment being the invalidity of all administrative acts thus accomplished and privation of the benefice itself. The ecclesiastical legislation on this point is very severe, but it concerns episcopal sees only. In the time of Innocent III (1198-1216) those elected to an ordinary

episcopal see had to seek the confirmation of their election from the metropolitan only. Bishops outside of Italy who had to obtain from Rome the confirmation of their election (metropolitans, or bishops immediately subject to the Holy See) were authorized (c. xlv, h. t.), in cases of necessity, to enter at once on the administration of their churches, provided their election had aroused no opposition; meanwhile the confirmation proceedings went their ordinary course at Rome.

At the Second Council of Lyons, in 1274 (c. *Avanitiæ*, v, h. t., in VI^o), elected persons were forbidden, under penalty of deprivation of their dignity, to meddle in the administration of their benefice by assuming the title of administrator, procurator, or the like. A little later, Boniface VIII (*Extrav., Injunctæ*, i, h. t.) established the rule still in force for entering on possession of major benefices and episcopal sees, according to which the person elected must not be received unless he present to the provisional administrators the Apostolical Letters of his election, promotion, and confirmation. The Council of Trent having established the vicar capitular as provisional administrator of the diocese during the vacancy of the see, it became necessary to prohibit elected persons from entering on the administration of their future dioceses in the capacity of vicars capitular. This was done by Pius IX in the Constitution "*Romanus Pontifex*" (28 August, 1873), which recalls and renews the measure taken by Boniface VIII. In this Constitution the pope declares that the law "*Avaritiæ*" of the aforesaid Council of Lyons applies not only to bishops elected by chapters, but also to candidates named and presented by heads of states in virtue of concordats. He rules that chapters can neither appoint temporarily vicars capitular nor revoke their appointment. He also forbids them to designate as such persons nominated by the civil power, or otherwise elected to a vacant church. Offences against this law are severely punished, by excommunication specially reserved to the pope and by privation of the revenues of their benefices for those dignitaries and canons who turn over the administration of their church to a person elected or nominated. The same penalties are pronounced against said elected or nominated persons, and against all who give them aid, counsel, or countenance. Moreover, the person elected or nominated forfeits all acquired right to the benefice, while all acts performed during his illegitimate administration are declared invalid.

We may now return to the confirmation of the election according to the law of the Decretals. It belonged to the immediate superior. It was his duty to extinguish all opposition by summoning the elected person to defend himself. Even if there were no opposition the superior was bound to summon, by a general edict posted on the door of the vacant church, all who might possibly dispute the election to appear within a fixed period; all this under penalty of the nullity of subsequent confirmation (c. xlvii, h. t., in VI^o). The superior had to examine carefully both the election and the person

of the one elected, in order to satisfy himself that everything was conformable to law; if his investigation proved favourable he gave the requisite confirmation whereby the elected person became definitively prelate of his church and received full jurisdiction. While the law did not bind the superior to any strict time-limit for the granting of confirmation, it authorized the elected person to complain if the delay were excessive. All this legislation, especially elaborated for episcopal elections, is now no longer applicable to them; however, it is still in force for inferior benefices, e. g. canonries, when they are conferred by way of election.

VI. ELECTIONS NOW IN USE

Election, considered as the choice made by a college of its future prelate, is verified first of all in the designation of a pope by the cardinals (*see* CONCLAVE). The election of bishops by chapters is still, theoretically, the common rule, but the general reservation formulated in the second rule of the Apostolic Chancery has suppressed in practice the application of this law; episcopal elections, in the strict sense of the word, occur now in only a small number of sees (*see* BISHOP). Finally, the prelates of regulars are normally appointed by election; the same is true of abbesses. (See the Council of Trent, Sess. XXV, c. vi, De regul.) The common ecclesiastical law provides for no other elections. There are, however, other ecclesiastical elections that do not concern real prelates. Religious communities of men and women under simple vows proceed by election in the choice of superiors, superiors general, assistants general, and usually the members of the general councils. In cathedral churches it is by election that, on occasion of the vacancy of a see, the chapter appoints the vicar capitular (Council of Trent, Sess. XXIV, c. xvi, De ref.). It is also according to the canonical form of election that colleges, especially chapters, proceed in appointing persons, e. g., to dignities and canonries, when such appointment belongs to the chapter; to inferior benefices to which the chapter has a right to nominate or present; again in the appointment of delegates on seminary commissions (Council of Trent, Sess. XXIII, c. xviii, De ref.), or in bestowing on some of its members various capitulary offices, or making other such designations. The same is true of other ecclesiastical groups, e. g. the chapters of collegiate churches, etc., also of confraternities and other associations recognized by ecclesiastical authority. In the latter cases, however, there is no election in the strictly canonical sense of the term.

See Commentaries on the *Corpus Juris Canonici* at the title *De electione et electi potestate*, Lib. I, tit. vi; and in VI°; SANTI-LEITNER, *Prælect. Jur. Can.* (Ratisbon, 1898); FERRARIS, *Prompta Bibliotheca*, s. v. *Electio*; PASSERINI, *De electione canonicâ* (Cologne, 1661).

A. BOUDINHON.

Pope St. Eleutherius

Pope St. Eleutherius (Eleutheros)

Pope (c. 174-189). The *Liber Pontificalis* says that he was a native of Nicopolis, Greece. From his contemporary Hegesippus we learn that he was a deacon of the Roman Church under Pope Anicetus (c. 154-164), and evidently remained so under St. Soter, the following pope, whom he succeeded about 174. While the condition of Christians under Marcus Aurelius was distressing in various parts of the empire, the persecution in Rome itself does not seem to have been violent. De Rossi, it is true, dates the martyrdom of St. Cecilia towards the end of this emperor's reign; this date, however, is by no means certain. During the reign of Commodus (180-192) the Christians enjoyed a practically unbroken peace, although the martyrdom of St. Appollonius at Rome took place at the time (180-185). The Montanist movement, that originated in Asia Minor, made its way to Rome and Gaul in the second half of the second century, more particularly about the reign of Eleutherius; its peculiar nature made it difficult to take from the outset a decisive stand against it (see Montanists). During the violent persecution at Lyons, in 177, local confessors wrote from their prison concerning the new movement to the Asiatic and Phrygian brethren, also to Pope Eleutherius. The bearer of their letter to the pope was the presbyter Irenæus, soon afterwards Bishop of Lyons. It appears from statements of Eusebius concerning these letters that the faithful of Lyons, though opposed to the Montanist movement, advocated forbearance and pleaded for the preservation of ecclesiastical unity.

Just when the Roman Church took its definite stand against Montanism is not certainly known. It would seem from Tertullian's account (*adv. Praxeam*, I) that a Roman bishop did at one time address to the Montanists some conciliatory letters, but these letters, says Tertullian, were recalled. He probably refers to Pope Eleutherius, who long hesitated, but, after a conscientious and thorough study of the situation, is supposed to have declared against the Montanists. At Rome heretical Gnostics and Marcionites continued to propagate their false teachings. The "*Liber Pontificalis*" ascribes to Pope Eleutherius a decree that no kind of food should be despised by Christians (*Et hoc iterum firmavit ut nulla esca a Christianis repudiaretur, maxime fidelibus, quod Deus creavit, quæ tamen rationalis et humana est*). Possibly he did issue such an edict against the Gnostics and Montanists; it is also possible that on his own responsibility the writer of the "*Liber Pontificalis*" attributed to this pope a similar decree current about the year 500. The same writer is responsible for a curious and interesting assertion concerning the early missionary activity of the Roman Church; indeed, the "*Liber Pontificalis*" contains no other statement equally remarkable. Pope

Eleutherius, says this writer, received from Lucius, a British king, a letter in which the latter declared that by his behest he wishes to become a Christian (*Hic accepit epistula a Lucio Brittanio rege, ut Christianus efficerentur per ejus mandatum*). Whence the author of the first part of the "Liber Pontificalis" drew this information, it is now impossible to say. Historically speaking, the fact is quite improbable, and is rejected by all recent critics.

As at the end of the second century the Roman administration was so securely established in Britain, there could no longer have been in the island any real native kings. That some tribal chief, known as king, should have applied to the Roman bishop for instruction in the Christian faith seems improbable enough at that period. The unsupported assertion of the "Liber Pontificalis", a compilation of papal biographies that in its earliest form cannot antedate the first quarter of the sixth century, is not a sufficient basis for the acceptance of this statement. By some it is considered a story intended to demonstrate the Roman origin of the British Church, and consequently the latter's natural subjection to Rome. To make this clearer they locate the origin of the legend in the course of the seventh century, during the dissensions between the primitive British Church and the Anglo-Saxon Church recently established from Rome. But for this hypothesis all proof is lacking. It falls before the simple fact that the first part of the "Liber Pontificalis" was compiled long before these dissensions, most probably (Duchesne) by a Roman cleric in the reign of Pope Boniface II (530-532), or (Waitz and Mommsen) early in the seventh century. Moreover, during the entire conflict that centered around the peculiar customs of the Early British Church no reference is ever made to this alleged King Lucius. Saint Bede is the first English writer (673-735) to mention the story repeatedly (*Hist. Eccl.*, I, V; V, 24, *De temporum ratione*, ad an. 161), and he took it, not from native sources, but from the "Liber Pontificalis". Harnack suggests a more plausible theory (*Sitzungsberichte der Berliner Akademie*, 1904, I, 906-916). In the document, he holds, from which the compiler of the "Liber Pontificalis" drew his information the name found was not *Britanio*, but *Britio*. Now this is the name (*Birtha- Britium*) of the fortress of Edessa. The king in question is, therefore, Lucius Ælius Septimus Megas Abgar IX, of Edessa, a Christian king, as is well known. The original statement of the "Liber Pontificalis", in this hypothesis, had nothing to do with Britain. The reference was to Abgar IX of Edessa. But the compiler of the "Liber Pontificalis" changed *Britio* to *Brittanio*, and in this way made a British king of the Syrian Lucius.

The ninth-century "Historia Brittonum" sees in Lucius a translation of the Celtic name Llever Maur (Great Light), says that the envoys of Lucius were Fagan and Wervan, and tells us that with this king all the other island kings (*reguli Britanniaë*) were baptized (*Hist. Brittonum*, xviii). Thirteenth-century chronicles add other details. The "Liber

Landavensis", for example (ed. Rees, 26, 65), makes known the names of Elfan and Medwy, the envoys sent by Lucius to the pope, and transfers the king's dominions to Wales. An echo of this legend penetrated even to Switzerland. In a homily preached at Chur and preserved in an eighth- or ninth-century manuscript, St. Timothy is represented as an apostle of Gaul, whence he came to Britain and baptized there a king named Lucius, who became a missionary, went to Gaul, and finally settled at Chur, where he preached the gospel with great success. In this way Lucius, the early missionary of the Swiss district of Chur, became identified with the alleged British king of the "Liber Pontificalis". The latter work is authority for the statement that Eleutherius died 24 May, and was buried on the Vatican Hill (in Vaticano) near the body of St. Peter. His feast is celebrated 26 May.

J.P. Kirsch

St. Eleutherius

St. Eleutherius

(Fr. ELEUTHERE).

Bishop of Tournai at the beginning of the sixth century. Historically there is very little known about St. Eleutherius, but he was without doubt the first Bishop of Tournai. Theodore, whom some give as his immediate predecessor, was either a bishop of Tours, whose name was placed by mistake on the episcopal list of Tournai, or simply a missionary who ministered to the Christians scattered throughout the small Frankish Kingdom of Tournai. Before he became bishop, Eleutherius lived at court with his friend Medardus, who predicted that he would attain the dignity of a count and also be elevated to the episcopate. After Clovis, King of the Franks, had been converted to Christianity, in 496, with more than 3000 of his subjects, bishops took part in the royal councils. St. Remigius, Bishop of Reims, organized the Catholic hierarchy in Northern Gaul, and it is more than likely that St. Eleutherius was named Bishop of Tournai at this time.

The saint's biography in its present form was really an invention of Henri of Tournai in the twelfth century. According to this, Eleutherius was born at Tournai towards the end of the reign of Childeric, the father of Clovis, of a Christian family descended from Irenaeus, who had been baptized by St. Piatius. His father's name was Terenus, and his mother's Blanda. Persecution by the tribune of the Scheldt obliged the Christians to flee from Tournai and take refuge in the village of Blandinium. The conversion of Clovis, however, enabled the small community to reassemble and build at Blandinium a church, which was dedicated to St. Peter. Theodore was made bishop of Tournai, and Eleutherius succeeded him. Consulted by Pope Hormisdas as to the best means of eradicating the heresy which threatened nascent Christianity, Eleutherius convened a synod and publicly confounded the heretics. They vowed vengeance, and as he was on his way to the church, one day, they fell on him and, after beating him unmercifully, left him for dead. He recovered, however, but his days were numbered. On his death-bed (529) he confided his flock to his lifelong friend, St. Medardus.

The motive underlying this biography invented by Canon Henri (1141), was to prove the antiquity of the Church of Tournai, which from the end of the eleventh century had been trying to free itself from the jurisdiction of the bishops of Noyon. The sermons on the Trinity, Nativity, and the feast of the Annunciation (*Bibliotheca Patrum*, vol. XV), sometimes attributed to St. Eleutherius, are also of a more than doubtful authenticity. His cult, however, is well established; there is record of a recovery of his relics during the episcopate of Hedilo in 897 or 898, and a translation of them by Bishop Baudoin in 1064 or 1065, and another in 1247. Relics of this saint were also preserved in the monastery of St. Martin at Tournai, and in the cathedral at Bruges. His feast is given in martyrologies on 20 or 21 July, but is usually celebrated on the former date. The translation of his relics is commemorated 25 August.

L. VAN DER ESSEN

Eleutheropolis

Eleutheropolis

A titular see in Palaestina Prima. The former name of this city seems to have been Beth Gabra, "the house of the strong men", which later became Beît Djibrîn, "the house of Gabriel". Vespasian slaughtered almost all its inhabitants, according to Josephus, *De Bell. Jud.*, IV., viii, 1, where its name is written Betaris. In A.D. 200 Septimius Severus, on his Syrian journey changed its name to Eleutheropolis, and it soon became one of the most important cities of Judea. Its special era, which figures on its coins and in many inscriptions, began 1 January, A.D. 200. (See *Echos d'Orient*, 1903, 310)

sq.; 1904,215 sq.) Its first known bishop is Macrinus (325); five others are mentioned in the fourth and two in the sixth century (Lequien, Or. Christ., III, 631). In 393, during the episcopate of Zebennus, the relics of the Prophets Habakuk and Micah were found at Ceila and Tell Zakariya near Eleutheropolis (Sozom., H.E., VII, xxix). At Eleutheropolis was born St. Epiphanius, the celebrated bishop of Salamis in Cyprus; at Ad in the neighbourhood he established a monastery which is often mentioned in the polemics of St. Jerome with Rufinus and John, Bishop of Jerusalem. The city was, moreover, an important monastic centre at least till the coming of the Arabs. The latter beheaded (638) at Eleutheropolis fifty soldiers of the garrison of Gaza who had refused to apostatize. They were buried in a church built in their honour. (See Anal. Bolland., 1904, 289 sq., and Echos d'Orient, 1905, 40 sq.) The city was destroyed by the Mussulmans in 796 in the civil wars. The Crusaders erected there a fortress, in 1134, under Fulco of Anjou; the Knights of St. John, to whom it was committed, restored at this time the beautiful Byzantine church at Sandahanna. The citadel was taken in 1187 by Saladin, conquered in 1191 by Richard Lion Heart, destroyed in 1264 by Sultan Bibars, and rebuilt in 1551 by the Turks. Today Beît Djibrîn is a village with about 1000 Mussulman inhabitants, on the road from Jerusalem to Gaza, in a fertile and very healthy region. The medieval fortress still stand, about 180 feet square; there are also remains of the walls, ruins of a cloister, and of a medieval church. In the neighbourhood are remarkable grottoes, which filled St. Jerome with wonderment. Some of these grottoes were used in early Christian times as places of worship; others bear Arabic inscriptions.

Reland, Palaestina (Utrecht, 1714), 749-754; Smith, Diet. of Greek and Roman Geogr. (London, 1878)s.v. Bethograbis.

S. VAILHÉ

The Elevation

The Elevation

What we now know as *par excellence* the Elevation of the Mass is a rite of comparatively recent introduction. The Oriental liturgies, and notably the Byzantine, have indeed a showing of the consecrated Host to the people, with the words "Holy things to the holy", but this should rather be regarded as the counterpart of our "Ecce Agnus Dei" and as a preliminary to the Communion. Again, in the West, a lifting of the Host at the words "omnis honor et gloria", immediately before the Pater Noster, has taken place ever since the ninth century or earlier. This may very probably be looked upon as originally an invitation to adore when the great consecratory prayer of the canon extending from the Preface to the Pater Noster (see Cabrol in "Dict. d'Archéologie",

I, 1558) had been brought to a conclusion. But the showing of the Sacred Host (and still more of the Chalice) to the people after the utterance of the words of Institution, "Hoc est corpus meum", is not known to have existed earlier than the close of the twelfth century. Eudes de Sully, Bishop of Paris from 1196 to 1208, seems to have been the first to direct in his episcopal statutes that after the consecratory words the Host should be "elevated so that it can be seen by all".

There has, however, been a good deal of confusion upon this point in the minds of some early liturgists, owing to the practice which prevailed of lifting the bread from the altar and holding it in the hands above the chalice while consecrating it. Some degree of lifting, at the words "acceptit panem in sanctas ac venerabiles manus suas" was unavoidable and many priests carried it so far that liturgical commentators spoke of their act as "elevare hostiam" (cf. Migne, P.L., CLXXVII, 370, and CLXXI, 1186), but a careful examination of the evidence proves that this was quite a different thing from showing the Host to the people. Moreover, the motive of this latter showing has generally been misconceived. It has often been held to be a protest against the heresy of Berengarius; but Berengarius died a century before, and the statements of writers at the beginning of the thirteenth century make the whole development plain. The great centre of intellectual life at that period was Paris, and we learn that at Paris a curious theological view was then being defended by such eminent scholars as the chancellor Peter Manducator and the professor Peter Cantor, that transubstantiation of the bread only took place when the priest at Mass had pronounced the words of consecration over both bread and wine (see, e.g., Giraldus Cambrensis, Works, II, 124; Caesarius of Heisterbach, "Dialogus", IX, xxvii, and "Libri Miraculorum", ed. Meister, pp 16, 17). To quote the words of Peter of Poitiers "dicunt quidam....quod non facta est transubstantiatio panis in corpus donec prolata sint haec verba "Hic est sanguis" (Migne, P. L., CCXI, 1245; Pope Innocent III, "De sacro altaris mysterio", IV, 22, uses very similar language). This view, as may readily be understood, aroused considerable opposition, and notably on the part of Bishop Eudes de Sully and Stephen Langton, afterwards Archbishop of Canterbury and cardinal. It seems clear that the theologians of this party, by way of protest against the teaching of Peter Cantor, adopted the custom of adoring the Host immediately after the words, "Hoc est enim corpus meum" were spoken, and by a natural transition they encouraged the practice of showing it to the people for this purpose. The developments can be easily followed in the synodal decrees of France, England, and other countries during the thirteenth century. We find mention of a little bell of warning in the early years of that century, and before the end of the same century it was enjoined in many dioceses of the Continent and in England that one of the great bells of the church should be tolled at the moment of the Elevation, in order that those at work in the fields might kneel down and adore.

It will be readily understood from the above explanation that there was not the same motive at first for insisting on the elevation of the Chalice as well as the Host. No one at that period doubted that by the time the words of Institution had been spoken over the wine, transubstantiation had been effected in both species. We find accordingly that the elevation of the Chalice was introduced much more slowly. It was not adopted at St. Alban's Abbey until 1429, and we may say that it is not practised by the Carthusians even to this day. The elevation of the Host at Mass seems to have brought in its train a great idea of the special merit and virtue of looking upon the Body of Christ. Promises of an extravagant kind circulated freely among the people describing the privileges of him who had seen his Maker at Mass. Sudden death could not befall him. He was secure from hunger, infection, the danger of fire, etc. As a result, an extraordinary desire developed to see the Host when elevated at Mass, and this led to a variety of abuses which were rebuked by preachers and satirists. On the other hand, the same devout instinct undoubtedly fostered the introduction of processions of the Blessed Sacrament and the practice of our familiar Exposition and Benediction (qq. v.).

All the usual authorities upon the liturgical history of the Mass are somewhat unsatisfactory owing to the neglect to note the important point as to the teaching of the Paris theologians of the twelfth century. See THURSTON, *The Elevation in The Tablet*, 19 Oct., 28 Oct., 2 Nov., 1907. But many useful facts may be gleaned from GIORGI, *De Liturgia Rom. Pont.* (Rome, 1744), III; LEBRUN, *Explication des prieres et des ceremonies de la Messe* (Paris, 1726); GIHR, *Das heilige Messopfer* (tr. St. Louis, 1902); THALHOFER, *Liturgik* (Freiburg, 1893), II. DRURY, *Elevation in the Eucharist* (Cambridge, 1907), is of little value. See further the bibliography of the article *Canon of the Mass*.

HERBERT THURSTON

Fausto de Elhuyar y de Suvisa

Fausto de Elhuyar y de Suvisa

A distinguished mineralogist and chemist, born at Logroño, Castile, 11 October, 1755; died 6 February, 1833. He was professor in the School of Mines, Vergara, Biscay, from 1781 to 1785. His most celebrated work is the isolation of tungsten. Associated with his brother, Juan Jose, in 1783, two years after Scheele and Bergman had announced the probable existence of this metal, he isolated it, reducing it by carbon. At the present day when tungsten steel, known as high speed steel and self-hardening steel, is revolutionizing machine-shop practice, the work of Elhuyar is of particular interest. He named the metal Wolfram, a name which it still retains in the German

language; the name, tungsten, meaning heavy stone, is generally used in other tongues. The Academy of Sciences of Toulouse, 4 March, 1784, received notice of this discovery. Elhuyar then spent three years in travelling for the purpose of study, through Central Europe and went to Mexico, then called New Spain. Here he had general superintendence of the mines and founded a Royal School of Mines in 1792. Driven away by the Revolution, he returned to Spain, where he was busy reorganizing his department when he was seized with a fit of apoplexy and died. His works are numerous; he wrote on the theory of amalgamation, a system for the reduction of silver from its ore which received great development in Mexico. In 1818 he published memoirs on the mintage of coins. He was also the author of memoirs on the state of the mines of New Spain (now Mexico) and on the exploitation of the Spanish mines. At Madrid, in 1825, he published a work on the influence of mineralogy in agriculture and chemistry.

Biographies in Dictionnaire Larousse, La Grande Encyclopedie, and under tungsten and Wolfram. His work on the reduction of tungsten is described in WURTZ, Dictionnaire de chimie; WATTS, Dictionary of Chemistry; MUSPRATT, Chimie.

T. O'CONOR SLOANE

Elijah

Elias

Elias (Heb. *'Eliahu*, "Yahveh is God"; also called Elijah).

The loftiest and most wonderful prophet of the Old Testament. What we know of his public life is sketched in a few popular narratives enshrined, for the most part, in the First (Third) Book of Kings. These narratives, which bear the stamp of an almost contemporary age, very likely took shape in Northern Israel, and are full of the most graphic and interesting details. Every part of the prophet's life therein narrated bears out the description of the writer of Ecclesiasticus: He was "as a fire, and his word burnt like a torch" (xlvi, 1). The times called for such a prophet. Under the baneful influence of his Tyrian wife Jezabel, Achab, though perhaps not intending to forsake altogether Yahveh's worship, had nevertheless erected in Samaria a temple to the Tyrian Baal (1 Kings, xvi, 32) and introduced a multitude of foreign priests (xviii 19); doubtless he had occasionally offered sacrifices to the pagan deity, and, most of all, hallowed a bloody persecution of the prophets of Yahveh.

Of Elias's origin nothing is known, except that he was a Thesbite; whether from Thisbe of Nephtali (Tob., i, 2, Gr.) or from Thesbon of Galaad, as our texts have it, is not absolutely certain, although most scholars, on the authority of the Septuagint and of Josephus, prefer the latter opinion. Some Jewish legends, echoed in a few Christian writings, assert moreover that Elias was of priestly descent; but there is no other warrant

for the statement than the fact that he offered sacrifices. His whole manner of life resembles somewhat that of the Nazarites and is a loud protest against his corrupt age. His skin garment and leather girdle (2 Kings, 1, 8), his swift foot (1 Kings, xviii, 46), his habit of dwelling in the clefts of the torrents (xvii,3) or in the caves of the mountains (xix, 9), of sleeping under a scanty shelter (xix, 5), betray the true son of the desert. He appears abruptly on the scene of history to announce to Achab that Yahveh had determined to avenge the apostasy of Israel and her king by bringing a long drought on the land. His message delivered, the prophet vanished as suddenly as he had appeared, and, guided by the spirit of Yahveh, betook himself by the brook Carith, to the east of the Jordan, and the ravens (some critics would translate, however improbable the rendering, "Arabs" or "merchants") "brought him bread and flesh in the morning, and bread and flesh in the evening, and he drank of the torrent" (xvii, 6).

After the brook had dried up, Elias, under Divine direction, crossed over to Sarepta, within the Tyrian dominion. There he was hospitably received by a poor widow whom the famine had reduced to her last meal (12); her charity he rewarded by increasing her store of meal and oil all the while the drought and famine prevailed, and later on by restoring her child to life (14-24). For three years there fell no rain or dew in Israel, and the land was utterly barren. Meanwhile Achab had made fruitless efforts and scoured the country in search of Elias. At length the latter resolved to confront the king once more, and, suddenly appearing before Abdias, bade him summon his master (xviii, 7, sq.). When they met, Achab bitterly upbraided the prophet as the cause of the misfortune of Israel. But the prophet flung back the charge: "I have not troubled Israel, but thou and thy father's house, who have forsaken the commandments of the Lord, and have followed Baalim" (xviii, 18). Taking advantage of the discountenanced spirits of the silenced king, Elias bids him to summon the prophets of Baal to Mount Carmel, for a decisive contest between their god and Yahveh. The ordeal took place before a great concourse of people (see CARMEL, MOUNT) whom Elias, in the most forcible terms, presses to choose: "How long do you halt between two sides? If Yahveh be God, follow him; but if Baal, then follow him" (xviii, 21). He then commanded the heathen prophets to invoke their deity; he himself would "call on the name of his Lord"; and the God who would answer by fire, "let him be God" (24). An altar had been erected by the Baal-worshippers and the victim laid upon it; but their cries, their wild dances and mad self-mutilations all the day long availed nothing: "There was no voice heard, nor did any one answer, nor regard them as they prayed" (29). Elias, having repaired the ruined altar of Yahveh which stood there, prepared thereon his sacrifice; then, when it was time to offer the evening oblation, as he was praying earnestly, "the fire of the Lord fell, and consumed the holocaust, and the wood, and the stones, and the dust, and licked up the water that was in the trench" (38). The issue was fought

and won. The people, maddened by the success, fell at Elias's command on the pagan prophets and slew them at the brook Cison. That same evening the drought ceased with a heavy downpour of rain, in the midst of which the strange prophet ran before Achab to the entrance of Jezrael.

Elias's triumph was short. The anger of Jezabel, who had sworn to take his life (xix, 2), compelled him to flee without delay, and take his refuge beyond the desert of Juda, in the sanctuary of Mount Horeb. There, in the wilds of the sacred mountain, broken spirited, he poured out his complaint before the Lord, who strengthened him by a revelation and restored his faith. Three commands are laid upon him: to anoint Hazael to be King of Syria, Jehu to be King of Israel, and Eliseus to be his own successor. At once Elias sets out to accomplish this new burden. On his way to Damascus he meets Eliseus at the plough, and throwing his mantle over him, makes him his faithful disciple and inseparable companion, to whom the completion of his task will be entrusted. The treacherous murder of Naboth was the occasion for a new reappearance of Elias at Jezrael, as a champion of the people's rights and of social order, and to announce to Achab his impending doom. Achab's house shall fall. In the place where the dogs licked the blood of Naboth will the dogs lick the king's blood; they shall eat Jezabel in Jezrael; their whole posterity shall perish and their bodies be given to the fowls of the air (xxi, 20-26). Conscience-stricken, Achab quailed before the man of God, and in view of his penance the threatened ruin of his house was delayed. The next time we hear of Elias, it is in connexion with Ochozias, Achab's son and successor. Having received severe injuries in a fall, this prince sent messengers to the shrine of Beelzebub, god of Accaron, to inquire whether he should recover. They were intercepted by the prophet, who sent them back to their master with the intimation that his injuries would prove fatal. Several bands of men sent by the king to capture Elias were stricken by fire from heaven; finally the man of God appeared in person before Ochozias to confirm his threatening message. Another episode recorded by the chronicler (II Par., xxi 12) relates how Joram, King of Juda, who had indulged in Baal-worship, received from Elias a letter warning him that all his house would be smitten by a plague, and that he himself was doomed to an early death.

According to [2 Kings 3](#), Elias's career ended before the death of Josaphat. This statement is difficult -- but not impossible -- to harmonize with the preceding narrative. However this may be, Elias vanished still more mysteriously than he had appeared. Like Enoch, he was "translated", so that he should not taste death. As he was conversing with his spiritual son Eliseus on the hills of Moab, "a fiery chariot, and fiery horses parted them both asunder, and Elias went up by a whirlwind into heaven" ([2 Kings 2:11](#)), and all the efforts to find him made by the sceptic sons of the prophets disbelieving Eliseus's recital, availed nothing. The memory of Elias has ever remained living in

the minds both of Jews and Christians. According to Malachias, God preserved the prophet alive to entrust him, at the end of time, with a glorious mission (iv, 5-6): at the New Testament period, this mission was believed to precede immediately the Messianic Advent (Matt., xvii, 10, 12; Mark, ix, 11); according to some Christian commentators, it would consist in converting the Jews (St. Jer., in Mal., iv, 5-6); the rabbis, finally, affirm that its object will be to give the explanations and answers hitherto kept back by them. I Mach., ii, 58, extols Elias's zeal for the Law, and Ben Sira entwines in a beautiful page the narration of his actions and the description of his future mission (Ecclus., xlviii, 1-12). Elias is still in the N.T. the personification of the servant of God (Matt., xvi, 14; Luke, i, 17; ix, 8; John, i, 21). No wonder, therefore, that with Moses he appeared at Jesus' side on the day of the Transfiguration.

Nor do we find only in the sacred literature and the commentaries thereof evidences of the conspicuous place Elias won for himself in the minds of after-ages. To this day the name of *Jebel Mar Elyas*, usually given by modern Arabs to Mount Carmel, perpetuates the memory of the man of God. Various places on the mountain: Elias's grotto; *El-Khadr*, the supposed school of the prophets; *El-Muhraka*, the traditional spot of Elias's sacrifice; *Tell el-Kassis*, or Mound of the priests -- where he is said to have slain the priests of Baal -- are still in great veneration both among the Christians of all denominations and among the Moslems. Every year the Druses assemble at *El-Muhraka* to hold a festival and offer a sacrifice in honour of Elias. All Moslems have the prophet in great reverence; no Druse, in particular, would dare break an oath made in the name of Elias. Not only among them, but to some extent also among the Jews and Christians, many legendary tales are associated with the prophet's memory. The Carmelite monks long cherished the belief that their order could be traced back in unbroken succession to Elias whom they hailed as their founder. Vigorously opposed by the Bollandists, especially by Papenbroeck, their claim was no less vigorously upheld by the Carmelites of Flanders, until Pope Innocent XII, in 1698, deemed it advisable to silence both contending parties. Elias is honoured by both the Greek and Latin Churches on 20 July.

The old stichometrical lists and ancient ecclesiastical writings (Const. Apost., VI, 16; Origen, Comm. in Matth., xxvii, 9; Euthalius; Epiphan., Haer., xliii) mention an apocryphal "Apocalypse of Elias", citations from which are said to be found in I Cor. ii, 9, and Eph., v, 14. Lost to view since the early Christian centuries, this work was partly recovered in a Coptic translation found (1893) by Maspéro in a monastery of Upper Egypt. Other scraps, likewise in Coptic, have since been also discovered. What we possess now of this Apocalypse -- and it seems that we have by far the greater part of it -- was published in 1899 by G. Steindorff; the passages cited in I Cor., ii, 9, and

Eph., v, 14, do not appear there; the Apocalypse on the other hand, has a striking analogy with the Jewish "Sepher Elia".

CHARLES L. SOUVAY

Elias of Cortona

Elias of Cortona

Minister General of the Friars Minor, b., it is said, at Bevilia near Assisi, c. 1180; d. at Cortona, 22 April, 1253. In the writings of Elias that have come down to us he styles himself "Brother Elias, Sinner", and his contemporaries without exception call him simply "Brother Elias". The name of a town was first added to his name in the fourteenth century; in Franciscan compilations like the "Chronica XXIV generalium" and the "Liber Conformitatum" Elias is described as Helias de Assisi, whereas the name of Cortona does not appear in connexion with his before the seventeenth century. It is clear in any event that Elias did not belong to the noble family of Coppi as some have asserted. From Salimbene, who knew Elias well, we learn that his family name was Bonusbaro or Bonibarone, that his father was from the neighbourhood of Bologna, and his mother an Assisian; that before becoming a friar Elias worked at his father's trade of mattress-making and also taught the children of Assisi to read the Psalter. Later on, according to Eccleston, Elias was a *scriptor*, or notary, at Bologna, where no doubt he applied himself to study. But he was not a cleric and never became a priest. Elias appears to have been one of the earliest companions of St. Francis of Assisi. The time and place of his joining the saint are uncertain; it may have been at Cortona in 1211, as Wadding says. Certain it is, however, that he held a place of prominence among the friars from the first. After a short sojourn, as it seems, in Tuscany, Elias was sent in 1217 as head of a band of missionaries to Palestine, and two years later he became the first provincial of the then extensive province of Syria. It was in this capacity that he received Cæsar of Speyer into the order. Although we are ignorant of the nature or extent of Elias's work in the East, it would seem that the three years he spent there made a deep impression upon him. In 1220-21 Elias returned to Italy with St. Francis, who showed further confidence in him by naming him to succeed Peter of Cataneo (d. 10 March, 1221) as vicar-general of the order. Elias had held this office for five years when Francis died (3 Oct., 1226), and he then became charged with the responsibilities of the moment and the provisional government of the Friars Minor. After announcing the death of Francis and the fact of the Stigmata to the order in a beautiful letter, and superintending the temporary burial of the saint at San Giorgio, Elias at once began to lay plans for the erection of a great basilica at Assisi, to enshrine the remains of the Poverello. To this end he obtained a donation, with the authority of

the pope, of the so-called Collis Inferni at the western extremity of the town, and proceeded to collect money in various ways to meet the expenses of the building. Elias thus alienated the zealots in the order, who felt entirely with St. Francis upon the question of poverty, so that at the chapter held in May, 1227, Elias was rejected in spite of his prominence, and Giovanni Parenti, provincial of Spain, was elected second general of the order.

Thenceforth Elias devoted all his energies to raising the basilica in honour of St. Francis. The first stone was laid 17 July, 1228, the day following the saint's canonization, and the work advanced with such incredible speed that the lower church was finished within twenty-two months. It was consecrated 25 May, 1230, the hurried, secret, and still unexplained translation of St. Francis's body thither from San Giorgio planned by Elias having taken place a few days previously, before the general and other friars assembled for the purpose were present. Soon after this, though there is some difference of opinion as to the exact date, Elias attempted, as it seems by a kind of *coup de main*, to depose Parenti and seize the government of the order by force, but the attempt failed. He thereupon retired to a distant hermitage, where we are told he allowed his beard and hair to grow, wore the vilest habit, and to all appearances led a most penitential life. However this may be, Elias was elected to succeed Parenti as general at the chapter in 1232, *magis tumultuose quam canonice*, as a contemporary chronicler expresses it; and he continued to govern the Friars Minor for nearly seven years. During that period the order was passing through one of the crises of its earlier development. It is well known (*see* CONVENTUALS) that even during the lifetime of St. Francis a division had shown itself in the ranks of the friars, some being for relaxing the rigour of the rule, especially as regards the observance of poverty, and others for adhering to its literal strictness. The conduct of Elias after his election as general helped to widen this breach and fan the flame of discord in the order. In arbitrary fashion he refused to convene a chapter or to visit any of the provinces, but sent in his place "visitors", who acted rather as tax collectors—for Elias's chief need was money to complete the church and convent of S. Francesco—thus not only violating the rule himself, but causing others to do so also. In many other respects Elias abused his authority, receiving unworthy subjects into the order and confiding the most important offices to ignorant lay brothers, and when several of the early and most venerated companions of Francis withstood his high-handed methods, they were dealt with as mutineers, some being scourged, others exiled or imprisoned. Elias's manner of life made his despotism more intolerable. It seems to have been that of a powerful baron rather than of a mendicant friar. We are told that he gathered about him a household of great splendour, including secular lackies, dressed in the gayest liveries, that he kept "a most excellent cook" for his exclusive use, that he fared sumptuously, wore splendid garments, and made his

journeys to different courts on fine palfreys with rich trappings. Because of these excesses, which threatened the complete destruction of the rule, the opposition to Elias became widespread. It was organized by Aymon of Faversham, who, in conjunction with other provincials from the North, determined to have him removed, and appealed to Gregory IX. Elias excommunicated the appellants and sought to prevent their reception by the pope. But Gregory received them and, in spite of Elias, summoned a chapter at Rome. Elias resisted to the utmost, and strove to browbeat his accusers, but Gregory called on him to resign. He refused to do so, and was thereupon deposed by the pope, the English provincial, Albert of Pisa, being elected general in his stead. This was in 1239.

After his deposition, Elias, who still kept the titles of Custos of the Assisian Basilica and Master of the Works, seems to have busied himself anew for a time at the task of completing the church and convent of S. Francesco, but subsequently retired to Cortona. Refusing to obey either the general or the pope, Elias now openly transferred his allegiance to Frederick II, and we read of him in 1240 with the emperor's army, riding on a magnificent charger at the siege of Faenza and at that of Ravenna. Some two years before this Elias had been sent by Gregory IX as an ambassador to Frederick. He now became the supporter of the excommunicated emperor in his strife with Rome and was himself excommunicated by Gregory. It is said that Elias afterwards wrote a letter to the pope explaining his conduct and asking pardon, and that this letter was found in the tunic of Albert of Pisa after the latter's death. Aymon of Faversham, who had been the principal opponent of Elias, and who was elected general in succession to Albert, having died in 1244, a chapter was thereupon convened at Genoa. Elias was summoned by Innocent IV to attend it, but he failed to appear. Some say that the papal mandate never reached him. Be this as it may, Elias was excommunicated anew and expelled from the order. The news of his disgrace spread quickly "to the great scandal of the Church", and the very children might be heard singing in the streets:

"Hor attorna fratt' Helya
Ke pres' ha la mala via",

a couplet which met the friars at every turn, so that the very name of Elias became hateful to them. It was about this time that Elias was sent by Frederick II on an important diplomatic mission to Constantinople and Cyprus. When not employed by the emperor, Elias resided at Cortona with a few friars who had remained faithful to him. He dwelt for a time in a private house there, still known as the *casa di frate Elia*, but in January, 1245, the people of Cortona, for whom he had obtained sundry privileges in the past, presented him with a piece of ground called the *Bagno della Regina*, and helped him to erect thereon the splendid church and convent dedicated to St. Francis.

Soon after Blessed Giovanni da Parma became general in 1247, he sent Fra Gerardo da Modena to Cortona to beg Elias to submit, promising that he would be treated with the utmost clemency. But Elias, who seems on the one hand to have feared imprisonment by the pope and on the other to have been unwilling to renounce the favour of Frederick II, declined. During Passiontide, 1253, the lonely old man—for Elias had lost his protector by Frederick's death in 1250—fell seriously ill. We learn from the sworn testimony of several witnesses that Bencius, Archpriest of Cortona, recognizing at once the gravity of Elias's condition and the reality of his repentance, absolved him on Holy Saturday, 19 April; that two days later Elias received Holy Communion at the hands of Fra Diotefece, but that he could not be anointed, since Cortona being then under interdict, no holy oil was to be found. On Easter Tuesday Elias died, reconciled indeed with the Church but outside the order. He was buried at Cortona in the church he had built, which two years later—his followers having returned to obedience—passed into the hands of the order. But Elias's bones were not suffered to rest at S. Francesco, for a later guardian dug them up and flung them out.

Elias is perhaps the most difficult character to estimate in all Franciscan history. In the first place it is wellnigh impossible, with the documents at our disposal, to obtain even a clear idea of his chequered career. There is no contemporary life of Elias, and, with the exception of Celano's "Vita Prima", which is said to have been written under the influence of Elias, none of the early biographies of St. Francis make any allusion to him. In the second place, considerable bias has to be reckoned with in what is recorded of Elias in later works, especially in the writings of the Zelanti, which are often influenced less by historical considerations than by party spirit. Many stories have gathered around the life of Elias which are largely inventions. Yet these fictions have been indiscriminately reproduced by subsequent writers, with the result that Elias has come to be depicted by too many modern biographers of St. Francis as a traitor to his master's interests, as a mere tool of the Curia in transforming the order and destroying the manner of life intended by the Poverello. But if some have branded Elias as another Judas, others, going to the opposite extreme, have not hesitated to call him the St. Paul of St. Francis. Laying undue stress on some words of St. Antoninus, they have sought to exculpate Elias altogether, to justify his conduct at all hazards, even where it is wholly unjustifiable; they would fain make him appear as a second founder of the order, to whose ability its great success was mainly due. It is just because so few have written calmly about Elias that it becomes additionally difficult to form a just estimate of the real motives which guided him. He has been too much abused and too much lauded. Between the two extremes it seems necessary, if we would judge with fairness, to distinguish two periods in the life of Elias, namely, before the death of St. Francis and after it. In spite of the account of Elias's early pride and frowardness given by the

"Fioretti"—which may be set aside as a picturesque slander introduced for artistic effect—there is nothing to show that Elias was other than a good religious during the lifetime of St. Francis, else it is hard to understand how the latter could have entrusted him with so much responsibility, and how he could have merited the special death-bed blessing of the Poverello. On the other hand that Elias really loved St. Francis there can be no doubt, and so far as we have means of ascertaining there never was any breach between them. At the same time it would be difficult to imagine two characters more widely different than Elias and St. Francis. Their religious ideals were as far apart as the poles. The heroic ideal of poverty and detachment which the Poverello conceived for his friars Elias regarded as exaggerated and unpractical. Hence, while St. Francis did not desire large *loci* for his friars, Elias multiplied spacious convents. Again, Elias's views with regard to learning among the friars were very far removed from those of St. Francis. "Hoc solum habuit bonum frater Helias", writes Salimbene, "quia Ordinem fratrum Minorum ad studium theologiæ promovit." But Elias did more than this. In particular the extension of the Franciscan missions among the infidels owes more to his work than is commonly admitted. For the rest, Elias was no doubt guided throughout by what he thought to be the glory of the order. On the other hand it would be idle to deny that Elias was utterly lacking in the true spirit of his master. Ambition was Elias's chief fault. So long as he remained under the influence of Francis his ambition was curbed, but when he came to govern, forgetting his own past life, the example of St. Francis, and the obligations of his office, Elias so far allowed ambition to dominate him that when it was thwarted he had not the humility to submit, but, reckless of consequences, plunged to his ruin.

It is no doubt owing to his fall and disgrace that in an order so prolific in early biographies Elias remained so long without a biographer. It would be difficult, however, to exaggerate the importance of his influence upon the history of the Franciscan Order. Even his opponents conceded that Elias possessed a remarkable mind, and none doubted his exceptional talents. "Who in the whole of Christendom", asks Eccleston, "was more gracious or more famous than Elias?" Matthew of Paris dwells on the eloquence of his preaching, and Bernard of Bresse calls him one of the most erudite men in Italy. We know that good as well as great men sought the friendship of Elias, and, strange as it may seem, he appears to have retained the confidence of St. Clare and her companions.

Nothing that can really be called a portrait of Elias remains, Giunta Pisano's picture of him "taken from life" in 1236 having disappeared in 1624; but a seventeenth-century replica in the Municipio at Assisi is believed to have been more or less copied from it. In the latter, Elias is represented as a small, spare, dark-haired man, with a melancholy face and trim beard, and wearing an Armenian cap. With the exception of his letter

to the order announcing the death of Francis, no writing of Elias has come down to us; several works dealing with alchemy, formerly circulated under his name, are undoubtedly supposititious. Whether or not Elias was himself the architect of S. Francesco, the fact remains that if the tomb of the Poverello has become the "cradle of the Renaissance", the "first flower and the fairest of Italian Gothic", and the glory of Assisi, it is to Elias we own this, and it constitutes his best monument.

Biographies of Elias: Antonio Cortonese (Venuti), *Vita di frate Elia* (2nd ed., Leghorn, 1763); Affo, *Vita di frate Elia* (2nd ed., Parma, 1819); Rybka, *Elias von Cortona* (Leipzig, 1874); these may still be read with interest, but they have been to a certain extent superseded by Lempp, *Frère Elie de Cortone* (Paris, 1901) in *Collection d'études et de documents sur l'histoire religieuse et littéraire du moyen âge*, Vol. III. Dr. Lempp has attempted to put order into the undigested mass of details handed down about Elias, and his monograph is thoroughly "documenté", but its objective value is greatly spoiled by the author's apparent anxiety to read a gospel of his own into the beginnings of Franciscan history. Those who wish to go behind these biographies to some of the original authorities from which our knowledge of Elias is derived, may consult: Cilano, *Legenda Prima B. Francisci*, ed D' Alençon (Rome, 1906), p. xxviii with references to text; Eccleston, *De Adventu Minorum in Angliam in Anal. Francis.*, I (Quaracchi, 1885), 230 and passim; *Chronica fr. Pascal Robinson.

Elias of Jerusalem

Elias of Jerusalem

Died 518; one of the two Catholic bishops (with Flavian of Antioch) who resisted the attempt of the Emperor Anastasius I (491-518) to abolish the Council of Chalcedon (451). Anastasius spent the greater part of his reign in a vain attempt to impose Monophysitism on his subjects. Unlike his predecessors, who favoured Monophysitism merely as a political expedient whereby to conciliate Egypt and the great number of Monophysites in Syria, Anastasius carried on his propaganda apparently from religious conviction. His chief adviser, Marinus, a Syrian, was also a convinced Monophysite. At first the emperor tried to arrange a compromise. The population of Constantinople and nearly all the European provinces were too Chalcedonian for an open attack on that council to be safe. Macedonius II, Patriarch of Constantinople (469-511), submitted so far as to sign Zeno's Henotikon (482), but refused to condemn the council. Flavian of Antioch also for a time approved of a policy of compromise. The Acacian schism (484-519) still continued during the reign of Anastasius, but the emperor and his patriarch made advances to the Roman See—advances that came to nothing, since the pope always insisted on the removal of the names of former schismatics from the Byzantine diptychs. Gradually Anastasius went over completely to the Monophysites. Severus of Sozomen, Xenaias of Tahal in Persia, and a great crowd of Syrian and Egyptian Monophysite monks overwhelmed him with petitions to have the courage of his convictions and to break openly with the Dyophysites. In the emperor's chapel the Trisagion was sung with the famous Monophysite addition ("who was curcified for us"). Macedonius of Constantinople was deposed (511), and an open Monophysite, Timothy I (511-518), took his place. Timothy began a fierce persecution of Catholics. Then the Government summoned a synod at Sidon in 512 that was to condemn the Council of Chalcedon. It was chiefly Elias of Jerusalem who prevented this result.

Elias was an Arab, by birth, who had been educated in a monastery in Egypt. In 457 he was driven out by the Monophysite Patriarch of Alexandria, Timothy the Cat. He then came to Palestine and founded a *laura* at Jericho. Anastasius of Jerusalem ordained him priest. In 494 Elias succeeded Sallustius as Bishop of Jerusalem and governed the see until 513. He acknowledged Euphemius of Constantinople (see Euphemius) and refused the communion of Macedonius, the intruder. About 509 the Monophysite Xenaias of Hierapolis tried to make Elias sign a Monophysite formula, and the emperor ordered him to summon a synod that should condemn the Council of Chalcedon. Instead, Elias sent the emperor a Catholic profession that his enemies seem to have falsified on the way. Evagrius says: "He when he had written it sent it to

the Emperor by the hands of Dioscorus' followers" (Monophysites). "And the profession that they then showed contained an anathema against those who speak of two natures in Christ. But the Bishop of Jerusalem, saying that it had been tampered with, sent another without that anathema. Nor is this surprising. For they often corrupted works of the holy Fathers" (H. E., III, xxxi). The Synod of Sidon in 512 was to condemn Chalcedon and depose Elias and Flavian. But they succeeded in persuading the Fathers to do neither (Labbe, Council., IV, 1414). The Monophysites went on accusing these two of Nestorianism, and Anastasius deposed them, in spite of the protest of Elias' legate, Sabas. Flavian was deposed first and Severus, an open Monophysite, was introduced in his place. With this person Elias and the monks of Palestine would have no communion (Evagr., H. E., III, xxxiii). Then the Count of Palestine, Olympos, arrived at Jerusalem and offered Elias his choice of signing a Monophysite formula or being deposed. Elias refused to sign and was banished to Aila on the Red Sea (513). His monks remained faithful to him to the end.

Elias of Jerusalem was the founder of many monasteries in his patriarchate. The common presentation of him as a compromiser is unjust. He was steadfastly Catholic throughout and protested at once against the heretical formula brought to the emperor in his name. The Syrian Uniat Church keeps his feast, with St. Flavian of Antioch, on 18 Feb. (Nilles, Kalend. Man., I, 471). These two are named in the Roman Martyrology on 4 July

Acta SS., July, II, 22-28; Nicephoros callistus, XVI, 26; Liberatus, *Brev. caus. Nest. et Eutych.*, XIX; Evagrius, *H. E.*, III, xxx-xxxiii.

Adrian Fortescue

Jean-Baptiste-Armand-Louis-Leonce Elie de Beaumont

Jean-Baptiste-Armand-Louis-Léonce Elie de Beaumont

Geologist, b. at Canon (Dép. Calvados), near Caen, France, 25 Sept., 1798; d. at Canon, 21 Sept., 1874. He made his preliminary studies at the Séminaire Henri IV in Paris, and after successfully competing the course at the Ecole Polytechnique devoted himself in 1819 to mineralogy at the Ecole des Mines. His professor of geology, Brochant de Villiers, in 1822, chose him and his fellow-student Dufrénoy as companions on a tour to England, to study the mines of the country and to become acquainted with the British methods of geological surveying. After their return, Elie de Beaumont published a series of papers in conjunction with Dufrénoy in the "Annales des Mines" (1824-1830) which were afterwards republished under the title "Voyage métallurgique en Angleterre"; 2 vols. (Paris, 1837-39). In 1825 the two young geologists began the pre-

paration of a geological map of France. This great work, carried on, first under the direction of de Villiers and afterwards independently, required eighteen years for its completion. Its publication was an event of much importance in the development of geology in France and established the reputation of its authors. Later and more complete editions were afterwards issued and Elie de Beaumont continued to direct the work of the special geological survey until his death.

In 1827 he was elected professor of geology at the Ecole des Mines and in 1832 was appointed to the same chair in the Collège de France. In 1833 he became chief engineer of mines and some years later succeeded de Villiers as general inspector of mines. He received many honours during his long career in recognition of his scientific achievements. He was admitted to the Académie des Sciences in 1835 and succeeded Arago in 1853 as its perpetual secretary. He served as President of the Geological Society of France and in 1861 became Vice-President of the Conseil Général des Mines. He was made a Senator of France in 1852 and during the Second Empire a Grand Officer of the Legion of Honour.

His fame extended throughout Europe. His extensive field observations, in connexion with his surveys and his epoch-making work on the age and origin of mountain systems, constitute his chief contributions to geology. A paper published by him, as early as 1829, in the "Annales" of the Academy, may be regarded as the starting-point of modern views on mountain structure. His observations and theories on the subject are developed in detail in his "Notice sur les systèmes des montagnes": 3 vols. (1852). Elie de Beaumont was a man of ardent faith and great integrity of life. In all his official positions he was conspicuous for his fairness and consideration for his colleagues. He was also the author of "Observations sur les différentes formations dans le système des Vosges", Paris, 1829; "Mémoires pour servir à une description géologique de la France" (with Dufrénoy), 4 vols., Paris, 1830-38; "Recherches sur quelques-unes des révolutions de la surface du globe", Paris, 1834; "Explications de la carte géologique de la France", Part I, 1841; Part II-IV, 1848-78 (with Dufrénoy).

DEVILLE, *Coup-d'oeil historique sur la géologie et sur les travaux d'Elie de Beaumont* (Paris, 1878); BERTRAND, *Eloges Académiques* (Paris, 1890), 77-103; VON ZITTEL, *History of Geology and Palæontology* (London, 1901).

H. M. BROCK

St. Eligius

St. Eligius

(Fr. Eloi).

Bishop of Noyon-Tournai, born at Chaptelat near Limoges, France, c. 590, of Roman parents, Eucherius and Terrigia; died at Noyon, 1 December, 660. His father, recognizing unusual talent in his son, sent him to the noted goldsmith Abbo, master of the mint at Limoges. Later Eligius went to Neustria, where he worked under Babo, the royal trasdurer, on whose recommendation Clotaire II commissioned him to make a throne of gold adorned with precious stones. His honesty in this so pleased the king that he appointed him master of the mint at Marseilles, besides taking him into his household. After the death of Clotaire (629), Dagobert appointed his father's friend his chief councillor. The fame of Eligius spread rapidly, and ambassadors first paid their respects to him before going to the king. His success in inducing the Breton King, Judicail, to submit to Frankish authority (636-37) increased his influence. Eligius took advantage of this to obtain alms for the poor and to ransom Roman, Gallic, Breton, Saxon, and Moorish captives, who were arriving daily at Marseilles. He founded several monasteries, and with the king's consent sent his servants through towns and villages to take down the bodies of malefactors who had been executed, and give them decent burial. Eligius was a source of edification at court, where he and his friend Dado (Audoenus) lived according to the Irish monastic rule, introduced into Gaul by St. Columbanus. Eligius introduced this rule, either entirely or in part, into the monastery of Solignac which he founded in 632, and into the convent at Paris where three hundred virgins were under the guidance of the Abbess Aurea. He also built the basilica of St. Paul, and restored that of St. Martial in Paris. He erected several fine churches in honour of the relics of St Martin of Tours, the national saint of the Franks, and St. Denis, who was chosen patron saint by the king. On the death of Dagobert (639), Queen Nanthilde took the reins of government, and Eligius and Dado left the court and entered the priesthood. On the death of Acarius, Bishop of Noyon-Tournai, 13 May, 640, Eligius was made his successor with the unanimous approbation of clergy and people. The inhabitants of his diocese were pagans for the most part. He undertook the conversion of the Flemings, Antwerpians, Frisians, Suevi, and the barbarian tribes along the coast. In 654 he approved the famous privilege granted to the Abbey of Saint-Denis, Paris, exempting it from the jurisdiction of the ordinary. In his own episcopal city of Noyon he built and endowed a monastery for virgins. After the finding of the body of St. Quentin, Bishop Eligius erected in his honour a church to which was joined a monastery under the Irish rule. He also discovered the bodies of St. Piatius and companions, and in 654 removed the remains of St Fursey, the celebrated Irish missionary (d. 650). Eligius was buried at Noyon. There is in existence a sermon written by Eligius, in which he combats the pagan practices of his time, a homily on the last judgment, also a letter written in 645, in which he begs for the prayers of Bishop Desiderius of Cahors. The fourteen other homilies attributed to him are of doubtful au-

thenticity. His homilies have been edited by Krusch in "Mon. Germ. Hist." (loc. cit. infra).

St. Eligius is particularly honoured in Flanders, in the province of Antwerp, and at Tournai, Courtrai of Ghent, Bruges, and Douai. During the Middle Ages his relics were the object of special veneration, and were often transferred to other resting-places, thus in 881, 1066, 1137, 1255, and 1306. He is the patron of goldsmiths, blacksmiths, and all workers in metal. Cabmen have also put themselves under his protection. He is generally represented in Christian art in the garb of a bishop, a crosier in his right hand, on the open palm of his left a miniature church of chased gold.

L. VAN DER ESSEN

St. Elined

St. Elined

Virgin and martyr, flourished c. 490. According to Bishop Challoner (Britannia Saneta, London, 1745. II, 59), she was a daughter of Bragan (Brychan), a British prince, after whom the present province of Brecknock is named, and her memory was kept in Wales. Giraldus Cambrensis, in his "Itinerarium Cambr." (I, c. ii), the chief authority for Elined, speaks of the many churches throughout Wales named after the children of Bragan, and especially of one on the top of a hill, in the region of Brecknock, not far from the castle of Aberhodni, which is called the church of St. Almedha, "who, re-

jecting the marriage of an earthly prince, and espousing herself to the eternal King, consummated her course by a triumphant martyrdom". Her feast was celebrated 1 August, on which day throngs of pilgrims visited the church, and many miracles were wrought. William of Worcester says that she was buried at Usk. The church mentioned by Giraldus was called, says Rees, Slweh chapel. The Bollandists (1 August) express themselves satisfied with the evidence of her cultus. This saint is the Luned of the "Mabinogion" (Lady Guest, I, 113-14, II, 164) and the Lynette of Tennyson's "Gareth and Lynette". She is also supposed to be identical with the Enid of the "Mabinogion" and Tennyson's "Idylls".

G.E. PHILLIPS

Eliseus (Elisha)

Eliseus

(Elisha; Heb. 'lysh', God is salvation).

A Prophet of Israel. After learning, on Mount Horeb, that Eliseus, the son of Saphat, had been selected by God as his successor in the prophetic office, Elias set out to make known the Divine will. This he did by casting his mantle over the shoulders of Eliseus, whom he found "one of them that were ploughing with twelve yoke of oxen". Eliseus delayed only long enough to kill the yoke of oxen, whose flesh he boiled with the very wood of his plough. After he had shared this farewell repast with his father, mother, and friends, the newly chosen Prophet "followed Elias and ministered to him". (III Kings, xix, 8-21.) He went with his master from Galgal to Bethel, to Jericho, and thence to the eastern side of the Jordan, the waters of which, touched by the mantle, divided, so as to permit both to pass over on dry ground. Eliseus then beheld Elias in a fiery chariot taken up by a whirlwind into heaven. By means of the mantle let fall from Elias, Eliseus miraculously recrossed the Jordan, and so won from the prophets at Jericho the recognition that "the spirit of Elias hath rested upon Eliseus". (IV Kings, ii, 1-15.) He won the gratitude of the people of Jericho for healing with salt its barren ground and its waters. Eliseus also knew how to strike with salutary fear the adorers of the calf in Bethel, for forty-two little boys, probably encouraged to mock the Prophet, on being cursed in the name of the Lord, were torn by "two bears out of the forest". (IV Kings, ii, 19-24) Before he settled in Samaria, the Prophet passed some time on Mount Carmel (IV Kings, ii, 25). When the armies of Juda, and Israel, and Edom, then allied against Mesa, the Moabite king, were being tortured by drought in the Idumæan desert, Eliseus consented to intervene. His double prediction regarding relief from drought and victory over the Moabites was fulfilled on the following morning. (IV Kings, iii, 4-24.)

That Eliseus inherited the wonder-working power of Elias is shown throughout the whole course of his life. To relieve the widow importuned by a hard creditor, Eliseus so multiplied a little oil as to enable her, not only to pay her indebtedness, but to provide for her family needs (IV Kings, iv, 1-7). To reward the rich lady of Sunam for her hospitality, he obtained for her from God, at first the birth of a son, and subsequently the resurrection of her child (IV Kings, iv, 8-37). To nourish the sons of the prophets pressed by famine, Eliseus changed into wholesome food the pottage made from poisonous gourds (IV Kings, iv, 38-41). By the cure of Naaman, who was afflicted with leprosy, Eliseus, little impressed by the possessions of the Syrian general, whilst willing to free King Joram from his perplexity, principally intended to show "that there is a prophet in Israel". Naaman, at first reluctant, obeyed the Prophet, and washed seven times in the Jordan. Finding his flesh "restored like the flesh of a little child", the general was so impressed by this evidence of God's power, and by the disinterestedness of His Prophet, as to express his deep conviction that "there is no other God in all the earth, but only in Israel". (IV Kings, v, 1-19.) It is to this Christ referred when He said: "And there were many lepers in Israel in the time of Eliseus the prophet: and none of them was cleansed but Naaman the Syrian" (Luke, iv, 27). In punishing the avarice of his servant Giezi (IV Kings, v, 20-27), in saving "not once nor twice" King Joram from the ambuscades planned by Benadad (IV Kings, vi, 8-23), in ordering the ancients to shut the door against the messenger of Israel's ungrateful king (IV Kings, vi, 25-32), in bewildering with a strange blindness the soldiers of the Syrian king (IV Kings, vi, 13-23), in making the iron swim to relieve from embarrassment a son of a prophet (IV Kings, vi, 1-7), in confidently predicting the sudden flight of the enemy and the consequent cessation of the famine (IV Kings, vii, 1-20), in unmasking the treachery of Hazael (IV Kings, viii, 7-15), Eliseus proved himself the Divinely appointed Prophet of the one true God, Whose knowledge and power he was privileged to share.

Mindful of the order given to Elias (III Kings, xix, 16), Eliseus delegated a son of one of the prophets to quietly anoint Jehu King of Israel, and to commission him to cut off the house of Achab (IV Kings, ix, 1-10). The death of Joram, pierced by an arrow from Jehu's bow, the ignominious end of Jezabel, the slaughter of Achab's seventy sons, proved how faithfully executed was the Divine command (IV Kings, ix, 11-x, 30). After predicting to Joas his victory over the Syrians at Aphec, as well as three other subsequent victories, ever bold before kings, ever kindly towards the lowly, "Eliseus died, and they buried him" (IV Kings, xiii, 14-20). The very touch of his corpse served to resuscitate a dead man (IV Kings, xiii, 20-21). "In his life he did great wonders, and in death he wrought miracles" (Ecclus., xlvi, 15).

Daniel P. Duffy

Elishe

Elishé

A famous Armenian historian of the fifth century, place and date of birth unknown, d. 480. Some identify him with Elishé, Bishop of Amaduni, who took part in the Synod of Artashat (449). According to a different and more common tradition, he had been in his younger days a companion, as soldier or secretary, of the Armenian general Vartan, during the war of religious independence (449-451) against the Persian King, Yezdigerd II. Later he became a hermit and retired to the mountains, south of Lake Van, where he died. All ancient authorities speak of him as "vartabed" or "doctor". His most famous work is the "History of Vartan and of the wars of the Armenians [written] at the request of David the Mamigonian", in which he recounts the heroic struggle of the Armenians in union with the Iberians and the Albanians, for their common faith, against the Persians (449-451). It is considered one of the masterpieces of ancient Armenian literature and is almost entirely free from Greek words and expressions. A good edition of it was published at Venice (1826) by the Mechitarists of San Lazzaro. One of the manuscripts on which it is based purports to be a faithful copy of another manuscript dated 616. The text of that edition was further improved in subsequent editions at the same place (1828, 1838, 1859, and 1864). Among other editions of value may be mentioned those of Theodosia (Crimea), 1861, and of Jerusalem, 1865. There is an English, but unfinished, translation by C. F. Neumann (London, 1830); one in Italian by G. Cappelletti (Venice, 1840); and one in French by V. Langlois in his "Collection des Historiens anciens et modernes de l'Arménie" (Paris, 1869), II, 177 sqq. In addition to the seven chapters mentioned by Elishé himself in his introductory remarks, all the editions contain an eighth chapter referring to the so-called Leontian martyrs (454) and others. The genuineness of that chapter has been called in question. It has been also remarked that in all manuscripts the fifth chapter is missing, while in the editions the original sixth chapter is cut in two so as to make up for the missing chapter. On the first point see Langlois, *op. cit.*, II, p. 180; on the second see C. F. Neumann, "Versuch einer Geschichte der armenischen Literatur, nach den Werken der Mechitaristen frei gearbeitet" (Leipzig, 1836), pp. 64 sqq. See also Ter-Minassiantz, "Die armenische Kirche in ihren Beziehungen zu der syrischen Kirche" (Leipzig, 1904), p. 37. Elishé is also the author of a commentary on Joshua and Judges, an explanation

of the Our Father, a letter to the Armenian monks, etc., all found in the Venice editions of the "History of Vartan".

H. HYVERNAT

Elizabeth

Elizabeth

("God is an oath" -- [Exodus 6:23](#)).

Zachary's wife and John the Baptist's mother, was "of the daughters of Aaron" ([Luke 1:5](#)), and, at the same time, Mary's kinswoman ([Luke 1:36](#)), although what their actual relationship was, is unknown. St. Hippolytus (in Niceph. Call., *Hist. Eccles.*, II, iii) explains that Sobe and Anna, their mothers were sisters, and that Sobe had married a "son of Levi". Whether this indication, probably gathered from some apocryphal writings, and later on adopted by the compilers of the Greek Menologium, is correct, cannot be ascertained. Elizabeth, like Zachary, was "just before God, walking in all the commandments and justifications of the Lord without blame" ([Luke 1:6](#)). She had been deprived, however, of the blessings of motherhood until, at an advanced age, a son was promised her by the Angel Gabriel ([Luke 1:8-20](#)). When, five months later, Elizabeth was visited in her home by the Virgin Mary, not only was her son sanctified in her womb, but she herself was enlightened from on high to salute her cousin as "the mother of my Lord" ([Luke 1:43](#)). According to some modern critics, we should even attribute to her the canticle "Magnificat". After the birth and circumcision of John the Baptist, the Gospels do not mention Elizabeth any more. Her feast is celebrated on 8 September by the Greeks, and 5 November in the Latin Church.

CHARLES L. SOUVAY

Sisters of St. Elizabeth

Sisters of St. Elizabeth

Generally styled "Grey Nuns". They sprang from an association of young ladies established by Dorothea Klara Wolff, in connection with the sisters, Mathilde and Maria Merkert, and Franziska Werner, 1842, in Nelsse (Prussia), to tend in their own homes, without compensation, helpless sick persons who could not or would not be received into the hospitals. The members purposed to support the needy through the

labour of their own hands. Without adopting any definite rule, they led a community life and wore a common dress, a brown woollen habit with a grey bonnet. For this reason they were soon called by the people the "Grey Nuns". As their work was soon recognized and praised everywhere, and as new members continually applied for admission, their spiritual advisers sought to give the association some sort of religious organization. They endeavoured, wherever possible, to affiliate it with already established confraternities having similar purposes. But their foremost desire was to educate the members for the care of the sick in hospitals. Great difficulties arose, and the attempt failed, principally through the resistance of the foundresses, who did not wish to abandon their original plan of itinerant nursing. Thus the association which had justified such bright hopes was dissolved, and many of the newly admitted members joined the Sisters of St. Charles Borromeo, while the foundresses left the novitiate which they had already entered. Klara Wolff and Mathilde Merkert died shortly after, in the service of charity. The other two began their work anew in 1850 and placed it under the especial patronage of St. Elizabeth. They speedily gained the sympathy of the sick of all classes and creeds, and also that of the physicians. New candidates applied for admission, and the sisters were soon able to extend the sphere of their activity beyond Neisse. Of especial importance was the foundation made at Breslau, where the work of the sisters came under the direct observation of the episcopal authorities. Soon after, 4 Sept., 1859, Prince-Bishop Heinrich Furster was prevailed upon by the favourable reports and testimonials to grant the association ecclesiastical approbation. As such a recognition presupposed a solid religious organization, a novitiate was established according to the statutes submitted. In the following year the twenty-four eldest sisters made the three religious vows. State recognition, with the grant of a corporate charter, was obtained by the confraternity 25 May, 1864, under the title, "Catholic Charitable Institute of St. Elizabeth", through the mediation of the Prussian Crown Prince Frederick William, subsequent Emperor of Germany, who had observed the beneficent activity of the sisters on the battlefields of Denmark. The approbation of the Holy See was granted for the congregation on 26 Jan., 1887, and for its constitutions on 26 April, 1898. The congregation has spread to Norway, Sweden, and Italy, and has (1908), dependent on the mother-house at Breslau, 305 filial houses, with 2565 sisters and about 100 postulants.

Elizabeth Associations

Elizabeth Associations

(Elisabethenvereine.)

Charitable associations of women in Germany which aim for the love of Christ to minister to the bodily and spiritual sufferings of the sick poor and of neglected children. On 10 December, 1842, eight ladies of Munich formed a society, of which the Princess Leopoldine von Lowenstein was the head, for the purpose of visiting and aiding the sick poor in their homes. In 1851 it was made a religious congregation to which many indulgences were granted by the Holy Father. In order to carry on better the visiting of the sick the first branch or conference of the association was founded in 1870. According to its statutes the members are divided into two classes: associate members, or those who aid the organization by means of annual contributions, and active members who, besides contributing of their means, also visit the sick poor and perform other duties, as those of administration, at the direction of the president of the society. The branches are merely means of carrying on the affairs of the main society with which they are closely affiliated, but they are independent in administration. The Elizabeth Association of Munich, according to the financial report covering the year 1907, has 157 active and 3686 associate members; the receipts were 129,559.66 marks (\$32,339.76), and disbursements, 128,422.77 marks (\$30,855.69). During the year 1907 4315 poor persons were assisted, 195 children cared for in asylums and nurseries, and 18 old people were provided for in asylums and infirmaries.

Other Elizabeth Associations, although with some differences of organization, were formed on the model of that of Munich at Barmen and Trier in 1843, Cologne in 1848, etc. These societies are now found chiefly in the following sections of Germany: Bavaria, 36 societies, 24 of these being in the Palatinate; Diocese of Cologne, 110 societies with 1200 members, about 7000 contributors, and a total income of nearly 150,000 marks, families assisted 3500; Diocese of Paderborn, 120 societies with over 16,000 members and contributors, and an income of 175,000 marks, families assisted 3600. There are also Elizabeth Associations in the Dioceses of Freiburg, Munster, Trier, Limburg, Hildesheim, and the Vicariate Apostolic of Saxony; in the Diocese of Breslau, instead of Elizabeth Associations, there are about 130 women's conferences of the Society of St. Vincent de Paul. In Germany the Elizabeth Associations number altogether some 550 branches or conferences which aid annually 10,000 to 12,000 families.

MS. history of the Elizabeth Association of Munich; by-laws, annual and financial reports of the different associations, Munich, Freiburg, Cologne, etc.; *Regein des Vereins von der hl. Elisabeth* (Cologne, 1900); *Regein und Gebete des Vereins der hl.*

GREGOR REINHOLD

St. Elizabeth of Hungary

St. Elizabeth of Hungary

Also called St. Elizabeth of Thuringia, born in Hungary, probably at Pressburg, 1207; died at Marburg, Hesse, 17 November (*not* 19 November), 1231.

She was a daughter of King Andrew II of Hungary (1205-35) and his wife Gertrude, a member of the family of the Counts of Andechs-Meran; Elizabeth's brother succeeded his father on the throne of Hungary as Bela IV; the sister of her mother, Gertrude, was St. Hedwig, wife of Duke Heinrich I, the Bearded, of Silesia, while another saint, St. Elizabeth (Isabel) of Portugal (d. 1336), the wife of the tyrannical King Diniz of that country, was her great-niece.

In 1211 a formal embassy was sent by Landgrave Hermann I of Thuringia to Hungary to arrange, as was customary in that age, a marriage between his eldest son Hermann and Elizabeth, who was then four years old. This plan of a marriage was the result of political considerations and was intended to be the ratification of a great alliance which in the political schemes of the time it was sought to form against the German Emperor Otto IV, a member of the house of Guelph, who had quarrelled with the Church. Not long after this the little girl was taken to the Thuringian court to be brought up with her future husband and, in the course of time, to be betrothed to him.

The court of Thuringia was at this period famous for its magnificence. Its centre was the stately castle of the Wartburg, splendidly placed on a hill in the Thuringian Forest near Eisenach, where the Landgrave Hermann lived surrounded by poets and minnesingers, to whom he was a generous patron. Notwithstanding the turbulence and purely secular life of the court and the pomp of her surroundings, the little girl grew up a very religious child with an evident inclination to prayer and pious observances and small acts of self-mortification. These religious impulses were undoubtedly strengthened by the sorrowful experiences of her life.

In 1213 Elizabeth's mother, Gertrude, was murdered by Hungarian nobles, probably out of hatred of the Germans. On 31 December, 1216, the oldest son of the landgrave, Hermann, who Elizabeth was to marry, died; after this she was betrothed to Ludwig, the second son. It was probably in these years that Elizabeth had to suffer the hostility of the more frivolous members of the Thuringian court, to whom the contemplative and pious child was a constant rebuke. Ludwig, however, must have soon come to her

protection against any ill-treatment. The legend that arose later is incorrect in making Elizabeth's mother-in-law, the Landgravine Sophia, a member of the reigning family of Bavaria, the leader of this court party. On the contrary, Sophia was a very religious and charitable woman and a kindly mother to the little Elizabeth.

The political plans of the old Landgrave Hermann involved him in great difficulties and reverses; he was excommunicated, lost his mind towards the end of his life, and died, 25 April, 1217, unreconciled with the Church. He was succeeded by his son Ludwig IV, who, in 1221, was also made regent of Meissen and the East Mark. The same year (1221) Ludwig and Elizabeth were married, the groom being twenty-one years old and the bride fourteen. The marriage was in every regard a happy and exemplary one, and the couple were devotedly attached to each other. Ludwig proved himself worthy of his wife. He gave his protection to her acts of charity, penance, and her vigils, and often held Elizabeth's hands as she knelt praying at night beside his bed. He was also a capable ruler and brave soldier. The Germans call him St. Ludwig, an appellation given to him as one of the best men of his age and the pious husband of St. Elizabeth.

They had three children: Hermann II (1222-41), who died young; Sophia (1224-84), who married Henry II, Duke of Brabant, and was the ancestress of the Landgraves of Hesse, as in the war of the Thuringian succession she won Hesse for her son Heinrich I, called the Child; Gertrude (1227-97), Elizabeth's third child, was born several weeks after the death of her father; in after-life she became abbess of the convent of Altenberg near Wetzlar.

Shortly after their marriage, Elizabeth and Ludwig made a journey to Hungary; Ludwig was often after this employed by the Emperor Frederick II, to whom he was much attached, in the affairs of the empire. In the spring of 1226, when floods, famine, and the pest wrought havoc in Thuringia, Ludwig was in Italy attending the Diet at Cremona on behalf of the emperor and the empire. Under these circumstances Elizabeth assumed control of affairs, distributed alms in all parts of the territory of her husband, giving even state robes and ornaments to the poor. In order to care personally for the unfortunate she built below the Wartburg a hospital with twenty-eight beds and visited the inmates daily to attend to their wants; at the same time she aided nine hundred poor daily. It is this period of her life that has preserved Elizabeth's fame to posterity as the gentle and charitable chételaine of the Wartburg. Ludwig on his return confirmed all she had done. The next year (1227) he started with the Emperor Frederick II on a crusade to Palestine but died, 11 September of the same year at Otranto, from the pest. The news did not reach Elizabeth until October, just after she had given birth to her third child. On hearing the tidings Elizabeth, who was only twenty years old, cried out: "The world with all its joys is now dead to me."

The fact that in 1221 the followers of St. Francis of Assisi (d. 1226) made their first permanent settlement in Germany was one of great importance in the later career of Elizabeth. Brother Rodeger, one of the first Germans whom the provincial for Germany, Caesarius of Speier, received into the order, was for a time the spiritual instructor of Elizabeth at the Wartburg; in his teachings he unfolded to her the ideals of St. Francis, and these strongly appealed to her. With the aid of Elizabeth the Franciscans in 1225 founded a monastery in Eisenach; Brother Rodeger, as his fellow-companion in the order, Jordanus, reports, instructed Elizabeth, to observe, according to her state of life, chastity, humility, patience, the exercise of prayer, and charity. Her position prevented the attainment of the other ideal of St. Francis, voluntary and complete poverty. Various remarks of Elizabeth to her female attendants make it clear how ardently she desired the life of poverty. After a while the post Brother Rodeger had filled was assumed by Master Conrad of Marburg, who belonged to no order, but was a very ascetic and, it must be acknowledged, a somewhat rough and very severe man. He was well known as a preacher of the crusade and also as an inquisitor or judge in cases of heresy. On account of the latter activity he has been more severely judged than is just; at the present day, however, the estimate of him is a fairer one. Pope Gregory IX, who wrote at times to Elizabeth, recommended her himself to the God-fearing preacher. Conrad treated Elizabeth with inexorable severity, even using corporal means of correction; nevertheless, he brought her with a firm hand by the road of self-mortification to sanctity, and after her death was very active in her canonization. Although he forbade her to follow St. Francis in complete poverty as a beggar, yet, on the other hand, by the command to keep her dower she was enabled to perform works of charity and tenderness.

Up to 1888 it was believed, on account of the testimony of one of Elizabeth's servants in the process of canonization, that Elizabeth was driven from the Wartburg in the winter of 1227 by her brother-in-law, Heinrich Raspe, who acted as regent for her son, then only five years old. About 1888 various investigators (Börner, Mielke, Wenck, E. Michael, etc.) asserted that Elizabeth left the Wartburg voluntarily, the only compulsion being a moral one. She was not able at the castle to follow Conrad's command to eat only food obtained in a way that was certainly right and proper. Lately, however, Huyskens (1907) tried to prove that Elizabeth was driven from the castle at Marburg in Hesse, which was hers by dower right. Consequently, the *Te Deum* that she directed the Franciscans to sing on the night of her expulsion would have been sung in the Franciscan monastery at Marburg. Accompanied by two female attendants, Elizabeth left the castle that stands on a height commanding Marburg. The next day her children were brought to her, but they were soon taken elsewhere to be cared for. Elizabeth's aunt, Matilda, Abbess of the Benedictine nunnery of Kitzingen near Würzburg, took

charge of the unfortunate landgravine and sent her to her uncle Eckbert, Bishop of Bamberg. The bishop, however, was intent on arranging another marriage for her, although during the lifetime of her husband Elizabeth had made a vow of continence in case of his death; the same vow had also been taken by her attendants. While Elizabeth was maintaining her position against her uncle the remains of her husband were brought to Bamberg by his faithful followers who had carried them from Italy. Weeping bitterly, she buried the body in the family vault of the landgraves of Thuringia in the monastery of Reinhardsbrunn. With the aid of Conrad she now received the value of her dower in money, namely two thousand marks; of this sum she divided five hundred marks in one day among the poor. On Good Friday, 1228, in the Franciscan house at Eisenach Elizabeth formally renounced the world; then going to Master Conrad at Marburg, she and her maids received from him the dress of the Third Order of St. Francis, thus being among the first tertiaries of Germany. In the summer of 1228 she built the Franciscan hospital at Marburg and on its completion devoted herself entirely to the care of the sick, especially to those afflicted with the most loathsome diseases. Conrad of Marburg still imposed many self-mortifications and spiritual renunciations, while at the same time he even took from Elizabeth her devoted domestics. Constant in her devotion to God, Elizabeth's strength was consumed by her charitable labours, and she passed away at the age of twenty-four, a time when life to most human beings is just opening.

Very soon after the death of Elizabeth miracles began to be worked at her grave in the church of the hospital, especially miracles of healing. Master Conrad showed great zeal in advancing the process of canonization. By papal command three examinations were held of those who had been healed: namely, in August, 1232, January, 1233, and January, 1235. Before the process reached its end, however, Conrad was murdered, 30 July, 1233. But the Teutonic Knights in 1233 founded a house at Marburg, and in November, 1234, Conrad, Landgrave of Thuringia, the brother-in-law of Elizabeth, entered the order. At Pentecost (28 May) of the year 1235, the solemn ceremony of canonization of the "greatest woman of the German Middle Ages" was celebrated by Gregory IX at Perugia, Landgrave Conrad being present. In August of the same year (1235) the corner-stone of the beautiful Gothic church of St. Elizabeth was laid at Marburg; on 1 May, 1236, Emperor Frederick II attended the taking-up of the body of the saint; in 1249 the remains were placed in the choir of the church of St. Elizabeth, which was not consecrated until 1283. Pilgrimages to the grave soon increased to such importance that at times they could be compared to those to the shrine of Santiago de Compostela. In 1539 Philip the Magnanimous, Landgrave of Hesse, who had become a Protestant, put an end to the pilgrimages by unjustifiable interference with the church that belonged to the Teutonic Order and by forcibly removing the

relics and all that was sacred to Elizabeth. Nevertheless, the entire German people still honour the "dear St. Elizabeth" as she is called; in 1907 a new impulse was given to her veneration in Germany and Austria by the celebration of the seven hundredth anniversary of her birth. St. Elizabeth is generally represented as a princess graciously giving alms to the wretched poor or as holding roses in her lap; in the latter case she is portrayed either alone or as surprised by her husband, who, according to a legend, which is, however, related of other saints as well, met her unexpectedly as she went secretly on an errand of mercy, and, so the story runs, the bread she was trying to conceal was suddenly turned into roses.

The original materials for the life of St. Elizabeth are to be found in the letters sent by CONRAD OF MARBURG to Pope Gregory IX (1232) and in the testimony of her four female attendants (*Libellus de dictis quatuor ancillarum*) taken by the third papal commission (January, 1235). The best edition of the testimony is to be found in HUYSKENS, *Quellenstudien zur Geschichte der hl. Elisabeth, Landgräfin von Thüringen* (Marburg, 1908), 110-40. For the Acts of the process of canonization see HUYSKENS, *Quellenstudien*, 110-268; *Vita S. Elisabethae des Caesarius von Heisterbach O. Cist.* (1236), ed. HUYSKENS, in *Annalen des historischen Vereins für den Niederrhein* (Cologne, 1908), Pt. LXXXV; the hagiography of St. Elizabeth was greatly influenced by DIETRICH OF APOLDA, *Vita S. Elisabeth* (written 1289-97), published in CANISIUS, *Antiquae lectionis* (Ingolstadt, 1605), V, Pt. II, 147-217, and in BASNAGE, *Thesaurus Monumentorum Ecclesiasticorum* (Amsterdam, 1723). IV. 115-152.

MICHAEL BIHL

St. Elizabeth of Portugal

St. Elizabeth of Portugal

Queen (sometimes known as the PEACEMAKER); born in 1271; died in 1336. She was named after her great-aunt, the great Elizabeth of Hungary, but is known in Portuguese history by the Spanish form of that name, Isabel. The daughter of Pedro III, King of Aragon, and Constantia, grandchild of Emperor Frederick II, she was educated very piously, and led a life of strict regularity and self-denial from her childhood: she said the full Divine Office daily, fasted and did other penances, and gave up amusement. Elizabeth was married very early to Diniz (Denis), King of Portugal, a poet, and known as *Ré Lavrador*, or the working king, from his hard work in his country's service. His morals, however, were extremely bad, and the court to which his young wife was brought consequently most corrupt. Nevertheless, Elizabeth quietly pursued the regular religious practices of her maidenhood, whilst doing her best to win her husband's affections by gentleness and extraordinary forbearance. She was devoted to

the poor and sick, and gave every moment she could spare to helping them, even pressing her court ladies into their service. Naturally, such a life was a reproach to many around her, and caused ill will in some quarters. A popular story is told of how her husband's jealousy was roused by an evil-speaking page; of how he condemned the queen's supposed guilty accomplice to a cruel death; and was finally convinced of her innocence by the strange accidental substitution of her accuser for the intended victim.

Diniz does not appear to have reformed in morals till late in life, when we are told that the saint won him to repentance by her prayers and unfailing sweetness. They had two children, a daughter Constantia and a son Affonso. The latter so greatly resented the favours shown to the king's illegitimate sons that he rebelled, and in 1323 war was declared between him and his father. St. Elizabeth, however, rode in person between the opposing armies, and so reconciled her husband and son. Diniz died in 1325, his son succeeding him as Affonso IV. St. Elizabeth then retired to a convent of Poor Clares which she had founded at Coimbra, where she took the Franciscan Tertiary habit, wishing to devote the rest of her life to the poor and sick in obscurity. But she was called forth to act once more as peacemaker. In 1336 Affonso IV marched his troops against the King of Castile, to whom he had married his daughter Maria, and who had neglected and ill-treated her. In spite of age and weakness, the holy queen dowager insisted on hurrying to Estremoz, where the two king's armies were drawn up. She again stopped the fighting and caused terms of peace to be arranged. But the exertion brought on her final illness; and as soon as her mission was fulfilled she died of a fever, full of heavenly joy, and exhorting her son to the love of holiness and peace. St. Elizabeth was buried at Coimbra, and miracles followed her death. She was canonized by Urban VIII in 1625, and her feast is kept on 8 July.

F.M. CAPES

Blessed Elizabeth of Reute

Blessed Elizabeth of Reute

Member of the Third Order of St. Francis, born 25 November, 1386, at Waldsee in Swabia, of John and Anne Acheer; died 25 November, 1420. From her earliest days "the good Betha", as she was called, showed a rare piety, and under the learned and devout Conrad Kugelin, her confessor, provost of the Canons Regular of St. Augustine at St. Peter's in Waldsee, she made extraordinary progress towards perfection. When fourteen she received the habit of the third order, but continued to live at home. Finding the life uncongenial, she secured the consent of her parents after long entreaties to leave home. Receiving no support from them she remained at the house of a pious

tertiary, and the two worked at weaving; but the remuneration was small and they frequently suffered from hunger and other privations. After three years Conrad Kugelin established a house for tertiaries at Reute on the outskirts of Waldsee and Elizabeth entered it together with some others.

Here she took up her work in the kitchen, and now began her wonderful life of seclusion, fasting, and prayer. There was no *clausura* at the convent, still she led so retired a life that she was called "the Recluse." She spent many hours in a little garden, kneeling on a stone or prostrate on the ground in contemplation. So pure was her life that her confessor could scarcely find matter for absolution. She had much to suffer from attacks of the evil spirit, from suspicions of her sisters in religion, from leprosy, and other sicknesses, but in all her trials she showed a heavenly patience. This she learned from the Passion of Christ, which she made the continual subject of meditation, the object of her love, and the rule of her life. In consequence God permitted her to bear the marks of the Passion on her body; her head often showed the marks of the Thorns, and her body those of the Scourging. The stigmata appeared only now and then, but her pains never ceased. She was shown the happiness of the blessed and the souls in the state of purgation; the secrets of hearts and of the future were unveiled to her. She foretold the election of Martin V and the end of the Western Schism. Though so much favoured by Divine Providence she always preserved a great humility. After her death she was buried in the church of Reute. Her life was written by her confessor and sent to the Bishop of Constance, but it was only after 1623, when her tomb was opened by the provost of Waldsee, that her popular veneration spread in Swabia. After several miracles had been wrought through her intercession the Holy See was asked to ratify her cult. This was done 19 June, 1766, by Clement XIII. The Franciscans celebrate her feast on 25 November.

FRANCIS MERSHMAN

St. Elizabeth of Schonau

St. Elizabeth of Schönau

Born about 1129; d. 18 June, 1165.-Feast 18 June. She was born of an obscure family, entered the double monastery of Schönau in Nassau at the age of twelve, received the Benedictine habit, made her profession in 1147, and in 1157 was superioress of the nuns under the Abbot Hildelin. After her death she was buried in the abbey church of St. Florin. When her writings were published the name of saint was added. She was

never formally canonized, but in 1584 her name was entered in the Roman Martyrology and has remained there.

Given to works of piety from her youth, much afflicted with bodily and mental suffering, a zealous observer of the Rule of St. Benedict and of the regulation of her convent, and devoted to practices of mortification, Elizabeth was favoured, from 1152, with ecstasies and visions of various kinds. These generally occurred on Sundays and Holy Days at Mass or Divine Office or after hearing or reading the lives of saints. Christ, His Blessed Mother, an angel, or the special saint of the day would appear to her and instruct her; or she would see quite realistic representations of the Passion, Resurrection, and Ascension, or other scenes of the Old and New Testaments. What she saw and heard she put down on wax tablets. Her abbot, Hildelin, told her to relate these things to her brother Egbert (Eckebert), then priest at the church of Bonn. At first she hesitated fearing lest she be deceived or be looked upon as a deceiver; but she obeyed. Egbert (who became a monk of Schönau in 1155 and succeeded Hildelin as second abbot) put everything in writing, later arranged the material at leisure, and then published all under his sister's name.

Thus came into existence

- three books of "Visions". Of these the first is written in language very simple and in unaffected style, so that it may easily pass as the work of Elizabeth. The other two are more elaborate and replete with theological terminology, so that they show more of the work of Egbert than of Elizabeth.
- "Liber viarum Dei". This seems to be an imitation of the "Scivias" (*scire vias Domini*) of St. Hildegard of Bingen, her friend and correspondent. It contains admonitions to all classes of society, to the clergy and laity, to the married and unmarried. Here the influence of Egbert is very plain. She utters prophetic threats of judgment against priests who are unfaithful shepherds of the flock of Christ, against the avarice and worldliness of the monks who only wear the garb of poverty and self-denial, against the vices of the laity, and against bishops and superiors delinquent in their duty; she urges all to combat earnestly the heresy of the Cathari; she declares Victor IV, the antipope supported by Frederick against Alexander III, as the one chosen of God. All of this appears in Egbert's own writings.
- The revelation on the martyrdom of St. Ursula and her companions. This is full of fantastic exaggerations and anachronisms, but has become the foundation of the subsequent Ursula legends.

There is a great diversity of opinion in regard to her revelations. The Church has never passed sentence upon them nor even examined them. Elizabeth herself was convinced of their supernatural character, as she states in a letter to Hildegard; her brother held the same opinion; Trithemius considers them genuine; Eusebius Amort (*De revelationibus visionibus et apparitionibus privatis regulae tute, etc.*, Augsburg, 1744) holds them to be nothing more than what Elizabeth's own imagination could produce, or illusions of the devil, since in some things they disagree with history and with other revelations (*Acta SS.*, Oct, IX, 81). A complete edition of her writings was made by F.W.E. Roth (Brunn, 1884); translations appeared in Italian (Venice, 1859), French (Tournai, 1864), and in Icelandic (1226-1254).

FRANCIS MERSHMAN

Philip Michael Ellis

Philip Michael Ellis

First Vicar Apostolic of the Western District, England, subsequently Bishop of Segni, Italy, b. in 1652; d. 16 Nov., 1726. He was the son of the Rev. John Ellis, Rector of Waddesdon, Buckinghamshire, a descendant of the Ellis family of Kiddall Hall, Yorkshire, and Susannah Welbore. Of six brothers, John, the eldest, became Under-Secretary of State to William III; William, a Jacobite Protestant, was Secretary of State of James II in exile; Philip became a Benedictine monk and Catholic bishop; Welbore became Protestant bishop of Kildare and afterwards of Meath, Ireland; Samuel was Marshal of King's Bench; and Charles an Anglican clergyman. Philip, while still a Westminster schoolboy, was converted to the Catholic Faith, and when eighteen years old went to St. Gregory's, Douai, where he was professed, taking the name of Michael in religion (30 Nov., 1670). After ordination he returned in 1685 to the English mission where he became one of the royal chaplains. In 1688 he was appointed vicar Apostolic of the newly created Western District and was consecrated by Mgr. d'Adda, the papal nuncio (6 May). At the revolution in 1688 he was imprisoned, but being soon liberated he retired to Saint-Germain and afterwards to Rome. In 1696 he was named assistant prelate at the pontifical throne; and in Rome his knowledge of English affairs made him so useful that his repeated petitions for leave to return to his vicariate were refused. In 1704 he resigned the vicariate, and in 1708 was made Bishop of Segni, being enthroned on 28 Oct. His first care was to rebuild the ruined monastery of S. Chiara and open it as a diocesan seminary. This he enriched with many gifts and a large legacy.

A curious survival of his English title survives in an inscription at Segni to "Ph. M. Mylord Ellis". Eleven sermons preached in 1685 and 1686 before James II, Queen Mary of Modena, and Queen Henrietta Maria, were published in pamphlet form, some of which have been reprinted (London, 1741; 1772). The Acts of his synod at Segni in 1710 were also published by order of Clement XI.

EDWIN BURTON

Ellwangen Abbey

Ellwangen Abbey

The earliest Benedictine monastery established in the Duchy of Wurtemberg, situated in the Diocese of Augsburg about thirty miles north-east of the town of Stuttgart. Hariolfus, Bishop of Langres, was the founder, and the date of foundation was about 764, though there are a few authorities for as early a date as 732. In later times it became a royal abbey, a privilege which seems to have been conferred in 1011 by the Emperor Henry II, and afterwards confirmed by the Emperor Charles IV, in 1347. Some authorities date the granting of this privilege as late as 1555. This cannot be correct, for it is known that the superior of Ellwangen took his seat in the Diet among the princes of the country in 1500. The Benedictine occupation of the abbey came to an end in the first half of the fifteenth century. In 1460 it was changed into a college of secular canons under the rule of a provost. Ellwangen had many men of renown connected with it: the Abbots Lindolf and Erfinan, whom Mabillon speaks of as famous authors; Abbot Gebhard began to write the life of St. Udalricus but died before completing it; Abbot Ermenrich (c. 845), author of the life of St. Solus which may be found in the fourth volume of the "Acta Sanctorum" of Mabillon. Adalbero, a monk of this abbey, was made Bishop of Augsburg in 894. Abbot Lindebert became Archbishop of Mainz, as also did Abbot Hatton (891). St. Gebhard, Abbot of Ellwangen, became Bishop of Augsburg in 995. Abbot Milo about the middle of the tenth century was one of the visitors appointed for the visitation of the famous Abbey of St. Gall. Nothing is known of the property connected with Ellwangen during the period of its Benedictine history, but in the eighteenth century, after it had passed into the hands of the secular canons, its possessions included the court manor of Ellwangen, the manors of Taxstell, Neuler, Rothlein, Tannenburg, Wasseralfingen, Abts-Gmundt, Kockenbourg near the town of Aalen, Henschlingen on the River Lein, and Lautern. Most of the ecclesiastical buildings still exist, though they are no longer used for religious purposes. Since the secularization they have been held by the State and used for state purposes.

G.E. HIND

Elohim

Elohim

(Sept., *theos*; Vulg., *Deus*).

Elohim is the common name for God. It is a plural form, but "The usage of the language gives no support to the supposition that we have in the plural form *Elohim*, applied to the God of Israel, the remains of an early polytheism, or at least a combination with the higher spiritual beings" (Kautzsch). Grammarians call it a plural of majesty or rank, or of abstraction, or of magnitude (Gesenius, *Grammatik*, 27th ed., nn. 124 g, 132 h). The Ethiopic plural *amlak* has become a proper name of God. Hoffmann has pointed out an analogous plural *elim* in the Phoenician inscriptions (Ueber einige phon. Inschr., 1889, p. 17 sqq.), and Barton has shown that in the tablets from El-Amarna the plural form *ilani* replaces the singular more than forty times (Proceedings of the American Oriental Society, 21-23 April, 1892, pp. cxcvi-cxcix).

Etymology

Elohim has been explained as a plural form of *Eloah* or as plural derivative of *El*. Those who adhere to the former explanation do not agree as to the derivation of *Eloah*. There is no such verbal stem as *alah* in Hebrew; but the Arabist Fleischer, Franz Delitzsch, and others appeal to the Arabic *aliha*, meaning "to be filled with dread", "anxiously to seek refuge", so that *ilah* (*eloah*) would mean in the first place "dread", then the object of dread. Gen., xxi, 42, 53, where God is called "the fear of Isaac", Is., viii, 13, and Ps. lxxv, 12, appear to support this view. But the fact that *aliha* is probably not an independent verbal stem but only a denominative from *ilah*, signifying originally "possessed of God" (cf. *enthousiazein*, *daimonan*) renders the explanation more than precarious. There is no more probability in the contention of Ewald, Dillmann, and others that the verbal stem, *alah* means "to be mighty": and is to be regarded as a by-form of the stem *alah*; that, therefore, *Eloah* grows out of *alah* as *El* springs from *alah*. Baethgen (*Beitrag*, 297) has pointed out that of the fifty-seven occurrences of *Eloah* forty-one belong to the Book of Job, and the others to late texts or poetic passages. Hence he agrees with Buhl in maintaining that the singular form *Eloah* came into existence only after the plural form *Elohim* had been long in common use; in this case, a singular was supplied for its pre-existent plural. But even admitting *Elohim* to be the prior form, its etymology has not thus far been satisfactorily explained. The ancient Jewish and the early ecclesiastical writers agree with many modern scholars in deriving *Elohim* from *El*, but there is a great difference of opinion as to the method of derivation. Nestle (*Theol. Stud. aus Würt.*, 1882, pp. 243 sqq.) supposes that the plural has arisen by the insertion of an artificial *h*, like the Hebrew *amahoth* (maidens) from *amah*.

Buhl (Gesenius Hebraisches Handwörterbuch, 12th ed., 1895, pp. 41 sq.) considers *Elohim* as a sort of augmentative form of *El*; but in spite of their disagreement as to the method of derivation, these writers are one in supposing that in early Hebrew the singular of the word signifying God was *El*, and its plural form *Elohim*; and that only more recent times coined the singular form *Eloah*, thus giving *Elohim* a grammatically correct correspondent. Lagrange, however, maintains that *Elohim* and *Eloah* are derived collaterally and independently from *El*.

The Use of the Word

The Hebrews had three common names of God, *El*, *Elohim*, and *Eloah*; besides, they had the proper name *Yahweh*. Nestle is authority for the statement that *Yahweh* occurs about six thousand times in the Old Testament, while all the common names of God taken together do not occur half as often. The name *Elohim* is found 2570 times; *Eloah*, 57 times [41 in Job; 4 in Pss.; 4 in Dan.; 2 in Hab.; 2 in Cantic of Moses (Deut., xxxii); 1 in Prov., 1 in Is.; 1 in Par.; 1 in Neh. (II Esd.)]; *El*, 226 times (*Elim*, 9 times). Lagrange (*Etudes sur les religions sémitiques*, Paris, 1905, p. 71) infers from Gen., xlv, 3 (the most mighty God of thy father), Ex., vi, 3 (by the name of God Almighty), and from the fact that *El* replaces *Yah* in proper names, the conclusion that *El* was at first a proper and personal name of God. Its great age may be shown from its general occurrence among all the Semitic races, and this in its turn may be illustrated by its presence in the proper names found in Gen., iv, 18; xxv, 13; xxxvi, 43. *Elohim* is not found among all the Semitic races; the Aramaeans alone seem to have had an analogous form. It has been suggested that the name *Elohim* must have been formed after the descendants of Shem had separated into distinct nations.

Meaning of the Word

If *Elohim* be regarded as derived from *El*, its original meaning would be "the strong one" according to Wellhausen's derivation of *El*, from *ul* (*Skizzen*, III, 169); or "the foremost one", according to Nöldeke's derivation of *El* from *ul* or *il*, "to be in front" (*Sitzungsberichte der berlinischen Akademie der Wissenschaften*, 1880, pp. 760 sqq.; 1882, pp. 1175 sqq.); or "the mighty one", according to Dillmann's derivation of *El* from *alah* or *alay*, "to be mighty" (*On Genesis*, I, 1); or, finally "He after whom one strives", "Who is the goal of all human aspiration and endeavour", "to whom one has recourse in distress or when one is in need of guidance", "to who one attaches oneself closely", *coincidentibus interea bono et fine*, according to the derivation of *El* from the preposition *el*, "to", advocated by La Place (cf. Lagarde, *Uebersicht*, etc., p. 167), Lagarde (*op. cit.*, pp. 159 sqq.), Lagrange (*Religions semitiques*, pp. 79 sqq.), and others. A discussion of the arguments which militate for and against each of the foregoing derivations would lead us too far.

If we have recourse to the use of the word *Elohim* in the study of its meaning, we find that in its proper sense it denotes either the true God or false gods, and metaphorically it is applied to judges, angels, and kings; and even accompanies other nouns, giving them a superlative meaning. The presence of the article, the singular construction of the word, and its context show with sufficient clearness whether it must be taken in its proper or its metaphorical sense, and what is its precise meaning in each case. Kautzsch (*Encyclopaedia Biblica*, III, 3324, n. 2) endeavours to do away with the metaphorical sense of *Elohim*. Instead of the rendering "judges" he suggests the translation "God", as witness of a lawsuit, as giver of decisions on points of law, or as dispenser of oracles; for the rendering "angels" he substitutes "the gods of the heathen", which, in later post-exilic times, fell to a lower rank. But this interpretation is not supported by solid proof.

According to Renan (*Histoire du peuple d'Israel*, I, p. 30) the Semites believed that the world is surrounded, penetrated, and governed by the *Elohim*, myriads of active beings, analogous to the spirits of the savages, alive, but somehow inseparable from one another, not even distinguished by their proper names as the gods of the Aryans, so that they can be considered as a confused totality. Marti (*Geschichte der israelitischen Religion*, p. 26), too, finds in *Elohim* a trace of the original Semitic polydemonism; he maintains that the word signified the sum of the divine beings that inhabited any given place. Baethgen (*op. cit.*, p. 287), F.C. Baur (*Symbolik und Mythologie*, I, 304), and Hellmuth-Zimmermann (*Elohim*, Berlin, 1900) make *Elohim* an expression of power, grandeur, and totality. Lagrange (*op. cit.*, p. 78) urges against these views that even the Semitic races need distinct units before they have a sum, and distinct parts before that arrive at a totality. Moreover, the name *El* is prior to *Elohim* (*op. cit.*, p. 77 sq.) and *El* is both a proper and a common name of God. Originally it was either a proper name and has become a common name, or it was a common name has become a proper name. In either case, *El*, and, therefore, also its derivative form *Elohim*, must have denoted the one true God. This inference becomes clear after a little reflection. If *El* was, at first, the proper name of a false god, it could not become the common name of a false god, it could not become the common name for deity any more than Jupiter or Juno could; and if it was, at first, the common name for deity, it could become the proper name only of that God who combined in him all the attributes of deity, who was the one true God. This does not imply that all the Semitic races had from the beginning a clear concept of God's unit and Divine attributes, though all had originally the Divine name *El*.

A.J. MAAS

St. Elphege

St. Elphege

(Or ALPHEGE).

Born 954; died 1012; also called Godwine, martyred Archbishop of Canterbury, left his widowed mother and patrimony for the monastery of Deerhurst (Gloucestershire). After some years as an anchorite at Bath, he there became abbot, and (19 Oct., 984) was made Bishop of Winchester. In 994 Elphege administered confirmation to Olaf of Norway at Andover, and it is suggested that his patriotic spirit inspired the decrees of the Council of Enham. In 1006, on becoming Archbishop of Canterbury, he went to Rome for the pallium. At this period England was much harassed by the Danes, who, towards the end of September, 1011, having sacked and burned Canterbury, made Elphege a prisoner. On 19 April, 1012, at Greenwich, his captors, drunk with wine, and enraged at ransom being refused, pelted Elphege with bones of oxen and stones, till one Thurm dispatched him with an axe. Elphege's body, after resting eleven years in St. Paul's (London), was translated by King Canute to Canterbury. His principal feast is kept on the 19th of April; that of his translation on the 8th of June. He is sometimes represented with an axe cleaving his skull.

PATRICK RYAN

Elphin

Elphin

Diocese of Elphin (Elphinium)

Suffragan of Tuam, Ireland, a see founded by St. Patrick. All the known facts respecting its first bishop are recorded in two important memorials of early Irish hagiography, the "Vita Tripartita" of St. Patrick, and the so-called "Patrician Documents" in the "Book of Armagh" (q. v.). On his missionary tour through Connaught, which he entered by crossing the Shannon at Drum-boilan, near Battlebridge, in the parish of Ardcarne, in 434 or 435, St. Patrick came to the territory of Corcoghlan, in which

was situated the place now called Elphin. The chief of that territory, a noble Druid named Ono, of the royal Connacian race of Hy-Briuin, gave land, and afterwards his castle or fort, to St. Patrick to found a church and monastery. The place, which had hitherto been called, from its owner's name, *Emlagh-Ono*, received the designation of Elphin, which signifies "rock of the clear spring", from a large stone raised by the saint from the well opened by him in this land and placed on its margin, and the copious stream of crystal water which flowed from it and still flows through the street of Elphin. There St. Patrick built a church called through centuries *Tempull Phadruig*, i. e. Patrick's church. He established here an episcopal see, and placed over it St. Assicus as bishop, and with him left Bite, a bishop, son of the brother of Assicus, and Cipia, mother of Bite. St. Patrick also founded at Elphin an episcopal monastery or college, one of the first monasteries founded by him, and placed Assicus over it, in which office he was succeeded by Bite. Both were buried at Racoon, in Donegal, where St. Patrick built a church and a habitation for seven bishops. The "Septem episcopi de Racoon" are invoked in the Festology of Ængus the Culdee (q. v.).

The first bishop of Elphin is described in the "Book of Armagh" as the *cerd*, i. e. the wright or goldsmith of St. Patrick; and he made chalices, patens, and metal book-covers for the newly founded churches. Following the example of their masters, the successors and spiritual children of St. Assicus founded a school of art and produced beautiful objects of Celtic workmanship in the Diocese of Elphin. Some of these remain to the present day, objects of interest to all who see them. The famous Cross of Cong (see CROSS), undoubtedly one of the finest specimens of its age in Western Europe, was (as the inscription on it and the Annals of Innisfallen testify) the work of Mailisa MacEgan, successor of St. Finian of Clooncruff near Elphin, in the County Roscommon, and was made at Roscommon under the superintendence of Domhnall, son of Flanagan O'Duffy, successor of Coman and Kieran, abbots of Roscommon and Clonmacnoise, and Bishop of Elphin. It is held that the exquisite Ardagh Chalice, which was given to Clonmacnoise by Turlough O'Connor, and was stolen thence by the Danes, was made, if not by the same artist, at least in the same school at Roscommon. The Four Masters record (1166) that the shrine of Manchan of Maothail (Mohill) was covered by Rory O'Connor, and an embroidery of gold placed over it by him in as good style as relic was ever covered in Ireland. It is, therefore, fair to conclude that this beautiful work was also executed in the school of art founded by St. Assicus in the Diocese of Elphin. Within four miles of the present town of Elphin is Ratherroghan, the famous palace of Queen Meave and the Connaught kings; Relig-na-Righ, the Kings' Burial Place; also the well of Ogulla, or the Virgin Monument, the scene of the famous conversion and baptism of Aithnea (Eithne) and Fidelm, the daughters of Leoghari, monarch of Ireland in the time of St. Patrick. Ware states that after the union with Elphin of the minor

sees of Roscommon, Ardcarne, Drumcliffe, and other bishoprics of less note, finally effected by the Synod of Kells (1152), the see was esteemed one of the richest in all Ireland, and had about seventy-nine parish churches. The Four Masters describe its cathedral as the "Great Church" in 1235, and speak of the bishop's court in 1258. It had a dean and chapter at this time, as we learn from the mandate of Innocent IV, sent from Lyons, 3 July, 1245, to the Archbishop of Tuam, notifying him that the pope had annulled the election of the Provost of Roscommon to the See of Elphin, and ordering him to appoint and consecrate Archdeacon John, postulated by the dean Malachy, the archdeacons John and Clare, and the treasurer Gilbert.

Among the early bishops was Bron of Killaspugbrone, a favoured disciple of St. Patrick. He was also the friend and adviser of St. Brigid when she dwelt in the plain of Roscommon and founded monasteries there. According to Ware, of the successors of St. Assicus in the See of Elphin he found mention of only two before the coming of the English, Domhnall O'Dubhthaigh (O'Duffy), who died in 1036, and Flanachan O'Dubhthaigh, who died in 1168. There is reference to at least two other bishops of Elphin, in 640 and 1190. From St. Assicus to 1909 the names of at least fifty-four occupants of the see are enumerated in the ecclesiastical annals and public records of Ireland and Rome. Many of them were renowned for learning, wisdom and piety. During the Reformation and subsequent persecutions, there continued in Elphin an unflinching succession of canonically appointed Catholic bishops. They were faithful dispensers of the divine mysteries, like George Brann and John Max; confessors true to the Catholic Faith and the See of Peter, through years of persecution and exile like O'Higgins and O'Crean; martyrs sealing their testimony with their blood, like O'Healy and Galvirius.

The present Diocese of Elphin includes nearly the whole of the county of Roscommon, with large portions of Sligo and Galway. In the census of 1901 the population was: Catholics, 125,743; non-Catholics, 7,661. The present chapter consists of a dean, archdeacon, treasurer, chancellor, theologian, penitentiary, and four prebendaries. The parishes number 33, parish priests and curates 100. There is a convent of Dominicans at Sligo. The female orders in the diocese are: Ursulines, Sligo; Sisters of Mercy, in various places; and Franciscan Missionaries of Mary, at Loughlynn. To the convents are attached primary schools attended by 2,500 girls. Three of them have also industrial schools for orphan and homeless children. The Ursulines conduct a boarding-school for young ladies. The diocesan seminary is the college of the Immaculate Conception at Sligo. The Marist and Presentation Brothers teach large schools. The cathedral of the diocese at Sligo, an early Romanesque structure, simple and massive, was erected by Most Rev. Dr. Gillooly, and consecrated in 1897. He also built St. Mary's Presbytery, and the College of the Immaculate Conception, Sligo. These,

with a Temperance Hall, form a group of ecclesiastical buildings worthy of their beautiful scenic surroundings.

Bishop Gillooly was succeeded, 24 March, 1895, by the Most Rev. John Joseph Clancy, born in the parish of Riverstown, County Sligo, in 1856. He was educated at the Marist College, Sligo, and Summerhill College, Athlone, and entered Maynooth in 1876, where he spent two years on the Dunboyne Establishment. In 1883 he was appointed professor in the Diocesan College, Sligo, and in 1887 professor of English Literature and French in Maynooth College, which office he held until he was made Bishop of Elphin.

J.J. KELLY

Elusa

Elusa

A titular see of Palaestina Tertia, suffragan of Petra. This city is called *Chellous* in the Greek text of Judith, i, 9. It is also mentioned by Ptolemy, V, xv, 10 (in Idumaea), Peutinger's "Table", Stephanus Byzantius (as being formerly in Arabia, now in Palaestina Tertia), St. Jerome (In Isaiam, V, xv, 4), the pilgrim Theodosius, Antoninus of Piacenza, and Joannes Moschus (Ptatum Spirituale, clxiv). In the fourth century, as is to be learned from St. Jerome's life of St. Hilarion, there was at Elusa a great temple of Aphrodite; the saint seems to have introduced Christianity there ("Vita Hilarionis" in P.G., XXIII, 41). Early in the following century a Bishop of Elusa after redeeming the son of St. Nilus, who had been carried off from Mount Sinai by the Arabs, ordained both him and his father (P.G. LXXIX, 373-93). Other bishops known are Theodulus, 431; Aretas, 451; Peter, 518; and Zenobius, 536 (Lequien, Or. christ., III, 735). Today the ruins of the city are seen at El-Khalasa (Khalasah), about nineteen miles south of Bersabee, in a large plain belonging to nomad tribes. Many inscriptions have been found there (Revue Biblique, 1905, 246-48, 253-55). In the vicinity, according to the Targums, was the desert of Sur with the well at which the angel found Agar (Gen., xvi, 7). (See *Revue Biblique*, 1906, 597).

The ancient See of Elusa (Eauze) in Gaul was united with that of Auch (q.v.) probably in the ninth century.

S. VAILHÉ
Council of Elvira

Council of Elvira

Held early in the fourth century at Elliberis, or Illiberis, in Spain, a city now in ruins not far from Granada. It was, so far as we know, the first council held in Spain, and was attended by nineteen bishops from all parts of the Peninsula. The exact year in which it was held is a matter of controversy upon which much has been written. Some copies of its Acts contain a date which corresponds with the year 324 of our reckoning; by some writers the council has accordingly been assigned to that year. Hardouin suggests 313, Mansi 309, and Hefele 305 or 306. Recent opinion (Duchesne, see below) would put the date considerably earlier, from 300 to 303, consequently previous to the persecution of Diocletian. The principal bishop attending the council was the famous Hosius of Cordova. Twenty-six priests are also recorded as sitting with the bishops. Its eighty-one canons were, however, subscribed only by the bishops. These canons, all disciplinary, throw much light on the religious and ecclesiastical life of Spanish Christians on the eve of the triumph of Christianity. They deal with marriage, baptism, idolatry, fasting, excommunication, the cemeteries, usury, vigils, frequentation of Mass, the relations of Christians with pagans, Jews, heretics, etc. In canon xxxiii we have, says Hefele (*op. cit.* below), the oldest positive ecclesiastical ordinance concerning the celibacy of the clergy. Canon xiii exhibits the institution of nuns (*virgines Deo sacratae*) as long familiar to Spain. Canon xxxvi (*placuit picturas in ecclesia esse non debere ne quod colitur et adoratur in parietibus depingatur*) has often been urged against the veneration of images as practised in the Catholic Church. Binterim, De Rossi, and Hefele interpret this prohibition as directed against the use of images in overground churches only, lest the pagans should caricature sacred scenes and ideas; Von Funk, Termel, and Dom Leclercq opine that the council did not pronounce as to the liceity or non-liceity of the use of images, but as an administrative measure simply forbade them, lest new and weak converts from paganism should incur thereby any danger of relapse into idolatry, or be scandalized by certain superstitious excesses in no way approved by the ecclesiastical authority. (See Von Funk in "Tübingen Quartalschrift", 1883, 270-78; Nolte in "Rev. des Sciences ecclésiastiques", 1877, 482-84; Turmel in "Rev. du clergé français", 1906, XLV, 508.) Several other canons of this council offer much interest to students of Christian archaeology. (See text and commentary in Hefele-Leclercq, "Hist. des Conciles." I, 212 sqq.)

ARTHUR S. BARNES

Ely

Ely

ANCIENT DIOCESE OF ELY (ELIENSIS; ELIA OR ELYS).

Ancient diocese in England. The earliest historical notice of Ely is given by Venerable Bede who writes (*Hist. Eccl.*, IV, xix): "Ely is in the province of the East Angles, a country of about six hundred families, in the nature of an island, enclosed either with marshes or waters, and therefore it has its name from the great abundance of eels which are taken in those marshes." This district was assigned in 649 to Etheldreda, or Audrey, daughter of Anna, King of the East Angles, as a dowry in her marriage with Tonbert of the South Girvii. After her second marriage to Egfrid, King of Northumbria, she became a nun, and in 673 returned to Ely and founded a monastery on the site of the present cathedral. As endowment she gave it her entire principality of the isle, from which subsequent Bishops of Ely derived their temporal power. St. Etheldreda died in 679, and her shrine became a place of pilgrimage. In 870 the monastery was destroyed by the Danes, having already given to the Church four sainted abbesses, Sts. Etheldreda, Sexburga, Ermenilda, and Werburga. Probably under their rule there was a community of monks as well as a convent of nuns, but when in 970 the monastery was restored by King Edgar and Bishop Ethelwold it was a foundation for monks only. For more than a century the monastery flourished, till about the year 1105 Abbot Richard suggested the creation of the See of Ely, to relieve the enormous Diocese of Lincoln. The pope's brief erecting the new bishopric was issued 21 Nov., 1108, and in Oct., 1109, the king granted his charter, the first bishop being Harvey, former Bishop of Bangor. The monastery church thus became one of the "conventual" cathedrals. Of this building the transepts and two bays of the nave already existed, and in 1170 the nave as it stands to-day (a complete and perfect specimen of late Norman work) was finished. As the bishops succeeded to the principality of St. Etheldreda they enjoyed palatine power and great resources. Much of their wealth they spent on their cathedral, with the result that Ely can show beautiful examples of gothic architecture of every period, including two unique features, the unrivalled Galilee porch (1198-1215) and the central octagon (1322-1328) which rises from the whole breadth of the building and towers up until its roof forms the only Gothic dome in existence. The western tower (215 feet) was built between 1174 and 1197, and the octagon was added to it in 1400. Of the cathedral as a whole it is true that "a more vast, magnificent and beautiful display of ecclesiastical architecture and especially of the different periods of the pointed style can scarcely be conceived" (Winkles, *English Cathedrals*, II, 46). It is fortunate in having perfect specimens of each of the successive styles of Gothic archi-

ecture: the Early English Galilee porch, the Decorated lady-chapel (1321-1349), and the Perpendicular chantry of Bishop Alcock (c. 1500)

The original Catholic diocese was much smaller than the present Anglican see and consisted of Cambridgeshire alone, while even of this county a small part belonged to Norwich diocese. The bishops of Ely usually held high office in the State and the roll includes many names of famous statesmen, including eight lord chancellors and six lord treasurers. Two bishops-John de Fontibus and Hugh Belsham -- were reputed as saints, but never received formal cultus; the former was commemorated on 19 June. The following is the list of bishops:--

- Harvey, 1109
- Nigel, 1133 (*lord treasurer*)
- William Longchamp 1189 (*lord chancellor*)
- Eustace, 1198 (*lord chancellor*)

Bishop Goodrich showed reforming tendencies and during his pontificate the monastery with all its dependencies was suppressed. The last Catholic bishop was Thomas Thirlby, who was one of the eleven confessor-bishops imprisoned by Elizabeth and who died at Lambeth in 1570. In the diocese there were one archdeaconry and 141 parishes. The arms of the see were: gules, three ducal crowns, or.

EDWIN BURTON

St. Elzear of Sabran

St. Elzéar of Sabran

Baron of Ansouis, Count of Ariano, born in the castle of Saint-Jean de Robians, in Provence, 1285; died at Paris, 27 September, 1323. After a thorough training in piety and the sciences under his uncle William of Sabran, Abbot of St. Victor at Marseilles, he acceded to the wish of Charles II of Naples and married the virtuous Delphine of the house of Glandèves. He respected her desire to live in virginity and joined the Third Order of St. Francis, vying with her in the practice of prayer, mortification, and charity towards the unfortunate. At the age of twenty he moved from Ansouis to Puy-Michel for greater solitude, and formulated for his servants rules of conduct that made his household a model of Christian virtue. On the death of his father, in 1309, he went to Italy and, after subduing by kindness his subjects who despised the French, he went to Rome at the head of an army and aided in expelling the Emperor Henry VII. Returning to Provence, he made a vow of chastity with his spouse, and in 1317 went back to Naples to become the tutor of Duke Charles and later his prime minister when he became regent. In 1323 he was sent as ambassador to France to obtain Marie of Valois in marriage for Charles, edifying a worldly court by his heroic virtues. He was buried in the Franciscan habit in the church of the Minor Conventuals at Apt. The decree of his canonization was signed by his godson Urban V and published by Gregory XI. His feast is kept by the Friars Minor and Conventuals on the 27th of September, and by the Capuchins on the 20th of October.

GREGORY CARR

Emanationism

Emanationism

The doctrine that emanation (Lat. *emanare*, "to flow from") is the mode by which all things are derived from the First Reality, or Principle.

I. The term *emanation*, being itself a metaphor, has been, and is still, used in many senses, and frequently by writers who are not emanationists. Others, without using the word, really hold the doctrine of emanation. Furthermore, emanationism is always

interwoven with different opinions on various subjects; to separate it from these so as to assign its fundamental elements is more or less arbitrary. Taking *emanationism* in the sense commonly received today, it is not primarily a theological, but rather a cosmogonic system, not a direct answer to the question of the nature of God, but to that of the mode of origin of things from God. In general it holds that all things proceed from the same Divine substance, some immediately, others mediately. All beings form a series the beginning of which is God. The second reality is an emanation from the first, the third from the second, and so on. At every step the derived being is less perfect than its source; but, by giving rise to other beings, the source itself loses none of its perfections. The first source, then, from which everything flows, remains unchanged; its perfection is neither exhausted nor lessened.

Emanationism is frequently referred to as a form of pantheism; but while this latter is primarily a system of reality, identifying all things as modes or appearances of the one substance, emanationism is concerned chiefly with the mode of derivation. Nor does it necessarily affirm the substantial identity of all things; it may assert the distinct, though dependent, substantiality of emanated realities. It is true that emanation is conceived by some in a pantheistic sense, as an immanent process, an expansion of the Divine substance within itself. But by many it is understood as implying a separation of the derived beings from their source. Hence, not only some forms of pantheism are not emanationistic, but also many emanationists — with more or less consistency — reject pantheism. For those who admit that matter is eternal and exists independently of God, God cannot be more than an architect, who arranges pre-existing materials. In the doctrine of complete emanationism, all things, from the highest spiritual substances to the lowest forms of matter, come from God as their first origin, matter being the last and therefore most imperfect emanation. Some views, however, combine the theory of the eternity of matter with the theory of emanation.

The doctrine of creation teaches that all things are distinct from God, but that God is their efficient cause. God does not produce things from His own substance nor from any pre-existing reality, but by an act of His will brings them out of nothing. According to emanationism, on the contrary, the Divine substance is the reality from which all things are derived, not by any voluntary determination, but by a necessity of nature. And God does not produce all things immediately; the lower are more distant, and are separated from Him by necessary intermediaries. (It may be noted, however, that sometimes the word *emanation* is used in a broader sense including also *creation*. Thus St. Thomas: "Quæritur de modo emanationis rerum a primo principio qui dicitur creatio". Summa, I, Q. xlv, a. 1.)

Evolution implies the change of one thing into something else, whereas a reality from which another emanates remains identical with itself. The process of evolution

— at least in its totality — is generally considered as an ascent, a movement upwards towards a greater perfection. Emanation is a descent; it begins with the infinitely perfect, and at every step the emanating beings are less pure, less perfect, less divine. The Infinite is postulated as a starting-point, instead of being the goal which the universe is ever striving to realize. Some comparisons used by emanationists, though only metaphors, and consequently misleading if taken literally, may give a clearer idea of the system. Things proceed from God as water from a spring or an overflowing vessel; as the stem, branches, leaves, etc., from the roots; as the web from the spider; as light or heat from the sun or a fire; as the doctrine from the teacher. It is easy to see that all such comparisons are deficient in many points. They are intended simply to illustrate that which is above human comprehension.

II. Vague indications of emanationism are found in ancient mythologies and religions, especially those of India, Egypt, and Persia. Thus in the Upanishads things are said to issue from their eternal principle as the web from the spider, the plant from the earth, the hair from the skin. But, while these and other comparisons and expressions may be interpreted in the sense of emanationism, they are not sufficiently explicit to serve as a basis for the assertion that such systems of philosophy or religion are emanationistic. Philo's teaching on this point is not much clearer. His thought was influenced by two distinct currents: Greek philosophy, especially Platonism, and Judaism. In his endeavour to reconcile them, he sometimes falls into inconsistencies, and his real position is doubtful. According to him, God, infinitely perfect, cannot act on the world immediately, but only through powers or forces (*pneuma*) which are not identical with Him, but proceed from Him. The primitive Divine force is the Logos. Whether the Logos is a substance or only an attribute, remains an obscure point. From the Logos the Spirit (*pneuma*) proceeds. It is the soul, or vivifying principle, of the world. Sometimes God is looked upon as the efficient and active cause of the world, sometimes also as immanent, as the one and the whole (*eis kai to pan autos estin*).

The first clear and systematic expression of emanationism is found in the Alexandrian school of Neo-Platonism. According to Plotinus, the most important representative of this school, the first principle of all things is the One. Absolute unity and simplicity is the best expression by which God can be designated. The One is a totally indetermined essence, for any attribute or determination would introduce both limitation and multiplicity. Even intelligence and will cannot belong to this Primal Reality, for they imply the duality of subject and object, and duality presupposes a higher unity. The One, however, is also described as the First, the Good, the Light, the Universal Cause. From the One all things proceed; not by creation, which would be an act of the will, and therefore incompatible with unity; nor by a spreading of the Divine substance as pantheism teaches, since this would do away with the essential oneness. The One

is not all things, but before all things. Emanation is the process by which all things are derived from the One. The infinite goodness and perfection "overflows", and, while remaining within itself and losing nothing of its own perfection, it generates other beings, sending them forth from its own superabundance. Or again, as brightness is produced by the rays of the sun so everything is a radiation (*perilampsis*) from the Infinite Light. The various emanations form a series every successive step of which is an image of the preceding one, though inferior to it. The first reality that emanates from the One is the *Nous*, a pure intelligence, an immanent and changeless thought, putting forth no activity outside of itself. The *Nous* is an image of the One, and, coming to recognize itself as an image, introduces the first duality, that of subject and object. The *Nous* includes in itself the intellectual world, or world of ideas, the *kosmos nontos* of Plato. From the *Nous* emanates the Soul of the world, which forms the transition between the world of ideas and the world of the senses. It is intelligent and, in this respect, similar to the ideal world. But it also tends to realize the ideas in the material world. The World-Soul generates particular souls, or rather plastic forces, which are the "forms" of all things. Finally, the soul and its particular forces beget matter, which is of itself indetermined and becomes determined by its union with the form. With a few variations in the details, the same essential doctrine of emanation is taught by Iamblichus and Proclus. With Plotinus, Iamblichus identifies the One with the Good, but assumes an absolutely first One, anterior to the One, and utterly ineffable. From it emanates the One; from the One, the intelligible world (ideas); and from the intelligible world, the intellectual world (thinking beings). According to Proclus, from the One come the unities (*enades*), which alone are related to the world. From the unities emanate the triads of the intelligible essences (being), the intelligible-intellectual essences (life), and the intellectual essences (thought). These again are further differentiated. Matter comes directly from one of the intelligible triads.

Gnostics teach that from God, the Father, emanated numberless Divine, supra-mundane *Æons*, less and less perfect, which, taken all together, constitute the fullness (*pleroma*) of Divine life. Wisdom, the last of these, produced an inferior wisdom named Achamoth, and also the psychical and material worlds. To denote the mode according to which an inferior is derived from a superior degree, Basilides uses the term *aporroia* ("flowing from", "efflux"), and Valentinus, the term *probole* (throwing forth, projection). The Fathers of the Church and Christian writers, especially when they treat of the divine exemplarism or of the relations of the three Divine Persons in the Trinity, and even when they speak of the origin of the world, may use expressions that remind one of the theory of emanation. But such expressions must be interpreted according to the doctrine of creation to which they adhere. Pseudo-Dionysius follows Plotinus and the later Neo-Platonists, especially Proclus, frequently borrowing their terminology. Yet

he endeavours to adapt their views to the teachings of Christianity. God is primarily goodness and love, and other beings are emanations from His goodness, as light is an emanation from the sun. John Scotus Eriugena takes his doctrine from Pseudo-Dionysius and interprets it in the sense of pantheistic emanationism. There is only one Being who, by a series of substantial emanations, produces all things. Nature has four divisions, or rather there are four stages of the one nature:

- 1 The nature which creates, but is not created, i. e. God in His primordial, incomprehensible reality, unknown and unknowable for all beings, even for Himself. God alone truly is, and He is the essence of all things.
- 2 The created and creating nature, i. e. God considered as containing the ideas, prototypes, or, to use Eriugena's expression, the primordial causes of things. It is the ideal world.
- 3 The nature which is created, but does not create, is the world of things existing in time and space. All flow, proceed, or emanate from the first principle of being. Creation is a "procession". Creatures and God are one and the same reality. In creatures God manifests Himself. Hence the name *theophania* which Eriugena gives to this process.
- 4 Nature, which neither creates nor is created, i. e. God as the term towards which everything ultimately returns.

Arabian philosophy — not to speak here of the various forms of Arabian mysticism — is in many points influenced by Neo-Platonism, and generally holds some form of emanationism, the emanation of the different spheres to which all things celestial and terrestrial belong. According to Alfarabi, from the First Being, conceived as intelligent (in this Alfarabi departs from Plotinus), the intellect emanates; from the intellect, the cosmic soul; and from the cosmic soul, matter. Avicenna teaches that matter is eternal and uncreated. From the First Cause comes the *intelligentia prima*, from which follows a series of processions and emanations of the various celestial spheres down to our own earthly sphere. For Averroes the intellect is not individual, but identical with the universal spirit, which is an emanation from God. Interesting is a comparison found in one of the later mystics, Ibn Arabi. Water that flows from a vessel becomes separated from it; hence this comparison is defective, for things that issue from God are not separated from Him. Emanation is illustrated by the comparison with a mirror, which receives the features of a man, although the man and his features remain united.

In Jewish philosophy, influences of Neo-Platonism are apparent in Avicbron and Maimonides. In the Cabbala the famous doctrine of the Sephiroth is essentially a

doctrine of emanations. It was developed and systematized especially in the thirteenth century. The Sephiroth are the necessary intermediaries between God and the universe, between the intellectual and the material world. They are divided into three groups, the first group of three forming the world of thought, the second group, also of three, the world of soul, and the last group, of four, the world of matter.

III. Philosophically the discussion of emanationism supposes the discussion of the whole problem of the nature of God, especially of His simplicity and infinity. The doctrine of the Catholic Church is contained in the definition of the dogma of the **creatio ex nihilo** by the Fourth Lateran Council and, especially, the Council of the Vatican. The latter expressly condemns emanationism (I. De Deo rerum omnium creatore, can. iv), and anathematizes those "asserting that finite things, both corporeal and spiritual, or at least spiritual, have "emanated from the Divine substance.

The literature on this subject includes the works of the authors mentioned in the course of the article, works on history of philosophy, both general and of special schools and philosophers. HEINZE in *Realencyk. für prot. Theol.*, v, 329; HAGEMANN in *Kirchenlex.*, IV, 431.

C. A. DUBRAY.

Emancipation

Ecclesiastical Emancipation

In ancient Rome emancipation was a process of law by which a slave released from the control of his master, or a son liberated from the authority of his father (*patria potestas*), was declared legally independent. The earliest ecclesiastical employment of this process was in the freeing of slaves. The Church, unable to change at once the sad condition of the slave, was able, however, to gradually substitute for slavery the milder institution of serfdom, and to introduce in place of the elaborate formalities of the *emancipatio* the simpler form of the *manumissio in ecclesiâ* (Cod., De his, qui in ecclesiâ manumittuntur, i, 13), in which a simple statement to that effect by the master before the bishop and the congregation sufficed. The emancipation of a slave was especially necessary as a preliminary to his ordination [c. i (Synod of Poitiers, 1078, can. viii), X, De filiis presbyterorum ordinandis vel non, I, xvii; c. iii (Fourth Synod of Toledo, 633, can. lxxiv), X, De servis non ordinandis et eorum manumissione, I, xviii]. Similarly, the entrance of a son into a religious order, i. e. the taking of solemn vows, or the *professio religiosa*, carries with it in canon law his emancipation from the legal authority (*patria potestas*) of the father. No positive law, however, can be quoted on this point, nor does modern civil legislation recognize this consequence of religious profession. The canon law recognizes another, purely imitative form of emancipation. This was

the release of a pupil of a cathedral school, a *domicellaris*, from subjection to the authority of the *scholasticus*, or head of the school. This emancipation took place with certain well-defined ceremonies, known in the old German cathedral schools as *Kappengang*.

The term *emancipation* is also applied to the release of a secular ecclesiastic from his diocese, or of a regular from obedience and submission to his former superior, because of election to the episcopate. The petition requesting release from the former condition of service or submission, which the collegiate electoral body, or the newly elected person, must present to the former superior, is called *postulatio simplex*, in contradistinction to the *postulatio sollemnis*, or petition to be laid before the pope, in case some canonical impediment prevents the elected person from assuming the episcopal office. The document granting the dismissal from the former relations is called *litteræ dimissoriæ* or *emancipatoriæ*. It is not customary to use the term *emancipation* for that form of dismissal by which a church is released from parochial jurisdiction, a bishop from subordination to his metropolitan, a monastery or order from the jurisdiction of the bishop, for the purpose of placing such person or body under the ecclesiastical authority next higher in rank, or under the pope himself. This act is universally known as exemption (q.v.).

FERRARIS, *Bibliotheca prompta* (Paris, 1884), s. v.; CAMBUZAT, *De l'émancipation des mineurs dans l'ancienne France* in *Revue cath. des institutions et du droit* (Paris, 1887), XXIX, 151-174.

JOHANNES BAPTIST SÄGMÜLLER

Ember Days

Ember Days

Ember days (corruption from Lat. *Quatuor Tempora*, four times) are the days at the beginning of the seasons ordered by the Church as days of fast and abstinence. They were definitely arranged and prescribed for the entire Church by Pope Gregory VII (1073-1085) for the Wednesday, Friday, and Saturday after 13 December (S. Lucia), after Ash Wednesday, after Whitsunday, and after 14 September (Exaltation of the Cross). The purpose of their introduction, besides the general one intended by all prayer and fasting, was to thank God for the gifts of nature, to teach men to make use of them in moderation, and to assist the needy. The immediate occasion was the practice of the heathens of Rome. The Romans were originally given to agriculture, and their native gods belonged to the same class. At the beginning of the time for seeding and harvesting religious ceremonies were performed to implore the help of their deities: in June for a bountiful harvest, in September for a rich vintage, and in

December for the seeding; hence their *feriae sementivae*, *feriae messis*, and *feri vindimiales*. The Church, when converting heathen nations, has always tried to sanctify any practices which could be utilized for a good purpose. At first the Church in Rome had fasts in June, September, and December; the exact days were not fixed but were announced by the priests. The "Liber Pontificalis" ascribes to Pope Callistus (217-222) a law ordering: the fast, but probably it is older. Leo the Great (440-461) considers it an Apostolic institution. When the fourth season was added cannot be ascertained, but Gelasius (492-496) speaks of all four. This pope also permitted the conferring of priesthood and deaconship on the Saturdays of ember week--these were formerly given only at Easter. Before Gelasius the ember days were known only in Rome, but after his time their observance spread. They were brought into England by St. Augustine; into Gaul and Germany by the Carolingians. Spain adopted them with the Roman Liturgy in the eleventh century. They were introduced by St. Charles Borromeo into Milan. The Eastern Church does not know them. The present Roman Missal, in the formulary for the Ember days, retains in part the old practice of lessons from Scripture in addition to the ordinary two: for the Wednesdays three, for the Saturdays six, and seven for the Saturday in December. Some of these lessons contain promises of a bountiful harvest for those that serve God.

FRANCIS MERSHMAN

Embolism

Embolism

(Greek: *embolismos*, from the verb, *emballein*, "to throw in")

Embolism is an insertion, addition, interpretation. The word has two specific uses in the language of the Church:

I. IN THE PRAYER

The prayer which, in the Mass, is inserted between the Our Father and the Fraction of the Bread: "Libera nos, quæsumus, Domine, ab omnibus malis", etc. It is an interpretation of the last petition. The embolism may date back to the first centuries, since, under various forms, it is found in all the Occidental and in a great many Oriental, particularly Syrian, Liturgies. The Greek Liturgies of St. Basil and St. John Chrysostom, however, do not contain it. In the Mozarabic Rite this prayer is very beautiful and is recited not only in the Mass, but also after the Our Father at Lauds and Vespers. The Roman Church connects with it a petition for peace in which she inserts the names of the Mother of God, Sts. Peter and Paul, and St. Andrew. The name of St. Andrew is found in the Gelasian Sacramentary, so that its insertion in the Embolismus would

seem to have been anterior to the time of St. Gregory. During the Middle Ages the provincial churches and religious orders added the names of other saints, their founders, patrons, etc., according to the discretion of the celebrant (see MICROLOGUS)

II. IN THE CALENDAR

In the calendar this term signifies the difference of days between the lunar year of only 354 days and the solar year of 365.2922 days. In the Alexandrian lunar cycle of 19 years, therefore, seven months were added, one each in the second, fifth, eighth, eleventh, thirteenth, sixteenth, and nineteenth (the embolistic) years. Each embolistic year had 13 lunar months, or 384 days. The lunar calendar was called Dionysian, because Dionysius Exiguus, in the sixth century, recommended the introduction of the Alexandrian Easter cycle of 19 years and computed it for 95 years in advance.

F.G. HOLWECK.

Embroidery

Embroidery

ECCLESIASTICAL EMBROIDERY

That in Christian worship embroidery was used from early times to ornament vestments, is confirmed by numerous notices, especially the statements of the "Liber Pontificalis". For the period before the tenth century no account, even partially satisfactory, has come down to us, either of the methods of producing the embroidery or of the manner and extent of its use. What is incidentally said is not sufficient to make the matter clear, and no embroidery of this period for ecclesiastical purposes has been preserved. The oldest extant examples are the remains of a maniple and of a stole dating from the beginning of the tenth century, in the museum of Durham cathedral, and fragments of an altar-cover of the same century in the National Museum at Ravenna. Vestments magnificently embroidered appeared at the beginning of the eleventh century, such as the chasuble completely covered with pictures embroidered in pure gold, which is preserved in the Bamberg cathedral; the coronation mantle of Hungary, originally also a chasuble; and other specimens of the highest importance not only on account of their costly material and the skill shown in their execution, but even more on account of the deep significance of the pictures. Up to the thirteenth century embroidery in gold thread was the ornamentation mainly used for ecclesiastical

ical purposes. To a certain degree gold embroidery was intended to take the place of figured materials woven with gold thread. Consequently, this embroidery so closely resembles fabrics woven with gold that on superficial examination it could easily be taken for such. At the same time, however, embroidery with silk thread was also practised, as is shown by the splendid copes preserved at St. Paul in Corinthia.

Ecclesiastical embroidery reached its fullest development in the thirteenth, fourteenth, and the first half of the fifteenth centuries. In this period whatever bore the name of vestment, wherever means allowed, was more or less richly embroidered. The working materials were gold, silver, and silk threads, small disks and spangles cut with a stamp from silver, plain or gilded, spangles and small disks of enamel, real pearls, precious stones, paste diamonds, and coral. The embroidery of figures was the branch of the art most pursued, purely ornamental embroidery being regarded as of subordinate importance. The copes and chasubles covered with pictorial embroidery of a deeply religious character, the *aurifrisia* (bands) magnificently ornamented with embroidered figures, that were laid on the liturgical clothing and other vestments, the covers and wall-hangings embroidered in striking pictorial designs, the stoles covered with wonderful needlework, all these examples of the art of the needle of that era, still found in large numbers in the church treasures and museums, show that ecclesiastical embroidery then reached a height never since regained. In the eleventh and twelfth centuries Sicily was famous for its ecclesiastical embroidery; in the thirteenth and fourteenth centuries the workshops of England were more noted than all others. In this latter period mention of English embroidery, called *opus anglicanum*, is found in almost all inventories of the more important churches of the Continent, even in Italy. The vestment most frequently sent from England into other parts of Western Europe was a cope completely covered with a rich embroidery of figures on a background of vine arabesques or elaborate architecture, the background being worked in gold thread; examples of these copes are still preserved at St. John Lateran at Rome, at Pienza, Vich, and Daroca in Spain, Salzburg, Saint-Bertrand-de-Comminges in France, and elsewhere. A large amount of superb ecclesiastical needlework, splendid specimens of which still exist, was also produced in Germany, France, and Italy; in the last-named country the work of Florence, Siena, Lucca, and Venice was especially noted. In the fifteenth century the finest ecclesiastical embroidery was done in Flanders, where the work most largely produced was of that kind in which couched gold thread was worked over with coloured silks. The best examples of this are the mass-vestments of the Order of the Golden Fleece preserved in the Hofburg at Vienna. With the close of the Middle Ages ecclesiastical embroidery began to decline. Instead of the flat stitch, use was now made of the more striking raised embroidery, which frequently degenerated into a purely formal high relief totally unsuited in character to ecclesiastical embroidery. There was

a continually growing tendency to aim at brilliant effects and a stately magnificence. At the same time pictorial needlework was less and less in use, owing to the influence of secular embroidery. Needlework for church vestments was limited more and more to purely ornamental designs, taken chiefly from the plant world, and to certain symbolic designs. The art sank to its lowest depths both in design and technic at the commencement of the nineteenth century, during the so-called *Biedermaier* (honest citizen) period.

Ecclesiastical embroidery flourished in the various provinces of the Byzantine Empire. While the costly needlework produced there was naturally used mainly in the services of the Greek Church, still many pieces were brought into Western Europe. This Byzantine needlework did not fail to influence Western ecclesiastical embroidery. One of the finest examples of art needlework of the Byzantine Empire of the Middle Ages is the imperial dalmatic in the treasury of St. Peter's at Rome, erroneously attributed to the eleventh century; it is, in reality, a Greek *saccòs* (vestment of a Greek bishop or patriarch) worked, probably, in the latter half of the fourteenth century.

At no period has ecclesiastical differed in its technic from secular embroidery. The same varieties of stitches and other art resources have been employed in both cases. No special ordinances have ever been issued by the Church in regard to embroidery for vestments, either as to material, colour, use, or design. Good taste, however, requires that the embroidery should harmonize with the character and colour-effect of the vestment, and that it should not be too heavy, too crowded, or too stiff.

EMBROIDERY IN SCRIPTURE

It is probable that the Israelites learned the art of embroidery during their sojourn in Egypt. The ornamentation of woven fabrics, especially of linen, by needlework in threads of different colours, spun or drawn from various materials, such as wool, flax, or gold, was known to ancient nations. The Greek and Romans acquired the art from the East. The monuments of Assyria and Babylon represent the garments of kings and officials as highly ornamented with what are commonly regarded as embroideries, and specimens of embroidered work have been found in Egyptian tombs. In Ezech., xxvii, 7, mention is made of the "fine broidered linen" used for sails on the ship of Tyre. The first reference to embroidery in Scripture is found in the Book of Exodus (xxvi, 1, 31, 36) in the directions given to Moses concerning the curtains of the Tabernacle, the veil for the Ark, and the hanging in the entrance to the Holy of Holies. The Douay, following the Vulgate, does not distinguish between the two Hebrew expressions in [Exodus 26:1, 31](#) and [Exodus 26:36](#). The former is translated in the Revised Version by "the work of a cunning workman" and seems to refer to the weaving of figured designs from different coloured threads; the latter may have been real embroidery, or needlework.

Besides the hanging at the entrance of the Tabernacle (Ex., xxvi, 36), the hanging in the entrance of the court (Ex., xxvi, 16) and the girdle of the high-priest (Ex., xxviii, 39; xxxix, 28) were the work of the "embroiderer", whereas in regard to the ephod (Ex., xxviii, 6; xxxix, 3) and the rational (Ex., xxviii, 15; xxxix, 8) another word is employed. Beseleel and Ooliab were endowed with skill in both kinds of work (Ex., xxxv, 35; xxxviii, 22,23). The word is used of the embroidered garments or scarfs mentioned in the Canticle of Debbora (Judges, v, 30), and of the bride's apparel in Ps. xlv (Heb., xlv), 15, where according to the Hebrew text she is said to be arrayed in embroiderings of gold and raiment of needlework. The garments of the faithless spouse, the figure of Israel (Ezech., xvi, 10, 13, 18), were likewise embroidered. In Ezech., xxvi, 16, it is foretold that the princes of the seas shall put off their broidered garments, and broidered stuffs are mentioned among the merchandise of Tyre (Ezech., xxvii, 7, 16, 24).

In the Authorized or King James Version (Ex., xxviii, 4) one of the high-priest's garments is called "a broidered coat"; the Revised Version changed it to "a coat of chequer work". The Douay has "a strait linen garment" (*lineam strictam* in the Vulgate). The Hebrew word used here is not found elsewhere in Scripture. It is believed by some to indicated "a surface device of lustre upon one colour", similar to work still done in Damascus. Even in regard to the nature of the word which is translated "embroidery", authorities are not agreed. Some regard it as painting on cloth, others as an ornamentation produced by sewing on to a stuff pieces of materials of other colours, other again as a fabric woven from threads of different colours.

St. Emerentiana

St. Emerentiana

Virgin and martyr, d. at Rome in the third century. The old Itineraries to the graves of the Roman martyrs, after giving the place of burial on the Via Nomentana of St. Agnes, speak of St. Emerentiana. Over the grave of St. Emerentiana a church was built

which, according to the Itineraries, was near the church erected over the place of burial of St. Agnes, and somewhat farther from the city wall. In reality Emerentiana was interred in the *coemeterium majus* located in this vicinity not far from the *coemeterium Agnetis*. Armellini believed that he had found the original burial chamber of St. Emerentiana in the former *coemeterium*. According to the legend of St. Agnes Emerentiana was her foster-sister. Some days after the burial of St. Agnes Emerentiana, who was still a catechumen, went to the grave to pray, and while praying she was suddenly attacked by the pagans and killed with stones. Her feast is kept on 23 January. In the "Martyrologium Hieronymianum" she is mentioned under 16 September, with the statement: *In coemeterio maiore*. She is represented with stones in her lap, also with a palm or lily.

J.P. KIRSCH

Jacques-Andre Emery

Jacques-André Emery

Superior of the Society of St-Sulpice during the French Revolution, b. 26 Aug., 1732, at Gex; d. at Paris, 28 April, 1811. After his preliminary studies with the Carmelites of his native town and the Jesuits of Mâcon, he passed to the Seminary of St. Irenæus at Lyons and completed his studies at St-Sulpice, Paris, where he became a member of the society of that name and was ordained priest (1758). He taught with distinction in the seminaries of Orléans and Lyons; at Lyons, too, he sustained the rights of the Holy See with firmness and ability, yet with due courtesy, before the archbishop, Mgr. de Montazet, a prelate of Jansenistic tendencies. Partly on the recommendation of the archbishop, he was made superior of the seminary at Angers (1776), and later became vicar-general of the diocese, displaying in both capacities marked powers of governing. In 1782 he was elected Superior-General of the Seminary and Society of St-Sulpice. His rule began in the lax days preceding the French Revolution, and Father Emery showed himself indefatigable in his zeal for the reform of the seminaries and for the training of clergy fit to cope with existing evils and prepared for the troublous times which, to some extent, he foresaw. After the Revolution broke forth, he watched its terrible progress without despair; he was, perhaps, during that period, the coolest head among the churchmen of France. His wide acquaintance among the priests and bishops, many of whom, in the course of his thirty years of teaching and ruling in the seminaries had been under his authority, and his position as administrator of the Diocese of Paris during the absence of the exiled archbishop, and as superior of St-Sulpice, brought many to him for advice. He was, says the historian Sicard, "the head and the arm" of the party whose counsels were marked by moderation and good sense; "a man who

was rarely endowed in breadth of learning, in knowledge of his time, in the clearness of his views, in the calmness and energy of his decisions; the oracle of the clergy, consulted on all sides less by reason of his high position than of his superior wisdom. M. Emery was called by Providence to be the guide throughout the long interregnum of the episcopate during the revolution" (*L'Ancien Clergé*, III, 549). And Cardinal de Bausset declares that he was the "real moderator of the clergy during twenty years of the most violent storms".

The decisions of the Archiepiscopal Council at Paris concerning the several oaths demanded of the clergy, inspired by Emery, were accepted by large numbers of priests and violently assailed by others. To their acceptance was due whatever practice of cult remained in France during the Revolution; to their rejection was due, in large part, the cessation of worship and the opinion which came to regard the clergy as "the irreconcilable enemies of the republic". Emery did not, like many others, mistake purely political projects for vital questions of religion. He felt free to take the "Oath of Liberty and Equality", but only as concerning the civil and political order; he upheld the lawfulness of declaring submission to the laws of the Republic (30 May, 1795), and of promising fidelity to the Constitution (28 Dec., 1799). He lent his influence to Mgr. Spina in his efforts to obtain the resignation of the French bishops, according to the will of Pius VII (15 Aug., 1801). While ready, for the good of religion, to go as far as the rights of the Church permitted, he was stanch in his opposition to the Civil Constitution of the Clergy (1790). Public religious services were suspended during the Revolution, and the seminaries closed; St-Sulpice was taken over by the revolutionists, and Father Emery was imprisoned and several times narrowly escaped execution. His faith, courage, and good humour sustained many of his fellow-prisoners and prepared them to meet death in a brave and Christian spirit; the gaolers, in fact, came to value his presence because it saved them annoyance from prisoners condemned to death. The closing of the seminaries in France led Father Emery, on the request of Bishop Carroll, to send some Sulpicians to the United States to found the first American seminary at Baltimore (St. Mary's, 18 July, 1791). The future religion of the country, he wrote to Father Nagot, the first superior, depended on the formation of a native clergy, which alone would be adequate and fit for the work before it. Despite the discouragements of the first years, he continued the supporter of the institution and welcomed the foundation of the college at Pigeon Hill, and later at Emmitsburg, for young aspirants to the priesthood. At one time, however, Bishop Carroll feared the withdrawal of the Sulpicians, but his arguments and above all the advice of Pius VII convinced Father Emery that the good of religion in America required their presence.

After Napoleon came into supreme control, Father Emery re-established the Seminary of St-Sulpice. His defence of the pope against the emperor caused Napoleon

to expel the Sulpicians from the seminary; this, however, did not daunt Father Emery, who defended the papal rights in the presence of Napoleon (17 March, 1811) and gained the emperor's admiration, if not his good will. "He was", remarks Sicard, "the only one among the clergy from whom Napoleon would take the truth." The death of Father Emery occurred a month later. He left many writings which have been published by Migne in his collection of theological works. They deal chiefly with the politico-religious questions of the day. He is best remembered, perhaps, by his dissertation on the mitigation of the sufferings of the damned. He wrote also on Descartes, Leibniz, and Bacon, and published from their works extracts in defence of religion. While clearly perceiving the intellectual evils of his day and the necessary remedies, he did not himself possess the fertility and originality of intellect, or the peculiar genius needed to counteract the influence of the powerful minds which then ruled France and Europe.

Gosselin, *Vie de M. Emery*, 2 vols. (Paris, 1861-1862); Migne, *Histoire de M. Emery et de l'église de France pendant la révolution et pendant l'empire*, 2 vols. (Paris, 1895); Sicard, *L'Ancien Clergé de France* (Paris, 1902), III.

John F. Fenlon

Emesa

Emesa

A titular see of Phœnicia Secunda, suffragan of Damascus, and the seat of two Uniat archdioceses (Greek Melchite and Syrian). Emesa was renowned for its temple of the sun, adored here in the shape of a black stone, whose priests formed a powerful aristocracy. One of them, Bassianus, became Roman emperor under the name of Elagabalus (a.d. 218). A native Arab dynasty ruled over the city between 65 b.c. and a.d. 73, from which period the series of Emesa coins dates. Emesa was the birthplace of the philosopher Longinus (c. a.d. 210), the friend of Queen Zenobia, and St. Romanos, the great Byzantine hymnographer (in the sixth century). Among twelve Greek bishops, known from the fourth to the eighth century, are: St. Silvanus, a martyr under Maximinus in company with the physician Julian (c. 312); Eusebius, a famous rhetorician suspected of Arianism; Nemesius (fourth century) and Paul, writers and friends of St. Basil and St. Cyril of Alexandria (Lequien, *Or. christ.*, II, 837). Another, whose name is unknown, was burned by the Arabs in 666 (Lammens in "*Mélanges de la faculté orientale de Beyrouth*", 1906, 3-14). The diocese was never suppressed and still exists for the Greek Melchites, both non-Catholic and Uniat (*Echos d'Orient*, 1907, 223, 226). It was raised to the rank of an autocephalous archbishopric in 452, when the supposed head of St. John the Baptist was found at the monastery of the Spelæon, and it was made a metropolitan see with four suffragan sees in 761, when the relic was

transferred to the cathedral (*Echos d'Orient*, 1907, 93-96, 142, 368). Sozomen (*Hist. eccl.*, III, xvii) speaks of this church as a marvel; the Arabs on capturing the city in 636 took over half of it; later it was changed into a mosque. In 1110 Emesa was taken by the Crusaders, and in 1157 suffered severely from an earthquake. The modern city, which the Arabs call Homs (Hems, Hums), built on the Orontes in sand-coloured basalt, is the chief town of a *caza*, in the sanjak of Hamah, vilayet of Damascus. The population is about 50,000 including some 30,000 weavers. There are 33,000 Mussulmans, 14,500 Greeks, 1000 Jacobites, 500 Greek Catholics, 350 Maronites, and a few Catholics of other rites. The Orthodox Greek metropolitan and the Jacobite bishop live at Homs. (For lists of ancient Jacobite bishops see Lequien, *op. cit.*, II, 1141, and "*Revue de l'Orient chrétien*", 1901, 196, 199.) The greek Melchite metropolitan resides at Iabroud; he has jurisdiction over 8000 faithful, 20 priests, 12 churches, 7 schools, and 2 monasteries of Schooerites. The Syrian Catholic archbishop resides at Damascus; his diocese includes 2000 faithful, with 4 parishes and 5 churches. The Jesuits have a residence and school at Homs, and native Mariamet Sisters conduct a school for girls.

S. VailhÉ

Emigrant Aid Societies

Emigrant Aid Societies

Records of the early immigration to the North American colonies are indefinite and unsatisfactory. The first legislation on immigration enacted by the United States was on 2 March, 1819, when Congress provided that a record be kept of the number of the immigrants arriving from abroad, their ages, sex, occupations, and nativity. Ireland has always supplied a large proportion of those landed at American ports, the steady stream commencing in the first years of the eighteenth century. These immigrants were then nearly all Presbyterians, few Catholics being among those taking passage prior to the Revolution. Arthur Young, in his "Tour in Ireland" (1776-79), declares that "the spirit of emigrating in Ireland appears to be confined to two circumstances, the Presbyterian religion and the linen manufacture. I heard of very few emigrants except among manufacturers of that persuasion. The Catholics never went; they seemed

not only tied to the country, but almost to the parish in which their ancestors lived." In a message to the "Representatives of the Freemen of the Province of Pennsylvania and the Three Lower Counties", Lieutenant Governor Patrick Gordon declared, on 17 December, 1728, that he had "positive orders from Britain to provide by proper law against these crowds of Foreigners who are yearly powr'd upon us. It may also require thoughts to prevent the importation of Irish Papists and convicts, of whom some of the most notorious, I am creditably informed, have of late been landed in this River."

The earliest American organization for the care of immigrants was the Charitable Irish Society of Boston, Massachusetts, founded 17 March, 1737. Says its charter: "Several Gentlemen, Merchants and Others of the Irish Nation residing in Boston in New England from an Affectionate and Compassionate concern for their countrymen in these Parts, who may be reduced by Sickness, Shipwrack, Old age and other Infirmities and unforeseen Accidents, Have thought fitt to form themselves into a Charitable Society for the relief of such of their poor and indigent Countrymen". The Managers, according to the rules, were to be "Natives of Ireland, or Natives of any other part of the British Dominions of Irish Extraction being Protestants and inhabitants of Boston". This anti-Catholic rule did not last long, for representatives of the Faith were members of the Society in 1742, and to-day they are in the majority on its roll.

In Philadelphia the Hibernian Society for the Relief of Emigrants from Ireland was organized on 3 March, 1790. Mathew Carey was its secretary, and Commodore John Barry, Jasper Moylan, George Meade, and other Catholics prominent in those days were among its first members. The Hibernian Society for "the aid of distressed Irishmen and their descendants" was started at Savannah, Georgia, in March, 1812, and emigration from Ireland being constantly on the increase, other societies were formed in New York, notably the Emigrant Assistance Society in 1825, with Dr. William James Macneven, one of the United Irishmen of 1798, at its head. It was the canal- and railroad-building era, and the aim of this society was to take care of the new arrivals and direct them where to find employment. It was the predecessor of the Irish Emigrant Society founded, also in New York, in 1841, through the efforts of Bishop Hughes, with Gregory Dillon as its first president. Out of this organization ten years later came the Emigrant Industrial Savings Bank, which in subsequent years developed into one of the greatest financial institutions in the country.

As New York was the great entrepôt for aliens, the Legislature, by act of 5 May, 1847, created the Board of Emigration of the State of New York to protect from fraud and imposition alien passengers arriving at New York, and to care and provide for the helpless among them. The president of the Irish Emigrant Society was ex-officio a member of this commission, and at Castle Garden, which became the official landing depot, its agents were recognized officially in their arrangements for the care of the

incoming immigrant. In addition to looking out for the welfare of the immigrants, a banking department was organized by the society to transmit money to Europe, to secure passage tickets over the ocean and the railways, to exchange the money brought in by the immigrants, and safeguard their material interests generally. In this way many millions of dollars, as well as several millions of immigrants, have been safely cared for through the instrumentality of this society. The discounts and commissions in these financial transactions paid its expenses and left a surplus which is given in charity, so that it will benefit either the immigrants or their descendants. The law by which the State of New York established the Commissioners of Emigration was declared by the Supreme Court, in May, 1876, an unconstitutional regulation of commerce, and an usurpation of the powers of Congress. In the twenty-nine years of its existence it had collected by a head-tax from the immigrants the sum of \$11,239,329. The responsibility of caring for the immigrants was then taken over by the Federal Government, in July, 1891. The State commission was abolished, Castle Garden abandoned, and the United States landing station established on Ellis Island under the supervision of the Treasury Department. Here, as under the State control, the representatives of the Emigrant Aid Societies are accorded all facilities for protecting and assisting those who need their help in starting out in the New World.

For the protection of Irish immigrant girls the Mission of Our Lady of the Rosary was founded in New York in 1881, through the efforts of Charlotte Grace O' Brien, daughter of William Smith O'Brien, the Irish patriot of 1848. At her solicitation -- she was not until several years later a Catholic -- Cardinal McCloskey appointed the Rev. John J. Riordan chaplain at Castle Garden, and he began there the work of the mission which exercises a moral influence over the steamship companies to protect the girls on board their vessels, and watches over and assists the girls at the landing depot. From its opening to the end of 1908, fully 100,000 girls were cared for by the mission, all free of charge. It is supported by voluntary contributions.

The increase of immigration having thus been recognized as a fact calling for charitable action, the German Society of New York offered advice and systematic assistance to German immigrants, but took no interest in their religious welfare. Its president was *ex officio* a member of the State Emigration Commission. In 1866, at the Catholic Congress held at Trier, Peter Paul Cahensly, a prominent merchant of Limburg, Prussia, suggested the establishment of the St. Raphael Society for the systematic protection of German emigrants, both at the point of departure and the port of landing. Three years later the plan was adopted at the Congress which met at Bamberg in Bavaria, and was taken up with much energy throughout Germany. Connexion with the United States was established through the Central Verein, which, at its convention in New York, in 1868, created a committee of five for emigrant affairs. The

agents of this body looked after the affairs of the immigrants at New York, but received only a waning support from their fellow Germans. In 1883 Peter Paul Cahensly crossed the ocean to New York, travelling, as Miss O' Brien had done, in the steerage, so that he might learn by personal experience the wants and hardships of the immigrant. At his suggestion a branch of the St. Raphael Society was formed in New York, with Bishop Winand M. Wigger of Newark as its president. Not much progress was made by this society until 1882, when the Rev. John Reuland was sent over from Germany to manage its bureau at New York. As an adjunct to it, a hospice called the Leo House was established under a separate corporation in 1889. It cost \$95,000. The Sisters of St. Agnes have charge of the Leo House, which is the residence of the chaplain in attendance on the German immigrants. From 1889 to 1 November, 1908, there were 51,719 immigrants cared for by the St. Raphael Society. Since the decline of German immigration after 1895, the Leo House has also entertained natives of France, Poland, Bohemia, and other Slavonic sections of the Austro-Hungarian Monarchy. The St. Raphael Society has its agents at Bremen, Hamburg, Antwerp, Rotterdam, Havre, Liverpool, and London, representatives in every diocese in Germany, and correspondents in all the large cities of the United States and of South America.

The Austrian Society of New York was founded in 1898 by a number of former Austrians to aid the newly arrived immigrants at Ellis Island, and to maintain a home under its supervision for the purpose of boarding them free of charge. Those who can afford it pay a nominal fee. Advice and help to employment is given free not only to the newcomers, but also to Austrians who have been in the country for any length of time. The Society is supported by the dues of the members and by donations including an annual subsidy of \$5000 from the Austrian Government. Among the members are twenty-one priests. The Austrian Society employs three agents at Ellis Island; one of them is the missionary who pleads before the board of inquiry for the unfortunate detained, cares for the sick, and looks after the spiritual needs of all. In the ten years of its existence 721,631 persons were entertained at its immigrant house. To maintain the Catholic character of the home and of the Austrian Society at large, as originally intended by the Emperor of Austria, it has from the start been chiefly interested in the Catholic immigrants, but all others are welcome to its care and facilities.

Polish priests ministering in the Eastern section of the United States established at New York, in 1893, the St. Joseph's Society, for the aid and care of the immigrants of that nationality. Its chaplain and agents work on the same lines as those of other societies of the Government landing station. Its home is in charge of the Filician Sisters, and its accommodations are free. Its support is derived from voluntary contributions and a yearly grant of \$1000 from the Austrian Government on account of the Poles from Galicia who may seek the assistance of the home.

Under the auspices of the Fathers of Mercy the Jeanne d'Arc Home for the protection of French immigrant women was opened in 1895, in New York. It was founded through the generosity of Miss C. T. Smith, who gave the home as a memorial of her mother Mrs. Jeanne Durand Smith. Two years later the Sisters of Divine Providence took charge of it, and they have since managed its affairs. Since its establishment 6800 women have received its care. It is supported by voluntary contributions. The inmates pay if they can, most of them are taken care of gratuitously. Employment is found for them and they are taught useful domestic arts.

As part of the great work in behalf of Italian immigrants undertaken by Bishop Scalabrini of Piacenza, Italy, members of his Congregation of St. Charles Borromeo established the Society of St. Raphael for Italian Immigrants at New York in 1891. Its home is managed by the Sisters of Charity (Pallottine). Only women and children are kept there; men are given meals and advice, but lodge elsewhere. The chaplain and agent meet the immigrants at Ellis Island. A branch of this society was organized at Boston, in 1902. In December, 1908, Archbishop Blenk of New Orleans appointed an Italian priest as chaplain to look after immigrants from Italy and open a home for them. Work here is carried on by the St. Vincent de Paul Society.

The Society for Italian Immigrants is a secular corporation organized in New York in 1901 for the aid and protection of immigrants. It has no religious affiliations. The Italian government makes it an annual appropriation equal to the amount received from all other sources, and its income is derived from the subscriptions of those interested in philanthropic work. Its home has accommodations for 200. It has founded four schools in Italian labour camps to prevent the demoralization usually attending those communities. The enormous volume of Italian immigration during recent years may be realized from the fact that from 1880 to 1908 it amounted to 2,500,000. In 1857 it was about 1000; in 1880 it was 12,000; in 1907, 286,000. It is estimated that 250,000 aliens arrived in the United States between 1789 and 1820. From 1820, when the official records begin, to the end of the fiscal year, 30 June, 1907, the number of immigrants arriving was 25,985,237.

The Association for the Protection of Belgian and Dutch Immigrants was organized 4 June, 1907, at Chicago, Illinois, by priests in charge of congregations in various sections of the United States, made up of those nationalities. Other priests interested in the spiritual and temporal welfare of the Catholic immigrants from Belgium and Holland assisted in its progress.

THOMAS F. MEEHAN

Emmanuel

Emmanuel

Emmanuel (Septuagint *Emmanouel*; A.V., *Immanuel*) signifies "God with us" ([Matthew 1:23](#)), and is the name of the child predicted in Isaias 7:14: "Behold a virgin shall conceive, and bear a son, and his name shall be called Emmanuel". The various views advanced as to the identity of the child cannot be fully explained and discussed here; the following observations must suffice:

- The child is not a merely ideal or metaphorical person, he cannot be identified with the regenerate people of Israel (Hoffmann), nor with religious faith (Porter), for "he shall eat butter and honey."
- The Prophet does not refer to a child in general, but points to an individual (cf. Boorda, Kuenen, W.R. Smith, Smend, Duhm, Cheyne. Marti); both text and context require this.
- The child is not a son of the Prophet Isaias (cf. Hitzig, Reuss); Isaias 8:1-4, shows that the Prophet's son has a name different from that Emmanuel.
- The child is not a son of Achaz (cf. Lagarde, McCurdy); for Ezechias did not possess the most essential characteristics of Emmanuel as described by Isaias.
- The Emmanuel is the Messiah foretold in the other prophecies of Isaias. In Isaias 8:8, Palestine is called the land of Emmanuel, though in other passage it is termed the land or the inheritance of Yahweh (Isaias 14:2, 25; 47:6; [Osee 9:3](#); Jeremias 2:7; 12:14; etc), so that Emmanuel and Yahweh are identified. Again, in the Hebrew text of Isaias 8:9-10, the Prophet predicts the futility of all the enemies' schemes against Palestine, because of Emmanuel. In 9:6-7, the characteristics of the child Emmanuel are so clearly described that we can doubt no longer of his Messianic mission. The eleventh chapter pictures the Messianic blessings which the child Emmanuel will bring upon the earth. Moreover, St. Matthew (1:23) expressly identifies the Em-

manuel with Jesus the Messiah, and Christian tradition has constantly taught the same doctrine.

The question why the Messiah was called Emmanuel, or "God with us", admits of a double answer: the name is a pledge of Divine help and also a description of the nature of the Messiah. King Achaz had not believed the Prophet's first promise of deliverance from his enemies, Rasin, King of Syria, and Phacee, King of Israel (Isaias 7:1-9). And when the Prophet tried a second time to restore his confidence, Achaz refused to ask for the sign which God was ready to grant in confirmation of the prophetic promise (7:10-12). The Prophet, therefore, forces, in a way, King Achaz to confide in God, showing that the Messiah, the hope of Israel and the glory of the house of David, implies by his very name "Emmanuel", or "God with us", the Divine presence among his people. A number of the Fathers, e.g. St. Irenaeus, Lactantius, St. Epiphanius, St. Chrysostom, and Theodoret, regard the name "Emmanuel", not merely as a pledge of Divine assistance, but also as an expression of the mystery of the Incarnation by virtue of which the Messiah will be "God with us" in very deed.

A.J. MAAS

Emmaus

Emmaus

A titular see in Palæstina Prima, suffragan of Cæsarea. It is mentioned for the first time in 166-165 B.C., when Judas Machabeus defeated there the army of Gorgias (I Mach., iii, 40, iv, 25). A little later the Syrian general Bacchides fortified and garrisoned it (Josephus, Ant. Jud., XIII, i, 3). In A.D. 4, during the rebellion of Athrongius against the Romans, the inhabitants left their city, which was, nevertheless, destroyed by Varus (Josephus, "Ant. Jud." XVII, x, 7 9; Idem, "Bel. Jud.", II, iv, 3). It soon rose again, for Josephus (Bel. Jud., III, iii, 5) and Pliny (Hist. nat., V, xiv) rank it amongst the "toparchies" of the country. Vespasian took it at the beginning of his campaign against the Jews, stationed a legion in the neighbourhood, and named it Nicopolis (Sozom., Hist. eccl., V, xxi). According to Eusebius and St. Jerome, this name was given to it only in 223, by Julius Africanus, its governor and most illustrious son, and this is the name commonly used by Christian writers. Here a spring in which Christ is said to have washed His feet, and which was reputed to cure all diseases, was closed up by order of Julian the Apostate (Sozom., Hist. eccl., V, xxi). Four Greek bishops are known, from the fourth to the sixth century (Lequien, Or. christ., III, 593). At the beginning of the Arab conquest the plague broke out in the city, and the inhabitants fled; they must have soon returned, however, for Emmaus remained a very important

town. It was the last station of the Crusaders on their way to Jerusalem in June, 1099. Eubel (*Hierarch. cath.*, II, 223) has a list of eleven Latin titular bishops, but only for the fifteenth century. To-day 'Am'was (the native name) is a Mussulman village about eighteen miles from Jerusalem, on the road to Jaffa. There are still visible ruins of a beautiful basilica built in the fourth or the fifth century, and repaired by the Crusaders. Near 'Am'was, at El-Atroun, the Trappists founded a priory in 1890.

In the opinion of many 'Am'was is the Emmaus of the Gospel (Luke, xxiv, 13 35), where Christ manifested Himself to two of His Disciples. Such is, indeed, the tradition of the Church of Jerusalem, attested as early as the fourth century by Eusebius of Cæsarea, Titus of Bostra, and St. Jerome, a tradition confirmed by all pilgrims, at least to the time of the Crusades; it may even date back to the third century to Julius Africanus and Origen. It is also supported by many Biblical commentaries, some of which are as old as the fourth or the fifth century; in these the Emmaus of the Gospel is said to have stood at 160 stadia from Jerusalem, the modern 'Am'was being at 176 stadia. In spite of its antiquity, this tradition does not seem to be well founded. Most manuscripts and versions place Emmaus at only sixty stadia from Jerusalem, and they are more numerous and generally more ancient than those of the former group. It seems, therefore, very probable that the number 160 is a correction of Origen and his school to make the Gospel text agree with the Palestinian tradition of their time. Moreover, the distance of 160 stadia would imply about six hours' walk, which is inadmissible, for the Disciples had only gone out to the country and could return to Jerusalem before the gates were shut (Mark, xvi, 12; Luke, xxiv, 33). Finally, the Emmaus of the Gospel is said to be a village, while 'Am'was was the flourishing capital of a "toparchy". Josephus (*Ant. Jud.*, VII, vi, 6) mentions at sixty stadia from Jerusalem a village called Ammaus, where Vespasian and Titus stationed 800 veterans. This is evidently the Emmaus of the Gospel. But it must have been destroyed at the time of the revolt of Bar-Cocheba (A.D. 132 35) under Hadrian, and its site was unknown as early as the third century. Origen and his friends merely placed the Gospel Emmaus at Nicopolis, the only Emmaus known at their time. The identifications of Koubeibeh, Abou Gosh, Koulonieh, Beit Mizzeh, etc. with Emmaus, as proposed by some modern scholars, are inadmissible.

S. VAILHÉ

St. Emmeram

St. Emmeram

Bishop of Poitiers and missionary to Bavaria, b. at Poitiers in the first half of the seventh century; martyred at Asheim (Bavaria) towards the end of the same century. Of a noble family of Aquitaine, he received a good education and was ordained priest. According to some authors Emmeram occupied the See of Poitiers, but this cannot be verified, for his name does not appear among the bishops of Poitiers. He probably held the see for a short time, from the death of Dido (date unknown) to the episcopate of Ansoaldus (674). Having heard that the inhabitants of Bavaria were still idolaters, he determined to carry the light of the Faith to them. Ascending the Loire, crossing the Black Forest, and going down the Danube, he reached Ratisbon in a region then governed by the Duke Theodo. For three years he laboured in Bavaria, preaching and converting the people, acquiring also a renown for holiness. He then turned his steps towards Rome, to visit the tombs of Sts. Peter and Paul, but after a five days' Journey, at a place now called Kleinhelfendorf, south of Munich, he was set upon by envoys of the Duke of Bavaria who tortured him cruelly. He died shortly afterwards at Asheim, about fifteen miles distant. The cause of this attack and the circumstances attending his death are not known. According to the legend related by Aribo, Bishop of Freising, the first to write a life of St. Emmeram, Ota, daughter of the Duke of Bavaria, who had been seduced by Sigipaldus, an important personage of her father's court, fearing her father's wrath, confessed her fault to the bishop. Moved with compassion, he advised her to name himself, whom every one respected, as her seducer, and it was in consequence of this accusation that Theodo ordered him to be followed and put to death. The improbability of the tale, the details of the saint's martyrdom, which are certainly untrue, and the fantastic account of the prodigies attending his death show that the writer, infected by the pious mania of his time, simply added to the facts imaginary details supposed to redound to the glory of the martyr.

All that is known as to the date of the saint's death is that it took place on 22 September, some time before St. Rupert's arrival in Bavaria (696). At Kleinhelfendorf, where he was tortured, there stands to-day a chapel of St. Emmeram, and at Asheim, where he died, is also a martyr's chapel built in his honour. His remains were removed to Ratisbon and interred in the church of St. George, from which they were transferred

about the middle of the eighth century by Bishop Gawibaldus to a church dedicated to the saint. This church having been destroyed by fire in 1642, the saint's body was found under the altar in 1645 and was encased in a magnificent reliquary. The relics, which were canonically recognized by Bishop Ignaz de Senestrez in 1833, are exposed for the veneration of the faithful every year on 22 September. It is impossible to prove that Emmeram occupied the See of Ratisbon, for the official episcopal list begins with the above-mentioned Gawibaldus, who was consecrated by St. Boniface in 739 and died in 764.

LEON CLUGNET

Abbey of St. Emmeram

Abbey of St. Emmeram

A Benedictine monastery at Ratisbon (Regensburg), named after its traditional founder, the patron saint of the city. The exact date of foundation is unknown. St. Emmeram flourished in the middle of the seventh century and 652 is given by most authorities as the approximate date of the establishment of this monastery. Its beginnings were connected with a chapel in which certain much venerated relics were preserved, and which, in 697, was enlarged and beautified by Theodo, Duke of Bavaria, who built at the same time a new monastery for Benedictine monks, of which Appolonius was first abbot. It was still further enlarged by Charlemagne about the year 800 and endowed with extensive possessions and many privileges. When St. Boniface, in 739, divided Bavaria into four dioceses, the first Bishop of Ratisbon fixed his see at the Abbey of St. Emmeram, but later on it was removed by a subsequent bishop to the old Cathedral of St. Stephen, which stands beside the present one. In 830, the then bishop obtained from Louis, King of Bavaria, the administration of the abbey for himself and his successors, and for upwards of a hundred years the Bishops of Ratisbon ruled the monastery as well as the diocese, but in 968 St. Wolfgang restored its independence and from that time forward it enjoyed the rule of its own abbots. For some centuries it was customary to elect as bishop a canon of St. Stephen's and a monk of St. Emmeram's alternately. Many of the early bishops of Ratisbon were buried in the abbey church and their tombs are still to be seen there, as also is that of the Emperor Arnulph (d. 899). The abbots held the rank of princes of the Empire, and as such had a seat in the Imperial Diets. The present church, which is a Romanesque basilica, dates from the thirteenth century, but was restored in a somewhat debased style in the eighteenth. It is one of the few German churches with a detached bell-tower. The monastery was suppressed early in the nineteenth century and in 1809 the conventual buildings became the palace of the Prince of Thurn and Taxis, hereditary postmaster-general of the old

German Empire, whose family still (1909) reside there. The cloister garth, in the centre of which is a modern mortuary chapel, is now used as the family burial-place.

MIGNE, *Dict. des Abbayes* (Paris, 1856).

G. CYPRIAN ALSTON

Ven. Anne Catherine Emmerich

Ven. Anne Catherine Emmerich

An Augustinian nun, stigmatic, and ecstatic, born 8 September, 1774, at Flamsche, near Coesfeld, in the Diocese of Munster, Westphalia, Germany; died at Dulmen, 9 February, 1824.

Her parents, both peasants, were very poor and pious. At twelve she was bound out to a farmer, and later was a seamstress for several years. Very delicate all the time, she was sent to study music, but finding the organist's family very poor she gave them the little she had saved to enter a convent, and actually waited on them as a servant for several years. Moreover, she was at times so pressed for something to eat that her mother brought her bread at intervals, parts of which went to her master's family. In her twenty-eighth year (1802) she entered the Augustinian convent at Agnetenberg, Dulmen. Here she was content to be regarded as the lowest in the house. Her zeal, however, disturbed the tepid sisters, who were puzzled and annoyed at her strange powers and her weak health, and notwithstanding her ecstasies in church, cell, or at work, treated her with some antipathy. Despite her excessive frailty, she discharged her duties cheerfully and faithfully. When Jerome Bonaparte closed the convent in 1812 she was compelled to find refuge in a poor widow's house. In 1813 she became bedridden. She foresaw the downfall of Napoleon twelve years in advance, and counseled in a mysterious way the successor of St. Peter. Even in her childhood the supernatural was so ordinary to her that in her innocent ignorance she thought all other children enjoyed the same favours that she did, i.e. to converse familiarly with the Child Jesus, etc. She displayed a marvellous knowledge when the sick and poor came to the "bright little sister" seeking aid; she knew their diseases and prescribed remedies that did not fail. By nature she was quick and lively and easily moved to great sympathy by the sight of the sufferings of others. This feeling passed into her spiritual being with the result that she prayed and suffered much for the souls of Purgatory whom she often saw, and for the salvation of sinners whose miseries were known to her even when far away. Soon after she was confined to bed (1813) the stigmata came externally, even to the marks of the thorns. All this she unsuccessfully tried to conceal as she had concealed the crosses impressed upon her breast.

Then followed what she dreaded on account of its publicity, an episcopal commission to inquire into her life, and the reality of these wonderful signs. The examination was very strict, as the utmost care was necessary to furnish no pretext for ridicule and insult on the part of the enemies of the Church. The vicar-general, the famous Overberg, and three physicians conducted the investigation with scrupulous care and became convinced of the sanctity of the "pious Beguine", as she was called, and the genuineness of the stigmata. At the end of 1818 God granted her earnest prayer to be relieved of the stigmata, and the wounds in her hands and feet closed, but the others remained, and on Good Friday were all wont to reopen. In 1819 the government sent a committee of investigation which discharged its commission most brutally. Sick unto death as she was, she was forcibly removed to a large room in another house and kept under the strictest surveillance day and night for three weeks, away from all her friends except her confessor. She was insulted, threatened, and even flattered, but in vain. The commission departed without finding anything suspicious, and remained silent until its president, taunted about his reticence, declared that there was fraud, to which the obvious reply was: In what respect? and why delay in publishing it? About this time Klemens Brentano, the famous poet, was induced to visit her; to his great amazement she recognized him, and told him he had been pointed out to her as the man who was to enable her to fulfil God's command, namely, to write down for the good of innumerable souls the revelations made to her. He took down briefly in writing the main points, and, as she spoke the Westphalian dialect, he immediately rewrote them in ordinary German. He would read what he wrote to her, and change and efface until she gave her complete approval. Like so many others, he was won by her evident purity, her exceeding humility and patience under sufferings indescribable. With Overberg, Sailer of Ratisbon, Clement Augustus of Cologne, Stollberg, Louisa Hensel, etc. he revered her as a chosen bride of Christ.

In 1833 appeared the first-fruits of Brentano's toil, "The Dolorous Passion of Our Lord Jesus Christ according to the Meditations of Anne Catherine Emmerich" (Sulzbach). Brentano prepared for publication "The Life of The Blessed Virgin Mary", but this appeared at Munich only in 1852. From the MS. of Brentano Father Schmoeger published in three volumes "The Life of Our Lord" (Ratisbon, 1858-80), and in 1881 a large illustrated edition of the same. The latter also wrote her life in two volumes (Freiburg, 867-70, new edition, 1884). Her visions go into details, often slight, which give them a vividness that strongly holds the reader's interest as one graphic scene follows another in rapid succession as if visible to the physical eye. Other mystics are more concerned with ideas, she with events; others stop to meditate aloud and to guide the reader's thoughts, she lets the facts speak for themselves with the simplicity, brevity, and security of a Gospel narrative. Her treatment of that difficult subject, the twofold

nature of Christ, is admirable. His humanity stands out clear and distinct, but through it shines always a gleam of the Divine. The rapid and silent spread of her works through Germany, France, Italy, and elsewhere speaks well for their merit. Strangely enough they produced no controversy. Dom Guéranger extolls their merits in the highest terms (*Le Monde*, 15 April, 1860).

Sister Emmerich lived during one of the saddest and least glorious periods of the Church's history, when revolution triumphed, impiety flourished, and several of the fairest provinces of its domain were overrun by infidels and cast into such ruinous condition that the Faith seemed about to be completely extinguished. Her mission in part seems to have been by her prayers and sufferings to aid in restoring Church discipline, especially in Westphalia, and at the same time to strengthen at least the little ones of the flock in their belief. Besides all this she saved many souls and recalled to the Christian world that the supernatural is around about it to a degree sometimes forgotten. A rumour that the body was stolen caused her grave to be opened six weeks after her death. The body was found fresh, without any sign of corruption. In 1892 the process of her beatification was introduced by the Bishop of Münster.

E.P. GRAHAM

Empiricism

Empiricism

(Lat. *empirismus*, the standpoint of a system based on experience).

Primarily, and in its psychological application, the term signifies the theory that the phenomena of consciousness are simply the product of sensuous experience, i.e. of sensations variously associated and arranged. It is thus distinguished from Nativism or Innatism. Secondly, and in its logical (epistemological) usage, it designates the theory that all human knowledge is derived exclusively from experience, the latter term meaning, either explicitly or implicitly, external sense-percepts and internal representations and inferences exclusive of any superorganic (immaterial) intellectual factor. In this connection it is opposed to Intellectualism, Rationalism, Apriorism. The two usages evidently designate but two inseparable aspects of one and the same theory the epistemological being the application of the psychological to the problem of knowledge.

Empiricism appears in the history of philosophy in three principal forms: (1) Materialism, (2) Sensism, and (3) Positivism.

(1) Materialism

Materialism in its crudest shape was taught by the ancient atomists (Democritus, Leucippus, Epicurus, Lucretius), who, reducing the sum of all reality to atoms and motion, taught that experience, whereof they held knowledge to be constituted, is generated by images reflected from material objects through the sensory organs into the soul. The soul, a mere complexus of the finest atoms, perceives not the objects but their effluent images. With modern materialists (Helvetius, d'Holbach, Diderot, Feuerbach, Moleschott, Büchner, Vogt, etc.), knowledge is accounted for either by cerebral secretion or by motion; while Häckel looks on it as a physiological process effected by certain brain cells. Avenarius, Willy, Mach, etc. subtilize this process so far as to reduce all experience to internal (empirio-criticism).

(2) Sensism

All materialists are of course sensists. Though the converse is not the case, nevertheless, by denying any essential difference between sensations and ideas (intellectual states), sensism logically involves materialism. Sensism, which is found with Empedocles and Protagoras amongst the ancients, was given its first systematic form by Locke (d. 1704), though Bacon (d. 1626) and Hobbes (d. 1679) had prepared the data. Locke derives all simple ideas from external experience (sensations), all compound ideas (modes, substances, relations) from internal experience (reflection). Substance and cause are simply associations of subjective phenomena; universal ideas are mere mental figments. Locke admits the existence, though he denies the demonstrability, in man of an immaterial and immortal principle, the soul. Berkeley (d. 1753), accepting the teaching of Locke that ideas are only transfigured sensations, subjectivizes not only the sensible or secondary qualities of matter (*sensibilia propria*, e.g. colour and sound) as his predecessor had done, but also the primary qualities (*sensibilia communia*, extension, space, etc.), which Locke held to be objective. Berkeley denies the objective basis of universal ideas and indeed of the whole material universe. The reality of things he places in their being perceived (*esse rei est percipi*), and this "perceivedness" is effected in the mind by God, not by the object or subject. He still retains the substance-reality of the human soul and of spirits generally, God included. Hume (d. 1776) agrees with his two empiricist predecessors in teaching that the mind knows only its own subjective organic impressions, whereof ideas are but the images. The supersensible is therefore unknowable; the principle of causality is resolved into a mere feeling of successiveness of phenomena; its necessity is reduced to a subjective feeling resulting from uniform association experienced in consciousness, and the spiritual essence or substantial being of the soul is dissipated into a series of conscious states.

Locke's sensism was taken up by Condillac (d. 1780), who eliminated entirely the subjective factor (Locke's "reflection") and sought to explain all cognitional states by a mere mechanical, passive transformation of external sensations. The French sensist retained the spiritual soul, but his followers disposed of it as Hume had done with the Berkeleian soul relic. The Herbartians confound the image with the idea, nor does Wundt make a clear distinction between primitive concepts (*empirische Begriffe*, representations of individual objects) and the image: "Denken ist Phantasieren in Begriffen und Phantasieren ist Denken in Bildern".

(3) Positivism

Positivists, following Comte (d. 1857), do not deny the supersensible; they declare it unknowable; the one source of cognition, they claim, is sense-experience, experiment, and induction from phenomena. John Stuart Mill (d. 1870), following Hume, reduces all knowledge to series of conscious states linked by empirical associations and enlarged by inductive processes. The mind has no certitude of an external world, but only of "a permanent possibility of sensations" and antecedent and anticipated feelings. Spencer (d. 1903) makes all knowledge relative. The actual existence of things is their persistence in consciousness. Consciousness contains only subjective feelings. The relative supposes the absolute, but the latter is unknowable to us; it is the object of faith and religion (Agnosticism). All things, mind included, have resulted from a cosmical process of mechanical evolution wherein they are still involved; hence all concepts and principles are in a continuous flux.

THE TEACHING OF CATHOLIC PHILOSOPHY

Catholic Philosophy teaches that sense-experience is a source, and indeed the primary source, of human knowledge, but it holds that there are other sources beyond sensations. There is nothing in the intellect that had not its birth in sense; this is one of the generalizations of the School. Moreover, though every intellectual act is accompanied by sensory motion, and especially by some sense representation (*phantasma*) evoked in the imagination, nevertheless sensation and sensuous representation (*phantasma*, image) differ essentially from the idea produced in and by the intellect, which is an immaterial, supersensuous and superorganic power or faculty. The theory here proposed may be called empirico-intellectualism since it conjoins a sensuous factor with the purely intellectual or immaterial agency in the genesis of knowledge. Its bases are as follows:

- Ideas represent the natures or essences of things, not the mere sensuous qualities, the phenomena of things, but the underlying subject and cause thereof, e.g. substance, life, cause, truth, etc.; while ideas of sensuous qualities as such represent them in the abstract and as universal, e.g. light.

- The mind possesses ideas of things (substances and accidents) immaterial, invisible, possible, and impossible, etc., e.g. ideas of God, spirit, etc.--ideas which cannot be formed from purely sensuous presentations or images.
- we make clear-cut distinctions between the essential and accidental or contingent properties and attributes of things.
- Every predicate idea represents not a congeries of sensuous qualities, but what the subject is (its essence), under some particular aspect.

Now none of these peculiarities of the idea can be discovered in any sensation or image, which always represents sensuous phenomena, existent and concrete. Locke's "reflection" and Condillac's "processes of association" will not suffice to transmute sensations into ideas, since these two states are essentially, because objectively (representatively), different. Positivists inadvertently slip in an immaterial agency, whereby indeed they beg the question when they appeal to induction to explain the genesis of knowledge; the inductive process involves universal abstract principles and logical laws which are constituted of ideas that essentially transcend sensations. The supersensuous character of ideas follows equally from their "extension" or range of applicability. Ideas as representative of essences, are available as predicates, and are the terms whereof absolutely universal principles are constituted. Hence ideas are universal, whereas sensations and images can represent only objects that affect the sensory organs, i.e. individual, physically existing objects. Moreover, ideas represent objects as abstract-
- *physically* abstract, e.g. individual sensible qualities; *mathematically* abstract, e.g. extension and number; *metaphysically* abstract, e.g. nature, entity, substance, truth, etc. And indeed unless ideas were of the abstract there could be no science, physical, mathematical, or philosophical; all these sciences consider their objects apart from concrete individual determinations. No intellectual judgment whatsoever would be possible, since every predicate is a generalized term and hence in some degree abstract. Sensation cannot represent an abstract object; for though the sight, e.g., perceives colour apart from sound, nevertheless

- no sense can abstract from the subject-matter--from the existence and individuality of its proper object; the eye does not see colour as such and abstracted, but the coloured object physically and individually existing;
- no sense can abstract from its proper object (its appropriate stimulus or object-quality), nor from its common object (quantity, the extended object);

- a fortiori, no sense can perceive one dimension of extension or a mathematical point, or things non-existent, or abstract forms like man and humanity.

Nor does the common image suffice to explain the universal idea as Locke and the Herbartians suppose, for the common image, though indistinct, remains always in some way concrete and sensible; since the imagination as primarily reproductive can represent only what the senses have reported. Consciousness attests this; for if the imagination represent e.g. a triangle, it is always of some certain size and shape; it cannot represent a triangle which is neither rectangular, obtuse, nor acute; while the idea of a triangle prescind from every size or shape. Besides the image there is therefore the thought, the intellectual concept, the latter differing essentially from the former. Hence the common image is not predicable of the individuals distributively because it is still somehow concrete, singular, sensible, material, and represents only quality. Nor can it be predicated as confusedly blending all its inferiors, because the predicate of a judgment is attributed according to comprehension rather than extension. At best, moreover, the image is *like* to things; the concept is *identical* with the subject of which it is predicated. According to the empiricists the common image results from a comparison of representations, so that what is common to them, i.e. some pre-eminent quality, stands as the concept. But the intellect would thus have to immediately perceive and compare the images, which is impossible; nor could it form a concept unless a number of sense perceptions and representations of a thing or things of the same species had preceded. We know, however, that we immediately form a concept of a thing, even though perceived but once. Furthermore, in order to form the common image a concept of the object must have preceded; for in order to compare similar things we must previously have perceived their likeness. Now, to perceive their likeness means to perceive some common objective aspect wherein the similar things agree, while differing in other aspects. But this the senses cannot perceive; hence there must precede an intellectual perception of the note of agreement common to the objects represented by the images, i.e. a universal idea must precede the common image. The common image therefore does not precede but follows the common concept, whereof it is a sort of shadow. This is specially so in the case of the productive imagination which re-arranges in new forms previously compared images and hence supposes reflection and judgment, operations which no sense can perform.

Sensism implies scepticism.

- For if we do not immediately perceive external objects but only our subjective sensuous modifications, then, since these differ with different individuals (e.g. the varying judgments of distance, heat, cold, etc., which varying judgments require

intellectual correction whereof the senses are incapable), there could be no certain and objective truth, each individual would be the measure of truth, there would be no objective criterion of certitude, no universal truths.

- In order to pass from a subjective affection to a knowledge of its object we must employ the principle of causality. Now, in sensism, either the concept of cause is not objective or cause is not perceived at all; therefore the principle of causality is either rejected or is pronounced doubtful. Hence there can be no certitude of the objective existence of things. Hume was but logical when he deduced universal scepticism from the theory of Locke.

Sensism involves the destruction of all science.

- Science is the knowledge of things in and by their causes; but the senses cannot perceive causes.
- Positivists claim that by their method the sciences have made wonderful progress, that by employing observation and induction the laws of nature have been discovered. Now, observation of phenomena entails universal ideas whereby the phenomena are classified under groups or species, while induction, to be legitimate and certain, postulates the principle of causality. Therefore the physical sciences suppose physical abstraction; the mathematical, mathematical abstraction, the metaphysical, metaphysical abstraction (primitive, i.e. direct, and reflective; ontological, logical, psychological). The negation of universal, necessary, immutable ideas essentially different from sensations means the destruction of even physical science, a fortiori of mathematical and philosophical sciences.

Sensism destroys the foundations of morality and religion. For, as sensists and positivists admit, their theories leave no proof of the soul's spirituality and immortality; of the existence of moral law, its obligation and sanction in a future life; of the existence of God and His relation to man. Now, history bears witness that these truths are fundamental for man's religious and moral life.

F.P. SIEGFRIED

Congress of Ems

Congress of Ems

The Congress of Ems was a meeting of the representatives of the German Archbishops Friedrich Karl von Erthal of Mainz, Maximilian Franz of Cologne, Clemens

Wenceslaus of Trier, and Hieronymus von Colloredo of Salzburg, at the little town of Bad-Ems, near Coblenz, in August, 1786, for the purpose of protesting against papal interference in the exercise of episcopal powers and fixing the future relations between these archbishops and the Roman pontiff.

The Gallican principles concerning the relation between the bishops and the pope, which had been disseminated in Germany by Hontheim, the Auxiliary Bishop of Trier (1748-1790), in his treatise "*De statu ecclesiæ et legitimâ potestate Rom. Pontificis*" (1763) under the pseudonym "Febronius", were shared by some of the most influential archbishops of Germany. The archbishops became confirmed in the position which they took towards the pope by the encouragement and support of Emperor Joseph II, who arrogated to himself both temporal and spiritual jurisdiction. As early as 1769 the representatives of the Elector-Archbishops of Mainz, Cologne, and Trier, at a meeting held in Coblenz, had drawn up a list of thirty-one articles, most of which were directed against the Roman Curia. The proximate occasion of the Congress of Ems was the erection of an Apostolic nunciature in Munich (27 Feb., 1785) and the appointment of Zoglio, titular Archbishop of Athens, as nuncio (27 June), with jurisdiction over the entire territory of the Elector Karl Theodor, which then comprised Bavaria with the Rhine Palatinate and the former Duchies of Jülich and Berg. Pius VI erected this nunciature upon the urgent request of the Elector of Bavaria, who was loath to have parts of his territory under the spiritual jurisdiction of bishops who, being electors like himself, were rather his equals than his subordinates. He had previously suggested to the Elector-Archbishops of Mainz, Cologne, and Trier to appoint special vicars-general for their districts in his territory. Upon their refusal he requested Pius VI to erect separate dioceses for his territory, but in deference to the wishes of the three elector-archbishops, the pope also refused. Finally the Elector of Bavaria asked for the above-mentioned nunciature, and despite the protests of the archbishops his wish was granted.

Meanwhile Bellisomi, the nuncio at Cologne, was transferred to Lisbon, and Pacca, the titular Archbishop of Damietta was appointed to succeed him at Cologne. Maximilian Franz, Archbishop of Cologne (a brother of Emperor Joseph II), refused to see him, and none of the three elector-archbishops honoured his credentials. Despite protests, both Pacca and Zoglio began to exercise their powers as nuncios. Relying on the support which Emperor Joseph II had promised, the three elector-archbishops and the Archbishop of Salzburg planned concerted action against Rome and sent their representatives to Ems to hold a congress. Von Erthal of Mainz, who was the soul of the opposition, was represented by his auxiliary bishop Valentine Heimes; Maximilian Franz of Cologne, by his privy councillor Heinrich von Tautphäus; Clemens Wenceslaus of Trier, by his privy councillor and official representative in temporal matters, Joseph

Ludwig Beck; Colloredo of Salzburg, by his consistorial councillor, Johann Michael Bönicke. On 25 August, 1786, these archiepiscopal representatives signed the notorious "Punctuation of Ems", consisting of twenty-three articles which aimed at making the German archbishops practically independent of Rome. For the text of the articles see Munch, "Sammlung aller älteren und neueren Concordate" (Leipzig, 1831), I, 404-423.

Assuming that Christ gave unlimited power of binding and loosing to the Apostles and their successors, the bishops, the "Punctuation" maintains that all prerogatives and reservations which were not actually connected with the primacy during the first three centuries owe their origin to the Pseudo-Isidore decretals, universally acknowledged as false, and, hence, that the bishops must look upon all interference of the Roman Curia with the exercise of their episcopal functions in their own dioceses as encroachments on their rights. Upon these schismatic principles the four archbishops based their demands, which may be summarized as follows: all direct appeals to Rome must be discontinued; all exempt monasteries must become subject to the bishops in whose districts the monasteries are situated; no German monasteries must have generals, provincials, or other superiors who do not reside in Germany; the bishops need not obtain quinquennial faculties from Rome, because by virtue of their office they can dispense from abstinence, from matrimonial impediments, including the second degree of consanguinity and the second and first degrees of affinity, from solemn religious vows and the obligations resulting from Holy orders; papal Bulls and ordinances of the Roman Curia are binding in each diocese only after the respective bishop has given his *placet*; all Apostolic nunciatures must be abolished; the manner of conferring benefices and the procedure in ecclesiastical lawsuits must be changed in favour of the bishops; the episcopal oath must be changed so that it shall not appear to be the oath of a vassal, etc.

It may easily be seen that the articles of the "Punctuation" lower the papal primacy to a merely honorary one and advocate an independence of the archbishops in regard to the pope which is entirely incompatible with the Unity and Catholicity of the Church of Christ. Still the "Punctuation" was immediately ratified by the four archbishops and sent to Emperor Joseph II with an humble request for his support. The emperor was pleased with the articles and would have pledged his unqualified support if his councillors, especially Kaunitz, had not for political reasons advised him otherwise. In his reply of 16 Nov., 1786, the emperor wisely makes his support dependent on the condition that the archbishops gain the consent of their suffragan bishops, the superiors of the exempt monasteries, and the estates into whose districts their spiritual jurisdiction extends. The suffragan bishops, especially the pious and learned prince-bishops August von Styrum of Speier and Franz Ludwig von Erthal of Würzburg-Bamberg (a brother of the Archbishop of Mainz), protested against the schismatic tendency of the

"Punctuation" and saw in the anti-papal procedure of the archbishops merely an attempt to increase their own power to the detriment of their suffragans. The Elector of Bavaria likewise remained a zealous defender of the pope and his nuncio at Munich, and even the Protestant King Frederick II of Prussia was an opponent of the "Punctuation" and favoured the nuncio Pacca at Cologne.

Still the archbishops insisted on their demands. When the nuncio at Cologne by authority of the pope granted a matrimonial dispensation from the second degree of consanguinity to Prince von Hohenlohe-Bartenstein and Countess Blankenheim, Archbishop Maximilian Franz of Cologne addressed to him a strong protest forbidding him for the future the exercise of all jurisdiction in the Archdiocese of Cologne. The archbishops themselves now began to grant dispensations from such degrees of relationship as were not contained in their ordinary quinquennial faculties, just as if the "Punctuation of Ems" were in full force. When the nuncio at Cologne, by order of the pope, informed the pastors that all marriages contracted by virtue of such dispensations were invalid, the archbishops ordered their pastors to return the circular to the nuncio and to obtain all future dispensations directly from their ordinary, the archbishop. The Church in Germany was now near to a schism. Fortunately, von Erthal of Mains needed the services of Rome. He desired Karl Theodor von Dalberg as coadjutor, and, to obtain the consent of Rome, he withdrew, at least apparently, from the "Punctuation" and obtained a renewal of his quinquennial faculties from Rome on 9 Aug., 1787. Similarly the Archbishop of Trier asked for quinquennial faculties as Bishop of Augsburg, but not as Archbishop of Trier. Von Erthal's submission to Rome was only a pretended one. He continued his opposition and on 2 June, 1788, requested Emperor Joseph II, in the name of himself and the three other archbishops, to bring the affair concerning the German nuncios before a diet. But soon the archbishops discovered that all the estates were opposed to the "Punctuation" and that a diet would rather retard than accelerate the fulfilment of their wishes. For this reason they addressed a letter to Rome (1 Dec., 1788) asking the pope to put an end to the unedifying ecclesiastical dissensions in Germany by withdrawing the faculties from the nuncios and by sending representatives to the German estates with authority to come to an amicable agreement regarding the other demands of the archbishops. In answer to this request appeared the publication of a memorable document composed by order of the pope and entitled: "Sanctissimi Dom. nostri Pii Papæ VI responsio ad Metropolitanos Moguntinum, Trevirenses, Coloniensem et Salisburgensem super Nunciaturis Apostolicis" (Rome, 1789). It was a masterpiece in form and contents of Apostolic firmness and paternal reproof. After presenting a dispassionate and objective view of the whole litigation, the document refutes all the arguments of the archbishops against papal nunciatures, shows how wrong it was for the archbishops to rebel against papal authority, explains

that the pope cannot send representatives to worldly estates who have no right to pass judgment on ecclesiastical affairs, and admonishes the archbishops to give up their untenable position towards the Holy See.

The papal writing was not without effect. Archbishop Wenceslaus of Trier, who had long desired an amicable settlement of the odious affair, into which, it appears, he was drawn against his will, publicly withdrew from the "Punctation" on 20 Feb., 1790, and admonished his colleagues to follow his example. They, however, continued their opposition and on occasion of the imperial capitulation of Leopold II (1790) and that of Francis II (1792) obtained the promise that their complaints concerning the nunciatures would be attended to as soon as possible by a decree of the diet. The threatening progress of the French Revolution finally changed the attitude of the Archbishops of Cologne and Salzburg, but the Archbishop of Mainz clung to the "Punctation" until the victorious French army invaded his electorate, and he was deprived of all his possessions west of the Rhine, at the Peace of Campo Formio, in 1797.

MICHAEL OTT.

Hieronymus Emser

Hieronymus Emser

The most ardent literary opponent of Luther, born of a prominent family at Ulm, 20 March, 1477; died 8 Nov., 1527 at Dresden. At the University of Tübingen, whither he went in 1493, he acquired a thorough knowledge of Greek and Latin, but in 1497 he began the study of law and theology at the University of Basle. Through the good offices of Christopher, later Bishop of Utenheim, he barely escaped imprisonment at Basle for having inscribed some satirical verses of his countryman, Bebel, in a volume which was circulated among the students. The legate, Cardinal Raymond Peraudi of Gurk, who seems to have been the judge in this trial, shortly after engaged him as secretary. In 1500 he published a mediocre work on the miraculous crosses which were generally supposed to have fallen from heaven. Four years later he began a series of brilliant lectures at Erfurt on Reuchlin's "Sergius vel Caput Capitis" and numbered Martin Luther among his hearers. On account of his triumphs at Erfurt he always claimed the distinction of having been one of the pioneers of classical humanism in

Germany. Despite his renown and brilliant manner of teaching, Emser's lectures at Leipzig on the classics, in 1505, aroused little admiration. Disgusted at his failure he turned to the study of theology and won the degree of bachelor. George of Saxony befriended him in a financial way during these and subsequent years. Dissatisfied with the methods of teaching theology then prevalent, Emser applied himself earnestly to canon law, and on the completion of his studies served George of Saxony as secretary. At the request of the latter he composed a Latin ode in honour of St. Benno of Meissen, who had just been canonized. This canonization was largely due to the efforts of Emser at Rome, whither he went in 1510 at the express wish of George of Saxony, who saw in this solemn act a source of glory for his realm. The life of the new saint, which Emser wrote in faultless Latin on his return in 1512, is worthless from a critical point of view.

About this time Emser received Holy orders and two prebends at Dresden and Meissen. While preaching by command of George of Dresden, he became better acquainted with Luther. Emser admired the fiery Augustinian; Luther, the accomplished *littérateur*. But in 1519 they parted. At the disputation in Leipzig, Luther, to the express dissatisfaction of George of Saxony, who was present with Emser, gave utterance to Hussite opinions of a radical sort regarding the pope. Emser was deeply pained at this; and on learning that the Bohemians, in two semi-public letters, hailed a second Hus in Luther, he declared in a letter to John Zack that Luther had reprimanded the Bohemians for their attitude towards the pope, and had upheld the papal supremacy as a necessary means to prevent division. Emser added a very lucid explanation based on Scripture in proof of the primacy, and in a subjoined poem dealt a severe blow to the calumnies against the pope. Luther soon learned the contents of this letter and, regarding it as an attempt to discredit him among the Bohemians, replied in his "Ad ægocerotem Emseranum M. Luther additio", where abuse of all kind was heaped upon the Church. Emser answered with an equally violent though not scurrilous work: "A venatione lutherianâ ægocerotis Assertio", in which he portrayed the certain scandal arising from the words and conduct of a refractory monk. He defended the Scriptures in a very personal way against the arbitrary interpretation of Luther. The letter closes with a history of his life, which was intended to offset the aspersions cast on his probity by his opponent. Luther replied by burning at Wittenberg this letter and other writings of Emser, together with the Bull of excommunication and the "Corpus juris canonici" (10 Dec., 1520). This insult did not provoke Emser. But as Luther displayed an incredible literary activity in 1520, Emser wrote eight polemical works in 1520 and 1521 which abound in personalities and invective, yet defend the Faith in a masterly way and clearly point out the logical results of the new teaching. In 1522 he translated the address which the Englishman, John Clark, delivered on handing over to Pope Leo X the book written by Henry VIII against Luther. (O'Donovan, *The Defence of the Seven*

Sacraments by Henry VIII, New York, 1908, pp. 110-17.) Among other works may be mentioned his German translation of the New Testament with a laudatory preface by George of Saxony. Emser showed in this work the liberties taken by Luther with the Scriptures and refuted his errors.

WALTAN, *Nachricht von H. Emser's Leben und Schriften* (Anspach, 1783); JANSSEN, *Gesch. des deutschen Volkes* (1893), III, 466 sq.; SCHARFF in *Kirchenlex.*, IV, 479. — The following are non-Catholic: KAWERAU, *Hieronymus Emser* (Halle, 1898); MOSEN, *H. Emser der Vorkämpfer Roms gegen die Reformation* (Halle, 1890); KEFERSTEIN, *Der Lautstand in den Bibelübersetzungen von Emser und Eck* (Jena, 1888). EMSER'S polemical writings of 1521 against Luther were edited in two small volumes by ENDERS (Halle, 1890-92).

THOS. M. SCRWERTNER.

Juan de la Encina

Juan de la Encina

(JUAN DE LA ENZINA).

Spanish dramatic poet, called by Ticknor the father of the Spanish secular drama; b. in the village of Encina near Salamanca, 7 Aug., 1468; d. in Salamanca, 1534. He was educated at the University of Salamanca, whence he proceeded to Madrid, where at the age of twenty-five he became a member of the household of Fadrique de Toledo, first Duke of Alba. Later, Encina went to Rome, where he took orders, and owing to his skill in music attracted the attention of Leo X who made him *maestro di capella*, which was a signal honour. In 1519 he accompanied Fadrique Afan de Ribera, Marquis of Tarifa, on a pilgrimage to the Holy Land, where he remained two years, and upon his return in 1521 he published a poetical account of his travels, rather devoid of literary merit, under the title "Trabagia o Via Sagrada de Hierusalem". At a more advanced age, he was appointed prior of Leon and returned to Spain, where he died. He was buried in the cathedral of that city.

Encina published the first edition of his works under the title of "El Cancionero". This was reprinted five times during the sixteenth century, showing that he enjoyed great popularity. Although he wrote lyrical poems, songs, and *villancios* in the old Spanish style, his most important works were his dramatic compositions which he himself calls *representaciones*, and which fill the fourth division of his "Cancionero". They are eleven in number, all in the nature of eclogues, and written in some form of old Spanish verse; in all there is singing, and in one of them a dance. They therefore have several elements of the secular drama, the origin of which, according to Ticknor, can be traced no further back by any existing authentic monument. Two things must

be considered, however, in connexion with these compositions as the foundation of the secular drama. One is that they are eclogues in form and name but not in substance; the second, that they were really acted before an audience. The date of these performances has been given as early as 1492. The *representaciones* have not much dramatic merit. They are crude and slight, and there is no pretension to a plot. Some of the most important works of Encina are: "The Triumph of Love", "The Knight who turns Shepherd", and "The Shepherds who turn Courtiers". He was also the author of a prose work on the condition of the poetic art in Spain entitled "Arte de Poesia Castellana", published about 1497.

VENTURA FUENTES

Diego Ximenez de Enciso

Diego Ximenez de Enciso

Dramatic poet, b. in Andalusia, Spain, c. 1585; date of death unknown. All trace of him is lost after 1632. He was much admired and praised by Cervantes, Lope de Vega and Montalván; the last considers him a "model for those who wish to write great comedies". Although he enjoyed some fame, as his frequent mention by his contemporaries would show, he has shared the fate of many other Spanish dramatists of his day, and his works have undeservedly been consigned to oblivion. In his catalogue of the Spanish theatre, Cayetano Barrera gives a list of eleven plays by Enciso, but most of them are scattered throughout the great libraries of Europe, and only three have reached several editions, namely, "El Príncipe Don Carlos", "La Mayor Hazaña del Emperador Carlos Quinto", and "Los Médicis de Florencia". To the average reader, however, only the last named is easily accessible. It is to be found in "La Biblioteca de Autores Españoles". These three plays were probably chosen for repeated editions because they show Enciso at his best. Enciso's idea of the historical drama is thoroughly unique for a Spanish dramatist, for he alone of all his contemporaries seems to regard the historical drama as being capable of adhering closely to facts. He does not, however, adhere slavishly to history, but rather uses it as did Shakespeare, that is, he uses recognized sources in such a way as to give to his plot the appearance of probability. In his versification Enciso shows great variety, but the eleven-syllabled verse seems to predominate. His work as a whole is characterized by the elevated tone which pervades it, the simplicity and interest of the plots, and its sonorous language.

VENTURA FUENTES

Martin Fernandez de Enciso

Martín Fernández de Enciso

Navigator and geographer, b. at Seville, Spain, c. 1470; d. probably about 1528 at Seville. It is not known when, why, or with whom he went to America, but in 1508 he was living on the island of Santo Domingo, where he had accumulated a fortune in the practice of law. In 1509 Alonzo de Ojeda (or Hojeda) had been granted the government of Terra Firme (the region about the Isthmus of Darien), but he lacked the funds necessary to colonize the country. He then applied to Enciso, who had the reputation of being rich, able, and adventurous, and the latter agreed to provide a vessel with men and provisions. Ojeda set out in advance in 1509, and it was agreed that Enciso was to equip his vessel and follow him in 1510. When the latter arrived, he found that Ojeda, having been beset by hostile Indians, and having exhausted his supplies and ammunition, had returned in search of him. Taking the survivors of Ojeda's expedition, Enciso founded the town of Santa María la Antigua del Darien (1510). Among his followers was one Vasco Nuñez de Balboa who afterwards became famous for his discovery of the Pacific Ocean, then called the South Sea (Mar del Sur), and who had joined the expedition without Enciso's knowledge or authority, seeking to escape his creditors. Soon after the founding of the new city, Balboa stirred up rebellion among the men, and was able to depose Enciso, whom he banished to Spain. Here, the latter complained to the king of Balboa's arbitrary conduct and injustice, and the king, partly owing to these accusations, sent Pedrarias Dávila to America in 1514 as Governor of Darien, with instructions to have the wrongs of Enciso righted. Enciso accompanied the expedition as "alguacil mayor" and continued to oppose Balboa until the latter's execution by Dávila in 1517. He soon afterwards returned to Spain where he published his "Suma de Geografia que trata de todas las partidas del mundo", the first account in Spanish of the discoveries in the New World. The work was published in 1519 at Seville and was reprinted in 1530 and in 1549. It is dedicated to the Emperor Charles V, and in it, according to Navarrete, Enciso has embodied all that was then known of the theory and practice of navigation. The geographical portion is given with great care, and contains the first descriptions of the lands discovered in the western seas, that is, the results of the explorations of the Spaniards up to 1519. It is, on the whole, a more accurate work than the other early works of its kind.

VENTURA FUENTES

Encolpion

Encolpion

(Gr. *egkolpion*, that which is worn on the breast).

The name given in early Christian times to a species of reliquary worn round the neck, in which were enclosed relics as fragments of cloth stained with the blood of a martyr, small pieces of parchment with texts from the Holy Scriptures, particles of the True Cross, etc.

The custom of bearing on the person objects of this character was evidently derived from the pagan practice of wearing *bullae*, containing amulets, round the neck as a protection against enchantment; the Church endeavoured to purify this usage from superstition by substituting objects venerated by Christians for those to which they had been accustomed before conversion. According to St. Jerome, however (in *Matt.*, c. xxiii), some of the faithful in his day attached a superstitious importance to these aids to piety; he censures certain classes of women who seem to have, in some degree, identified sanctity with an exaggerated veneration for sacred relics: "Hoc quod apud nos superstitiosae mulierculae in parvulis evangeliis et in crucis ligno et istiusmodi rebus, quae habent quidem zelum Dei, sed non secundum scientiam, factitant" (That which superstitious women amongst us, who have a certain zeal for God but not of right knowledge, do in regard to little copies of the Gospels, the wood of the cross, and things of that kind). Encolpia were of various forms, oval, round, four-cornered, and of various materials ranging from gold to glass. In 1571 two gold encolpia, square in form, were found in tombs of the ancient Vatican cemetery, engraved on one side with the monogram of Christ between the Alpha and Omega, and on the other with a dove. Another, now lost, was found in the tomb of Maria, wife of the Emperor Honorius, bearing the names of the imperial couple with the legend VIVATIS and the monogram. The famous treasure of Monza contains the *theca persica*, enclosing a text from the Gospel of St. John, sent by Pope St. Gregory the Great (590-604) to Queen Theodolinda for her son Adalaold. Another of the gifts of this pope to the Lombard queen was a cruciform encolpion containing a portion of the True Cross. Probably the most interesting reliquary of this form is a gold pectoral cross discovered at Rome in 1863, in the basilica of S. Lorenzo (*fuori le mura*), on the breast of a corpse. On one side it bears the inscription: EMMANOTHA NOBISCUM DEUS (Emmanuel, God with us), and on the other: CRUX EST VITA MIHI, MORS INIMICE TIBE (To me the Cross is life; to thee, O enemy, it is death). To the category of encolpia belong also the vials or vessels of clay in which were preserved such esteemed relics as oil from the lamps that burned

before the Holy Sepulchre and the golden keys with filings from St. Peter's chains, one of which was sent by St. Gregory the Great to the Frankish King Childebert.

MAURICE M. HASSETT

Encratites

Encratites

[*'Egkrateîs* (Irenæus) *'Egkratetai* (Clement Alex., Hippolytus)].

Literally, "abstainers" or "persons who practised continency", because they refrained from the use of wine, animal food, and marriage. The name was given to an early Christian sect, or rather to a tendency common to several sects, chiefly Gnostic, whose asceticism was based on heretical views regarding the origin of matter.

I. HISTORY

Abstinence from the use of some creatures, because they were thought to be intrinsically evil, is much older than Christianity. Pythagorism, Essenism, Indian asceticism betrayed this erroneous tendency, and the Indian ascetics are actually quoted by Clement of Alexandria as the forerunners of the Encratites (Strom., I, xv). Although St. Paul refers to people, even in his days, "forbidding to marry and abstaining from meats" (I Tim., iv, 1-5), the first mention of a Christian sect of this name occurs in Irenæus (I, xxviii). He connects their origin with Saturninus and Marcion. Rejecting marriage, they implicitly accuse the Creator, Who made both male and female. Refraining from all *'empsucha* (animal food and intoxicants), they are ungrateful to Him Who created all things. "And now", continues Irenæus, "they reject the salvation of the first man [Adam]; an opinion recently introduced among them by Tatian, a disciple of Justin. As long as he was with Justin he gave no sign of these things, but after his martyrdom Tatian separated himself from the Church. Elated and puffed up by his professorship, he established some teaching of his own. He fabled about some invisible æons, as the Valentinians do; and proclaimed marriage to be corruption and fornication, as Marcion and Saturninus do, but he made the denial of Adam's salvation a specialty of his own." The Encratites are next mentioned by Clement Alex. (Pæd., II, ii, 33; Strom., I, xv; VII, xvii). The whole of the third book of the Stromata is devoted to combating a false *encrateia*, or continency, though a special sect of Encratites is not there mentioned. Hippolytus (Philos., VIII, xiii) refers to them as "acknowledging what concerns God and Christ in like manner with the Church; in respect, however, of their mode of life, passing their days inflated with pride"; "abstaining from animal food, being water-drinkers and forbidding to marry"; "estimated Cynics rather than Christians". On the strength of this passage it is supposed that some Encratites were

perfectly orthodox in doctrine, and erred only in practice, but *tà perì toû theoû kai toû christoû* need not include the whole of Christian doctrine. Somewhat later this sect received new life and strength by the accession of a certain Severus (Eusebius, Hist. Eccl., IV, xxix), after whom Encratites were often called Severians. These Severian Encratites accepted the Law, the Prophets, and the Gospels, but rejected the Book of the Acts and cursed St. Paul and his Epistles. But the account given by Epiphanius of the Severians rather betrays Syrian Gnosticism than Judaistic tendencies. In their hatred of marriage they declared woman the work of Satan, and in their hatred of intoxicants they called wine drops of venom from the great Serpent, etc. (Hær., xiv). Epiphanius states that in his day Encratites were very numerous throughout Asia Minor, in Psidia, in the Adustan district of Phrygia, in Isauria, Pamphylia, Cilicia, and Galatia. In the Roman Province and in Antioch of Syria they were found scattered here and there. They split up into a number of smaller sects of whom the Apostolici were remarkable for their condemnation of private property, the Hydroparastatæ for their use of water instead of wine in the Eucharist. In the Edict of 382, Theodosius pronounced sentence of death on all those who took the name of Encratites, Saccophori, or Hydroparastatæ, and commanded Florus, the *Magister Officiarum*, to make strict search for these heretics, who were Manichæans in disguise. Sozomen (Hist. Eccl., V, xi) tells of an Encratite of Ancyra in Galatia, called Busiris, who bravely submitted to torments in the Julian persecution, and who under Theodosius abjured his heresy and returned to the Catholic Church. On the other hand, we learn from Macarius Magnes (about 403–Apocr., III, xliii) of a certain Dositheus, a Cilician, who about the same time wrote a work in eight books in defence of Encratite errors. About the middle of the fifth century they disappear from history, absorbed, probably, by the Manichæans, with whom they had so much in common from the first.

II. WRITINGS

The Encratites developed a considerable literary activity. The earliest writer in their defence probably was Tatian in his book "Concerning Perfection according to the Saviour", which Clement of Alexandria quotes and refutes in Strom., III, xii. Almost contemporary with him (about a.d. 150) was Julius Cassianus, known as the founder of Docetism (see **DocetÆ**). He wrote a work "Concerning Self-restraint and Continency", of which Clement and St. Jerome have preserved some passages (Strom., I, xxi; Euseb., Praep. Ev., X, xii; Strom., III, xiii; Jerome, ad Gal., VI, viii). Concerning the eight books of Dositheus we know only that he maintained that, as the world had its beginning by sexual intercourse, so by continency (*encrateia*) it would have its end; and that he inveighed against wine-drinkers and flesh-eaters. Among the apocryphal works which originated in Encratite circles must be mentioned: The Gospel according to the Egyptians, referred to by Clement (Strom., III, ix, 13), Origen (Hom. in i Luc.),

Hippolytus (Philos., V, vii), which contained a dialogue between Jesus and Salome specially appealed to by the Encratites in condemnation of marriage (to this Gospel the recently discovered "Logia" probably belong); the Gospel of Philip, of Thomas, the Acts of Peter, of Andrew, of Thomas, and other Apocrypha, furthering Gnostic-Encratite views.

Eusebius (Hist. Eccl., IV, xxi, 28) says that Musanus (a.d. 170 or 210) wrote a most elegant book addressed to some brethren who had fallen into the heresy of the Encratites. Theodoret (Hær. Fab., I, xxi) says that Apollinaris of Hierapolis in Phrygia (about 171) wrote against the Severian Encratites.

J.P. Arendzen

Encyclical

Encyclical

(Lat. *Litteræ Encyclicæ*)

According to its etymology, an encyclical (from the Greek *egkyklios, kyklos* meaning a circle) is nothing more than a circular letter. In modern times, usage has confined the term almost exclusively to certain papal documents which differ in their technical form from the ordinary style of either Bulls or Briefs, and which in their superscription are explicitly addressed to the patriarchs, primates, archbishops, and bishops of the Universal Church in communion with the Apostolic See. By exception, encyclicals are also sometimes addressed to the archbishops and bishops of a particular country. Thus this name is given to the letter of Pius X (6 Jan., 1907) to the bishops of France, in spite of the fact that it was published, not in Latin, but in French; while, on the other hand, the letter "Longinqua Oceani" (5 Jan., 1895) addressed by Leo XIII to the archbishops and bishops of the United States, is not styled an encyclical, although in all other respects it exactly observes the forms of one. From this and a number of similar facts we may probably infer that the precise designation used is not intended to be of any great significance. From the nature of the case encyclicals addressed to the bishops of the world are generally concerned with matters which affect the welfare of the Church at large. They condemn some prevalent form of error, point out dangers which threaten faith or morals, exhort the faithful to constancy, or prescribe remedies

for evils foreseen or already existent. In form an encyclical at the present day begins thus -- we may take the encyclical "Pascendi" on Modernism as a specimen: --

"Sanctissimi Domini Nostri Pii Divinâ Providentiâ Papæ X Litteræ Encyclicæ ad Patriarchas, Primate, Archiepiscopos, Episcopos aliosque locorum Ordinarios pacem et communionem cum Apostolicâ Sede habentes de Modernistarum Doctrinis. Ad Patriarchas, Primate, Archiepiscopos, Episcopos aliosque locorum Ordinarios, pacem et communionem cum Apostolicâ Sede habentes, Pius PP. X., Venerabiles Fratres, salutem et apostolicam benedictionem. Pascendi dominici gregis mandatum", etc.

The conclusion takes the following form: -- "Nos vero, pignus caritatis Nostræ divinique in adversis solatii, Apostolicam Benedictionem vobis, cleris, populisque vestris amantissime impertimus. Datum Romæ, apud Sanctum Petrum, die VIII Septembris MCMVII, Pontificatus Nostri anno quinto. Pius PP. X."

Although it is only during the last three pontificates that the most important utterances of the Holy See have been given to the world in the shape of encyclicals, this form of Apostolic Letter has long been in occasional use. Almost the first document published by Benedict XIV after his election was an "Epistola encyclica et commonitoria" on the duties of the episcopal office (3 Dec., 1740). Under Pius IX many momentous utterances were presented in this shape. The famous pronouncement "Quanta cura" (8 Dec., 1864), which was accompanied by a Syllabus of eighty anathematized errors, was an encyclical. Another important encyclical of Pius IX, described as an "Encyclical of the Holy Office", was that beginning "Supremæ" (4 Aug., 1856) in condemnation of Spiritualism. Leo XIII published a series of encyclicals on social and other questions which attracted universal attention. We may mention especially "Inscrutabilis" (21 April, 1878) on the evils of modern society; "Æterni Patris" (4 Aug., 1879) on St. Thomas Aquinas and Scholastic philosophy; "Arcanum divinæ sapientiæ" (10 Feb., 1880) on Christian marriage and family life; "Diuturnum illud" (29 June, 1881) on the origin of civil authority; "Immortale Dei" (1 Nov., 1885) on the Christian constitution of states; "Libertas præstantissimum" (20 June, 1888) on true liberty; "Rerum novarum" (16 May, 1891) on the labour question; "Providentissimus Deus" (18 Nov., 1893) on Holy Scripture; "Satis cognitum" (29 June, 1896) on religious unity. Pius X has shown the same favour for this form of document, e. g. in his earnest commendation of catechetical instruction "Acerbo nimis" (15 April, 1906) his address on the centenary of St. Gregory the Great (12 March, 1904), his first letter to the clergy and faithful of France, "Vehementer nos" (11 Feb., 1906), his instructions on intervention in politics to the people of Italy, and in the pronouncement on Modernism already mentioned.

Two officials presiding over separate bureaux still count it among their duties to aid the Holy Father in the drafting of his encyclical letters. These are the "Segretario

dei brevi ai Principi" assisted by two *minutanti*, and the "Segretario delle lettere Latine" also with a *minutante*. But it was undoubtedly the habit of Leo XIII to write his own encyclicals, and it is plainly within the competence of the sovereign pontiff to dispense with the services of any subordinates.

As for the binding force of these documents it is generally admitted that the mere fact that the pope should have given to any of his utterances the form of an encyclical does not necessarily constitute it an *ex-cathedra* pronouncement and invest it with infallible authority. The degree in which the infallible magisterium of the Holy See is committed must be judged from the circumstances, and from the language used in the particular case. In the early centuries the term encyclical was applied, not only to papal letters, but to certain letters emanating from bishops or archbishops and directed to their own flocks or to other bishops. Such letters addressed by a bishop to all his subjects in general are now commonly called pastorals. Amongst Anglicans, however, the name *encyclical* has recently been revived and applied, in imitation of papal usage, to circular letters issued by the English primates. Thus the reply of the Archbishops of Canterbury and York to the papal condemnation of Anglican Orders (this condemnation, "Apostolicæ Curæ", took the form of a Bull) was styled by its authors the Encyclical "Sæpius officio".

Little has been written professedly on the subject of encyclicals, which in treatises on canon law are generally grouped with other Apostolic Letters. The work of BENCINI, *De Literis Encyclicis Dissertatio* (Turin, 1728), deals almost exclusively with the early church documents which were so styled; see, however, HILGENREINER in *Kirchliches Handlexikon* (Munich, 1907), I, 1310; and GOYAU, *Le Vatican* (Paris, 1898), p. 336; WYNNE, *The Great Encyclical Letters of Leo XIII* (New York, 1903); EYRE, *The Pope and the People* (London, 1897); and D' ARROS, *Léon XIII d'après ses Encycliques* (Paris, 1902). On the authority of encyclicals and similar papal documents, see especially the very useful book of CHOUPIN, *Valeur des Décisions Doctrinales et Disciplinaires du Saint-Siège* (Paris, 1907); cf. BAINVEL, *De Magisterio vivo et Traditione* (Paris, 1905).

HERBERT THURSTON.

Encyclopedia

Encyclopedia

An abridgment of human knowledge in general or a considerable department thereof, treated from a uniform point of view or in a systematized summary. Although the word, used technically, dates only from the sixteenth century, encyclopedic treatment of human science reaches back to antiquity, growing out of the needs of general

culture, necessities arising from the extent of the great empires of antiquity. The general culture which every free-born Greek and Roman had to acquire, comprised the practical and theoretical sciences, grammar, music, geometry, astronomy, and gymnastics, and was termed *egkyklios paideia*, *orbis doctrin* (cycle of the sciences), and, beginning with the Middle Ages, *artes liberales*.

According to their form, systematic encyclopedias are divided into two classes:

- (a) those which present all branches of knowledge, arranged uniformly and organically according to some fixed system of connexion, and
- (b) the lexicographical encyclopedias, which treat of the same matter arranged according to an alphabetical system.

Suidas, in the tenth century, compiled an encyclopedia of the latter type, which became common only in the seventeenth century after the appearance of encyclopedic dictionaries dealing with particular sciences. Aristotle was the first in ancient times to attempt a summary of human knowledge in encyclopedic form. Compared with Aristotle's work, which is built up on a philosophic basis, the compilations along this line by Marcus Porcius Cato (234-149 b.c.), Marcus Terentius Varro (116-27 b.c.), in his "Disciplinarum libri IX", Pliny (a.d. 23-79), in his "Historia naturalis", and Martianus Capella (fifth century), in his "Satiricon", or "De Nuptiis Philologiae et Mercurii", used during the Middle Ages as a textbook for the liberal arts, were merely collections of materials. Besides general encyclopedias, the ancients also had special encyclopedias, e. g. a lost work of Plato's pupil, Speusippus, and later Varro's "Rerum divinarum et humanarum antiquitates", which has also perished. This group comprises also the medieval *summæ* and *specula*. The lack of a philosophic basis and the mechanical stringing together of facts without organic principle give to most of these works an unsatisfactory and tentative character.

The first attempt to compile an encyclopedia in the real sense of the word is evident in the "Etymologiae sive origines" of Isidore of Seville (c. 560-636), the materials of which were re-arranged and more or less independently supplemented by Rabanus Maurus (776-856) in his "De Universo", by Honorius Augustodunensis in his "Imago Mundi", and by others. The most astonishing of these compilations, from the viewpoint of wealth of material and complexity of detail, is the work of Vincent of Beauvais (died c. 1264), which groups the entire knowledge of the Middle Ages under three heads: "Speculum naturale", "Speculum doctrinale", and "Speculum historiale"; later an anonymous writer published, as a supplement, the "Speculum morale". The following are also examples of encyclopedic works in the later Middle Ages: "Liber de naturâ rerum" of Conrad of Megenberg (d. 1374); the "Imago Mundi" of Pierre d'Ailly (died

c. 1420); the "Margarita philosophica" of Gregor Reisch, O. Cart. (Freiburg, 1503), and at a later date the encyclopedias of Ringelberg, "Lucubrationes vel potius absolutissima *kyklopaideia*" (Basle, 1541), Paul Scalich, "Encyclopædia seu Orbis Disciplinarum tum sacrarum tum profanarum" (Basle, 1559); Martini, "Idea methodicæ et brevis encyclopædiæ sive adumbratio universitatis" (Herborn, 1606); Alsted's "Scientiarum omnium encyclopædiæ tomi VII" (Herborn, 1620; 2nd ed., 1630). All the above-mentioned works are simply collections of facts showing no mastery of the material by the writer, much less any critical research or an organic system of compilation.

The first to attempt a work founded on the philosophy and interrelation of sciences was Francis Bacon, Lord Verulam, in his incomplete "Instauratio Magna", the second part of which was the "Novum organum" (London, 1620), and his "De dignitate et augmentis scientiarum" (1623). His immediate successors, however, who had not mastered their materials, did not rise above the old-fashioned compilation of dry facts suited only for general instruction or as works of reference for scholars, e. g. the "Pera librorum juvenilium" of Wagenseil (Altdorf, 1695), Chevigny's "La science de l'homme de cour d'épée et de robe" (18 vols., Amsterdam, 1752), and Daniel Morhof's "Polyhistor" (Lübeck, 1688 and 1747). A clearer idea of the proper organic construction of an encyclopedic work is first apparent in J. M. Gesner's "Primæ lineæ isagoges in eruditionem universalem" (3rd ed., Göttingen, 1786), and J. G. Sulzer's "Kurzer Begriff aller Wissenschaften" (Leipzig, 1745; Eisenach, 1778). The way had been prepared, however, by two earlier works, which mark an important advance in the conception of what is proper to an encyclopedia. Both works, but especially the second, exerted a far-reaching influence on the whole intellectual life of the time. These were: Bayle's "Dictionnaire historique et critique" (Rotterdam, 1696), and "Encyclopédie ou dictionnaire raisonné des sciences, des arts et des métiers", compiled by Diderot and d'Alembert (28 vols., Paris, 1751-72, with 7 supplementary vols., 1776-80). While in these works the matter is arranged on an alphabetical system, a number of Sulzer's imitators essayed a systematic presentation of sciences on the old plan, e. g. Adelung, "Kurzer Begriff menschlicher Fertigkeiten und Kenntnisse" (Leipzig, 1778); Reimarus, "Encyklopädie" (Hamburg, 1775); Büsch, "Encyk. der mathematischen Wissenschaften" (Hamburg, 1795); Reuss, "Encyklopädie" (Tübingen, 1783); Buhle, "Encyklopädie" (Lemgo, 1790). A successful attempt in this direction, based on Kantian principles, was made by J. J. Eschenburg in his "Lehrbuch der Wissenschaftskunde" (Berlin, 1792; 3rd ed., 1808). In competition with this, Krug's introduction of a new method in "Versuch einer systematischen Encyklopädie der Wissensehaften" (Leipzig, 1796-97; Züllichau, 1804-19) was unsuccessful. Not to mention Habel, Rüb, and Strass, the following imitators of Eschenburg gained no little reputation: Heffter, "Philosophische Darstellung eines Systems aller Wissenschaften" (Leipzig, 1806); Burdach, "Organismus der menschlichen Wissenschaften

und Kunst" (Leipzig, 1809); Kraus, "Encyklopädische Ansichten" (Königsberg, 1809); and the followers of Kant, E. Schmidt, "Allgemeine Encyklopädie und Methodologie der Wissenschaften" (Jena, 1810), and K. A. Schaller, "Encyk. und Methodologie" (Magdeburg, 812). The increase in knowledge and the demands for specialization which are noticeable from the beginning of the nineteenth century, destroyed even the possibility of presenting completely all the departments of human knowledge or even a single branch of any great extent. The last attempts made in this direction (and they deserve some attention) were Kirchner's "Akademische Propädeutik" (Leipzig, 1842) and "Hodegetik" (1852), also Schleiermacher's "Bibliographisches System der gesamten Wissenschaftskunde" (Brunswick, 1852).

The increasing specialization of sciences has resulted in the production of special encyclopedias, which in the course of time have gradually come to cover every department of science and art and every phase of human life. Thus there have appeared, for instance, Böckh, "Encyk. und Methodologie der philolog. Wissenschaften" (2nd ed., Leipzig, 1886); Hommel, "Semitische Völker und Sprachen" (Leipzig, 1883 —); Schmitz's work on the modern languages; Körting's works on English and Romance philology (Heilbronn, 1884 —); Gröber, "Grundriss der roman. Philol." (Strasburg, 1888 —); Paul, "Grundriss der german. Philol." (Strasburg, 1889-93); Elze, "Grundriss der engl. Philol." (Halle, 1887); Geiger-Kuhn, "Grundriss der iranischen Philologie" (Strasburg, 1896 —); Bühler-Kielhorn, "Grundriss der indo-arischen Philologie" (Strasburg, 1896 —); Jagic, "Grundriss der slavischen Philologie" (1908). The province of jurisprudence has also been covered in a similar manner in the course of the nineteenth century, especially by Arndt, "Jurist. Encyk. u. Methodologie" (Stuttgart, 1843; 10th ed., 1901); Bluhme, "Encyk. der in Deutschland geltenden Rechte" (Bonn, 1847-58); Merkel, "Juristische Encyk." (Berlin, 1885; 3rd ed., 1904). Theology was also summarized by the Catholics: Staudenmaier, "Encyk. der theolog. Wissenschaften" (2nd ed., Mainz, 1840); Wirthmüller, "Encyk. der kath. Theologie" (1874); Flee, "Encyk. der Theologie" (1832); Kihn, "Encyk. und Methodologie der Theologie" (1892); Krieg, "Encyk. der theolog. Wissenschaften" (1899); by Protestants: Zöckler, "Handbuch der theolog. Wissenschaften" (Munich, 1882-85); Hagenbach, "Encyk. und Methodologie der theolog. Wissenschaften" (12th ed., Leipzig, 1889); Heinrici, "Theolog. encyk." (1893); Kähler, "Wissenschaft der christl. Lehre" (1893); Rübiger, "Theologik" (1880); Achelis-Baumgarten, "Grundriss der theol. Wissenschaften" (1892). Pedagogy is treated in the "Encykl. der Pädagogie" of Stoy (1861; 2nd ed., 1878); political science by Baumstark, "Kameralistische Encyk." (1835); and von Mohl, "Encyk. der Staatswissenschaft" (1859; 2nd ed., 1872); the progress of civilization by Dünkelberg, "Encyk. und Methodologie der Kulturtechnik" (1883); forestry by Dombrowski, "Allg. Encykl. der ges. Forst- und Jagdwissenschaften" (1886-94); physics by Lardner, "Cabinet Cyclopædia" (132 vols.,

London, 1829-46; 2d ed., 1854); "Allgemeine Encykl. der Physik", ed. Lamont, Helmholtz, and others; and chemistry by Frémy, "Encycl. chim." (Paris, 1886). The "Encyclopædia Metropolitana" of S. Taylor Coleridge is of a more general scope, as also the vast undertaking of Iwan Müller, which embraces every branch of classical learning, treated by specialists, "Handbuch der klassischen Altertumswissenschaft" (Munich, 1885; vols. since republished separately). Among the various attempts to treat history in this manner may be mentioned Oncken's "Allgemeine Gesch. in Einzeldarstellungen" (45 vols., Berlin, 1879-93). Nearly every branch may boast of some encyclopedic work to facilitate a rapid general survey of the subject, its history, aim, and object, and, above all, to present the results of special investigation in the several departments of the science. An important contribution along these lines, now in the course of publication, which will give the general reader an outlook upon the various branches of knowledge, is "Die Kultur der Gegenwart", ed. Hinneberg (Leipzig, 1906 —).

The first to arrange encyclopedic matter according to an alphabetical system was Suidas, during whose time (tenth and eleventh centuries) the necessity of general information on Byzantine culture made itself felt, especially during the reign of Constantine VII, Porphyrogenitus (913-59). The lexicon of Suidas was first imitated by Furetière (Rotterdam, 1690); Thomas Corneille (Paris, 1694); Ephraim Chambers in his "Cyclopædia" (London, 1728); Jablonski, "Lexikon der Künste und Wissensehaften" (Leipzig, 1721); Moréri, "Grand dict. historique" (Lyons, 1674); and Hübner, "Reales-Staats-Zeitungs- und Konversations-Lexikon" (1704; 31st ed., Leipzig, 1824-28). As to contents the encyclopedias of this period may likewise be divided into general encyclopedias (*Konversationslexikon*), and technical encyclopedias or dictionaries (*Realwörterbuch* or *Realencyklopädie*). The most important work for the popularization of the results of scientific research was Bayle's "Dict. historique et critique" (Rotterdam, 1695-97). The ambitious "Biblioteca universale" of Coronelli (7 vols., Venice, 1701) remained incomplete; the immense "Grosses, vollständiges Universal-Lexikon aller Wissenschaften und Künste", edited by J. P. von Ludewig, Frankenstein, Longolius, and others and published by Zedler (64 vols. and 4 suppl. vols., Leipzig, 1731-54), was brought to completion. About the same time there appeared in France the great encyclopedia of Diderot and d'Alembert who were assisted in their work by numerous champions of rationalism, e. g. Voltaire, d'Holbach, Rousseau, and Grimm: "Encyclopédie ou Dictionnaire raisonné des sciences, des arts et des métiers" (28 vols., Paris, 1751-72, with 5 supplementary volumes, Amsterdam, 1776-77, and 2 vols. of analytical index, Paris, 1780). This resembles the German work in breadth of scope, but had much greater influence on European thought, popularizing as it did the empiricism, sensism, and materialism of Locke. The first edition of 30,000 copies was followed by many later editions.

The encyclopedia of Diderot paved the way for the alphabetic encyclopedia. It was not only frequently reprinted but was re-arranged as a system of separate dictionaries by Panckoucke and Agasse in the "Encyclopédie méthodique ou par ordre des matières" (166 vols. of text and 51 vols. of illustrations; Paris, 1782-1832). In Germany the first encyclopedia modelled on Diderot's, by Köster and Roos, only reached *Kinol* (23 vols., Frankfurt, 1778-1804); the next attempt, however, made on a large scale by Ersch and Gruber, proved a success. This is considered the most scientific German encyclopedia, "Allgemeine Encyklopädie der Wissenschaften und Künste", begun by Professor Johann Samuel Ersch in 1813 and continued by Professors Hufeland, Gruber, Meier, Brockhaus, Müller, and Hoffmann. The work is divided into three sections: Section I, A to G, 99 vols. (1818-82); Section II, H to N, 43 vols. (1827-90); Section III, O to Z, 25 vols. (1830-50). Equally ambitious in scope is the "Oekonomisch-technolog. Encykl." (242 vols., Berlin, 1773-1858), planned by Krünitz as a dictionary of economics and technology, but gradually enlarged by his successors Flörke, Korth, and C. O. Hoffmann into a general encyclopedia. Outside of the encyclopedia of Ersch and Gruber, the most ambitious encyclopedic work of the nineteenth century, the model of encyclopedic presentation, is the Brockhaus "Konversationslexikon", which took its name from Hübner, and from Bayle's "Dictionnaire" its arrangement and plan of presenting the results of scientific research and discovery in a popular form. Hübner gave as the reason for naming his work "Reales-Staats-Zeitungs- und Konversations-Lexikon" the fact that "it was to contain no professorial learning but all items of refined learning needed in daily intercourse with educated people". As it was printed chiefly to satisfy people of a curious turn of mind, it was confined principally to geography, while history was excluded as a special science. The first encyclopedia according to modern ideas was begun by Löbel in 1796 (6 vols., Amsterdam, 1808; 2 supplementary vols., 1810). In 1800 the publishing rights were acquired by Friedrich Arnold Brockhaus; the firm of Brockhaus completely altered the original plan and is still engaged on the work (14th ed., 1901-abridged ed., 2 vols., 4th ed., 1888). Constructed on the same lines as the encyclopedia of Brockhaus is Pierer's "Universallexikon" (26 vols., 1824-36; 7th ed., 12 vols., 1888-93), to which were added the Pierer "Jahrbücher der Wissenschaften, Künste und Gewerbe" (1865-73); similar works are Meyer's "Konversations-Lexikon" (37 vols., Leipzig, 1840-52; 6th ed., 20 vols., 1902; 7th ed., abridged, 6 vols., 1907) and Spamer's "Illustriertes Konversationslexikon" (8 vols., 1869-79; 2 supplementary vols., 1879-82; 2nd ed., 1884-91). These works were inspired by a superficial rationalism, if not by conscious hostility to everything Catholic. Early attempts were made to counteract this propaganda of religious indifferentism by the publication of encyclopedias from the Catholic point of view, such as the "Allgemeine Realencyklopädie oder Konversations-Lexikon für das katholische Deutschland" (13 vols., 1846-

49; 4th ed., 1880-90); and Herder's "Konversationslexikon" (5 vols., Freiburg, 1853-57); neither proved a thorough success. The third edition of the latter (8 vols., 1901-08), through its preservation of Catholic interests, by its impartiality, thoroughness, and comprehensiveness, gained general approval.

Encyclopedias have since been compiled in all civilized countries. In France were published the "Encyclopédie des gens du monde" (22 vols., 1833-45); "Encyclopédie du XIX^e siècle" (75 vols., 1837-59; 3rd ed., 1867-72; continued as "Annuaire encyc."); "Encyclopédie moderne" (1846-51; new ed., 30 vols., 12 suppl. vols., atlas, 2 vols., 1856-62); "Dictionnaire de la conversation et de la lecture" (16 vols., 1851-58); "La Grande Encyclopédie", compiled by Bertholet, Derenbourg, and others (31 vols., 1885-1903); "Dict. univ.", ed. Larousse (17 vols., 1865-90; new ed., 1895); "Nouveau Larousse illustré", ed. Claude Augé (1898-1904); Larousse, "Dict. complet illustré" (129th ed., 1903). The chief Spanish encyclopedias are "Enciclopedia moderna", ed. Mellados (34 vols., 3 vols. of charts, Madrid, 1848-51); "Diccionario encic. Hispano-Americano", ed. Montaner y Simon (25 vols., Barcelona, 1887-99); and the "Enciclopedia universal ilustrada europeo-americana" (Barcelona, 1907 —), edited along Catholic lines; Portugal: "Diccionario popular hist. geogr. mytholog. biograph." (16 vols., Lisbon, 1876-90); "Diccionario universal portuguez", ed. Costa; "Enciclopedia portugueza ilustrada", ed. Lemos (254 nos. to 1903). Italy: "Nuova Encic. popolare italiana" (14 vols., Turin, 1841-51; 6th ed., 25 vols., 1875-89; suppl., 1889-99); "Enciclopedia popolare economica", ed. Berri (Milan, 1871); "Dizionario universale di scienze, lettere ed arti", ed. Lessona and Valle (Milan, 1874-1883); "Piccola Enciclopedia" (Milan, 1891). Rumania: "Enciclop. Romăna" (3 vols., Hermannstadt, 1896-1903). England: "Encyclopædia Britannica" (1771; 9th ed., 24 vols. and index, 1875-89, suppl., 11 vols., index and atlas, 1902-03); "New Encyclopædia" of Rees (45 vols., London, 1802-20); "Encyclopædia Metropolitana", ed. Smedley (30 vols., 1818-45); "English Cyclopædia", ed. Knight (27 vols., 4 suppl., London, 1854-73); "Chambers's Encyclopædia" (10 vols., London, 1860-68; new ed., 1901); "Encyclopædic Dictionary", ed. Hunter (7 vols., London, New York, 1879-88). United States: "The American Cyclopædia" (16 vols., New York, 1858-63; new ed., 1873-76); "Deutsch-Amerikanisches Konversations-Lex.", ed. Schem (New York, 1870-74); "Johnson's New Universal Encyc." (4 vols., New York, 1874-8; new ed., 8 vols., 1893-5); "The Encyclopedia Americana" (New York, 1903-06); "The New International Encyclopædia" (17 vols., New York, 1902-04); "The Jewish Encyclopedia" (1906 —). The Netherlands: "Nieuwenhuis' Woordenboek van kunsten en wetenschappen" (Leyden, 1851-68); "De algemeene Nederlandsche Encyclopedie" (15 vols., Zütphen, 1865-68); "Geïllustreerde Encyclopædic", ed. Winkler Prins (15 vols., 1868-82); "Woordenboek voor kennis en kunst", ed. Sijthoff (Leyden, 1891). Denmark and other northern countries: "Nordisk Konversationsleksikon", ed. Mollerup (3rd

ed., Copenhagen, 1883-94); "Store illustrerede Konversationsleksikon", ed. Blangstrup (12 vols., Copenhagen, 1891-1901); "Norsk haandbog", ed. Johnsen (1879-88); "Nordisk Familjebog" (Stockholm, 1879-94); "Konversationsleksikon", ed. Meijer (1889-94). Russia: "Entciklopedicheskij Slovar", ed. Brockhaus and Efron (35 vols., St. Petersburg, 1890-1902); "Boljsaja Enciklopedija", ed. Jushakow (St. Petersburg, 1899). Poland: "Encyklopedya powszechna", ed. Orgelbrand (28 vols., Warsaw, 1859-68), Sikorski (Warsaw, 1890). Bohemia: "Slovník Naucny", ed. Kober (12 vols., Prague, 1860-87); "Ottuv Slovník Naucny", ed. Otto (17 vols., Prague, 1888-1901). Hungary: "Pallas Nagy Lexikona" (16 vols., Budapest, 1893-97; suppl., 1900); an Arabian encyclopedia was discontinued when it reached the ninth volume (Beirut, 1876-87).

In addition to these works, which were prepared for general reference, technical encyclopedias reached great perfection during the nineteenth century. There is hardly a science or department of knowledge which is not fully covered in some work of this kind. In the province of general theology Migne has published in his "Encycl. théologique" (Paris, 1844-75), a series of over 100 special lexicons treating the different branches of theology: dogmas, heresies, liturgy, symbolism, archæology, councils, cardinals, etc. Another comprehensive encyclopedia, dealing especially with theology and church history, is the "Dizionario di erudizione storico-ecclesiastica" of Gaetano Moroni (103 vols., 6 index vols., Venice, 1840-79). The "Handlexikon der kath. Theologie", ed. Schaffer (3 vols., from A to Reservationen, Ratisbon, 1881-91) and Aschbach's "Kinchenlexikon" (4 vols., 1846-51) remained unfinished. The most important Catholic encyclopedia of Germany is Wetzler and Welte's "Kirchenlexikon" (13 vols., Freiburg, 1847-60; 2nd ed., 1880-91; index vol., 1903). A short but comprehensive encyclopedia is Buchberger's "Kirchliches Handlexikon" (Munich, 1907 —). Similar undertakings are "Dictionnaire de théologie catholique", ed. Vacant and Mangenot (Paris, 1903 —) and THE CATHOLIC ENCYCLOPEDIA, ed. Herbermann, Pace, Pallen, Shahan, and Wynne (15 vols., New York, 1906 —), which deals with the constitution, doctrine, discipline, and history of the Church, and whatever is connected with the interests of the Church. Among distinctively Protestant encyclopedias may be mentioned: "Lexikon für Theologie und Kirchenwesen", ed. H. Holtzmann and Zöpffel (2nd ed., Brunswick, 1888); "Realencyklopädie für protestantische Theologie und Kirche", ed. Herzog (21 vols., 1853-68; 3rd ed., 21 vols., ed. Hauck, 1896-1908; tr. New York, 1908 —); "Die Religion in Geschichte und Gegenwart", ed. Schiele (5 vols., Tübingen, 1909 —), on the same plan as Buchberger's "Handlexikon". There are a large number of Biblical dictionaries; the earliest is the "Grand dictionnaire de la Bible ou explication littérale et historique de tous les mots propres du vieux et nouveau Test.", ed. Richard Simon (Lyons, 1693). Soon after appeared Calmet's "Dict. historique, critique, chronologique, géographique et littéral de la Bible" (Paris, 1719). A work which

is still useful is the "Biblisches Realwörterbuch", ed. G. B. Winens (2 vols., 3rd ed., 1847-48). D. Schenkel's "Bibellexikon" is pronouncedly rationalistic; the Jewish point of view is found in Hamburger's "Realencyklopädie für Bibel und Talmud" (2 vols., 4 suppl. vols.; new ed., 1896-97); "The Jewish Encyclopedia", ed. Singer (New York, 1906 —). Among Protestant Biblical dictionaries are the "Handwörterbuch des biblischen Altertums", ed. Riehm and Bähgen (2 vols., Bielefeld, 1893-94); "Kurzes Bibelwörterbuch", ed. H. Guthe (1903); "Cyclopedia of Biblical Literature", ed. Kitto (3rd ed., ed. Alexander, 3 vols., Edinburgh, 1862-65); "Dictionary of the Bible", ed. Smith (London, 1860-63, 3 vols.; 2nd ed., Smith and Fuller, 1893); "Dictionary of the Bible", ed. Hastings (4 vols., Edinburgh, 1898-1902, suppl. vol., 1904); the well-known rationalistic "Encyclopædia biblica", ed. Cheyne and Black (4 vols.; London, 1899-1903). There are only two Catholic Biblical encyclopedias: Vigouroux, "Dictionnaire de la bible contenant tous les noms de personnes, de lieux, de plantes, d'animaux mentionnés dans les s. Ecritures (Paris, 1895 —), and the "Lexicon biblicum" of M. Hagen (4 vols., Paris, 1905 —). The following encyclopedias deal with Christian archæology: "Dictionnaire des antiquités chrétiennes", ed. Martigny (2nd ed., Paris, 1877); "Dictionary of Christian Antiquities", ed. Smith and Cheetham (London, 1875); Kraus, "Real-Encyklopädie der christlichen Alterthümer" (2 vols., Freiburg im Br., 1882-86); Cabrol, "Dictionnaire d'archéologie chrétienne et de liturgie" (Paris, 1907 —). Hagiography and the veneration of relics, besides the volume in Migne's "Encyclopédie théologique", "Heiligenlexikon", ed. Stadler and Heim (5 vols., 1858-82); on church music: "Lexikon der kirchlichen Tonkunst", ed. Kornmüller (2nd ed., 2 vols., Ratisbon, 1891-95).

Medicine is treated in "Medizinisch-chirurgische Encyk.", ed. Prosch and Ploss (4 vols., Leipzig, 1867); "Realencyklop. der gesamten Heilkunde", ed. Eulenburg (3rd ed., Vienna, 1893); "Handwörterbuch der gesamten Medizin" (2nd ed., Stuttgart, 1899-1900). Jurisprudence and sociology: "Encyklopädie der Rechtswissenschaft", ed. F. v. Holtendorff (1870-73; 6th ed., 1903 —); "Encykl. der Rechtswissenschaft", ed. Birkmeyer (Berlin, 1901); "Staats- und Gesellschafts-Lex.", ed. H. Wagener (26 vols., Berlin, 1859-68); "Staatslex.", ed. Rotteck and Weleker (15 vols., Altona, 1835-44; 3rd ed. 14 vols., 1856-66); the Catholic "Staats-Lexikon" of the Görres Society, ed. Bruder (5 vols., Freiburg im Br., 1889-97; 4th ed., ed. Bachem, 1908 —); "Deutsches Staatswörterbuch", ed. Bluntschli (2 vols., 1857-70; new ed., 3 vols., 1869-74); "Handwörterbuch der Staatswissenschaften", ed. Conrad, Elster, Lexis, and Loening (6 vols., 2 suppl. vols., 1889-98); "Nouveau dict. d'économie politique", ed. Fay and Chailley (2 vols., Paris, 1891-92); "Wörterbuch der Volkswirtschaft" ed. Elster (2 vols., 1808; 2nd ed., 1907); "Handwörterbuch der Schweizer Volkswirtschaft", ed. Reichesberg (1901 —); "Cyclopædia of Political Science, Political Economy, and Political History of the United States", ed. Lalor (Chicago, 1881); "Handwörterbuch der gesamten Militärwis-

senschaften", ed. Poter (Bielefeld, 1877-80). Philosophy: "Dictionnaire des sciences philosophiques", ed. Frank (3rd ed., 1885). Natural science: "Encyklopädie der Naturwissenschaften" (Breslau, 1879 —); "Encyclopédie d'histoire naturelle", ed. Chenu (22 vols. of text, 9 vols. of illustrations, Paris, 1850-61). Antiquity: "Realencyk. der klass. Altertumswissenschaft", ed. Pauly (6 vols., Stuttgart, 1842-66; ed. Wissowa, 1894 —); "Reallexikon des klassischen Altertums", ed. Lübker (1853 — 7th ed., 1890); "Reallexicon der deutschen Altertümer", ed. Göttinger (2nd ed., Leipzig, 1885). History and biography: "Encyklopädie der neuern Gesch.", ed. Herbst (5 vols., Gotha, 1880-90); "Allgemeine deutsche Biographie" (47 vols., 1875-1903; suppl., 1905 —), and, supplementary, Bettelheim's "Jahrbuch für Biographie und Necrologie" (1903 —); "Dictionnaire encyclopédique d'histoire, de biographie, de mythologie et de géographie", ed. Grégoire (Paris, 1894); "Dictionnaire des contemporains", ed. Vapereau (Paris, 1858; 6th ed., 1893; suppl., 1895); "Dictionnaire des littérateurs", ed. Vapereau (1876; 2nd ed., 1884); "Dictionary of National Biography" (63 vols., London, 1863-1903; new ed., 1908); "Nouvelle biographie générale" (46 vols., Paris, 1855-66); "Dizionario biografico degli uomini contemporanei", ed. de Gubernatis (3 vols., Florence, 1890-91); "Men and Women" (5th ed., 1899); "Who's Who" (1857 —); "Who's Who in America" (1899 —); "Werist's?", ed. Degener (1905 —). "The Catholic Who's Who" (London, 2nd ed., 1909). Geography: "Geographisch-statistisches Lexikon", ed. Ritter (2 vols., 1835; 8th ed., 1895); "Dictionnaire universelle d'histoire et de géographie", ed. Bouillet (Paris, 1842; 32nd ed., 1901; "Nouveau dictionnaire de géographie universelle", ed. Vivien de Saint-Martin (7 vols. and suppl., 1879-97); "General Dictionary of Geography", ed. Johnston (Edinburgh, 1877); "Dizionario universale di geografia e storia", ed. Straffonello and Grimaldi Costa (Milan, 1873-77, suppl., 1888). Pedagogy: "Encyk. des ges. Erziehungs- und Unterrichtswesens", ed. K. A. Schmid (10 vols., 1857-78; 2nd ed., Gotha, 1876-88); "Katholische Encyk. für Pädagogik" (Freiburg im Br., 1909 —); "Cyclopædia of Education", ed. Kiddle and Schem (New York, 1877). Mathematics: "Encyklopädie der mathematischen Wissenschaften", ed. Burkhardt and Meyer. Chemistry: "Handwörterbuch der Chemie", ed. Liebig and Poggendorff (1836-64; new ed., 1870). Art and music: "Encyclopédie historique et archéologique des beaux-arts plastiques", ed. Demmin (3 vols., Paris, 1865-70); "Dictionary of Arts, Manufactures and Mines", ed. Ure (4th ed., London, 1875-78); Gwilt, "Encyclopædia of Architecture" (new ed., London, 1894); "Dict. raisonné de l'architecture française", ed. Viollet-le-Duc (10 vols., and suppl., Paris, 1875-89); "Allgemeines Künstlerlexikon". ed. Füssli (1763-77); "Neues allgemeines Künstlerlexikon", ed. Nagler (22 vols., Munich, 1835-52); "Allgemeines Künstlerlex.", ed. Müller and Singer (3rd ed., 5 vols., 1895-1901; suppl. 1906); "Allgemeines Künstlerlex.", ed. Seubert (3 vols., Frankfurt, 1879); "Künstlerlexikon", ed. Thieme (Leipzig, 1907 —); "Musikahisches Konversations-Lexikon", ed.

Mendel and Reissmann (2 vols. and suppl., Berlin, 1870-83); "Musik-Lexikon", ed. Riemann (4th ed., 1894); "Biographie universelle des musiciens", ed. Fétis and Pougin (2nd ed., 8 vols., 1860-65; 2 suppl. vols., 1878-81); "Dictionary of Music", ed. Grove (4 vols. and suppl., London, 1878-89; 2nd ed., 1905 —); "Quellen-Lexikon für Musik", ed. Eitner (10 vols., 1900).

Besides these general encyclopedias dealing with different arts and sciences, there are also special technical dictionaries devoted to departments of each science, often treating recondite subjects, but in the hands of scholars facilitating acquaintance with the details of these sciences.

JOSEPH SAUER

Encyclopedists

Encyclopedists

(1) The writers of the eighteenth century who edited or contributed articles to the "Encyclopédie". (2) Those among them especially who belonged to the "philosophic" party, joined in the "illumination" movement, and may be grouped together because of a certain community of opinions on philosophical, religious, moral, and social questions.

I. THE ENCYCLOPÉDIE AND THE ENCYCLOPEDISTS

The "Encyclopédie, ou, Dictionnaire raisonné des sciences, des arts et des métiers, par une société de gens de lettres, mis en ordre et publié par M. Diderot . . . et quant à la partie mathématique par M. d'Alembert . . ." in the complete original edition comprises 35 folio volumes as follows: 17 vols. of text (Paris, 1751-1765); 11 vols. of plates (Paris, 1762-1772); 5 vols. of supplement, i.e., 4 of text and 1 of plates (Amsterdam and Paris, 1776-1777); 2 vols. of analytical index prepared by Pierre Mouchon (Amsterdam and Paris, 1780). In 1745, a French translation of Chambers's "Cyclopædia", prepared by John Mills with the assistance of Gottfried Sellius, was to be published in Paris by the king's printer, Le Breton. After the necessary royal privilege had been obtained, a number of difficulties between Mills and Le Breton caused the failure of the enterprise, and Mills returned to England. Le Breton asked Jean-Paul de Gua, professor in the Collège de France, to assume the editorship and revise the manuscripts. But again misunderstandings and disputes obliged de Gua to resign. Diderot was then called upon to complete the preparation of the manuscripts. At his suggestion, however, it was decided to undertake a more original and more comprehensive work. Diderot's friend, d'Alembert, agreed to edit the mathematical sciences. Diderot (1713-84) had not yet written any original work except the "Pensées philosophiques" (1746), in which

the foundations of Christianity are examined and undermined, revelation rejected, and reason proclaimed independent. The Parliament had ordered the book to be burnt. The "Promenade d'un sceptique" was written in 1747, but not published before the author's death. Diderot had also published a translation of Stanyan's "Grecian History" (1743) and an adaptation of Shaftesbury's "Inquiry concerning Virtue and Merit" under the title "Principes de la philosophie, ou Essai sur le mérite et la vertu" (1745). His main recommendation as editor of the new Encyclopédie, however, was the "Dictionnaire universel de médecine" (1746-1748), a translation of Dr. Robert James's "Medical Dictionary". D'Alembert (1717-83) was already famous as a mathematician. At the age of twenty-two he had presented two studies to the Académie des Sciences, "Sur le calcul intégral" (1740). The following year he was elected a member of the Académie. He had acquired a still greater reputation by his "Traité de dynamique" (1743) and the "Mémoire sur la cause générale des vents" (1747), the latter winning for its author the prize offered by the Berlin Academy and membership in that body.

While the articles were being printed Diderot was imprisoned at Vincennes, 29 July, 1749, for his "Lettre sur les aveugles à l'usage de ceux qui voient", or rather for a passage in it which had displeased Madame Dupré de Saint-Maur. After four months his publishers obtained his release; in November, 1750, the Encyclopédie was announced in a prospectus by Diderot, and, in July, 1751, the first volume was published. It opened with a "Discours préliminaire" by d'Alembert, in which the problem of the origin of ideas is solved according to Locke's sensualism, and a classification of sciences is proposed which, except in a few minor points, is that of Bacon. In the prospectus Diderot had already said: "If we succeed in this vast enterprise our principal debt will be to Chancellor Bacon who sketched the plan of a universal dictionary of sciences and arts at a time when there were, so to say, neither sciences nor arts." D'Alembert acknowledged the same indebtedness. Thus, British influence was considerable both in shaping the doctrine of the "Encyclopédie" and in bringing about its publication. The second volume appeared in January, 1752. In consequence of many protests against the spirit of the work, its sale was stopped, and later the *arrêt* of the King's Council suppressed both volumes as injurious to religion and royal authority (7 February, 1752). Three months later, however, Diderot and d'Alembert were asked to continue the work, a fact which they announce with pride in the preface to the third volume (October, 1753). The following volumes were published without any interruption until after the publication of the seventh volume (1757), when new difficulties arose. In his article on Geneva, d'Alembert had stated that the ministers of that city were Socinians, and praised them for their unbelief. They protested strongly, and this was the occasion for bitter discussions in which Voltaire and Rousseau took a prominent part. The outcome was that d'Alembert, tired of vexations, resigned the editorship. Rousseau also ceased

to have anything to do with the *Encyclopédie*, and thenceforth showed a vehement hostility to it. On the other hand, there were so many denunciations that finally an *arrêt* of the Council (8 March, 1759) revoked the privilege granted in 1746, and forbade the sale of the volumes already printed and the printing of any future volume. And yet, under the secret protection of Choiseul, Madame de Pompadour, Malesherbes, then director-general of the Librairie, and Sartine, the chief of police, work was resumed almost immediately. The ten remaining volumes were to be published together. After Diderot had corrected the proof-sheets, Le Breton, fearing new vexations, suppressed passages likely to be objectionable and to cause friction with the authorities. Diderot noticed the changes too late to prevent them. The articles were mutilated to an extent which it is now impossible to determine, as all manuscripts and proof-sheets were immediately destroyed. At last, in 1765, volumes VIII-XVII were published, completing the text of the *Encyclopédie*.

It is not possible to mention here all the contributors (about 160) to the work. Diderot himself wrote 990 articles on almost every subject, philosophical, religious, and moral, but especially on the arts and trades. Great care was taken in the treatment of the mechanical arts. No trouble was spared to obtain minute descriptions of various machines and the means of using them. All this was explained in the text and illustrated in the plates. D'Alembert's articles, with few exceptions, are on the mathematical and physical sciences. From the beginning Rousseau (1712-1778), then known as the author of several musical works and compositions, agreed to write the articles on music. He also wrote the article, "Economie politique". The collaboration of Buffon (1707-88) who had promised to write on "Nature" is announced in the second volume, but it is doubtful if that article, as printed, is from him. Most of the topics in natural history were treated by Daubenton (1716-99). Articles by d'Holbach (1723-89), Marmontel, Bordeu, are announced in the third volume. The fourth introduces Voltaire (1694-1778) as the author of some literary articles, and says of him: "The *Encyclopédie*, on account of the justice it has rendered and will always continue to render him, was worthy of the interest which he now takes in it." In the "Discours préliminaire", d'Alembert had praised him as occupying "a distinguished place in the very small number of great poets", and extolled him for his qualities as a prose writer. Condorcet, Grimm, Quesnay, Turgot, Necker also contributed articles or memoirs. De Jaucourt furthered the cause of the *Encyclopédie* not only by his numerous articles and his constant interest, but also by his attitude and reputation. Far from sharing the materialistic and atheistic tendencies of many of his co-workers, he was at the same time friendly to the Encyclopedists and to some of their enemies. Montesquieu at his death (1755) left an unfinished article on Taste (*Goût*); but his "Lettres persanes" (1721) and

"Esprit des lois" (1748) inspired many of the social and political articles in the Encyclopédie.

II. THE SPIRIT AND INFLUENCE OF THE ENCYCLOPÉDIE

The expression *spirit of the Encyclopédie* may at first seem to be a misnomer. In that vast compilation is found the greatest diversity of subjects and even of views on the same subjects. The writers of the articles belong to all professions and to all classes of society. Names of military men, lawyers, physicians, artists, clergymen, scientists, philosophers, theologians, statesmen, etc. appear on the lists of contributors given at the beginning of each volume. The articles are of unequal value; proportion is lacking, each contributor apparently writing as he thinks fits. Verbosity is a prominent defect, and, at times, the authors indulge in endless digressions. Voltaire repeatedly asked for brevity and better method. (See Letters to d'Alembert, esp. in 1756).

The articles seem to have been gathered together from various sources without any preconceived plan, without any unity or sufficient supervision. Under these conditions the spirit of the Encyclopédie might denote merely one special tendency, or one group of tendencies, which, at first manifested along with many others, gradually became important and finally predominant. To some extent it is that, but it is also more than that. The Encyclopédie was not intended only as a great monument to record the progress realized in sciences, arts, civil and religious institutions, industry, commerce, and all other lines of human endeavour; the Encyclopedists purposed moreover to prepare the future and indicate the way to further progress. The Encyclopédie would be a record, but it would also be a standard; not a mere onlooker, but a leader. In fact, appearing as it did in the third quarter of the eighteenth century, it is a mirror in which the events of the whole century are focused.

At the time of the publication of the Encyclopédie, the French Government was, owing to many causes and influences, already considerably weakened, and still weakening. Dissatisfaction and unrest, though not yet well defined, were spreading among the people. Existing institutions and customs, both religious and political, had recently been denounced in several publications. The "philosophers" were favourably received in the salons of the aristocracy. On the other hand, Jansenism, with the endless discussions of which it had been the source or the occasion, and also with the lack of knowledge and looseness of morals among some members of the clergy, had prepared the way for a reaction in the sense of unbelief. There were other causes less direct, perhaps, and more remote, yet influential in bringing about a break with the past. In Descartes one may find unequivocal germs of the neglect, contempt even, of tradition in philosophy, especially when immediate evidence, the *idée claire*, is made the sole valid criterion of truth. The influence of British philosophers was far from tending to check the growth of rationalism. Nor can we overlook the influence of the famous "Querelle

des Anciens et des Modernes", as it is known in the history of French literature. In the last two decades of the seventeenth century it was one of the main centres of attention. To this discussion, which resulted in a victory for those who favoured the "modern", Brunetière traces back three important consequences: first, the meaning of tradition becomes gradually identified with that of superstition; second, progress is conceived as an emancipation from, and an abjuration of, the past; finally, and this is still more important, education in all its stages consists more and more in derision of the past. True, recent times everywhere offered masterpieces of art, literature, and science. Whatever side we may take in the old quarrel to-day, and however much less radical and more impartial our views may be, we can at least understand the attitude of those who succeeded the great men of the age of Louis XIV.

Another important factor was scientific progress. After being too frequently confined to idle a priori controversies, science was asserting its rights, and these it soon came to exaggerate, while it failed to recognize the rights of others. Reason gradually freed itself from the superstition of the past and claimed absolute independence. Ancient, or rather Christian, conceptions of God and the world were not even deemed worthy of the serious consideration of a "thinker". Efficient causes alone were recognized, final causes proscribed. In nature science always dealt with immutable laws; soon the possibility of miracles and revelation was denied, while mysteries were regarded as absurd. Thus, in the place of traditional beliefs, new ideas were introduced, tending to rationalism, materialism, naturalism, and deism. On positive points there was but little agreement; the tendency was primarily negative. It was an opposition to received dogmas and institutions, an effort to establish a new theoretical and practical philosophy on the basis of merely naturalistic principles. Nothing is truer than d'Alembert's statement, in the "Discours préliminaire", that "our century believes itself destined to change all kinds of laws". Towards the middle of the eighteenth century the representatives of this movement were the "philosophers", and they were about to centralize their efforts in the *Encyclopédie*. Great prudence was necessary, and it was used. Some men who were known for their conservative opinions were asked to contribute articles, and the *Encyclopédie* contained some unexceptionable doctrines and moderate views on religious, ethical, and social problems; moreover, the editors themselves and those who shared their views frequently concealed or disguised their true convictions. As Voltaire says, they were in the sad necessity of "printing the contrary of what they believed" (Letter to d'Alembert, 9 October, 1756). More was insinuated than was clearly expressed, and at times a sarcastic remark was used with better effect than a definite statement or argument. When the main article to which one would naturally turn for information contained nothing objectionable, other articles, less likely to attract attention, expressed different and more "philosophic" views. That

such was the condition of affairs is attested by a significant passage in a letter of d'Alembert to Voltaire (21 July, 1757). To the latter's criticism of certain articles he replies: "No doubt we have bad articles in theology and metaphysics; but with theologians for censors, and a privilege, I defy you to make them any better. There are other articles less exposed to the daylight in which all is repaired. Time will enable people to distinguish what we have thought from what we have said." Hence, although the *Encyclopédie* itself contains many articles in which anti-Christian principles are openly professed, the true, unrestrained encyclopedic spirit was found in the meetings of the "philosophers" and in the salons, where they were looked upon as oracles. Today it is to be found in the later works of the Encyclopedists and chiefly their letters and memoirs. In the impious and cynical d'Alembert, for instance, as known from his correspondence with Voltaire, one would fail to recognize the prudent and reserved d'Alembert of the *Encyclopédie*. "You were born with the finest and most virile genius", Voltaire wrote to him (4 June, 1769), "but you are free only with your friends, when the doors are closed". This last remark applies also to Diderot and the other Encyclopedists. Their private letters reveal their true spirit and intentions, and prove that the apparent moderation and tolerance shown in their public writings were dictated by fear and not by conviction.

It is difficult to estimate the influence which the *Encyclopédie* exerted on the events that followed its publication, especially the French Revolution. To a large extent undoubtedly it was not the source, but only the reflection, of the religious and social views of the time. Not the *Encyclopédie* so much as the Encyclopedists exerted a real influence. Since their spirit was antagonistic to the Church and, in many respects, also to the State, one may ask why its manifestations were not suppressed; why in particular its organ, the *Encyclopédie*, was allowed to proceed, notwithstanding the warnings of its adversaries and its repeated condemnation by the civil authorities. In a word, what was done to check its influence or to oppose its doctrines? In general, it may be answered that little was done, and, under the circumstances, perhaps little could be done. The defenders of the Faith were not idle; they wrote books and articles in refutation of the "philosophers"; but their voice was not heard, and their scattered efforts were of little avail against the organized forces and the powerful protectors of their adversaries. The Jesuits, the secular clergy, especially Archbishop Christophe de Beaumont, of Paris, and Bishop Le Franc de Pompignan, of Le Puy, who wrote pastorals on the subject, and several other writers and preachers denounced the *Encyclopédie*. We have seen that they succeeded more than once in having its publication and sale prohibited by the Government. The suspensions were only temporary. The Encyclopedists were under the patronage of high personages at the Court; they were protected especially by Malesherbes, the director of the *Librairie*, who controlled, among other

things, the granting of privileges for new publications and the censoring of books, and by Sartine, the chief of police, on whom depended the enforcement of the laws and ordinances concerning the printing and sale of books. Malesherbes always showed himself the friend of not only of the *Encyclopédie*, but also of the Encyclopedists. Owing to this friendship, many works were published notwithstanding the official position of the Government. In 1759, after the decision of the council had revoked the privilege formerly granted, it was Malesherbes who warned Diderot that his papers were to be seized the next day. As it was too late to look for a place of safety where they could be taken, Malesherbes had them sent to his own house.

Thus the Government secretly favoured an enterprise which it officially censured, and, under this protection the *Encyclopédie* was begun and completed. Partly for the same reason, partly also for deeper reasons concerning the religious and civil conditions in France, the efforts to combat the *Encyclopédie* were not rewarded with much success. Moreau in the "*Mémoires pour servir à l'histoire des Cacouacs*" (1757), Palissot, in his "*Petites lettres sur de grands philosophes*" (1757) and in his comedy "*Les philosophes*" (1760), tried to use the weapons of ridicule and satire which some of the "philosophers", especially Voltaire, wielded with greater skill. Fréron, in the "*Année littéraire*", was at times sarcastic, and always ready to give and take blows. Constantly at war with the Encyclopedists, he was at a great disadvantage, for they enjoyed Malesherbe's protection, whereas for him the censure was always very severe. Thus he was hardly allowed to write on Voltaire's "*Ecossaise*" (1760), in which he had been publicly insulted on the stage. The Jansenists, in the "*Nouvelles ecclésiastiques*", did little more than insult the Encyclopedists. In the "*Journal de Trévoux*", the Jesuits, and among them especially Berthier (1704-82), who was director of the Journal from 1745 till the suppression of the Society of Jesus, wrote frequent criticisms. But notwithstanding all this opposition the spirit of irreligion was steadily gaining. Too often the criticism was weak, the attack unskillful. In some cases even, the anti-Encyclopedists, instead of harming their opponents, rather contributed to their success by giving them notoriety and affording them an opportunity for using their influence. The Jesuits were expelled from France in 1762; this gave a new victory and a new prestige to the "philosophers". D'Alembert, who wrote "*La destruction des Jésuites en France*" (1765), looks upon this expulsion as the just punishment of their hostility towards the *Encyclopédie*. Gradually the people were becoming accustomed to the new spirit, and thus it was that, whereas the first volumes had created a great stir in France, the appearance of the last volumes was scarcely noticed.

Unknown or little known in 1750, the "philosophers" had now won their battle, and were the recognized victors. Their success made them bolder in declaring openly what fear had frequently obliged them to veil in their former works and in the Encyc-

lopédie. These doctrines had also been made more familiar by the publication of several works before the completion of the Encyclopédie, the most important being Diderot's "Pensées sur l'interprétation de la nature" (1754); Helvétius's "De l'esprit" (1758); Rousseau's "Discours sur l'origine et les fondements de l'inégalité parmi les hommes" (1753), "Contrat social" (1762), and "Emile" (1762); Voltaire's "Dictionnaire philosophique" (1765); d'Holbach's "Système de la nature" (1770). Hence, on 8 July, 1765, Voltaire could write to d'Alembert: "They clamour against the philosophers, and are right; for, if opinion is the ruler of the world, this ruler is governed by the philosophers. You can hardly imagine how their empire is spreading."

BRUNETIÈRE, *Etudes critiques sur l'histoire de la littérature française* (Paris, 1896—); in these *Etudes* are found several essays on men and events related to the Encyclopédie; ID., *Manuel de l'histoire de la littérature française* (2d ed., Paris, 1899) and the sources indicated in it, especially the *Mémoires* and the *Correspondances* of the ENCYCLOPEDISTS; ID., *Les origines de l'esprit encyclopédique* in *Revue hebdomadaire* (November, 1907), 141, 281, 421; DAMIRON, *Mémoires pour servir à l'histoire de la philosophie au XVIIIe siècle* (Paris, 1858-1864); DUCROS, *Diderot* (Paris, 1894); ID., *Les Encyclopédistes* (Paris, 1900); DUPRAT, *Encyclopédistes* (Paris, 1866); LANFREY, *L'Eglise et les philosophes au dix-huitième siècle* (Paris, 1879); LÉVY BRUHL, *The Encyclopedists in Open Court*, XIII (1899), 129; MORLEY, *Diderot and the Encyclopedists* (2d ed., London, 1886); ROSENKRANZ, *Diderots Leben und Werke* (Leipzig, 1866); WADIA, *The Philosophers and the French Revolution* (London, 1904); WINDELBAND, *Geschichte der neueren Philosophie* (4th ed., Leipzig, 1907); LYONS in *Encyclopædia Britannica* (9th ed.), VIII, 197; RIAUX in FRANCK, *Dictionnaire des sciences philosophiques* (2d ed., Paris, 1885), 445.

C.A. DUBRAY

Stephan Ladislaus Endlicher

Stephan Ladislaus Endlicher

Austrian botanist (botanical abbreviation, *Endl.*), linguist, and historian, b. at Pressburg, Hungary, 24 June, 1804; d. at Vienna, 28 March, 1849. The son of a physician, he studied philosophy at Pesth and Vienna, and theology from 1823 to 1826 at Vienna; he did not, however, enter the priesthood. From 1826 at Pressburg he turned his attention to languages, studying especially Chinese, a knowledge of which is shown in some of his later works: "Anfangsgründe der chinesischen Grammatik" (Vienna, 1844), and "Atlas von China nach der Aufnahme der Jesuiten" (Vienna, 1843). Urged by his father, Endlicher took up the study of botany in 1826, and devoted all his spare time to it during the years 1828-36, when he had charge of the MSS. in the Imperial

Library of Vienna. In this same period he issued as librarian, in addition to a number of works on the ancient classical, German, and Hungarian literatures, the first volume (Vienna, 1836) of the MS. catalogue of the Imperial Library. In 1836, he was made curator of the botanical department of the Royal Natural History Museum, and in 1840, professor of botany at the University of Vienna, and director of the Botanical Garden of the University. In 1830, he had issued his first botanical treatise, that on the flora of Pressburg. As curator of the botanical department he united the various distinct herbaria into one scientifically arranged general herbarium, to which he added, as a gift, his own containing 30,000 species of plants; the classification adopted by Endlicher remained unchanged until 1885. On his appointment as curator he began at once to develop his botanical system, which is explained in his well-known and most important work: "Genera plantarum secundum ordines naturales disposita" (Vienna, 1836-50), a work regarded as one of the fundamental writings of systematized botany.

As early as 1835 he founded the first periodical in Austria for the natural sciences, the "Annalen des Wiener Museums der Naturgeschichte". His numerous other writings on botanical subjects show an independent critical judgment, acute observation, and comprehensive knowledge. Endlicher also collaborated in a number of publications with other botanists; with Schott, Fenzl, and especially with Unger in "Grundzüge der Botanik" (Vienna, 1843); with Pöppig in a work on the plants of Chile, Peru, and the region of the Amazon (Leipzig, 1835-45); also in conjunction with the American Asa Gray, and with George Bentham and Robert Brown of Great Britain. Up to the time of his death Endlicher aided von Martius in editing the latter's great work "Flora Brasiliensis" (Munich and Leipzig, 1840-1906); the work, a folio costing 6000 marks, was finally completed in 130 parts of 20,733 pages in all, and containing 3811 plates. It was through Endlicher's exertions that von Martius was enabled to begin the bringing out of this work under the patronage, and with the financial aid, of the Emperor Ferdinand I. Endlicher's botanical MSS. and correspondence belong to the botanical department of the Royal Museum at Vienna; his correspondence with Unger was published by the botanist Haberlandt (Berlin, 1899). In addition to his other labours, he had a large share in founding (1846-47) the Imperial Academy of Sciences of Vienna, and was one of its first forty members. Endlicher became involved in the political movement of 1848; he was elected a member both of the German and the Austrian parliaments, but his political activities were not successful. Botanists have, on three occasions, sought to use his name as a designation of species of plants (*Endlichera*, *Endlicheria*), but according to the rules of the botanical nomenclature, such appellations express synonyms which should be avoided.

VON BECK in *Botan. Centralblatt* (Cassel, 1888), XXXIII, 249; NEILREICH in *Verhandl. des zool.-bot. Vereins* (Vienna, 1855), V, 51; SACHS, *Geschichte der Botanik*

(Munich, 1875); WURZBACH in *Biograph. Lexicon des Kaisertums Oesterreich* (Vienna, 1858), IV, contains a list of his writings; *Die botanischen Anstalten Wiens* (Vienna, 1894); *Botanik und Zoologie in Oesterreich* (Vienna, 1901) contains a portrait of Endlicher.

JOSEPH ROMPEL

Endowment

Endowment

(Ger. *Stiftung*, Fr. *fondation*, It. *fondazione*, Lat. *fundatio*)

An endowment is a property, fund, or revenue permanently appropriated for the support of any person, institution, or object, as a student, professorship, school, hospital. The term is more frequently applied to the establishment of eleemosynary corporations by private endowment. In ecclesiastical circles the word is employed also in a more restricted sense, signifying a conditional donation or legacy, i.e. the establishment of a fund, by the provisions of a last will or otherwise, in order to secure permanently, or at least for a long time, some spiritual benefit, as, for instance, the offering and application of a monthly or annual Mass.

The early Christians were lavish in their support of religion, and frequently turned their possessions over to the Church [Lallemand, "Hist. de la charité" (Paris, 1903), II; Uhlhorn, "Hist. of Christ. Charity"; Hefele, "Christenthum u. Wohlthätigkeit" in his "Beiträge", I, 175]. The Emperor Justinian (Novella lxvii) compelled those who built churches to endow them; and about the same time, ecclesiastical legislation prescribed that no cleric was to be ordained for a church without proper provision for his maintenance (Counc. of Epaon, 517, c. xxv). Whoever desired to have a parish church on his estate was obliged to set aside a sufficient landed endowment for its clerics (IV Counc. of Arles, 541, c. xxxiii); while a bishop was forbidden to consecrate a church till the endowment had been properly secured by a deed or charter (II Counc. of Braga, 572, c. v). If one who held a fief from the king built and endowed churches, the bishop was required to procure the royal confirmation of the gift (III Counc. of Toledo, 589, c. xv). Ancient and noble Roman families, as well as others of less means, inspired by feelings of love and gratitude, made large bequests to the Church. In the fifth century, in countries inhabited by German tribes, the Church was endowed especially with lands. These possessions were lost during the political and social upheaval that followed the Germanic invasions, known as the Wanderings of Nations. Towards the end of Charlemagne's reign the regenerated peoples contributed once more voluntarily and generously to the support of ecclesiastical institutions.

In England, both under Saxon and Norman domination the generous zeal of the faithful prompted them to secure by endowments a permanent priesthood, and to provide for the dignity and even splendour of Divine worship. A considerable portion of the foundations thus established in England was squandered or confiscated during the Reformation of Henry VIII and Queen Elizabeth, while the remainder, by virtue of the Acts of Uniformity and Supremacy, was transferred to the Anglican Church, which still retains it. The conditions of the Catholics of England since the Reformation in temporal matters has not permitted to any extent the re-establishment of endowments, though instances have not been wanting and are on the increase. In Ireland and Scotland likewise the old foundations of the Church have been lost or diverted from their purpose. In Ireland the Protestant Church, which had received during the Reformation the lands and moneys of the Catholic Church, was disestablished and nominally disendowed by the Act of 1869, but so liberal were the compensations allowed that they amounted practically almost to a re-endowment. In Scotland the Presbyterians of the Established Church, owing to the immense influence of Knox in the sixteenth century, still possess what is left of the ancient endowments of the Catholic Church. Ecclesiastical endowments in France have undergone many vicissitudes, particularly from the year 1789, when a yearly income of about \$14,000,000 was suddenly and unjustly confiscated. The influence of the French Revolution was felt elsewhere, especially in Germany, where by the fifty-fifth article of the Resolutions of the Deputation of the Empire (1803) "all property belonging to the foundations, abbeys and monasteries was committed to the free and full disposal of the respective rulers, who were to provide for the expense of public worship, of instruction, of founding useful public institutions, and of *lightening their own financial embarrassments*". In Italy the annexation of the States of the Church in 1859, 1860, and 1870 by the "King of United Italy" was also followed by the introduction of anti-ecclesiastical laws, the robbery of the Church, and the spoliation of her institutions. The endowments that remain are for the most part administered by the Government. Foundations in America are not numerous and merit no special mention.

Canon law lays down strict regulations regarding the acceptance and management of endowments as well as the observance of the obligation arising therefrom. They are to be accepted only by those whose interests are at stake, as, for instance, the rector of a church, the administrator of an institution. The consent of the ordinary, if they are presented to a diocesan institution, or of the competent religious superior, if given to regulars, is requisite. The superior in question should assure himself that the income accruing from the investment is a sufficient recompense for the service demanded. Once the conditions of acceptance have been established, they are unchangeable, and it is incumbent on the bishop or religious superior, as above, to procure the fulfilment

of the obligation imposed. A catalogue or table of these obligations assumed by a church is to be posted conspicuously in the sacristy — a general one for the diocese is reserved in the chancery office — while among the parochial books is one in which the satisfaction of these obligations is noted. The supreme law to be observed in this matter is the will of the founder of an endowment, to fulfil which the zealous vigilance of the Church is ever directed. If, however, the property or invested funds of an endowment entirely disappear through no fault of the church, the latter is exempt from its part of the contract. If a disproportion arise between the service required and the recompense, a proportionate reduction of the obligation entailed is permitted, under certain conditions, by the Holy See. Bishops are not allowed to lessen the original obligation, e.g. to reduce the number of Masses to be offered annually, though where the mind of the donor is not sufficiently clear, they may determine minor details, such as the hour of the service, or the altar at which it is to take place. Founders of churches frequently reserved to themselves, with the approbation of Rome, the right to administer the temporal concerns of such foundations and to suggest candidates for vacant benefices in said churches (see Patronage), though ordinarily these trusts are under the supervision of a corporation or board of trustees.

ANDREW B. MEEHAN.

The Law of Conservation of Energy

The Law of Conservation of Energy

Amongst the gravest objections raised by the progress of modern science against Theism, the possibility of miracles, free-will, the immateriality of the human soul, its creation and immortality, are, according to many thoughtful men, those based on the Law of the Conservation of Energy. Consequently, as full a treatment of this topic in its philosophical aspects as the limits of space will allow, is here attempted.

EXPLANATION OF THE DOCTRINE

The word *energy* comes from the Greek *'énérgēia*, "operation", "actuality". This term is itself a compound of *'en* and *'érgon*, "work". In modern physical science the

notion of energy is associated with mechanical work. It is commonly defined as "the capacity of an agent for doing work". By "work" scientists understand the production of motion against resistance. Such energy, whilst existing in many forms, is considered especially in two generically distinct states known as kinetic energy, or energy of motion, and potential energy, or energy of position. The power of doing work in the former case is due to the actual motion possessed by the body, e.g. a cannon-ball on its course, or a swinging pendulum. Potential energy, on the other hand, is exemplified by a wound-up spring, or by the bob of a pendulum when at its highest point; as the bob swings upwards its velocity and kinetic energy continuously diminish, whilst its potential energy is increasing. When at its highest point its potential energy is at a maximum, and its kinetic is nil. Conversely, when, moving downwards, it reaches its lowest point, it will have recovered its maximum kinetic energy, whilst its potential will have vanished. Energy is also recognized in the heat of a furnace, or the fuel of the same, in explosives, in an electric current, in the radiations of the ether which illuminates and warms the earth. Now, it has been found that these different forms of energy can be changed into one another. Further, the amount of a sum of energy in different forms can be measured by the quantity of work it can accomplish. A weight suspended over a pulley can be employed to do work as it sinks to a lower level; likewise a steel spring as it expands, heat as it passes to a cooler body, electric current as it is expended, and chemical compounds in the course of decomposition. On the other hand, a corresponding amount of work will be required in order to restore the original condition of the agents. Perhaps the greatest and most fruitful achievement of modern physical science during the past century has been the establishment of a law of quantitative equivalence between these diverse forms of energy measured in terms of work. Thus a certain amount of heat will produce a definite amount of motion in a body, and conversely this quantity of motion may be made to reproduce the original amount of heat—assuming that in the actual process of transformation there were no waste. In other words, it is now accepted as established that, in any "conservative" or completely isolated system of energies, whatever changes or transformations take place among them, so long as no external agent intervenes, the sum of the energies will always remain constant. The Principle of Law of the Conservation of Energy has been thus formulated by Clerk Maxwell: "The total energy of any body or system of bodies is a quantity which can neither be increased nor diminished by any mutual action of these bodies, though it may be transformed into any other forms of which energy is susceptible" (*Theory of Heat*, p. 93). Thus stated, the law may be admitted to hold the position of a fundamental axiom in modern physics; the nature of the evidence for it, we shall consider later. But there is a further generalization, advancing a considerable way beyond the frontiers of positive science, which affirms that the total sum of such energy in the

universe is a fixed amount "immutable in quantity from eternity to eternity" (Von Helmholtz). This is a proposition of a very different character; and to it also we shall return. But first a brief historical account of the doctrine.

HISTORY

The doctrine of the Conservation of Energy was long preceded by that of the Constancy of Matter. This was held vaguely as a metaphysical postulate by the ancient materialists and positively formulated as a philosophical principle by Telesius, Galileo, and Francis Bacon. Descartes assumed in a somewhat similar a priori fashion that the total amount of motion (MV) in the universe is fixed— *certam tamen et determinatam habet quantitatem* (Princip. Philos., II, 36). But the effort to establish such assumptions by accurate experiment begins later. According to many we have the principle of the conservation of energy virtually formulated for the first time in Newton's Scholion developing his third law of motion (action and reaction are equal and opposite), though his participation in the current erroneous conception of heat as a "caloric", or independent substance, prevented his clearly apprehending and explicitly formulating the principle. Others would connect it with his second law. Huyghens, in the seventeenth century, seems to have grasped, though somewhat vaguely, the notion of momentum, or *vis viva* (MV^2). This was clearly enunciated by Leibniz later. The fundamental obstacle, however, to the recognition of the constancy of energy lay in the prevalent "caloric theory". Assuming heat to be some sort of substance, its origin and disappearance in connexion with friction, percussion, and the like seemed a standing contradiction with any hypothesis of the constancy of energy. As early as 1780, Lavoisier and Laplace, in their "Mémoire sur la chaleur", show signs of approaching the modern doctrine, though Laplace subsequently committed himself more deeply to the caloric theory. Count Rumford's famous experiments in measuring the amount of heat generated by the boring of cannon and Sir Humphry Davy's analogous observations (1799) on the heat caused by the friction of ice, proved the death-blow to the caloric theory. For the view was now beginning to receive wide acceptance among scientists, that heat was "probably a vibration of the corpuscles of bodies tending to separate them". Dr. Thomas Young, in 1807, employed the term *energy* to designate the *vis viva* or active force of a moving body, which is measured by its mass or weight multiplied by the square of its velocity (MV^2). Sadi Carnot (1824), though still labouring under the caloric theory, advanced the problem substantially in his remarkable paper, "Réflexions sur la puissance motrice du feu", by considering the question of the relation of quantity of heat to amount of work done, and by introducing the conception of a machine with a reversible cycle of operations. The great epoch, however, in the history of the doctrine occurred in 1842, when Julius Robert Mayer, a German physician, published his "Remarks on the Forces of Inanimate Nature", originally written in a series of letters to a

friend. In this little work, "contemptuously rejected by the leading journals of physics of that day" (Poincaré), Mayer clearly enunciated the principle of the conservation of energy in its widest generality. His statement of the law was, however, in advance of the existing experimental evidence, and he was led to it partly by philosophical reasoning, partly by consideration of physiological questions. At the same time, Joule, in Manchester, was engaged in determining by accurate experiments the dynamical equivalent of heat—the amount of work a unit of heat could accomplish, and vice versa; and "Colding was contributing important papers on the same subject to the Royal Scientific Society of Copenhagen, so that no particular man can be described as the Father of the doctrine of the Conservation of Energy" (Preston). Between 1848 and 1851, Lord Kelvin (then Sir William Thomson), Clausius, and Rankine developed the application of the doctrine to sundry important problems in the science of heat. About the same time Helmholtz, approaching the subject from the mathematical side, and starting from Newton's Laws of Motion, with certain other assumptions as to the constitution of matter, deduced the same principle, which he termed the "Conservation of Forces". Subsequently, Faraday and Grove illustrated in greater detail the extent and variety of the transformation and correlation of forces, not only heat being changed into work, but light occasioning chemical action, and this generating heat, and, and heat producing electricity, capable of being again converted into motion, and so on round the cycle. But it further became evident that in such a series there inevitably occurs a waste in the usability of energy. Though the total energy of a system may remain a constant quantity, since work can be done by heat only in its transition from a warmer to a cooler body, in proportion as such heat gets diffused throughout the whole system it becomes less utilizable, and the total capacity for work diminishes owing to this dissipation or degradation of energy. This general fact is formulated in what has been called the principle of Carnot or of Clausius. It is also styled the second law of thermodynamics and has been made the basis of very important conclusions as to the finite duration of the universe by Lord Kelvin. He thus enunciates the law: "It is impossible by means of inanimate material agency to derive a mechanical effect from a portion of matter by cooling it below the temperature of the coldest surrounding bodies."

Living Organisms

The successful determination of the quantitative equivalent of one form of energy in some other form, obviously becomes a far more difficult problem when the subject of the experiment is not inanimate matter in the chemical or physical laboratory, but the consumption of substances in the living organism. Scientific research has, however, made some essays in this direction, endeavouring to establish by experiment that the principle of the constancy of energy holds also in vital processes. By the nature of the

case the experimental evidence is of a rougher and less accurate character. Still it tends to show at all events approximate equivalence in the case of some organic functions. Among the best investigations so far seem to be those of Robner, who kept dogs in a calorimeter, measuring carefully the quantity of food received and the heat developed by them. The chemical energy of the substances consumed manifests itself in heat and motion, and the heat generated in the consumption of different substances by the animals seems to have corresponded rather closely to that resulting in laboratory experiments; hence it is affirmed that the observations all point to the conclusion that "the sole cause of animal heat is a chemical process" (Schäfer). This, however, is a long way from experimental proof that the conservation of energy holds in all vital processes with such rigid accuracy that every faintest change in the motor or sensory nerve-cells of the brain must have been completely determined by a preceeding physical stimulus. Whether this proposition be true or not, there is not as yet even a remote approach to experimental proof if it (cf. Ladd).

THE LAW CONSIDERED

Character and Range

About the character and range of the law and its bearing on sundry philosophical problems, there has been and still is much dispute. As a rule, however, the most eminent scientists, e.g. men like Clerk Maxwell and Lord Kelvin, are most cautious and guarded in their enunciation of the law. Be it noted that, when strictly stated, this proposition, "The sum of the kinetic and potential energies of a conservative system amid all changes remains constant", first applies only to an isolated or closed system. But such systems are hypothetical or ideal. As a matter of fact, no group of agents in the present universe is or can be thus isolated. Next, the proposition may be stated, as a legitimate generalization, only of inanimate bodies and material energies. The law affords no justification for the assertion that the *only* energies in any particular system, still less in the universe as a whole, are material energies. Clerk Maxwell himself explicitly reminds us that "we cannot assert that all energy must be either potential or kinetic, though we may not be able to conceive of any other form". Again many physicists insist that this concept of *energy* contained in the formula proves, when examined closely, to be vague and elusive. H. Poincaré asks: "What exactly remains constant?" And he concludes a searching analysis with the statement that "of the principle nothing is left but an enunciation: There is *something* which remains constant" (Science and Hypothesis, p. 127). As eminent a physicist as George F. Fitzgerald tells us that "the doctrine of the conservation of energy is most valuable, but it only goes a very little way in explaining phenomena" (Scientific Writings, p. 391). Helmholtz's extension of the principle in the statement, that "the total quantity of all the forces capable of work in the whole universe remains eternal and unchanged throughout all their changes", is a hazardous

leap from positive science into very speculative metaphysics. This should be recognized. For even supposing the proposition true, it cannot be demonstrated a priori. It is not self-evident. It is obviously beyond the possibility of experimental proof. It assumes the present universe to be a closed system into which new agents or beings capable of adding to its energy have never entered. Lucien Poincaré's contention is just: "It behooves us not to receive without a certain distrust the extension by certain philosophers to the whole Universe of a property demonstrated for those restricted systems which observation can alone reach. We know nothing of the Universe as a whole and every generalization of this kind outruns in singular fashion the limit of experiment." James Ward's account of its character is much the same: "Methodologically, in other words as a formal and regulative principle, it means much, really it means very little." It furnishes very little information about the past, present, or future of the universe.

Proof of the Law

On what evidence precisely, then, does the principle rest? Here again we find considerable disagreement. E. Mach tells us: "Many deduce the principle from the impossibility of perpetual motion, which again they either derive from experience or deem self-evident...Others frankly claim only an experimental foundation for the principle." He himself considers the justification of the law to be in part experimental, in part a logical or formal postulate of the intellect. We have already alluded to the view that it is implicit in Newton's laws of motion. The principle of causality, according to others, is its parent. Mayer himself quotes *ex nihilo nil fit*, and argues that creation or annihilation of a force lies beyond human power. Even Joule, who laboured so diligently to establish an experimental proof, would reinforce the latter with the proposition, that "it is manifestly absurd to suppose that the powers with which God has endowed matter can be destroyed". Preston judiciously observes: "The general principle of the conservation of energy is not to be proved by mathematical formulæ. A law of nature must be founded on experiment and observation, and the general agreement of the law with facts leads to a general belief in its probable truth. Further, the conservation of energy cannot be absolutely *proved* even by experiment, for the proof of a law requires a universal experience. On the other hand, the law cannot be said to be untrue, even though it may seem to be contradicted by certain experiments, for in these cases energy may be dissipated in modes of which we are as yet unaware" (p. 90). In view of the extravagant conclusions some writers have attempted to deduce from the doctrine, it is useful to note these serious divergencies of opinion as to what is its true justification among those who have a real claim to speak with authority on the subject.

We shall best approximate to the truth by distinguishing three different parts of the doctrine of energy: the law of constancy; the law of transformation; and the law of

dissipation or degradation. The law of transformation, that all known forms of material energy may be transmuted into each other, and are reconvertible, is a general fact which can only be ascertained and proved by experience. There is no a priori reason requiring it. The law of dissipation, that, as a matter of fact, in the course of the changes which take place in the present universe there is a constant tendency for portions of energy to become unusable, owing to the equal diffusion of heat through all parts of the system—this truth similarly seems to us to rest entirely on experience. Finally, with respect to the principle of quantitative constancy, the main proof must be experience—but experience in a broad sense. It has been shown by positive experiments with portions of inanimate matter that the more perfectly we can isolate a group of material agents from external interference, and the more accurately we can calculate the total quantity of energy possessed by the system at the beginning and end of a series of qualitative changes, the more perfectly our results agree. Further, modern physics constantly assumes this principle in most complex and elaborate calculations, and the agreement of its deductions with observed results verifies the assumption in a manner which would seem to be impossible were the principle not true. In fact, we may say that the assumption of the truth of the law, when correctly formulated, lies now at the basis of all modern physical and chemical theories, just as the assumption of inertia or the constancy of mass is fundamental to mechanics. At the same time we must not forget the hypothetical character of the conditions postulated, and the limitations in its application to particular concrete problems. Bearing this in mind, even if there occurs some novel experience, as, e.g., the fact that radium seemed capable of sustaining itself at a higher temperature than surrounding objects and of emitting a constant supply of heat without any observable diminution of its own store of energy, science does not therefore immediately abandon its fundamental principle. Instead, it rightly seeks for some hypothesis by which this apparently rebellious fact can be reconciled with so widely ranging a general law—as, for example, the hypothesis that this eccentric substance possesses a peculiar power of constantly collecting energy from the neighbouring ether and then dispensing it in the form of heat; or, that the high complexity of the molecular constitution of radium enables it, while slowly breaking down into simpler substances, to continue expending itself in heat for an extraordinarily long time. Such an exception, however, is a useful reminder of the unwarranted rashness of those who, ignoring the true character and limitations of the law, would, in virtue of its alleged universal supremacy, rule out of existence, whether in living beings or in the universe as a whole, every agent or agency which may condition, control, or modify in any way the working of the law in the concrete. As we have before indicated in regard to some changes of a chemical and mechanical character in the living beings, the principle of conservation *may* hold in much the same way as in non-living matter; whilst, in regard

to other physiological or psycho-physical processes, the necessary qualifications and limitations may be of a different order. The kind of evidence most cogent in regard to inanimate matter—both direct experiment and verified deduction—is wanting here; and many of the vital processes, especially those connected with consciousness, are so unlike mechanical changes in many respects that it would be scientifically unjustifiable to extend the generalization so as to include them. The possibility of reversion, for instance, applicable in a cycle of changes in inanimate matter, is here unthinkable. We could conceivably recover the gaseous and solid products of exploded gunpowder and convert them into their original condition, but the effort to imagine the reversion of the process of the growth of a man or a nation brings us face to face with an absurdity.

PHILOSOPHICAL DEDUCTIONS

The philosophical conclusions which some writers have attempted to deduce from the law affect the question of God's existence and action in the world, the possibility of Divine interference in the form of miracles, the nature of the human soul, its origin and relation to the body, and its moral freedom.

The Materialistic Mechanical Theory

This theory, which seeks to conceive the world as a vast self-moving machine, self-existing from all eternity, devoid of all freedom or purpose, perpetually going through a series of changes, each new state necessarily emerging out of the previous and passing into the subsequent state, claims to find its justification in this law of the conservation of energy. To this it may be replied in general, as in the case of the old objections to Theism based on the indestructibility of matter, that the constancy of the total quantity of energy in the world or the convertibility of different forms of material energy, does not affect the arguments from the evidences of intelligent design in the world, the existence of self-conscious human minds and the moral law. These things are realities of the first importance which every philosophical creed that pretends to be a rational system of thought must attempt to explain. But the mere fact that the sum of material energies, kinetic and potential, in any isolated system of bodies, or even in the physical universe as a whole, remains constant, if it be a fact, affords no rational account or explanation whatever of these realities.

Herbert Spencer's Doctrines

As Spencer is the best-known writer who attempts to deduce a philosophy of the universe from the doctrine of energy, we shall take him as representative of the school. Though the term *force* is confined by physicists to a narrower and well-defined meaning—the rate of change of energy per distance—Spencer identifies it with energy, and styles the conservation or constancy of energy the "Persistence of Force". To this general principle, he tells us, an ultimate analysis of all our sensible experience brings us down, and on this a rational synthesis must build up. Consequently, from this

principle his "Synthetic Philosophy" seeks to deduce all the phenomena of the evolution of the universe. With respect to its proof he assures us that "the principle is deeper than demonstration, deeper than definite cognition, deep as the very nature of the mind. Its authority transcends all other whatever, for not only is it given in the constitution of our consciousness, but it is impossible to imagine a consciousness so constituted as not to give it" (First Principles, p. 162). The value of this assertion may be gauged from the fact that Newton and all the ablest scientists down to the middle of the last century were ignorant of the principle, and that it required the labour of Mayer, Joule, Helmholtz, and others to convince the scientific world of its truth. "Evolution is an integration of matter and concomitant dissipation of motion during which matter passes from an indefinite incoherent homogeneity to a definite heterogeneity, and during which the retained motion undergoes a parallel transformation. Owing to the ultimate principles the transformation among all kinds of existence cannot be other than we see it to be. The redistribution of matter and motion must everywhere take place in those ways and produce those traits which celestial bodies, organisms, societies alike display, and it has to be shown that this universality of process results from the same necessity which determines each simplest movement around us... In other words the phenomena of evolution have to be deduced from the Persistence of 'Force'." Spencer's proof is merely a description of the changes which have taken place. He does not show, and it is impossible to show, from the mere fact that the *quantity* of energy has to remain constant, that the particular forms in which it has appeared—the Roman Empire, Shakespeare's plays, and Mr. Spencer's philosophy—*must* have appeared. The principle can only tell us that a constant quantitative relation has been preserved amid all the qualitative transformations of the physical universe, and that it will be preserved in the future. But it furnishes no reason for the order and seemingly intelligent design which abounds, and it offers not the faintest suggestion of an explanation *why* the primitive nebulae should have evolved into life, minds, art, literature, and science. To *describe* the process of building a cathedral is not to *deduce* a masterpiece of architecture from so many tons of stone and mortar. To show even that the law of gravitation prevailed during every event in the history of England would not be a deduction of the history of England from the law of gravitation. Yet this is precisely the sort of undertaking Spencer's "Synthetic Philosophy" is committed to in seeking to deduce the present world from the conservation of energy, and so to dispense with an intelligent Creator. The same holds for every other project of a similar kind. A more remarkable feature still in Spencer's handling of the present subject is that he seats this "Persistence of Force" in the Absolute itself. It really "means the persistence of some Power which transcends our knowledge and conception... the Unknown Cause of the phenomenal manifestations" of our ordinary experience. This is a complete

misconception, misrepresentation, and misuse of the principle of conservation, as known to science. Mayer and Joule never attempted to establish that some noumenal power or unknown cause behind the phenomena of the universe has a constant quantity of energy in itself. Nor is it a self-evident datum of our consciousness that, if there be such an unknown cause, its phenomenal manifestations must be always quantitatively the same throughout all past and future time". The scientific principle merely affirms constant quantitative equivalence amid the actual transmutations of certain known and knowable realities, heat, mechanical work, and the rest. This, however, would afford no help towards an explanation of the universe. Consequently, it had to be transformed into something very different to serve as the basis of the Synthetic Philosophy.

Professor Ostwald

Professor Ostwald, on the other hand, apparently opposed to mechanical theories, carries us little farther by his special doctrine of energy. Matter, the supposed vehicle or support of energy, he rejects as a useless hypothesis. Every object in the universe is merely some manifestation of energy of which the total amount retains a constant value. Energy itself is work, or what arises out of work, or is converted back into work. It is the universal substance of the process of change in the world. Mass is merely capacity for energy of movement, density is volume-energy. All we can know of the universe may be expressed in terms of energy. To accomplish this is the business of the savant. Hypotheses are to be abandoned as worthless crutches; and the aim of science is to catalogue objects as forms of energy. But surely this is merely to abandon all attempt at explanation. The mere application of a generic common name to diverse objects furnishes no real account of their qualitative differences. We do not advance knowledge by the easy process of assigning new properties to energy, any more than the ancients did by the liberal allotment of occult qualities. The simple truth is that the quantitative law of constancy supplies not the faintest clue to the fundamental problem, how and why the present infinitely varied allotropic forms of reality have come into existence.

THE LAW AND ITS CONSEQUENCES

Not only does the modern scientific doctrine of energy fail to provide a foundation for a materialistic theory of a mechanical self-existing universe, but a most important part of that doctrine—the second law of thermodynamics and its consequences—presents us with the materials for a very powerful argument against that theory. Lord Kelvin, the most eminent authority on this point, working from data established by Carnot and Clausius, has shown that "although mechanical energy is indestructible, there is a universal tendency to its dissipation, which produces throughout the system a gradual augmentation and diffusion of heat, cessation of motion and exhaustion of

the potential energy of the material Universe" (Lectures, vol. II, p. 356). The heat becoming thus diffused at an equally low temperature throughout the entire universe, all living organisms will perish of cold. In fact, the conclusion which Kelvin deduces from the modern scientific doctrine of energy is that the physical world, so far from being a self-existing machine endowed with perpetual motion, much more closely resembles a clock which has been put together and wound up at some definite date in the past and will run down to a point at which it will stop dead in the future.

CONSERVATION OF ENERGY AND THE HUMAN SOUL

According to the ordinary Catholic doctrine, philosophical and theological, the soul is a spiritual principle, distinct from matter, yet by its union with the organism constituting one substantial being, the living man. It is the source of spiritual activities, thought, and volition. It is endowed with free-will. It originates and controls bodily movements. In its origin it has been created; at death it is separated from the body and passes away from the material universe. Now if the soul or mind, though itself not a form of material energy, acts on the body, originates, checks, or modifies bodily movements, then it seems to perform work and so to interfere with the constancy of the sum of energy. Moreover, if thus being sources of energy individual souls are created and introduced into this material universe and subsequently pass out of it, then their irruptions seem to constitute a continuous infringement of the law. For clearness we will handle the subject under separate heads.

I. Does the soul or mind initiate or modify in any way movements of matter, or changes in the forms of energies of the material world? Yes, assuredly; the soul through its activities, does thus act on matter—Clifford, Huxley, Hodgson notwithstanding. The thoughts, feelings, and volitions of men have had some influence on the physical events which have constituted human history. All the movements of every material particle in the world would not have been precisely the same if there had been no sensation or thought. Art, literature, science, invention have had their origin in ideas, and they involve movements of material bodies. The mental states called feelings and desires have really influenced war and trade. If these feelings and ideas had been different, war, trade, art, literature, and invention would have been different. The movements of some portions of matter would have been other than they have been. The mind or soul, therefore, does really act on the body.

II. Is the soul, or the activities by which it acts on the body, for instance its conscious states, merely a particular form of energy interconvertible with the other material forms of heat, motion, electricity, and the rest? Or is the soul and psychic activity something distinct in *kind*, not interchangeable with any form of material energy? Yes. That mental or psychical states and activities are realities, utterly distinct in kind from material energy, is the judgment of philosophers and scientists alike. These states are

subjective phenomena perceptible only by the internal consciousness of the individual to whom they belong. Their existence depends on their being perceived. In fact, their *esse* is *percipi*. They are not transmutable into so much material energy. As Tyndall says, "the chasm between the two orders of reality is intellectually impassable." The phenomena of consciousness are not a fixed sum; though incapable of proper quantitative measurement they seem to grow extensively and intensively and to rise in quality in the world. Wundt, indeed, embodies this fact in his contrasted "principle of the increase of psychical energy", a law of qualitative value, which he attaches as the reverse or subjective side of the quantitative constancy of physical energy. The psychical increase, being indefinite, holds only under the condition that the psychical processes are continuous. Mental states or activities are thus movements of matter, whilst on the other hand they are different in nature from all material energies and unconvertible with any of the latter. The soul, mind, or whatever we call the subject or source of these immaterial states or activities, must be therefore some kind of hyperphysical agent or power.

III. This brings us to the central crux of the subject. If the soul, or mind, or any of its activities, causes or modifies the movement of any particle of matter, then it seems to have produced an effect equivalent to that of a material agent, to have performed "work", and thereby to have augmented or diminished the previously existing quantity of energy in the area within which the disturbance took place. The vital question then arises: Can this real influence of the soul, or of its activities, on matter be squared with the law of conservation? At all events, if it cannot, then so much the worse for the law. The law is a generalization from experience. If its present formulation conflicts with any established fact, we may not deny the fact; we must instead reformulate the law in more qualified terms. If our experience of radium seems to contradict the law of conservation, we are not at liberty to deny the existence of radium, or the fact that it emits heat. We must either give up the universality of the law, or devise some hypothesis by which the law and the new fact may be reconciled. Now we are certain that volition and thought do modify the working of some material agents. Consequently, we must devise some hypothesis by which this fact may be reconciled with the law, or else alter the expression of the law.

Diverse solutions, however, have been advanced. (1) Some writers simply deny the application of the law to *living* beings, or at least its rigid accuracy, if referred to the entire collection of vital and psychical phenomena. They urge with much force that the living, conscious organism, endowed with the power of self-direction, differs fundamentally in nature from a mere machine, and that it is therefore illegitimate to extend the application of the law to organisms in precisely the same sense as to inanimate matter until this extension is rigidly justified by experimental evidence. But

evidence of this quantitative accuracy is not forthcoming—nor at all likely to be. As a consequence, scientists of the first rank, such as Clerk Maxwell and Lord Kelvin, have always been careful to exclude living beings from their formulation of the law. Moreover, they remind us that, in certain respects, the animal structure resembles a very delicate mechanism in which an extremely minute force may liberate or transform a relatively large store of latent energy preserved in a very unstable condition, as, e.g., the pressure of a hair-trigger may explode a powder magazine.

(2) Again, many physicists of high rank (Clerk Maxwell, Tait, Balfour Stewart, Lodge, Poynting), who suppose, for sake of argument, the strict application of the law even to living beings, aim to harmonize the real action of the soul on the body with the law by conceiving this action as exercised merely in the form of a guiding or directing force. They generally do so, moreover, in connection with the established truth of physics that an agent may modify the direction of a force, or of a moving particle, without altering the quantity of its energy, or adding to the work done. Thus, a force acting at right angles to another force can alter the direction of the latter without affecting its intensity. The pressure of the rail on the side of the wheel guides the train-car; the tension of gravitation keeps the earth in its elliptical course round the sun without affecting the quantity of energy possessed by the moving mass. If the enormous force of gravitation were suddenly extinguished, say, by the annihilation of the sun, the earth would fly away at a tangent with the same energy as before. The axiom of physics, that a deflecting force may do no work, is undoubtedly helpful towards conceiving a reconciliation, even if it does not go the whole way to meet the difficulty.

(3) At the same time, the philosophy of Aristotle and St. Thomas provides us with a clue which assists us farther than any modern theory towards the complete solution of the problem. For this, four distinct factors must be kept in mind:—

(a) The entire *quantity* of the work done by the living being must in this view be accounted for by the material energies—mechanical, chemical, electrical, etc.—stored in the bodily organism. The soul, or mind, or vital power merely administers these, but does not increase or diminish them. The living organism is an extremely complex collection of chemical compounds stored in blood and cellular tissue. Many of these are in very unstable condition. A multitude of qualitative changes are constantly going on, but the quantity of the work done is always merely the result of the using up of the material energies of the organism. The soul, within limits, regulates the qualitative transformation of some of these material energies without altering the sum total.

(b) The action of the soul, whether through its conscious or its merely vegetative activities, must be conceived as primarily *directive*.

(c) But this is not all. The soul not only guides but *initiates* and *checks* movements. The most delicate hair-trigger, it is urged, requires *some* pressure to move it, and this

is *work* done, and so an addition to that of the machine. The trigger, too, presses with equal reactive force against the finger, and through this emits some of its energy back to another part of the universe. Consequently, any action of the soul upon the body, even if the pressure or tension be relatively small, involves, it is said, a double difficulty: the pressure communicated by the soul to the body and that returned by the body to the soul. In reply: First, what is needed in order to originate, guide, or even inhibit a bodily movement is a transformation of the *quality* of some of the energy located in certain cells of the living organism. Whilst physics, which seeks to reduce the universe to mass-points in motion, is primarily interested in quantity, qualitative differences cannot be ignored or ultimately resolved into quantitative differences. Direction is the qualitative element in simple movement, and it is as important as velocity or duration. Now, although the initiation of movement, or the origination of a change in the quality of the material energy located in particles of inanimate matter, needs a stimulus involving the expenditure of some energy, however small, it does not seem necessary, and there is no proof, that every transformation of energy in living beings requires a similar expenditure of energy to occasion the change. Be it noted also that the energy of the stimulus often bears no relation to the magnitude of the change and that in many cases it is not incorporated in the main transformation. Indeed, the explosive materials of the earth might conceivably be so collocated that the action of an infinitesimal force would suffice to blow up a continent and effect a qualitative transformation of energy vaster than the sum total of all the changes that have gone on in all living beings since the beginning of the world. This should be remembered when it is alleged that any action of the human mind on the body would constitute a serious interference with the constancy of the sum total of energy.

However, as a matter of fact, some qualitative changes of energy in the living organism which result in movement at least appear not to be excited by anything of the nature of physical impact. Psycho-physics teaches that concentration of thought on certain projected movements, and the fostering of certain feelings, are speedily followed by qualitative changes in organic fluids with vascular and neuromotor processes. States of consciousness becoming intense seem to seek expression and find an outlet in bodily movement, however this is actually realized. This brings us to the further step in the solution of the problem which the Aristotelico-Scholastic conception of the relation of body and mind, as "matter" and "form", contributes. In that theory the soul or vital principle is the "form" or determining principle of the living being. Coalescing with the material factor, it constitutes the living being. It gives to that being its specific nature. It unifies the material elements into one individual. It makes them and holds them a single living being of a certain kind. Biology reveals that the living organism is a mass of chemical compounds, many of them most complex and in very unstable

equilibrium, constantly undergoing change and tending to dissolution into simpler and more stable substances. When life ceases, the process of disintegration sets in with great rapidity. The function, then, of this active informing principle is of a unifying, conserving, restraining character, holding back, as it were, and sustaining the potential energies of the organism in their unstable condition. From this view of the relation of the soul to the material constituents of the body, it would follow that the transformation of the potential energies of the living organism is accomplished in vital processes not by anything akin to positive physical pressure, but by some sort of liberative act. It would in this case suffice simply to unloose, to "let go", to cease the act of restraining, and the unstable forms of energy released will thereby issue of themselves into other forms. In a sack of gas or liquid, for instance, the covering membrane determines the contents to a particular shape, and conserves them in a particular space. Somewhat analogously, in the Scholastic theory the soul, as "form", determines the qualitative character of the material with which it coalesces, while it conserves the living being in its specific nature. A "form" endowed with consciousness exerts a control, partly voluntary, partly involuntary, over the qualitative character of the constituents of the organism, and in this view it would occasion qualitative changes in some of these by a merely liberative act, without adding to or taking from the quantity of physical energy contained in the material constituents of the organism. The illustration is of course imperfect, like all such analogies. It is given merely to aid towards a conception of the relations of mind and body in the Aristotelean theory.

(d) Finally, in this theory, the action of the soul, or vital principle, upon the material energies of the living organism, must be conceived not as that of a foreign agent, but as of a co-principle uniting with the former to constitute one specific being. This most important factor in the solution is not sufficiently emphasized, or indeed realized, by many physicists who seek to harmonize the law with the real action of the soul. Accepting the philosophy of Descartes, many of these adopt a very exaggerated view of the separateness and mutual independence of soul and body. In that philosophy soul and body are conceived as two distinct beings merely accidentally conjoined or connected. The action of either upon the other is that of an extrinsic agent. If an angel or a demon set a barrel rolling down a hill by even a slight push, the action of such a spirit would involve the invasion of the system of the material universe by a foreign energy. But this is not the way the soul acts, according to the philosophy of St. Thomas and Aristotle. Here the soul is part of the living being, a component principle capable of liberating and guiding the transformation of energies stored up in the constituents of the material organism, which along with itself combines to form a single complete individual being. This point is a vital element in the solution, whether the basis of the difficulty be the conservation of energy, the conservation of momentum, or Newton's

third law. The directing influence is not exercised as the pressure of one material particle on another outside of it. The soul is *in* the body which it animates and in every part of it. Neither is "outside" the other.

This solution obviously provides an answer at the same time to the objections deduced from the conservation of energy against the creation of human souls or the freedom of the will. If the soul were a fount of energy distinct from and added to the material energies of the organism, and if the freedom of the will involved incursions of a foreign physical force into the midst of existing material energies, then infringement of the law of constancy would seem inevitable. But if the soul merely diverts the transformation of existing reserves of energy in the manner indicated, no violation of the law seems necessary. Similarly, the departure of such an immortal soul from the physical universe would not involve any withdrawal of material energy from the total sum. Finally, if human thought and volition can interfere in any degree with the movements of matter, and exercise a guiding influence on any of the processes of the bodily organism, a fortiori must it be possible for an Infinite Intelligence to intervene and regulate the course of events in the material universe; and if the human mind can effect its purposes without infringement of the law of conservation of energy, assuredly this ought to be still more within the powers of a Divine Mind, which, according to the Scholastic philosophy, sustains all beings in existence and continuously co-operates with their activity.

The extensive literature of the subject may roughly be distinguished as scientific and philosophic, though the two grade into each other.

Among those of mainly scientific character are:— *The Correlation and Conversion of Forces*, ed. Youmans (New York, 1865). This is a collection of the original papers of Helmholtz, Mayer, Grove, Faraday, Liebig, and Carpenter on the subject. Joule, *Scientific Papers* (2 vols., London, 1884, 1857); Helmholtz, *Popular Lectures on Scientific Subjects* (tr. London, 1873); Kelvin, *Popular Lectures and Addresses* (3 vols., New York and London, 1894), see especially II; Grove, *The Correlation of Physical Forces* (London, 1867); also A Tait, *Recent Advances in Physical Science* (London, 1876); Maxwell, ed. Rayleigh, *Theory of Heat* (London and New York, 1902); Stewart, *The Conservation of Energy in Internat. Sc. Series* (London, 1900); Tait and Stewart, *The Unseen Universe* (London, 1875); Preston, *The Theory of Heat* (London and New York, 1904), I; Fitzgerald, ed. Larmor, *Scientific Writings* (Dublin and London, 1902); Lucien PoincarÉ, *The New Physics* (tr., London, 1907), III; H. PoincarÉ, *Science and Hypothesis* (tr. London and New York, 1905); Mach, *Die Gesch. und die Würzel des Satzes von der Erhaltung der Arbeit* (Prague, 1871); Idem, *Populär-wissenschaftliche Vorlesungen* (Leipzig, 1896); Carpenter, *The Correlation of Physical and Vital Forces in Quar. Jour. of Science* (1865); Idem, *Mutual Relations of the Vital and Physical Forces in Transactions*

of the Royal Society (London, 1850); Schäfer, *Text-Book of Physiology* (Edinburgh and London, 1898), I; Mosso, *Fatigue* (New York and London, 1904), frequently referred to but contributes little to the question.

Among the philosophical works on the subject are: Couailliac, *La Liberté et la conservation de l'énergie* (Paris, 1897); Mercier, *La Pensée et la loi de la conservation de l'énergie* (Louvain, 1900); de Munnynck in *Revue Thomiste* (May, 1897), a useful article; Windle, *What is Life* (London and St. Louis, 1908); Ladd, *Philosophy of Mind* (London, and New York, 1895), ii; Maher, *Psychology* (London and New York, 1905) xxiii; Ward, *Naturalism and Agnosticism* (London, 1906); Lodge, *Life and Matter* (London, 1905); see also a very interesting controversy on the subject in *Nature* (1903), in which Sir Oliver Lodge, G. Minchin, E. W. Hobson, J. W. Sharpe, W. Peddie, J. H. Muirhead, C. T. Preece, E. P. Culverwell, and others took part; Gutberlet, *Das Gesetz von der Erhaltung der Kraft* (Münster, 1882); Spencer, *First Principle* (London and Edinburgh, 1900); Höffding, *Outlines of Psychology* (New York and London, 1896); Wundt deals with the subject in papers in *Philosophische Studien* (1898); also for brief treatment, see his *Outlines of Psychology* (tr., 3rd ed., New York, 1907); Ostwald, *Vorlesungen über Naturphilosophie* (Leipzig, 1902); see also Eisler, *Philosophisches Wörterbuch* (Berlin, 1904).

Michael Maher

Engaddi

Engaddi

(Sept. usually 'Eggadî; Hebr. 'En Gédhi, "Fountain of the Kid").

Engaddi is the name of a warm spring near the centre of the west shore of the Dead Sea, and also of a town situated in the same place. In II Par., xx, 2, it is identified with Asasonthamar (Cutting of the Pain), the city of the Amorrian, smitten by Chodorlahomor (Gen., xiv, 7) in his war against the cities of the plain. Jos., xv, 62, enumerates Engaddi among the cities of Juda in the desert Betharaba, but Ezech., xlvi, 10, shows that it was also a fisherman's town. Later on, David hides in the desert of Engaddi (I Kings, xxiv, 1, 2), and Saul seeks him "even upon the most craggy rocks, which are accessible only to wild goats" (ibid., 3). Again, it is in Engaddi that the Moabites and Ammonites gather in order to fight against Josaphat (II Par., xx, 1, 2) and to advance against Jerusalem "by the ascent named Sis" (ibid., 16). Finally, Cant., i, 13, speaks of the "vineyards of Engaddi"; the words, "I was exalted like a palm tree in Cades" ('*en aígialoís*), which occur in Ecclus., xxiv, 18, may perhaps be understood of the palm trees of Engaddi.

To these strictly Biblical data concerning Engaddi the following notes taken from profane sources may be added. Josephus (*Antiq.*, IX, i, 2) connects Engaddi with the growth of beautiful palm trees and the production of opobalsam. Pliny (*Nat. Hist.*, V, xxvii, 73) places Engaddi only second to Jerusalem as far as fertility and the cultivation of the palm tree are concerned. Eusebius and St. Jerome (*Onomastica sacra*, Göttingen, 1870, pp. 119, 254) testify that at their time there still existed on the shore of the Dead Sea a large Jewish borough called Engaddi which furnished opobalsam. The name still lives in the Arabic form 'Ain Jedi, which is now applied to a mere oasis enclosed by two streams, the Wady Sudeir and Wady el-'Areyeh, and bounded by nearly vertical walls of rock. The former vineyards and palm groves have given place to a few bushes of acacia and tamarisk, and the site of the ancient town is now occupied by a few Arabs.

Ludwig Engel

Ludwig Engel

Canonist, b. at Castle Wagrein, Austria; d. at Grillenberg, 22 April 1694. He became a Benedictine in the monastery of Molk (Melk), 10 September, 1654, and, at the order of his abbot, applied himself to the study of law at the University of Salzburg, where theological studies were committed to the care of the Benedictines. He was proclaimed doctor of civil and canon law in 1657, ordained priest in the following year, and was soon professor of canon law at this university. His profound knowledge and personal qualities procured for him the most honourable functions. In 1669 he was unanimously chosen vice-chancellor of the university. He left Salzburg in 1674 at the invitation of the Abbot of Molk, who was desirous that Engel should be known and appreciated by the religious of this monastery, in order to be chosen as his successor. The death of Engel, which occurred in the same year, prevented this plan from being realized. His principal works are: "Manuale parochorum" (Salzburg, 1661); "Forum competens" (Salzburg, 1663); "Tractatus de privilegiis et juribus monasteriorum" (Salzburg, 1664); and especially his "Collegium universi juris canonici", etc. (Salzburg, 1671-1674), a work remarkable for its conciseness, clearness, and solidity. It has placed its author in the first rank among Benedictine canonists. The fifteenth edition appeared in 1770. A compendium or summary of this work was published in 1720 by Mainardus Schwartz.

ZIELGELBAUER, *Historia litteraria ordinis Sancti Benedicti* (Augsburg, 1754), III, 401, IV, 231, 238, 593; SCHULTE, *Geschichte der Quellen und Literatur des canonischen Rechts* (Stuttgart, 1875-80), III, 150; EBERL in *Kirchenlex*, s. v.; KEIBLINGER, *Gesch. Von Melk* (1867), I, 899.

A. VAN HOVE

Abbey of Engelberg

Abbey of Engelberg

A Benedictine monastery in Switzerland, formerly in the Diocese of Constance, but now in that of Chur. It is dedicated to Our Lady of the Angels and occupies a commanding position at the head of the Nidwalden valley in the Canton Unterwalden. It was founded in 1082 by Blessed Conrad, Count of Seldenburen, the first abbot being Blessed Adelhelm, a monk of the Abbey of St. Blasien in the Black Forest, under whom the founder himself received the habit and ended his days there as a monk. Numerous and extensive rights and privileges were granted to the new monastery by various popes and emperors, amongst the earliest being Pope Callistus II, in 1124, and the Emperor Henry IV. The abbey was placed under the immediate jurisdiction of the Holy See, which condition continued until the formation of the Swiss Congregation in 1602, when Engelberg united with the other monasteries of Switzerland and became subject to a president and general chapter. In spiritual matters the abbots of Engelberg exercised quasi-episcopal jurisdiction over all their vassals and dependents, including the town which sprang up around the walls of the abbey, and also enjoyed the right of collation to all the parishes of the Canton. In temporal matters they had supreme and absolute authority over a large territory, embracing one hundred and fifteen towns and villages, which were incorporated under the abbatial rule by a Bull of Pope Gregory IX in 1236. These and other rights they enjoyed until the French Revolution, in 1798, when most of them were taken away. The prominent position in Switzerland which the abbey occupied for so many centuries was seriously threatened by the religious and political disturbances of the Reformation period, especially by the rapid spread of the Zwinglian heresy, and for a time its privileges suffered some curtailment. The troubles and vicissitudes, however, through which it passed, were happily brought to an end by the wise rule of Abbot Benedict Sigrist, in the seventeenth century, who is justly called the restorer of his monastery. Alienated possessions and rights were recovered by him and the good work he began was continued by his successors, under whom monastic discipline and learning have flourished with renewed vigour. The library, which is said to have contained over twenty thousand volumes and two hundred choice MSS., was unfortunately pillaged by the French in 1798. The abbey buildings

were almost entirely destroyed by fire in 1729 but were rebuilt in a substantial, if not very beautiful style and so remain to the present day. The monastery is now (1909) in a very flourishing state, having a community of about fifty and a school of over a hundred boys. The monks have charge of the parish of two thousand souls attached to the abbey and also minister to the needs of seven convents of nuns in the vicinity. In 1873 a colony from Engelberg founded the Abbey of New Engelberg, at Conception, Missouri, U.S.A. Abbot Leodegar Scherer, elected in 1901, was a fifty-third abbot of the monastery.

G. CYPRIAN ALSTON

Saint Engelbert of Cologne

St. Engelbert of Cologne

Archbishop of that city (1216-1225); b. at Berg, about 1185; d. near Schwelm, 7 November, 1225. His father was Engelbert, Count of Berg, his mother, Margaret, daughter of the Count of Gelderland. He studied at the cathedral school of Cologne and while still a boy was, according to an abuse of that time, made provost of the churches of St. George and St. Severin at Cologne, and of St. Mary's at Aachen. In 1199 he was elected provost of the cathedral at Cologne. He led a worldly life and in the conflict between Archbishops Adolf and Bruno sided with his cousin Adolf, and waged war for him. He was in consequence excommunicated by the pope together with his cousin and deposed in 1206. After his submission he was reinstated in 1208 and, to atone for his sin, joined the crusade against the Albigenses in 1212. On 29 Feb., 1216, the chapter of the cathedral elected him archbishop by a unanimous vote. In appearance he was tall and handsome. He possessed a penetrating mind and keen discernment, was kind and condescending and loved justice and peace, but he was also ambitious and self-willed. His archiepiscopal see had passed through sever struggles and suffered heavily, and he worked strenuously to repair the damage and to restore order. He took care of its possessions and revenues and was on that account compelled to resort to arms. He defeated the Duke of Limburg and the Count of Cleves and defended against them also the countship of Berg, which he had inherited in 1218 on the death of his brother. He restrained the impetuous citizens of Cologne, broke the stubbornness of the nobility, and erected strongholds for the defence of his territories. He did not spare even his own relations when guilty. In this way he gained the universal veneration of his people and increased the number of his vassals from year to year. Although in exterior bearing a sovereign rather than a bishop, for which he was blamed by pious persons, he did not disregard his duties to the Church, but strove to uplift the religious life of his people. The mendicant orders which had been founded shortly before his

accession, settled in Cologne during his administration, the Franciscans in 1219, the Dominicans in 1221. He was well disposed towards the monasteries and insisted on strict religious observance in them. Ecclesiastical affairs were regulated in provincial synods. Blameless in his own life, he was a friend of the clergy and a helper of the poor.

In the affairs of the empire Engelbert exerted a strong influence. Emperor Frederick II, who had taken up his residence permanently in Sicily, gave Germany to his son, Henry VII, then still a minor, and in 1221 appointed Engelbert guardian of the king and administrator of the empire. When the young king reached the age of twelve he was crowned at Aachen, 8 May, 1222, by Engelbert, who loved him as his own son and honoured him as his sovereign. He watched over the king's education and governed the empire in his name, careful above all to secure peace both within and without the realm. At the Diet of Nordhausen (24 Sept., 1223) he made an important treaty with Denmark; in the rupture between England and France he sided with England and broke off relations with France. The poet Walther von der Vogelweide extols him as "Master of sovereigns", and "True guardian of the king, thy exalted traits do honour to our emperor; chancellor whose like has never been".

Engelbert's devotion to duty, and his obedience to the pope and to the emperor were eventually the cause of his ruin. Many of the nobility feared rather than loved him, and he was obliged to surround himself with a body-guard. The greatest danger threatened him from among his relations. His cousin, count Frederick of Isenberg, the secular administrator for the nuns of Essen, had grievously oppressed that abbey. Honorius III and the emperor urged Engelbert to protect the nuns in their rights. Frederick wished to forestall the archbishop, and his wife incited him to murder. Even his two brothers, the Bishops of Münster and Osnabrück, were suspected as privy to the matter. Engelbert was warned, commended himself to the protection of Divine Providence, and amid tears made a confession of his whole life to the Bishop of Minden. On 7 Nov., 1225, as he was journeying from Soest to Schwelm to consecrate a church, he was attacked on a dark evening by Frederick and his associates in a narrow defile, was wounded in the thigh, torn from his horse and killed. His body was covered with forty-seven wounds. It was placed on a dung-cart and brought to Cologne on the fourth day. King Henry wept bitterly over the remains, put the murderer under the ban of the empire, and saw him broken on the wheel a year later at Cologne. He died contrite, having acknowledged and confessed his guilt. His associates also perished miserably within a short time. The crime, moreover, was disastrous for the German Empire, for the young king had now lost his best adviser and soon met a very sad fate, to the misfortune of his house and country.

Engelbert, by his martyrdom made amends for his human weaknesses. His body was placed in the old cathedral of Cologne, 24 Feb., 1226, by Cardinal Conrad von

Urach. The latter also declared him a martyr; a formal canonization did not take place. In 1618 Archbishop Ferdinand ordered that his feast be celebrated on 7 November and solemnly raised his remains in 1622. In the martyrology Engelbert is commemorated on 7 Nov., as a martyr. A convent for nuns was erected at the place of his death. By order of Engelbert's successor, Henry I, Cæsarius of Heisterbach, who possessed good information and a ready pen, wrote in 1226 the life of the saint in two books and added a third about his miracles (See Surius, "Vitæ Sanctorum", 7 Nov.)

BÖHMER, *Fontes rerum Germanicarum* (Stuttgart, 1854), II, in which the third book of the Vitæ is omitted; FICKER, *Engelbert d. hl. Erzbischof* (Cologne, 1853); WINKELMANN, *Kaiser Friedr. II. In Jahrbücher d. deutsch. Gesch.* (Leipzig, 1889), I.

GABRIEL MEIER

Engelbert

Engelbert

Abbot of the Benedictine monastery of Admont in Styria, b. of noble parents at Volkersdorf in Styria, c. 1250; d. 12 May, 1331. He entered the monastery of Admont about 1267. Four years later he was sent to Prague to study grammar and logic. After devoting himself for two years to these studies he spent nine years at the University of Padua studying philosophy and theology. In 1297 he was elected Abbot of Admont, and after ruling thirty years he resigned this dignity when he was almost eighty years old, in order to spend the remainder of his life in prayer and study. Engelbert was one of the most learned men of his times, and there was scarcely any branch of knowledge to which his versatile pen did not contribute its share. His literary productions include works on moral and dogmatic theology, philosophy, history, political science, Holy Scripture, the natural sciences, pedagogy, and music. The Benedictine, Bernard Pez, mentions thirty-eight works, many of which he published partly in his "Thesaurus anecdotorum novissimus" (Augsburg, 1721), partly in his "Bibliotheca ascetica antiquo-nova" (Ratisbon, 1723-5). The best known of Engelbert's works is his historicopolitical treatise "De ortu, progressu et fine Romani imperii", which was written during the reign of Henry VII (1308-1313). It puts forth the following political principles: a ruler must be a learned man; his sole aim must be the welfare of his subjects; an unjust ruler may be justly deposed; emperor and pope are, each in his sphere, independent rulers; the Holy Roman Empire is a Christian continuation of the pagan empire of ancient Rome; there should be only one supreme temporal ruler, the emperor, to whom all other temporal rulers should be subject. He bewails the gradual decline of both imperial and papal authority, prophesies the early coming of Antichrist and with it the ruin

of the Holy Roman Empire and a wholesale desertion of the Holy See. The work was published repeatedly, first according to the revision of Cluten (Offenbach, 1610); finally it was re-edited by Schott and printed in the Supplement to the "Bibliotheca Patrum" (Cologne, 1622) and in "Maxima Bibliotheca veterum Patrum" (Lyons, 1677). Following are the most important of the other works of Engelbert which have been printed: "De gratus et virtutibus beatae et gloriosae semper V. Marie" (Pez, "Thesaurus", I, pt. 1, 503-762); "De libero arbitrio" (ib., IV, pt. 2, 121-147); "De causâ longaevitatis hominum ante diluvium" (ib., I, pt. 1, 437-502); "De providentiâ Dei" (Pez, Bibliotheca ascetica, VI, 51-150); "De statu defunctorum" (ib., IX, 113-195); "Speculum virtutis pro Alberto et Ottone Austriae ducibus" (ib., III, entire); "Super passionem secundum Matthaeum" (ib., VII, 67-112); "De regimine principum", a work on political science, containing sound suggestions on education in general, edited by Hufnagel (Ratisbon, 1725); "De summo bono hominis in hâc vitâ", "Dialogus concupiscentiae et rationis", "Utrum sapienti competat ducere uxorem" (the last three valuable works on ethics were edited by John Conrad Pez in "Opuscula philosophica celeberrimi Engelberti", Ratisbon, 1725); "De musica tractatus", a very interesting treatise on music, illustrating the great difficulties with which teachers of music were beset in consequence of the complicated system of the hexachord with its solmization and mutation. The treatise was inserted by Gerbert in his "Scriptores ecclesiastici de musicâ sacrâ" (St. Blasien, 1784, anastatic reprint, Graz, 1905), II, 287 sqq.

MICHAEL OTT

Cornelis Engelbrechtsen

Cornelis Engelbrechtsen

(Also called ENGELBERTS and ENGELBRECHT, and now more usually spelt ENGELBRECHTSZ).

Dutch painter, b. at Leyden, 1468; d. there 1533; is believed to have been identical with a certain Cornelis de Hollandere who was a member of the Guild of St. Luke at Antwerp in 1492. He is said to have been the first artist in Holland who painted in oils, and to have been a profound student of the works of Jan Van Eyck. His principal paintings were executed in Leyden and for a long time preserved in that city, which still possesses in its picture gallery his large "Crucifixion", with wings representing the Sacrifice of Abraham and the Brazen Serpent, and a "Pietà" containing six scenes from the Life of Christ. There is an important "Crucifixion" by him at Amsterdam, removed from the convent of St. Bridget at Utrecht, a "Madonna and Child" in the London National Gallery, and a "Crucifixion" in the Munich Gallery, and there are two double pictures at Antwerp. However, most of his religious works were destroyed in Holland

during the iconoclastic movement in the sixteenth century. He has been declared to have been the master of Lucas Van Leyden, but nothing very definite is known on this matter. Many of his pictures are signed with a curious mark resembling a figure 4 supported upon two swords, and others with a sort of star. He had two sons: Cornelis, known as Kunst (1493-1544), and Luke, known as Kok, born 1495. The latter came over to England during the reign of Henry VIII, and a picture signed by him is in Lord De L'Isle's collection at Penshurst.

GEORGE C. WILLIAMSON

England (Before the Reformation)

England (Before the Reformation)

This term *England* is here restricted to one constituent, the largest and most populous, of the United Kingdom of Great Britain and Ireland.

Thus understood, England (taken at the same time as including the Principality of Wales) is all that part of the Island of Great Britain which lies south of the Solway Firth, the River Liddell, the Cheviot Hills, and the River Tweed; its area is 57,668 square miles, i.e. 10,048 square miles greater than that of the State of New York, but 11,067 square miles less than that of Missouri; its total resident population in 1901 was 23,386,593, or 78.2 percent of the population of the United Kingdom.

For the history of England down to the Norman Conquest the reader may be referred to the article Anglo-saxon Church; its later history is treated in the article England Since the Reformation. We begin our present account of pre-Reformation England with the new order of things created by William the Conqueror.

Although the picture of the degradation of the English Church in the first half of the eleventh century which has been drawn by some authorities (notably by H. Boehmer, "Kirche und Staat", 79) is very exaggerated, it is nevertheless certain that even King Edward the Confessor, with all his saintliness, had not been able to repair the damage caused partly by the anarchy of the last ten years of Danish rule, but not less surely, if remotely, by the disorders which for many generations past had existed at the centre of Christendom. Of the prevalence of simoniacal practices, of a scandalous and widespread neglect of the canons enjoining clerical celibacy, and of a general subordination of the ecclesiastical order to secular influences, there is no room for doubt. These evils were at that time almost universal. In 1065, the year of St. Edward's death, things were no better in England than on the Continent of Europe. Probably they were rather worse. But the forces which were to purify and renovate the Church were already at work.

The monastic reform begun in the tenth century at Cluny had spread to many religious houses of France and among other places had been cordially taken up in the Norman Abbey of Fécamp, and later at Bec. On the other hand this same ascetical discipline had done much to form the character both of Brun, Bishop of Toul, who in 1049 became pope, and is known as St. Leo IX, and of Hildebrand his chief counsellor, afterwards still more famous as St. Gregory VII. Under the auspices of these two popes a new era dawned for the Church. Effective action was at last taken to restrain clerical incontinence and avarice, while a great struggle began to rescue the bishops from the imminent danger of becoming mere feudatories to the emperor and other secular princes.

William the Conqueror had established intimate relations with the Holy See. He came to England armed with the direct authorization of a papal Bull, and his expedition, in the eyes of many earnest men, and probably even his own, was identified with the cause of ecclesiastical reform. The behaviour of Normans and Saxons on the night preceding the battle of Hastings, when the former prayed and prepared for Communion while the latter caroused, was in a measure significant of the spirit of the two parties. Taken as a whole, the Conqueror's dealings with the English Church were worthy of a great mission. All the best elements in the Saxon hierarchy he retained and supported. St. Wulstan was confirmed in the possession of the See of Worcester. Leofric of Exeter and Siward of Rochester, both Englishmen, as well as some half-dozen prelates of foreign birth who had been appointed in Edward's reign, were not interfered with. On the other hand, Stigand, the intriguing Archbishop of Canterbury, and one or two other bishops, probably his supporters, were deposed. But in this there was no indecent haste. It was done at the great Council of Winchester (Easter, 1070), at which three papal legates were present. Shortly afterwards the vacant sees were filled up, and, in procuring Lanfranc for Canterbury and Thomas of Bayeux for York, William gave to his new kingdom the very best prelates that were then available.

The results were undoubtedly beneficial to the Church. The king himself directly enjoined the separation of the civil and ecclesiastical courts, for these jurisdictions in the old shiremoots and hundredmoots had hardly been distinguished. It was probably partly as a consequence of this division that ecclesiastical synods now began to be held regularly by Lanfranc, with no small profit to discipline and piety. Strong legislation was adopted (e.g. at Winchester in 1176) to secure celibacy among the clergy, though not without some temporary mitigation for the old rural priests, a mitigation which proves perhaps better than anything else that in the existing generation a sudden and complete reform seemed hopeless. Further, several episcopal sees were removed from what were then mere villages to more populous centres. Thus bishops were transferred from Sherborne to Salisbury, from Selsey to Chichester, from Lichfield to Chester, and

not many years after from Dorchester to Lincoln, and from Thetford to Norwich. These and the like changes, and, not perhaps least of all, the drafting of Lanfranc's new constitutions for the Christ Church monks, were all significant of the improvement introduced by the new ecclesiastical regime.

With regard to Rome, the Conqueror seems never to have been wanting in respect for the Holy See, and nothing like a breach with the pope ever took place during his lifetime. The two archbishops went to Rome in 1071 to receive their pallia, and when (c. 1078) a demand was made through the papal legate, Hubert, for the payment of arrears of Peter's-pence, the claim was admitted, and the contribution was duly sent.

Gregory, however, seems at the same time to have called upon the King of England to do homage for his kingdom, regarding the payment of Romescot as an acknowledgment of vassalage, as in some cases, e.g. that of the Normans in Apulia (See Jensen, "Der englische Peterspfennig", p. 37), it undoubtedly was. But on this point William's reply was clear. "One claim [Peter's-pence] I admit," he wrote, "the other I do not admit. To do fealty I have not been willing in the past, nor am I willing now, inasmuch as I have never promised it, nor do I discover that my predecessors ever did it to your predecessors." It is plain that all this had nothing whatever to do with the recognition of the pope's spiritual supremacy, and in fact the king says in the concluding sentence of the letter: "Pray for us and for the good estate of our realm, for we have loved your predecessors and desire to love you sincerely and to hear you obediently before all" (et vos præ omnibus sincere diligere et obedienter audire desideramus).

Possibly the incident led to some slight coolness, reflected, for example, in the rather negative attitude of Lanfranc towards the antipope Wibert at a later date (see Liebermann in "Eng. Hist. Rev.", 1901, p. 328), but it is also likely that William and his archbishop were only careful not to get entangled in the strife between Gregory and the Emperor Henry IV. In any case, the more strictly ecclesiastical policy of the great pontiff was cordially furthered by them, so that St. Gregory, writing to Hugh, Bishop of Die, remarked that although the King of England does not bear himself in all things as religiously as might be wished, still, inasmuch as he does not destroy or sell the churches, rules peaceably and justly, refuses to enter into alliance with the enemies of the Cross of Christ (the partisans of Henry IV), and has compelled the priests to give up their wives and laymen to pay arrears of tithe, he has proved himself worthy of special consideration. As has been recently pointed out by an impartial authority (Davis, "England under Normans and Angevins", p. 54) "Lanfranc's correspondence and career prove that he and his master conceded important powers to the Pope not only in matters of conscience and faith but also in administrative questions. They admitted for example the necessity of obtaining the pallium for an archbishop and the Pope's power to invalidate episcopal elections. They were scrupulous in obtaining the

Pope's consent when the deposition or resignation of a bishop was in question and they submitted the time-honoured quarrel of York and Canterbury to his decision."

No doubt a strong centralized government was then specially needed in Church as well as State, and we need not too readily condemn Lanfranc as guilty of personal ambition because he insisted on the primacy of his own see and exacted a profession of obedience from the Archbishop of York. The recent attempt that has been made to fasten a charge of forgery upon Lanfranc in connection with this incident (see Boehmer, "Fälschungen Erzbischof Lanfranks") breaks down at the point where the personal responsibility of the great archbishop is involved. Undoubtedly many of the documents upon which Canterbury's claims to supremacy was based were forgeries, and forgeries of that precise period, but there is no proof that Lanfranc was the forger or that he acted otherwise than in good faith (see Walter in "Götting gelehrte Anzeigen", 1905, 582; and Saltet in "Revue des Sciences Ecclés.", 1907, p. 423).

Well was it for England that William and Lanfranc, without any violent overthrow of the existing order of things, either in Church or State, had nevertheless introduced systematic reforms and had provided the country with good bishops. A struggle was now at hand which ecclesiastically speaking was probably more momentous than any other event in history down to the time of the Reformation. The struggle is known as that about Investitures, and we may note that it had already been going on in Central Europe for some years before the question, through the action of William II and Henry I, sons of the Conqueror, reached an acute phase in England. Down to the eleventh century it may be said that, though the election of bishops always supposed the free choice, or at least the acceptance, of their flocks, the procedure was very variable. In these earlier ages bishops were normally chosen by an assembly of the clergy and people, the neighbouring bishops and the king or civil magnates exercising more or less of influence in the selection of a suitable candidate (see Imbart de la Tour, "Les élections épiscopales"). But from the seventh and eighth century onwards it became increasingly common for the local Churches to find themselves in some measure of bondage. From the ancient principle of "no land without a lord" it was easy to pass to that of "no church without a lord", and whether the bishopric was situated upon the royal domain or within the sphere of influence of one of the great feudatories, men came to regard each episcopal see as a mere fief which the lord was free to bestow upon whom he would, and for which he duly exacted homage. This development was no doubt much helped by the fact that as the parochial system grew up, it was the oratory of the local magnate which in rural districts became the parish church, and it was his private chaplain who was transformed into the parish priest. Thus the great landowner became the *patronus ecclesiæ*, claiming the right to present for ordination any cleric of his own choice. Now the relation of a sovereign towards his bishops came

in time to be regarded as precisely analogous. The king was held to be the lord of the lands from which the bishop derived his revenues. Instead of the possession of these lands being regarded as the apanage of the spiritual office, the acceptance of episcopal consecration was looked upon as the special condition or service upon which these lands were held from the king. Thus the temporal sovereign claimed to make the bishop, and, to show that he did so, he "invested" the new spiritual vassal with his fief by presenting to him the episcopal ring and crosier. The episcopal consecration was a subordinate matter which the king's nominee was left to arrange for himself with his metropolitan and the neighbouring bishops. Now, as long as the supreme authority was wielded by religiously-minded men, princes who took thought for the spiritual well being of their kingdoms, no great harm necessarily resulted from this perversion of right order. But when, as too often happened during the iron age, the monarch was godless and unprincipled, he either kept the see vacant, in order to enjoy the revenues, or else sold the office to the highest bidder. It must be obvious that such a system, if allowed to develop unchecked could only lead in the course of a few generations to the utter demoralization of the Church. When the bishops, the shepherds of the flock, were themselves licentious and corrupt, it would have been a moral miracle if the rank and file of the clergy had not degenerated in an equal or even greater degree. Upon the bishop depended ultimately the admission of candidates to ordination and he also was ultimately responsible for their education and for the maintenance of ecclesiastical discipline.

Now the fact cannot be disputed that in the tenth century a very terrible laxity had come to prevail almost everywhere throughout Western Christendom. The great monastic reform of Cluny and many individual saints like Ulric, at Augsburg, and Dunstan and Æthelwold, in England, did much to stem the tide, but the times were very evil. Worldly minded men, often morally corrupt, were promoted by sovereigns and territorial magnates to some of the most important sees of the Church, many of them obtaining that promotion by the payment of money or by simoniacal compacts. The lower clergy as a rule were grossly ignorant and in many cases unchaste, but under such bishops they enjoyed almost complete immunity from punishment. No doubt the corruptions of the age have been exaggerated by writers of the stamp of H. C. Lea, Michelet, and Gregorovius, but nothing could more conclusively prove the gravity of the evil than the fact that for two centuries the Church had to struggle with the abuse by which benefices threatened to become hereditary, descending from the priest to his children. Happily help was at hand. Many individual reformers strove to introduce higher religious ideals and met with partial success, but it was the merit of the great pontiff, St. Gregory VII, to go straight to the root of the evil. It was useless to fulminate decrees against the concubinage of priests and against their neglect of their spiritual

functions if the great feudal lords could still nominate unworthy bishops, bestowing investiture by ring and crosier and enforcing their consecration at the hands of other bishops as unworthy as the candidates. Gregory saw that no permanent good could be effected until this system of lay investitures was utterly overthrown. Those who have accused Gregory of insufferable arrogance, of a desire to exalt without measure the spiritual authority of the Church and to humble all secular rulers to the dust, make little allowance for the gravity of the evils he was combating and for the desperate nature of the struggle. When feudalism seemed on the point of so completely swallowing up all ecclesiastical organization, it was pardonable that St. Gregory should have believed that the remedy lay not in any compromise or balance of power, but in the unqualified acceptance of the principle that the Church was above the State. If, on the one hand, he considered that it was the function of the Vicar of Christ to direct and, if need be, chastise the princes of the earth, it is also clear from the history of his life that he designed to use that power impartially and well.

In England the struggle over investitures developed somewhat later than on the Continent. If, in the matter of the election of bishops, Gregory VII forbore to press the claims of the Church to extremities under such a ruler as William the Conqueror, this was surely not to be attributed to pusillanimity. The pope's forbearance was due quite as much to the fact that he was satisfied that the king made good appointments, as to the circumstance that his own energies were for the time absorbed in the greater struggle with the emperor. Even under the rule of William Rufus no great abuses declared themselves before the death of Lanfranc (1089). It is very noteworthy that William of St. Calais, Bishop of Durham, in 1088, having been accused of treason before the King's Court, questioned the competence of the Court and appealed to the pope. Practically speaking, his appeal was allowed, and he was granted a safe-conduct out of the kingdom, though only after the surrender of his fief. This was virtually an admission that a bishop held only the temporalities of his see from the crown, and that as a spiritual person he was free to challenge the decision of any national tribunal. Such an incident can with difficulty be reconciled with those theories of the independence of the English Church which commonly prevail among modern Anglicans.

With the death of Lanfranc, however, all that was evil in the nature of William Rufus seems to have come to the surface. Under the influence of the man who was his evil genius, Ralph Flambard, a cleric whom he eventually made Bishop of Durham, the king during nearly the whole of his reign set himself to undo the good effected by his father and Lanfranc. In the words of the chronicler, "God's Church was brought very low". Whenever a bishop or abbot died, one of the king's clerks was sent to take possession of all the rents for the use of the crown, leaving but a bare pittance to the monks or canons. The prelaties whose revenues were thus confiscated were long kept

vacant, and no new appointment was made except upon payment of a large sum of money by way of a "relief". For the credit of one or two really good men like Ralph Luffa and Herbert Losinga, who during these bad times became respectively Bishops of Chichester and Norwich (the latter paying a thousand pounds for his nomination), it should be pointed out that a certain pretext of feudal custom lent a decent veil to the simony involved in these transactions. The obsolete doctrine that a fief was a precarious estate, and granted only for a lifetime, was revived by Flambard, and, as a corollary, large sums of money, as "reliefs" (from *relevare*, "to take up again"), were demanded, when any fief, lay or spiritual, was conceded to a new possessor. But bishops and abbots were made to pay proportionately more than earls or barons, and a relief was exacted in some cases even from all the subordinate tenants of episcopal sees the moment the estate came into the king's hands (see Round, "Feudal England", p. 309). All this only illustrates further the evils inherent in the system of regarding a spiritual office as a fief held from the king. In the case of the metropolitan See of Canterbury, no successor was appointed until four years after Lanfranc's death. Even then William Rufus only yielded to the solicitations made to him because he had fallen grievously ill and was lying at the point of death. Most providentially, this illness coincided with the presence in England of Anselm, Abbot of Bec, whom all men regarded as marked out for the primacy alike by his learning and his holiness of life. The king summoned Anselm to his bedside, and the latter extorted a solemn promise of radical reform in the administration of both Church and State. Shortly afterwards, in spite of all his protests, Anselm himself was invested, literally by force, with the insignia of the primacy, and he was consecrated archbishop before the end of the year. But though the saint's firmness secured the restoration of all the possessions which belonged to the See of Canterbury at the time of Lanfranc's death, the king soon returned to his evil ways. In particular he still clung to the theory that by accepting investiture Anselm had become his liege man (*ligeus homo*), liable to all the incidents of vassalage. When an aid was demanded for the war in Normandy, Anselm at first refused. Then, not wantonly to provoke a conflict, he offered 500 marks; but when this sum was rejected as insufficient, he distributed the money to the poor. Early in 1095 the archbishop asked permission to go to the pope to receive the pallium. Rufus objected that, while the antipope Clement III was still disputing the title, it was for him and his Great Council to decide which pope should be recognized. When asked to recognize the jurisdiction of this council, Anselm replied: "In the things that are God's I will tender obedience to the Vicar of St. Peter; in things touching the earthly dignity of my lord the King I will to the best of my ability give him faithful counsel and help." The other bishops seem to have been cowed by Rufus and to have supported the king's claim to decide which of the rival popes he should recognize. But Anselm refused in any way

to surrender the allegiance which, when Abbot of Bec, he had sworn to Urban. He recognized no right of king or bishops to interfere, and he declared he would give his answer "as he ought and where he ought". These words, writes Dean Stephens (*History of The English Church*, II, 99), were understood to mean, that, as Archbishop of Canterbury, Anselm "refused to be judged by any one save the pope himself, a doctrine which it seems no one was prepared to deny". Through the saint's firmness Urban was recognized, and the pallium brought from him to England; but a little later Anselm again asked leave to go to Rome, and when it was refused he declared in the plainest terms that he must go without leave, for God was to be obeyed rather than man. Pope Urban received him with all possible respect, and publicly spoke of him as "alterius orbis papa", a phrase much quoted by Anglicans, as though it implied the recognition in the Archbishop of Canterbury of a jurisdiction independent of Rome.

But the whole lesson of Anselm's life centred in his belief that it lay with the pope to decide what course was to be followed in matters affecting the Church even at the risk of the king's displeasure, and despite any pretended national customs. Neither does it appear that the rest of the English bishops maintained the contrary as a matter of principle, though they considered that Anselm's attitude was needlessly provocative and uncompromising. There are not wanting signs that Eadmer's desire to exalt his own beloved master has led him to be somewhat less than just to Anselm's suffragans and to the Holy See itself. The archbishop remained in exile until after the death of Rufus, when Henry, who succeeded, made generous promises of freedom to the Church, explicitly renouncing any sort of payment or relief for the appointment of new bishops or abbots, and promising that church revenues should not be seized during vacancies. He recalled Anselm to England, but came into conflict with him almost immediately over the same old question of investitures. At the Councils of Bari (1098) and Rome (1099), at which the saint had personally assisted, anathema had been pronounced on those bishops or abbots who received investiture at the hands of laymen. Anselm accordingly refused either to do homage himself for the restitution of the possessions of the archbishopric or to consecrate other bishops who had received ring and crosier from the king. Eventually, by the consent of both parties, the matter was referred to Rome. In three different embassies that were sent, the pope upheld Anselm's view, despite the efforts made by Henry's envoys to extort some concession. Then Anselm himself went to Rome (1103) while a fresh set of royal emissaries were dispatched to work against him at the Curia. Nothing was settled, for Henry still held out, and Anselm accordingly remained abroad. But at last, when Anselm was on the point of launching an excommunication against the king, the latter, being in political straits, accepted such modified terms as his envoys could obtain from the Holy See. Anselm was allowed to consecrate those who had previously received investiture, but the king at a great

council (1107) renounced for the future the claim to invest bishop or abbot by ring and crosier. On the other hand it was tacitly admitted that bishops might do homage to the king for the temporal possessions of their sees. This settlement of the investiture question in England was fifteen years earlier than that arrived at on very similar lines between Pope Callistus II and the Emperor Henry V. The importance of the struggle can hardly be exaggerated, for, as already pointed out, the whole ecclesiastical order was in danger of being reduced to the status of vassals sharing all the vices of secular princes. Moreover this resolute stand made by St. Anselm and the popes was not without its political importance. The clergy as a body had now become sufficiently independent to take a leading part in that resistance to despotism to which the people during the next two centuries were to owe their most fundamental liberties. During all this time England as a whole was in no wise in sympathy with the monarch in his quarrel with the pope. As Dr. Gairdner writes of a later period, "It was a contest not of the English people, but of the King and his government with Rome. . . . As regards national feeling, the people evidently regarded the cause of the Church as the cause of liberty" (*Lollards and the Reformation*, I, 6). Nothing contributed so much to win the confidence of the nation as the independence shown by the Church in such struggles as those that are associated with the names of St. Anselm, St. Thomas Becket, and Cardinal Stephen Langton.

St. Anselm died peacefully at Canterbury in 1109, but Henry I lived on until 1135. During the remainder of Henry's reign and throughout the anarchy which prevailed under the rule of Stephen (1135-1154), good bishops were for the most part elected. The chapters were ostensibly left free in their choice, though they no doubt responded in some measure to the known preferences of the king. In any case simoniacal compacts are no longer heard of, while the Holy See had generally much to say to the final acceptance of the archbishops and of the more important prelates. A certain impatience of dictation from Rome, shown, for example, in occasional unwillingness to receive a legate or to allow appeals to the pope, may be noted at this as at other periods, but the principle of papal authority was never disputed. For example, the pallium, "taken from the body of Blessed Peter", a symbol of archiepiscopal jurisdiction which still appears in the arms of the English Sees of Canterbury and York, was personally fetched from Rome or at least petitioned for by every archbishop, as it had been in the Anglo-Saxon Church from the very beginning. In cases when the pall was brought to England instead of being conferred at the papal court, archbishops like St. Anselm and Ralph d'Escures went to meet it bare foot. To legates of the Holy See, notwithstanding the fact that their presence was not always desired, extreme deference was shown. Even a mere priest like Cardinal John of Crema, when he came to the country as papal legate, took precedence of the two archbishops in the Council of Westminster (1125). More over,

when protests were made against the sending of legates, it was not so much that the presence of a papal representative in England was resented, as because men believed that such legatine powers, by old tradition, ought to be conferred on the Archbishop of Canterbury, as had been done, for example, in the case of Tatwine, Plegmund, and Dunstan. As Eadmer reports (*Historia Novorum*, p. 58), "Inauditum scilicet in Britannia . . . , quemlibet hominem supra se vices apostolicas gerere nisi solum archiepiscopum Cantuariæ" (It was surely an unheard-of thing in Britain . . . that any man should bear the Apostolic delegation over him except only the Archbishop of Canterbury). In the spirit of this protest Archbishop William de Corbeil almost immediately after Crema's departure eagerly sought the office of legate for himself, and from that time, though Henry, Bishop of Winchester, was made legate by Innocent II in 1129, the Archbishop of Canterbury was usually constituted *legatus natus* (native, or ordinary, legate), a term used in contradistinction to the *legatus a latere* dispatched on extraordinary occasions "from the side" of the sovereign pontiff in Rome. But in any case the significance of the ordinary legatine appointment, first associated with the person of William de Corbeil (d. 1136), is unmistakable. It was, as Dean Stephens truly observes, "an acknowledgment of the supreme authority of the Pope. The primate shone with a reflected glory, his preeminence was not inherent but derivative" (*Hist. of the Eng. Church*, II, 142).

Evil as were the times during the first half of the twelfth century the English Church was by no means lacking in vivifying influences. This was the period of the chief development in England of the Cluniac Order (see CLUNY, CONGREGATION OF), a great Benedictine reform already alluded to, of which the first English house, that of Lewes, had been established by William de Warrenne and Gundrada his wife c. 1077. But the priory of Lewes later on became the mother of several other Cluniac priories, of which the best known are those of Wenlock, Thetford, Bermondsey, and Pontefract. Still more intimately associated with England was the Cistercian Order, another Benedictine reform of which the virtual founder was a Somersetshire man, St. Stephen Harding. His fame has been eclipsed by the glory of St. Bernard, the last of the Fathers and the founder of the Abbey of Clairvaux, but it was Stephen who received St. Bernard and his comrades at Citeaux in 1113, and who gave them the white habit prescribed by the Cistercian rule. The first abbey of the order in England was that of Waverley in Surrey (1128), which itself became the mother of several other foundations. But Waverley was eclipsed by the Yorkshire Abbey of Rivaulx established (c. 1133) by monks sent directly from Clairvaux by St. Bernard. Among the earliest recruits of Rivaulx was St. Ælred, perhaps the most eloquent of pre-Reformation English preachers. The foundations of the white monks thrived and multiplied exceedingly. By the year 1152 there were fifty Cistercian houses in England (Cooke in "Eng. Hist. Rev.",

Oct., 1893), of which the best known are Fountains, Tintern, and Meaux. Unfortunately, this rapid development seems to have been followed before long by some relaxation of primitive austerity and fervour, but the movement while it lasted must have contributed greatly to the diffusion of more spiritual ideals and to the correction of the manifold moral evils of the times. The Carthusian rule, the most austere of all, was not introduced into England until somewhat later -- the first house, that of Witham in Somerset, was founded by Henry II in 1180, one of the indirect results of the martyrdom of St. Thomas. Probably the extreme rigour of the life prevented the Carthusian foundations from ever becoming numerous. But the Charterhouse at Witham gave to England one of her greatest and holiest bishops, St. Hugh of Lincoln (d. 1200), and the Charterhouse of London at a later date played a noble part in the resistance it offered to the first stages of Henry VIII's revolt from Rome.

The houses of the Austin Canons, or "Black Canons", were more numerous and of earlier date than those of the Carthusians. Their first foundation was that of Colchester, in 1105, and they possessed two great establishments in London: St. Bartholomew's Smithfield, and St. Saviour's Southwark. At Carlisle they formed the cathedral chapter, the only exception to the rule that all the cathedrals which were not served by Benedictines were in the hands of secular canons. And here we may conveniently notice the fact that, owing, probably, to the initial impulse of St. Dunstan and the monastic sympathies of Lanfranc, who virtually reorganized the English Church after the Conquest, England stood almost alone among the nations of Europe in the number of her cathedrals that were served by monks. Canterbury, Durham, Winchester, Rochester, Worcester, Norwich, Ely, Coventry, and Bath all had Benedictine chapters. If this arrangement led to some gain in point of piety, there was also a proportionate disadvantage in the additional friction that was likely to result when it came to the election by religious of successors to the see. The Benedictines, the "Black Monks", were of course always the most numerous monastic body in England, and, while they had been firmly established in the country from the very beginning, there was at all times a pretty steady increase in the number of abbeys and cells which belonged to them. Bound specially by their rule to show hospitality to strangers, and being for the most part good farmers and good landlords, they formed a great element of stability and peace throughout the country, helping to bind district with district through their relations with their dependent cells and with one another. They were also the great centres of learning, more particularly in the collection and multiplication of books, and they were not only patrons of art but they provided in many cases the nearest approach to schools for architecture, painting, sculpture, embroidery, and other useful works. If their revenues were vast, so, it must be also remembered, were their charities. Neither would it be easy to imagine a more worthy object upon which to expend the

superfluous wealth of the country than in the erecting of those magnificent abbeys and churches which the monastic builders left to posterity. Speaking of the religious orders generally, it may be said that no more misplaced charge was ever made than that which describes their members as idle and useless. Of all the sections of the community they almost alone in that day were profitably busy. The industrious man-at-arms, the industrious lawyer, the industrious forester, huntsman, or *jongleur* were too often only a scourge to the land in which they lived. For this reason we conceive that a quite unnecessary outcry has been raised by a number of Anglican writers against a practice which undoubtedly became very prevalent in the twelfth century, namely that of making over -- technically called "impropriating" -- to religious houses the tithes or other sources of revenue of the parish churches. By this arrangement the monastery so benefited received nearly all the funds properly belonging to the parish, but supplied for the religious needs of the parishioners, either by deputing one of the monks to act as parish priest or by paying a small stipend to some secular vicar. No doubt this practice was open to abuse, and various synodal decrees were passed to keep it under control accordingly. Thus as early as 1102 the Council of Westminster laid down the principle that monasteries were not to impropriate churches without the consent of the bishop, and required that churches should not be stripped so bare of revenue as to reduce the priests who served them to penury. Later synodal legislation insisted that "perpetual vicars" should be appointed (i.e. priests who would not be liable to removal, and who would consequently have a permanent interest in their cure), and that "competent stipends", for which a minimum amount was determined, should be paid them for their services. Where, however, these and similar precautions were observed it is certain that many of the wisest and holiest of the English prelates regarded the impropriations of churches to religious communities with no disfavour. St. Hugh of Lincoln made many such grants (see Thurston, "Life of St. Hugh", p. 463), and it seems indisputable that in the then condition of the secular clergy, who were far, as yet, from having recovered completely from the state of ignorance and demoralization into which they had fallen in the preceding century, the churches for which some monastic community made themselves responsible were likely to be spiritually better cared for than those livings to which the crown or some secular magnate presented at will. Strange to say, it is precisely those writers who declaim against the degradation of the medieval clergy, and against their general neglect of the canons enjoining celibacy, who also are loudest in denunciation of the scandal that monks should enjoy the revenues intended for the parish priests. -- Can it be supposed that the possession of larger incomes would have tended to make the secular clergy more zealous or more continent? -- That there were two sides to the question has, however, been recognized by more thoughtful Anglicans and one such writer, for example, remarks with point: "The

secular priests living in solitude on a remote country benefice had more temptations to sink into ignorance and indolence, if not vice, than the member of a brotherhood, who was responsible to it for the discharge of his trust, and might from time to time be refreshed by a visit to the monastic house, or by visitors from it." (Stephens, *Hist. Eng. Church*, II, 272.)

With the accession of Henry II, in 1154, England, after years of strife, once more passed into the hands of a strong and capable ruler. Without being a whit less selfish or more patriotic than other princes of that age, Henry had the sense to see that good government meant stable government. His legal reforms and the new machinery of justice which he brought into being are of the highest possible importance to the jurist and to the student of constitutional history, but they do not specially concern us here. Henry at the beginning of his reign seems to have been well viewed in Rome, and believing, as the present writer does, that the Bull "Laudabiliter" is unquestionably genuine (see ADRIAN IV, and cf. "The Month", May and June, 1906), the religious mission entrusted to the king, no doubt upon his own representations, in the proposed conquest of Ireland, bears a close resemblance to the pretext advanced for William the Conqueror's invasion of Great Britain. In both cases, also, the Roman pontiff seems to have claimed dominion, granting the land to the invader as a fief upon payment of a certain tribute. The fact, that, according to the Bull "Laudabiliter", Henry himself had admitted (*quod tua etiam nobilitas recognoscit*) that "Ireland and all other islands upon which Christ, the Sun of Justice, has shone belong to the prerogative of St. Peter and the Holy Roman Church", deserves to be borne in mind in connection with King John's formal surrender of his kingdom to the Holy See at a later date.

But what specially interests us here in the reign of Henry II is the disputes between the king and Thomas, his archbishop, culminating, in 1170, in the martyrdom of the latter. Thomas Becket, a clerk in the household of Theobald, Archbishop of Canterbury, having been strongly recommended to Henry, had been taken into his intimate friendship and made Chancellor of the Kingdom, an office which he had discharged with splendid ability for seven years. After the death of Theobald, Thomas, at the instance of the king himself, was elected Archbishop of Canterbury. He vainly tried to escape from the proposed dignity, but, once appointed, his consecration marked the beginning of a complete change of life. He renounced the chancellorship and all secular pursuits, while he devoted himself to the practice of rigorous asceticism. It was not long before he found himself in conflict with the king, as indeed he had foreseen from the first. The first question which caused an open breach between them was a purely secular one. Henry demanded that a certain tax called "the sheriff's aid" should be paid directly into the Exchequer. Thomas, in a Great Council, declared that he was willing to make his contribution to the sheriffs, as had been customary, but absolutely refused

to pay if the money was to be added to the revenue of the Crown. Whether this tax was really the Danegeld, as Bishop Stubbs supposes, is very questionable, but in any case we may share his admiration for this, "the first instance of any opposition to the King's will in the matter of taxation which is recorded in our national history", and, as he adds, "it would seem to have been, formally at least, successful" (Const. Hist., I, 463). This incident, however, was soon thrown into the shade by the more serious quarrel over the Constitutions of Clarendon. What was put by the king in the forefront of the dispute was the alleged inadequacy of the punishment meted out to clerics who were guilty of criminal offences. The statement then made that a hundred homicides had been committed by clerics within ten years rests on no adequate evidence, neither are the cases of which we have definite particulars much more satisfactory (see Morris, "Life of St. Thomas", pp. 114 sqq.). It may be that the king was honestly intent on a scheme of judicial reform, and that he found that the growing jurisdiction of the ecclesiastical courts (the publication of the "Decretum Gratiani" and the increased study of the canon law had made them very popular) was an obstacle in his way. But Becket, who knew him well, suspected that Henry was deliberately striking at the privileges of the Church, and the manner in which a promise was extorted from the bishops to observe the "avitæ con suetudines" before anyone knew what these were, as well as the pretence that the Constitutions of Clarendon represented nothing but the customs said to have been observed in the time of Henry I, do not leave the impression of straightforward dealing. The general purport of the Constitutions, when they were at last made known, was to transfer certain causes -- for example, those regarding presentations to benefices -- from the jurisdiction of the ecclesiastical to that of the King's Courts, to restrain appeals to Rome, to prevent the excommunication of the king's officers and great vassals, and to sanction the king's appropriation of the revenues of bishoprics and abbacies. On one clause, that dealing with criminal clerks, much misapprehension has prevailed. It was formerly supposed that Henry wanted all clerks accused of crimes to be tried in the King's Courts. But this impression, as F. W. Maitland has shown (Roman Canon Law, pp. 132-147), is certainly wrong. A rather complicated arrangement was proposed by which cognizance of the case was first to be taken in the King's Court; if the culprit proved to be a clerk, the case was to be tried in the ecclesiastical court, but an officer of the King's Court was to be present, who, if the accused were found guilty, was to conduct him back to the King's Court after degradation, where he would be dealt with as an ordinary criminal and adequately punished. The king's contention was that flogging, fines, degradation, and excommunication, beyond which the spiritual courts could not go, were insufficient as punishment. The archbishop urged that, apart from the principle of clerical privilege, to degrade a man first and to hang him afterwards was to punish him twice for the same offence. Once degraded,

he lost all his rights, and if he committed another crime he might then be punished with death like any other felon. And here also it must not be forgotten that "the forces at the back of St. Thomas represented not only the respect which men feel for a bold fight for principle, but also that blind struggle against the hideous punishments of the age, of which the assertion of ecclesiastical privilege, covering widows and orphans as well as clerks and those that injured them, was a natural expression" (W. H. Hutton in "Social England", I, 394). After a moment of weakness in the earlier stage of the discussion, St. Thomas, in spite of Henry's fury, refused to have anything to say to the Constitutions. Among the rest of the bishops he met with little help, but the pope, Alexander III, loyally supported him. The rest of the story is well known. The archbishop soon found himself compelled to leave the kingdom. For nearly six years he remained abroad, an exile and bereft of his revenues. In 1170 a hollow reconciliation was patched up with the king, and Becket returned to Canterbury. But in a few weeks fresh cause of offence was given, and the king in a fit of passion uttered the rash words which led to the terrible tragedy of the martyrdom. St. Thomas fell in the transept of his cathedral, close beside the steps leading to the high altar, in the late afternoon of 29 December 1170. All Christendom was horrified, and Henry II, whether from policy or genuine remorse, surrendered his former pretensions while, in 1174, he performed humiliating penance at the martyr's tomb. Within a very few years Canterbury had become a place of pilgrimage celebrated throughout Europe. No one who studies carefully the history of the times can fail to see the immense moral force which such an example lent to the cause of the weak and to the liberties both of the Church and the people, against all forms of absolutism and tyranny. The precise quarrel for which St. Thomas gave his life was relatively a small matter. What was of supreme importance was the lesson that there was something higher, stronger, and more enduring than the will of the most powerful earthly despot.

The life of the Carthusian, St. Hugh, whom Henry II himself caused to be elected Bishop of Lincoln in 1186, forms an admirable pendant to that of St. Thomas. It may be noted in the first place, in view of the outcry raised a little later against the provision of foreigners to English sees, that St. Hugh was a Burgundian, who even at the end of his life hardly understood the language of the people. But no man ruled his diocese better, no man was more beloved alike by his own secular canons of Lincoln and by the numerous religious in his diocese; while, owing to his holiness, his fearlessness, and his merry humour, he was the only bishop who without yielding an inch of his high principles, preserved the respect and even the friendship of three such monarchs as Henry II, Richard C ur de Lion, and John. Very memorable was his firm refusal in the national council to grant Richard an aid in knights and money for foreign warfare. Though the reign of Richard, like that of his predecessor Henry II, still continued to

be a period of reform in law, it was also a period of unparalleled exactions in money. In this case the great Justiciar, Hubert Walter, who was also Archbishop of Canterbury, had made himself the instrument of the king's designs. Though all the temporal lords submitted, St. Hugh offered an uncompromising and successful resistance. "This", says Bishop Stubbs, "which was done not on ecclesiastical but on constitutional grounds, is an act which stands out prominently by the side of St. Thomas's protest against Henry's proposal to appropriate the sheriffs' share of Danegeld" (Select Charters, p. 28).

Richard's extreme need of money had no doubt been caused in part by his participation in the Crusades and by the huge ransom he had had to pay when captured on his way home by Duke Leopold of Austria. Englishmen, both now and at an earlier date, had played their part in the Crusades. Baldwin, Archbishop of Canterbury, who accompanied Richard, and who had been a most earnest preacher of the holy war, left his bones in Palestine, and Bishop Hubert Walter, who was destined to succeed him in the archbishopric, became the virtual commander of the English forces upon his death. But the Crusades exercised no great influence upon the national life of England. For our present purpose they are chiefly memorable as emphasizing the truth, so often ignored by Anglican writers, that medieval Christendom, while recognizing many different peoples and many different governments, conceived of the Church of God not as manifold, but as one. According to that "political theory of the Middle Age" which, founded by Gregory VII, had already imposed itself almost universally upon the speculative philosophy of Europe, the Church, embracing and controlling every form of civil government, was cosmopolitan and all-pervading. It was precisely the fact that she was not identified with any country or people, and that she appealed for her sanctions to forces outside of this visible world, that gave to the head of the Church his great position as the arbiter of nations. In principle no temporal ruler disputed the supremacy of the Vicar of Christ so long as the question remained in the abstract and so long as it was some other sovereign who was the sufferer. It was only when his own will was thwarted that active resistance was made, and then it was nearly always on some side issue, some technicality of law that the monarch and his advisers sought to evade the force of an unwelcome pronouncement. The very persistence with which monarchs at times sought to prevent the introduction into England of papal Bulls, provisions, or excommunications, was an acknowledgment rather than a repudiation of the papal authority; just as a man who barricades himself in his house that a writ may not be served on him is really giving proof of his supreme respect for the majesty of the law. This point of view is one that has carefully to be borne in mind in connection with the resistance to the papal exactions of the thirteenth century and with such ap-

parently unfriendly legislation as the Statutes of Præmunire and Provisors which we shall have to consider later on.

The reign of John (1199-1216) was a time of terrible suffering for the country, but it had results of untold importance in the consolidation of England as a nation. The very loss of her foreign possessions -- for in Henry II's day more than half France had recognized the suzerainty of the King of England -- contributed to that result. But within Great Britain itself, ever since the Norman Conquest, the political constituents of the nation had been divided between two strongly marked parties more or less in opposition. The first, or feudal, element consisted of the great nobles of the Conquest, with their vassals and the influences they wielded. The tendency of this party was centrifugal or disruptive, and they looked upon the country and its people as their lawful prey. The second, which for convenience' sake may be called the national element, was less homogeneous. It comprised the king, the newer nobility which represented mainly the great officials of the Crown appointed under Henry I and Henry II, and with these the bishops and clergy almost to a man. Taken as a whole, all these recognized the advantage of a centralized government and sympathized with the native population, wishing their rights to be respected and justice to be done. Now it was the work of John's lawless and despotic rule, especially after the restraining influence of Hubert Walter was withdrawn by death, to break up this combination and to unite all parties against himself. In this the action of Pope Innocent III, culminating in the Interdict and the sentence of deposition pronounced against John, played a most vital part. It is needless to recapitulate the story of the election of Stephen Langton as Archbishop of Canterbury, over which John's quarrel with the Holy See practically began. But it is well to recall that Langton, who rendered such splendid service to the liberties of his country, and whose name is imperishably associated with Magna Charta, was the pope's own nominee, elected at his instance by the Christ Church monks who had been dispatched to Rome. Under stress of the Interdict and of John's exactions, the old feudal lords, the clergy, and the new "ministerial" nobility gradually drew together. John found that he had none but a few personal partisans upon whom he could count, and Philip of France with a great following threatened invasion to enforce the pope's sentence of deposition. Under these circumstances John made his submission to the legate, Pandulf, promising to receive all the exiled bishops and to make restitution for the injuries and losses the Church had sustained. A few days later, on 13 May, the vigil of the Ascension, 1213, he went even further, for he surrendered his crown and kingdom into the hands of the legate to be received back from him as a fief which he and his successors were to hold of the pope for an annual rent of one thousand marks. It is not unnatural, perhaps, that this transaction should have been denounced by historians in the language of unmeasured indignation. Even Lingard in his day described it as

"heaping everlasting infamy on the memory of John", but the considerations he puts forward in extenuation of the act have not been without weight with later students. It may be said to be now generally acknowledged that the idea of such a surrender probably did not originate with the pope, but with John himself (see Davis, "England under the Normans and Angevins", 1905, p. 368; Norgate, "John Lackland", 1902, p. 181). As the second of these two writers explains, there is a quite intelligible motive for such an act: "John felt that he must bind the Pope to his personal interest by some special tie of such a nature that the interest of the papacy itself would prevent Innocent from casting it off or breaking it." But secondly, the statement formerly made about the cry of indignation heard in England when the news was known has little or no foundation. The vehement denunciation of the act by the partisan Matthew Paris, as "a thing to be detested for all time", was written many years afterwards. "Some", says Davis, "stigmatised the transaction as ignominious, but the most judicial chronicler of his day calls it a prudent move, for, he adds, there was hardly any other way in which John could escape from all his dangers. Even the hostile barons whose plans received an unexpected check did not venture either now or later to dispute the validity of the transaction" (cf. Adams, "Political Hist. of Eng.", II, 315). For such vassalage there were abundant precedents, both within and without the British Isles. Only twenty years earlier, as Hoveden states, Richard C ur de Lion resigned his crown to the Emperor Henry, engaging to receive it as a fief of the empire for an annual payment of five thousand pounds; while the Scottish patriots a century later, to defeat the claims of Edward I, acknowledged the pope as their feudal lord and pretended that Scotland had always been a fief of the Holy See. It would be most misleading to interpret these and other similar transactions merely in the light of modern sentiment. Perhaps one of the most regrettable features in the incident of John's submission and absolution is the encouragement which the sense of papal protection seems to have given him to proceed in his career of wrongdoing. His later action toward his subjects was no more straightforward or constitutional than before, and he seems to have deceived or gained over the legate to his side. But Archbishop Langton and his barons by this time knew him well, and by inflexible persistence they forced John to accept their terms. Taking as their foundation an earlier document granted by Henry I at the beginning of his reign, they drew up a charter of liberties, many times confirmed with slight variations in the course of the next century, and destined to be famous through all time as Magna Charta. This great treaty between the king and his people, which Stubbs has described (Const. Hist., II, p. 1) as "the consummation of the work for which unconsciously kings, prelates and lawyers had been labouring for a century, the summing up of one period of national life and the starting point of another", begins with a religious preamble declaring that John was moved to issue this charter out of reverence for God,

for the benefit of his own soul, for the exaltation of Holy Church, and for the amendment of his kingdom, and, further, that he had acted therein by the advice of Stephen, Archbishop of Canterbury, of the other bishops, and of Pandulf "subdeacon of the Lord Pope and member of his household", as also of the secular lords, the more important of whom are mentioned by name. As in the charter of Henry I, so here, the first article promises freedom to the Church in England (*quod ecclesia Anglicana libera sit et habeat jura sua integra et libertates suas illæsas*) and specifies in particular the freedom of election of bishops, which, as the document further explains, had already been promised by the king and ratified by Pope Innocent. For the rest it will be sufficient to say that *Magna Charta* in substance lays down the principle that the king has no right to violate the law, and, if he attempts to do so, may be constrained by force to obey it. In particular, justice is not to be sold, or delayed, or refused to any man. No freeman is to be taken or imprisoned or outlawed except by the lawful judgment of his peers. No scutage or tax, other than the three regular aids, is to be imposed except by the consent of the common council of the kingdom. Twenty-five barons were appointed to watch over the execution of the Charter, but they were far from retaining the sympathy of all. "Before the conference at Runnymede came to an end", says Mackechnie, "confidence in the good intentions of the 25 executors, drawn it must be remembered entirely from the section of the baronage most unfriendly to John, seems to have been completely lost" (Mackechnie, "*Magna Carta*", p. 53). The indignation, therefore, formerly expressed at the subsequent action of Innocent III in declaring the charter null and void is now generally admitted to be unreasonable. The barons had themselves claimed the credit of making England a papal fief (Lingard, II, 333; Rymer, I, 185), and it was certainly contrary to feudal usage for a vassal to contract obligations of this serious kind without reference to the overlord.

That the papal condemnation was not directed in principle against English popular liberties, may be inferred from the fact that the Charter was confirmed in November, 1216, upon the accession of the child king, Henry III, at a time when the papal legate Gualo was all-powerful, and was strongly supported by the new pope, Honorius III. The long reign which then began with a regency, despite the personal piety of Henry, was a period of much distress in England. The king's weakness and his partiality for foreign favourites involved him in a vast expenditure, while, on the other hand, the taxation thus necessitated could only have been carried through without disturbance by a strong central government, which was here entirely lacking. Cabals and intrigues of all kinds abounded, and the situation was complicated by constant demands for money made by the Holy See. The exactions of the various legates and the never ending "provisions" of papal nominees to canonries and rich livings were undoubtedly the cause of very bitter feeling at the time, and have formed the favourite theme of histor-

ians ever since. It would be useless to deny the existence of very serious abuses, more especially the fact that a large number of French and Italian clergy provided to English benefices never visited the country at all, and were content with simply drawing the revenues. But on the other hand there is much to be said in extenuation of the papal action, which unfortunately has been set before English readers in the most unfavourable light, owing to the bitter antipapalist feeling of the great St. Albans chronicler, Matthew Paris. How much Paris's judgment was warped by his prejudices, may be clearly seen in his unfriendly references to the friars, though they were then, at least relatively, in their first fervour. Lingard says of him that he seems to have collected and preserved every scandalous anecdote that would gratify his censorious disposition, and he adds a very strong personal expression of opinion regarding Paris's untrustworthiness (*Hist. of Eng.*, II, 479). It is not wonderful that in that outspoken age Matthew Paris and others like him, finding their pockets touched by the papal demands, should have raised an outcry which went a good deal beyond the actual damage inflicted. This very period, when England, it is alleged, was ground under the heel of papal tyranny, "was in all other fields of action, except the political, an epoch of unexampled progress" (Tout in "*Polit. Hist. of England*", III, 81). Again, the pope's need of money, owing to the life-and-death struggle with the Hohenstaufen, was real enough. In the eyes of Gregory IX and Innocent IV the wars with the excommunicated German emperor were as genuine a crusade in behalf of the Church of God as that undertaken against the Turks. Moreover, with regard to the provision of foreigners to English benefices, even after making all allowances for the bitter feeling against aliens which manifested itself so often in the reign of Henry III, it is impossible to deny that the world in the thirteenth and fourteenth centuries, and especially the ecclesiastical world, was cosmopolitan to a degree of which we can now form no conception. In the early part of the thirteenth century nearly all the oldest and most influential men in England had made at least part of their studies in Paris. The two Archbishops of Canterbury, Stephen Langton and St. Edmund Rich, both men of pure English descent, might be instanced as conspicuous examples, and if Englishmen had to complain of the many foreign ecclesiastics provided for in England, it must not be forgotten that there was quite a considerable number of Englishmen occupying foreign sees and other positions of emolument on the Continent. The fact is indisputable -- as indisputable as the fact that Englishmen formed a large proportion of the freebooters who roamed through Italy a century later and accepted the pay of anyone who would hire them -- but it is interesting to find it proudly insisted upon by Matthew Paris, who in his indignation at the nomination of foreign ecclesiastics to English benefices, declares that England has no occasion to go abroad to beg for suitable candidates, seeing that she herself was rather accustomed to supply dignitaries for other distant lands ("*Nec indiget Anglia*

extra fines suos in remotis regionibus personas regimini ecelesiarum idoneas mendicare, quæ solet tales aliis sæpius ministrare". -- *Historia Major*, IV, 61).

The cosmopolitan tendencies just alluded to were very much increased in the thirteenth century by one of the greatest religious revivals which the world has seen, viz., that resulting from the foundation and rapid development of the mendicant orders. There is no reason to suppose that the effects produced by the preaching of the Franciscan and Dominican friars, who first came to England in 1224 and 1221 respectively, were more remarkable in this country than abroad, but all historians are agreed that the impressions produced by this popularizing of religion were very marked. The work of spiritual regeneration which they performed at the first was wonderful, and they were warmly encouraged by such holy men and patriotic prelates as the great Bishop Grosseteste. It is perhaps more important to note that, despite the accusations of idleness and worldliness made against them at a later date, their zeal was not extinguished, even if it flagged. An impartial historian who has given special attention to the subject says: "For more than three hundred years the mendicant Friars in England were on the whole a power for good up and down the land, the friends of the poor and the evangelisers of the masses. During all that long time they were supported only by the voluntary offerings of the people at large -- just as the hospitals for the sick and incurable are supported now, -- and when they were driven out of their houses and their churches were looted in common with those of the monks and nuns, the Friars had no broad acres and no manors, no real property to seize, and very little was gained by the spoiling of their goods, but inasmuch as they were at all times the most devoted servants and subjects of the Pope of Rome, they had to go at last, when Henry VIII had made up his mind to rule over his own kingdom and to be supreme head over State and Church" (Jessopp, "History of England", 34).

It was during the thirteenth and fourteenth centuries that the relations between the medieval English Church and the Holy See may be considered to have assumed their final shape. At least this was the period when with such an outspoken champion as the great Bishop Robert of Lincoln (Grosseteste), or later, under so masterful a ruler as Edward I, or, again, amid the growing independence of Parliament, encouraged by such promoters of ecclesiastical disaffection as Wyclif and John of Gaunt in the reign of Edward III, the "Ecclesia Anglicana", according to the theory recently most prevalent, began to assert herself and resolutely set to work to put the pope in his place. And here it may be said once for all that the not unnatural impatience of papal supervision and papal interference which was often shown by strong kings like Edward I, and also at times by the clergy themselves, proves absolutely nothing against the acceptance of the pope's supreme authority as head of the Church. That subordinates should wish to be left free to enjoy a large measure of independence is a law of human nature.

England's colonies, for example, may be quite loyal. They may fully recognize in principle the supreme right of the imperial Government, and yet any dictation from home which goes beyond what is customary, and especially when it is of a kind which touches the colonial pocket, provokes resentment and is apt to be angrily resisted. Even in a fervent religious order a proposed visitation of some outlying house or province may be met with remonstrance and an appeal to precedent on the part of those who, how ever docile, are doubtful of the ability of a foreign authority to understand local conditions. An entire acceptance of the spiritual supremacy of the Holy See is not in the least inconsistent with the belief that an individual pontiff, and still more the officials who form the entourage of that pontiff, may be influenced by mercenary or unworthy motives. There is not any form of authority in the world which is not at times disobeyed and defied under more or less specious pretenses by those who fully recognize in principle their own subordination. Thus it happens that the supporters of "Anglican Continuity" theories are able to quote many utterances of medieval writers that sound disaffected or rebellious in tone, they are able to appeal to many individual acts of disobedience, but they fail altogether in producing any, even the faintest, repudiation in principle of the pope's spiritual supremacy by the accredited representatives of the pre-Reformation Church. By no historian has this truth been more clearly recognized than by the distinguished jurist, F. W. Maitland. Challenging the statement of the Ecclesiastical Courts Commission of 1883, which, largely under the guidance of the eminent historian, Bishop Stubbs, reported that "papal law was not binding in [medieval] England even in questions of faith and morals unless it had been accepted by the national authorities", Professor Maitland, with an irrefragable array of illustrations drawn mainly from the classical canon-law book of the English pre-Reformation Church, the "Provinciale" of Bishop Lyndwood (1435), maintains the exact contrary. According to Lyndwood, as Dr. Maitland clearly proves, "The Pope is above the law, . . . to dispute the authority of a papal decretal is to be guilty of heresy, at a time when deliberate heresy was a capital crime". "The last", Dr. Maitland continues, "is no private opinion of a glossator, it is a principle to which archbishops, bishops and clergy of the province of Canterbury have adhered by solemn words" (Roman Canon Law, 17). As the same authority goes on to show, not only did the pope claim and obtain recognition of his right to take into his own hands the judgment of every ecclesiastical cause over the head of the bishop, but it was largely through the questions and appeals of English bishops to Rome, asking for decisions, that the fabric of Roman canon law was built up (loc. cit., 53, 66, etc.). In full accord with this we find Archbishop Peckham telling such a monarch as Edward I that the emperor of all has given authority to the decrees of the popes, and that all men, all kings are bound by those decrees. So we find the Archbishop of Canterbury with all his suffragans writing a joint letter to the pope and

telling him that all bishops derived their authority from him as rivulets from the fountainhead (Sandale's "Register", 90-98). We find the pope carving a big slice from the jurisdiction of English bishoprics, as in the case of the Abbey of St. Albans or of Bury St. Edmunds, and making it absolutely and entirely exempt from episcopal authority. We find the very kings who are supposed by their Statutes of Provisors and Præmunire to have shaken off their allegiance to Rome, begging the sovereign pontiff in most respectful language to issue letters of provision or Bulls of confirmation in favour of such and such an ecclesiastic who enjoys the royal favour. No doubt these statutes of Provisors and Præmunire do in some sense play an important part in the history of the English Church during the fourteenth century, though it is admitted that they were so continually set aside that the permanent result of the legislation was greatly to strengthen the development of the king's dispensing power. The Statutes of Provisors, of which the first was passed in 1351, claimed for all electing bodies and patrons the right to elect or to present freely to the benefices in their gift, and moreover declared invalid all appointments brought about by way of papal "provision", i.e. nomination. Two years later this legislation was supplemented by the first Statute of Præmunire, which enacted that those who brought matters cognizable in the King's Courts before foreign courts should be liable to forfeiture and outlawry. It has been maintained that these acts prove that the English Church did not acknowledge any providing power in the Holy See. To this we may reply:

- that, like all the other English bishops, even Grosseteste, who is so constantly represented as the champion of English resistance to papal authority, in this matter fully recognized the right in principle, though he protested against abuses in the use of it;
- that the legislation at least professed to be passed not in a spirit of hostility to Rome, but as a remedy for manifold abuses caused by "Rome-runners" -- priests thronging to Rome and importuning the Holy See for benefices. It was the lay patrons of livings whose interests suffered by the papal provisions who were the chief promoters of the Acts;
- That the bishops refused to consent to the Acts (Stubbs, "Const. Hist.", III, 340) and caused their formal protest to be entered on the rolls of Parliament;
- that the bishops and clergy petitioned spontaneously and repeatedly for their repeal (ibid., 342), that the universities, in 1399, declared that the Acts operated to the detriment of learning, and that in 1416 the Commons also petitioned the king for the abolition of the Statute of Provisors;

- that the kings themselves disregarded the Acts and constantly asked the popes to provide to the sees;
- that it is universally admitted that papal provisions were more numerous after the passing of the Acts than before.

In the 300 years preceding the Reformation 313 bishops are known to have been provided by the popes; of these 47 were before the passing of the Statute, 266 after it (see Moyes in "The Tablet", 2 Dec., 1893). One thing is certain, that England in several instances owed some of her best and holiest prelates to the action of the popes in providing to English sees in opposition to the known wishes of the king. Stephen Langton, in 1205, St. Edmund Rich, in 1232, and John Peckham, in 1279, are conspicuous examples. We have already said above that a reaction against current Anglican theories regarding the position of the pope in the medieval English Church has been steadily growing during the last quarter of a century. The complete agreement of such writers as Professor F. M. Maitland, Dr. James Gairdner, and Mr. H. Rashdall, approaching the subject along quite different lines of research, is very remarkable. The following passage from one of the most distinguished of the younger school of English historians, Prof. Tout, of Manchester, states the case as frankly as it could have been stated by Lingard himself. After insisting that the Statutes of Provisors and Præmunire, like that of Labourers, or the sumptuary laws, remained a dead letter in practice, and after declaring that to the average clergy man or theologian of the day the pope was the one Divinely appointed source of ecclesiastical authority, the shepherd to whom the Lord had given commission to feed His sheep, Prof. Tout continues: "The anti-papal laws of the fourteenth century were the acts of the secular not of the ecclesiastical power. They were not simply antipapal, they were also anticlerical in their tendency, since to the man of the age an attack on the Pope was an attack on the Church. . . . The clergyman, though his soul grew indignant against the curialists, still believed that the Pope was the divinely appointed autocrat of the Church universal. Being a man, a Pope might be a bad Pope; but the faithful Christian, though he might lament and protest, could not but obey in the last resort. The papacy was so essentially interwoven with the whole Church of the Middle Ages that few figments have less historical basis than the notion that there was an antipapal Anglican Church in the days of the Edwards" (Polit. Hist. of Eng., III, 379). No one who carefully studies the language and acts of such a man as Grosseteste can fail to realize the truth that in spite of all his fearless criticism of the Roman Curia, his attitude of mind is thoroughly reverential to papal authority. The most famous, as being the least temperately worded, of all his pronouncements is now known to have been addressed, not, as formerly thought, to Pope Innocent IV himself, but to one of his subordinates. On the other hand, as Maitland points out,

Grosseteste throughout his life proclaimed in the strongest terms his belief in the plenitude of the papal power. "I know", he says, "and I affirm without any reserve that there belongs to our lord the Pope, and to the Holy Roman Church, the power of disposing freely of all ecclesiastical benefices." And this and similar language, acknowledging, for example, the pope to be the sun from which other bishops, like the moon and stars, receive whatever powers they have to illuminate and fructify the Church, was not only maintained by Grosseteste to the end (see "The Month", March, 1895), but re-echoed by Bishop Arundel nearly two centuries afterwards.

So again the occurrences which followed the publication by Boniface VIII of the Bull "Clericis laicos", in the days of Edward I and Archbishop Winchelsea, tend to show that even when the pope took up a position which was too extreme and from which he was forced ultimately to retire, the English Church was not less, but more, loyal to the Apostolic See than other, Continental, nations. Nothing could be less true to the facts of history than the idea that England stood apart from the rest of Christendom, with an ecclesiastical law, a theology, or in any essential matter even a ritual, of her own. The cosmopolitanism of the religious orders, especially the mendicants, and of the universities, would alone have sufficed to render this isolation impossible. England's isolation began when she broke away from the Roman obedience, suppressed the religious orders, banished every Catholic priest, and adopted a pronunciation of Latin which no Continental scholar could understand.

The great disturbing force in the ecclesiastical life of England during the fourteenth century, much more than the Statutes of Provisors or even the Black Death, was the rise and spread of Lollardy. We may perhaps doubt if the significance of the movement in this country was by any means as great as that which historians, partly on account of the Bohemian upheaval under John Hus which grew out of Wyclif's doctrines, partly through the favourite modern theory that Lollardy produced the Reformation, have generally attributed to it. Dr. James Gairdner, however, who has recently investigated the whole movement and its sequelæ with a thoroughness and knowledge of original materials to which no previous writer can lay claim, has arrived at conclusions which tend very seriously to modify the views hitherto very commonly received. In his idea the novelty and the socialistic tendency of the opinions so boldly proclaimed by Wyclif did constitute a grave political danger, a danger which was not, perhaps, so acute in the reformer's lifetime because the most startling of his views developed late, only ten years or less before his death (1384), but which were eagerly caught up and even exaggerated by ignorant disciples at a time of weak rule and political unrest. The fact that the Great Schism of the West broke out only six years before Wyclif's death added to the complications by leaving the greater part of Christendom in a state of uncertainty as to which of the rival popes had the better claim to men's allegiance, and

to this cause most probably is due the fact that Wyclif was left during his last years to propagate his doctrines practically undisturbed. That his doctrines were utterly revolutionary, as judged by any standard of opinion tolerated up to that time it would be absurd to deny. No one can fail to see the danger of teaching that there was no real dominion, no real authority, no real ownership of property without the grace of God. From this he deduced the conclusions that a man in mortal sin had no right to anything at all, that among Christians there ought to be community of goods, and that, as to the clergy having property of their own, it was a gross abuse. Similarly he held that every layman had Christ Himself for priest, bishop, and pope; that a pope was only to be obeyed when he taught according to Scripture, and that a king might take away all the endowments of the Church. With these were combined in his later years theological opinions regarding the sacraments and Transubstantiation which were offensive in the extreme to the Christian sense of that day. Wyclif, no doubt, in his philosophical teaching provided safeguards which mitigated the practical consequences of the principles he held, but these were subtleties which were lost upon the more ignorant and fanatical of his followers, more especially after their master's death. The points that they clearly understood were that tithes were pure alms, and that if the parish priests were not good men the tithes need not be paid; that a priest receiving any annual allowance by compact was simoniacal and excommunicated; that a priest who said Mass in mortal sin did not validly consecrate, but rather committed idolatry; that any priest could hear confessions (without faculties), and in fact that any holy layman predestined by God was competent to administer the sacraments without ordination. Such opinions as these, debated among the ignorant and uninstructed, and reinforced by a constant railing against devotional practices, such as pilgrimages, and against the Roman Court, the friars and all ecclesiastical authority, were obviously full of danger to social order at a time when the Black Death and the question of villeinage which resulted from it, had already provided many elements of disturbance.

Speaking of the proceedings against the foremost representative of Lollard opinions, Sir John Oldcastle, in 1413, Dr. Gairdner says: "It seems to have been a life-and-death struggle between established order and heresy"; and Bishop Stubbs, while doing too much honour by far to the fanatic creed of the Wyclifite leader, remarks: "Perhaps we shall most safely conclude from the tenor of history that his doctrinal creed was far sounder than the principles which guided either his moral or his political conduct." These comments really sum up the situation. The Wyclifite heresy became for a while a real danger to the peace of the country, as Oldcastle's insurrection proved. On the other hand, there was very little that was either sane or ennobling in the dreams which inspired the leaders, and which were imparted to their often very ignorant followers. Given the ideas then, and long after, universally prevalent in regard to heresy and the

measures of repression necessary to prevent infection from spreading, there was nothing exceptionally cruel or intolerant about the statute "De hæretico com burendo" of 1401, which provided that heretics convicted before a spiritual court, and refusing to recant, were to be handed over to the secular arm and burnt. There can be no doubt that before this extreme measure was resorted to much provocation had been given by the preaching of doctrines which all Christians then deemed blasphemous, and which were not confined to the vilifying of the Holy Eucharist, the pope, and the clergy, but touched upon the sanctity of marriage and the observance of Sunday as a day of rest. Dr. Gairdner, after a very careful survey of all the evidence, is satisfied that Archbishop Arundel and his suffragans acted in the interests of public order and showed no inclination to enforce the statute either intemperately or tyrannically. In point of fact after the suppression of Oldcastle's insurrection and his execution at the stake, Lollardy was no longer to be feared as a political power. Wyclif's ideas had little hold in England upon men of any weight or consideration. They lingered on for awhile and perhaps never entirely died down, though prosecutions for heresy became very rare long before the end of the fifteenth century, but they certainly cannot be regarded as a direct and primary cause of the religious changes which took place in the reign of Henry VIII.

Perhaps the most important in its ultimate consequences of all Wyclif's tenets was the supreme importance which he attributed to Holy Scripture. In his treatise "De Veritate Sacræ Scripturæ", written about 1378, he practically adopts the position that Scripture is the sole rule of faith. It followed in his idea that the word of God ought to become accessible to all, and that all men were free to interpret it for themselves. We are told, moreover, by a contemporary and hostile authority, the chronicler Knighton, that Wyclif himself translated the Gospel into English. Upon this and other evidence it has been commonly supposed that Wyclif was the first to bring the Bible to the knowledge of English readers and that the medieval Church uniformly adopted the practice of withholding the Scriptures from the laity. It is to the credit of modern students of medieval history that the grave misrepresentations involved in this traditional Protestant view are now generally abandoned (see e.g. Gairdner, "Lollardy", I, 100-17; "Cambridge Hist. of Eng. Literature", II, 56-62). We may summarize from the former of these writers the following conclusions, which represent what is best worth recalling upon this subject. The Church was not opposed in principle to the use of vernacular translations. Undoubtedly, translations into English of separate books of Scripture existed as far back as in the days of Bede. It is improbable, however, that a whole Bible in English, as distinct from Anglo-Saxon, existed before Wyclif's time; neither was it much required, for nearly all who could read, could read the Bible either in the Latin of the Vulgate, which the Church preferred, or in French. There was, however, no ex-

press prohibition to translate the Scriptures into English until the prohibition of the Provincial Synod of Oxford published in 1409. This prohibition was not seemingly occasioned by corrupt renderings or anything liable to censure in the text, but simply by the fact that it was composed for the general use of the laity, who were encouraged to interpret it in their own way without reference to the tradition and teaching of the Church. In fine, Dr. Gairdner concludes: "To the possession by worthy laymen of licensed translations the Church was never opposed, but to place such a weapon as an English Bible in the hands of men who had no regard for authority, and who would use it without being instructed to use it properly, was dangerous not only to the souls of those who read, but to the peace and order of the Church." The view has of late years been strongly urged by Abbot Gasquet, that the English version (or versions, for there are really two) commonly known as the Wyclifite Bible, has no connection with Wyclif, but is simply the fourteenth-century translation approved by ecclesiastical authority and existing probably before Wyclif's time. There are not wanting arguments in support of such a contention, but the difficulties are also serious, and the theory cannot be said to have found general acceptance.

The fifteenth century, owing mainly to the long minority of King Henry VI, and to the Wars of the Roses, was a period of political disturbance, and it does not add much to the ecclesiastical history of the country. We shall do well, however, to note that the invention of printing in England, as elsewhere, was cordially welcomed by the Church, and that it was under the shadow of the English Abbeys of Westminster and St. Albans that the earliest presses were erected. Despite the religious indifference which is supposed to have heralded the Reformation, the tone of the literature given to the world at these presses seems to bear witness to the prevalence of a very genuine spirit of piety.

As the story of the English Reformation is more fully told in the second part of this article, while many separate articles are to be found in THE CATHOLIC ENCYCLOPEDIA dealing with particular phases and leading personalities of that period, a brief outline of the great change will suffice to conclude this sketch of pre-Reformation England. Catholic historians and all others, except a small minority representing a particular school of Anglicanism, are agreed that, so far as England was concerned, even after the Wyclif movement, the Great Schism of the West, and the humanist revival of learning had done their worst, the position of the Church under the jurisdiction of Rome remained as secure as it had ever been. Lollardy no doubt had inoculated a certain section of the nation, and there were here and there stirrings indicative of a doctrinal revolt even during the early days of Henry VIII's reign, but with an episcopate thoroughly loyal to the Holy See and with the support of the king's strong government, these rumblings threatened no danger to the religious peace of the kingdom at large.

Neither does there seem to have been any great decay of morals among clergy or laity. The public opinion of the learned world has in all substantial respects endorsed Abbot Gasquet's vindication of the discipline observed in the religious houses prior to the suppression. Occasional scandals there probably were, and even a great abbey like St. Alban's may possibly have given some cause for the very grievous charges rehearsed against it in 1491 by Archbishop Morton, though the matter is seriously contested (see bibliography), but there is not the least reason to believe that any wave of moral indignation at ecclesiastical corruption or any resentment of Roman authority had made themselves felt amongst the people of England until many years after Luther had thrown down the gauntlet in Germany. What produced the English Reformation was simply the passion of an able and unscrupulous despot who had the cleverness to turn to his own account certain revolutionary forces which are always inherent in human nature and which are always especially liable to be awakened into activity by the dogmatic teaching and the stern censures of the Church of Rome. Of course the movement was much helped forward by the wider distribution of a modicum of learning which had been effected by the invention of the printing press, and which, while enabling people to read and interpret the text of Scripture for themselves, had too often filled them with conceit and with contempt for all scholastic traditions. The age was, at least relatively, an age of novelties and of unrest. The discovery of America had fired the imagination; the humanism of a coterie of scholars had in a measure spread to the masses. There was general talk of the "New Learning" -- by which, however, as Abbot Gasquet has pointed out, men meant not the revival of classical studies, but rather the bold and often heretical speculations about religion which were agitating so many minds. A great part of Germany was already in revolt, and England was not so isolated but that the echoes of controversy reached her shores. All these things made Henry's task easier, but for the severance of England from the obedience of the pope he, and he alone, was responsible. So far as Parliament had any share in the matter, the Parliament was Henry's tool. This estimate of the situation, which was long ago put forward by such writers as Dodd and Lingard, has impressed itself of late years with ever-increasing force upon Anglican opinion and will nowhere be found more clearly enunciated than in the writings of Dr. Brewer and Dr. James Gairdner, who, by their intimate first-hand acquaintance with all the manuscript materials for the reign of Henry VIII, are entitled to speak with supreme authority.

The fact that Henry was himself an amateur theologian and had vindicated against Luther the Catholic doctrine of the sacraments, thereby earning from Leo X the title of "Defender of the Faith", was probably fraught with tremendous consequences in the situation created by his attempted divorce from Queen Catherine. Profoundly impressed with his own dialectical skill, he persuaded himself that his case was thor-

oughly sound in law, and this probably carried him, almost without his being aware of it, into positions from which no retreat was possible to a man of his temperament. It was in 1529 that the papal commission to Wolsey and Campeggio, to pronounce upon the validity of the dispensation granted to Henry many years before to marry his deceased brother's wife, terminated by the pope's revocation of the cause to Rome. The failure of the divorce commission was quickly followed by the disgrace and death of Wolsey, and Wolsey's removal allowed all that was least amiable in Henry's nature to come to the surface. Two very able men, Thomas Cranmer and Thomas Cromwell, were ready at hand to second his designs, skilfully anticipating and furthering the king's wishes. To Cranmer is undoubtedly due the suggestion that Henry might obtain sufficient authority for treating his marriage as null if only he procured a number of opinions to that effect from the universities of Christendom. This was acted upon, and, by various arts and after the expenditure of a good deal of money, a collection of highly favourable answers was obtained. From Cromwell, on the other hand, the idea came that the king should make himself supreme head of the Church in England and thus get rid of the *imperium in imperio*. This was ingeniously contrived by the outrageous pretence that the clergy had collectively incurred the penalties of *Præmunire* by recognizing Wolsey's legislative jurisdiction; though this, of course, had been exercised with the royal knowledge and authority. Upon this preposterous pretext the clergy in convocation were compelled to make a huge grant of money and to insert a clause in the preamble of the vote acknowledging the King as "Protector and Supreme Head of the Church of England, as far as the law of Christ allows". This last qualification was only inserted after much debate, though it seems that at that period Henry was willing that the phrase "Supreme Head" should be understood in a way that was not inconsistent with the supremacy of the pope. At any rate, even after this, bishops still continued to receive their Bulls from Rome, and the royal divorce still continued to be pleaded there. Early in 1532 another move was made. The Commons were persuaded to frame a supplication against the Clergy of which drafts remain in the handwriting of Cromwell, showing from whom it emanated. This, after various negotiations and a certain amount of pressure, resulted in the "Submission of the Clergy", by which they promised not to legislate for the future without submitting their enactments for the approval of the king and a mixed committee of Parliament. To bring pressure to bear on the pope, the king caused Parliament to leave it in Henry's power to withhold from the Holy See altogether the payment of annates, or first-fruits of bishoprics, which consisted in the amount of the first year's revenue. By such gradual steps the breach with Rome was brought about, though even as late as January, 1533, application in a form most discreditably insincere was still made to Rome for the Bulls of the new Archbishop of Canterbury, Cranmer, who had been elected on Warham's death, and

who took the oaths of obedience to the pope, though he had previously declared that he regarded them as null and void. Almost immediately afterwards Cranmer pronounced sentence of divorce between Henry and Catherine. The king then had Anne Boleyn crowned, and an Act of Succession was passed next year with a preamble and an oath to be taken by every person of lawful age. Parliament all submitted and took the oath, but More and Fisher refused and were sent to the Tower. The climax of the whole work of disruption may be considered to have been reached in November, 1534, by the passing of the Act of Supremacy, which declared the king Supreme Head of the Church of England, this time without any qualification, and which annexed the title to his imperial crown.

A reign of terror now began for all who were unwilling to accept exactly that measure of teaching about matters religious and political which the king thought fit to impose. Fisher and More had been sent to the block, and others, like the Carthusians, who rivalled them in their firmness, were dispatched by that ghastly and more ignominious death-penalty assigned to cases of high treason. In virtue of this martyrdom these and many more are now venerated upon our altars as beatified servants of God. The rising in the North known as the Pilgrimage of Grace followed, and, when this dangerous movement had been frustrated by the astuteness and unscrupulous perjury of the king's representatives, fresh horrors were witnessed in a repression which knew no mercy. Previous to this had taken place the suppression of the smaller monasteries; and that of the larger houses soon followed, while an Act for the dissolution of chantries and free hospitals was passed in 1545, which there was not time to carry entirely into execution before the king's death. Probably all these things, even the destruction of shrines and images, reflect a certain rapacity in the king's nature rather than hostility to what would now be called popish practices. In his sacramental theology he still clung to the positions of the "Assertio septem sacramentorum", the book he had written to refute Luther. Both in the Six Articles and in the "Necessary Doctrine" the dogma of Transubstantiation is insisted upon; and indeed more than one unfortunate reformer who denied the Real Presence was sent to the stake. It was on this side that Henry's task was hardest. Against the Papalist sympathizers amongst his own subjects he consistently maintained a ruthless severity, neither did he relent until all were cowed into submission. Towards men of Calvinist and Lutheran tendencies, who were represented in high places by Cranmer, Cromwell, and many more, the king had intermittently shown favour. He had used them to do his work. They had been of the greatest assistance in prejudicing the cause of the pope, and even the most violent and scurrilous had rendered him service. True, the railing translation of the New Testament by Tyndale, which had been printed and brought to England as early as 1526, was prohibited, as was Coverdale's Bible later on, in 1546, very near the close of his reign. It is

plain that the scurrility of the more revolutionary led him to regard such teaching as dangerous to public order. Very remarkable are the words used by Henry in his last speech in Parliament, when he deplored the results of promiscuous Bible-reading: "I am very sorry to know how that most precious jewel, the Word of God, is disputed, rhymed, sung and jangled in every alehouse. I am equally sorry that readers of the same follow it so faintly and coldly in living; of this I am sure, that charity was never so faint among you, and virtuous and godly living was never less used, and God Himself among Christians was never less revered, honoured and served." If ever a moral and religious cataclysm was the work of one man, most assuredly the first stage of the Reformation in England was the work of Henry VIII. One could wish we knew that the sense of his own personal responsibility for the evils he deplored had come home to him before the hour when, on 28 January, 1547, he was summoned to his account.

Perhaps the most remarkable feature in the religious condition of England during the last year of Henry's reign was the fact that, besides the king himself, there were probably not a score of persons who were contented with the existing settlement. One large section of the nation was in complete sympathy with the doctrines of the German reformers, and to them the Mass, confession, communion in one kind, etc., which had been preserved untouched throughout all the changes, were simply as gall and wormwood. The great numerical majority, on the other hand, especially in the more remote and thinly populated districts, longed for the restoration of the old order of things. They wished to see the monks back, St. Thomas of Canterbury and the shrines of Our Lady once more in honour, and the pope recognized as the common father of Christendom. During the two short reigns which intervened before Elizabeth came to the throne each of these parties alternately gained the ascendant. Under Edward VI, the Protector Somerset, and after him the Duke of Northumberland, in full harmony with Cranmer, Hooper, and other bishops even more Calvinistically minded, abolished all remnants of popery. Chantry and guilds were suppressed, and their revenues confiscated, images in the churches, and then altars and vestments were removed and destroyed, while the material desecration was only typical of the outrages done to the ancient liturgy of Catholic worship in the first and second Books of Common Prayer. (See ANGLICANISM; ANGLICAN ORDERS; BOOK OF COMMON PRAYER.) The bishops who were more Catholically minded, like Bonner and Gardiner, were sent to the Tower. Princess Mary was subjected to the meanest and most petty forms of persecution. Neither can it be maintained that those in power were animated by any disinterested devotion to Reformation principles. Spoliation in its most vulgar form was the order of the day. It is only of late years that fuller historical research has done justice to what seemed the one redeeming feature in the general work of destruction

-- the foundation of the grammar schools which are known by the name of King Edward VI. We have now learned that not one of these schools was originally of Edwardian creation (see Leach, "English Schools at the Reformation"). Educational resources had already been seriously impaired under Henry VIII, and "the schools which bear the name of Edward VI owe nothing to him or his government but a more economic establishment. A good many of them had been chantry sebools, for if the chantry priest of old wasted his time in singing for souls he not infrequently did good work as a school master." So says a judicious summarizer of Mr. Leach's researches.

There can be no doubt that these violent measures provoked a reaction. Already in 1549 there had been serious insurrections all over the country, and more particularly in Devonshire and in Norfolk. On the death of the boy king, in July, 1553, an attempt was made by Northumberland to secure the succession for Lady Jane Grey but Mary at least for the time, had the people completely with her, and now it was the turn of Bonner, Gardiner, and the Catholic reaction. Overtures were made to the reigning pope, Julius III, and eventually Cardinal Pole, whose mission as legate was unfortunately delayed by the Emperor Charles V for diplomatic reasons connected with the marriage of Queen Mary to his son Philip II, reached England in November, 1554, where he was warmly received. After the Houses of Parliament through the king and queen had petitioned humbly for reconciliation with the Holy See, Pole, on St. Andrew's day, 30 November, 1554, formally pronounced absolution, the king and queen and all present kneeling to receive it. The restoration of ecclesiastical property confiscated during the previous reign was not insisted upon.

The reign of Mary is, unfortunately, chiefly remembered by the severity with which the statutes against heresy, now revived by Parliament, were put into force. Cranmer had been previously sentenced to death for high treason, and the sentence seems to have been politically just, but it was not at once executed. There seems to have been no desire upon the part of Mary or any of her chief advisers for cruel reprisals, but the reactionary forces always at work seem to have frightened them into sterner measures, and, as a result, Cranmer, Latimer, Ridley, and a multitude of less conspicuous offenders, most of them only after refusal to recant their heresies, were condemned and executed at the stake. No one has judged this miserable epoch of persecution more leniently than the historian who of all others has made himself live in the spirit of the times. Dr. James Gairdner, stanch Anglican as he is, in his recent work, "Lollardy and the Reformation", seems only to press farther the apology which he has previously offered for their terrible measures of repression. Thus he says: "With all this one might imagine that it was not easy for Mary to be tolerant of the new religion, and yet tolerant she was at first, as far as she well could be. . . . The case was simply that there were a number of persons determined not to demand mere toleration for themselves, but to

pluck down what they called idolatry everywhere and to keep the Edwardine service in the parish churches in defiance of all authority, and even of the feelings of their fellow parishioners. In short, there was a spirit of rebellion still in the land which had its root in religious bitterness; and if Mary was to reign in peace, and order to be upheld, that spirit must be repressed. Two hundred and seventy- seven persons are recorded to have been burnt in various parts of England during those sad three years and nine months, from the time the persecution began to the death of Mary. But the appalling number of the sufferers must not blind us altogether to the provocation. Nor must it be forgotten that if it be once judged right to pass an Act of Parliament it is right to put it in force." And as the same authority elsewhere says, "Amongst the victims no doubt, there were many true heroes and really honest men, but many of them would have been persecutors if they had had their way." Queen Mary died 17 November, 1558, and Cardinal Pole passed away on the same day twelve hours later.

To discuss at any length the monastic chronicles, the charters, rolls, and other records which constitute the ultimate sources of our information regarding the medieval history of England would be out of place in the present article. Only a small selection can in any case be made of the many serviceable works that have been published in recent years. It will be convenient to set down first the names of some Catholic books and studies which the reader is likely to find generally useful, and then to add a section of miscellaneous works and of books written from a standpoint which is at any rate not distinctively Catholic.

Catholic. -- LINGARD, *History of England* (10 vols., London, 1849); RULE, *Life of St. Anselm* (2vols., London, 1883); RAGEY, *Histoire de S. Anselme* (2 vols., Paris, 1890); DELARC, *Le Saint Siège et la conquête d'Angleterre* in *Revue des Quest. Histor.*, XLI (1887); RAGEY, *Eadmer* (Paris, 1892); MORRIS, *Life of St. Thomas Beckett* (London, 1885); L'HUILLIER, *S. Thomas de Canterbury* (Paris, 1891); THURSTON, *Life of St. Hugh of Lincoln* (London, 1898); BISHOP, *Cathedral Canons* in *Dublin Review* (London, 1898), CXXIII; WALLACE, *Life of St. Edmund* (London, 1893); WARD, *St. Edmund Archbishop of Canterbury* (London, 1903); DE PARAVICINI, *Life of St. Edmund of Abingdon* (London, 1898); KNELLER, *Des Richard Löwenherz deutsche Gefangenschaft* (Freiburg, 1893); FELTEN, *Robert Grosseteste Bischof von Lincoln* (Freiburg, 1887); GASQUET, *Henry III and the Church* (London, 1905); STRICKLAND, *Ricerche storiche sopra il B. Bonifacio Archivescovo di Cantorbery* (Turin, 1895); PALMER, *Fasti Ordinis FF. Pr dicatorum* (London. 1878); MOYES, *How English Bishops were made before the Reformation* in *The Tablet*, Nov., 1893, and many other articles in the Same periodical; GASQUET, *The Great Pestilence* (London, 1893); ID., *The Old English Bible and other Essays* (London, 1897); STEVENSON, *The Truth about John Wyclif* (London, 1885); STONE, *Reformation and Renaissance Studies* (London,

1904); GASQUET, *The Eve of the Reformation* (London, 1900); BRIDGETT, *Life of Blessed John Fisher* (London, 1888); ID., *Life and Writings of Sir Thomas More* (London, 1891); GASQUET, *Henry VIII and the English Monasteries* (London, 1888); RIVINGTON, *Rome and England* (London, 1897); BRIDGETT, *Blunders and Forgeries* (London, 1893); GASQUET, *The Last Abbot of Glastonbury* (London, 1895); ID. (ed.), COBDEN, *Hist. of the Reformation*; STONE, *Mary I of England* (London, 1901); ZIMMERMANN, *Kardinal Pole, sein Leben und seine Schriften* (Ratisbon, 1893); GASQUET AND BISHOP, *Edward VI and the Book of Common Prayer* (London, 1890).

Upon the religious life of England generally, see: BRIDGETT, *History of the Holy Eucharist in Great Britain* (new ed., 1908); GASQUET, *Parish Life in Medieval England* (London, 1906); WATERTON, *Pietas Mariana Britannica* (London, 1879); BRIDGETT, *Our Lady's Dowry* (London, 1875); GASQUET, *English Monastic Life* (London, 1904); TAUNTON, *The English Black Monks of St. Benedict* (2 vols., London, 1897); GASQUET, *Archbishop Morton and St. Albans* in *The Tablet*, Oct. 17, 1908, and Jan. 23, 1909; but cf. GAIRDNER in *Eng. Hist. Rev.*, Jan., 1909.

Among shorter Histories of England written from a Catholic standpoint, may be mentioned: BURKE, *Abridgment of Lingard*, re-edited and continued by BIRT (London, 1903); ALLIES, *History of the Church in England* (London, 1902); CATH. TRUTH SOCIETY, *A Short History of the Church in England* (London 1895); GASQUET, *Short Hist. of the Cath. Church in England* (London, 1903); WYATT-DAVIES, *School History of England* (London, 1902); STONE, *The Church in Eng. History* (London, 1907).

Non-Catholic Works. -- Of general histories, three different series produced within the last few years may be recommended as representative of the best modern scholarship and as aiming conscientiously at impartiality in the treatment of religious questions: *The Political History of England*, of which the five volumes reaching from 54 B.C. to A.D. 1547 are written respectively by T. HODGKIN, G. B. ADAMS, T. F. TOUT, C. OMAN, H. A. L. FISHER (London, 1904-1905). -- Mr. Tout's volume in particular is excellent. -- *A History of England in Six Volumes*. -- The first four volumes, reaching from the beginning to the age of Elizabeth, are written respectively by C. OMAN, H. W. C. DAVIS, OWEN EDWARDS, and A. D. INNES (London, 1905-1906). By far the best contribution in this series is that of Mr. Davis. -- *A History of the English Church*. -- The first four volumes, which extend to the death of Queen Mary, have respectively for authors W. HUNT, DEAN STEPHENS, CANON CAPES, and DR. J. GAIRDNER (London, 1901-1902). Dr. Gairdner's work is indispensable to the student of the Reformation period. -- The works of the late BISHOP STUBBS have exercised an immense influence on historical study in England. The most noteworthy are the *Constitutional History* (3 vols.); the *Select Charters*, and the *Prefaces* to various contributions to the *Rolls Series* (e.g., HOVEDEN, BENEDICT, etc.), which have lately been

collected and published separately. Stubbs's views on the tenure of land etc. during the Norman period are now somewhat out of date, but the chief defect of his work from a Catholic point of View is his adherence to the fiction of a national English Church independent of Rome. -- FREEMAN, *Norman Conquest* (5 vols.) and *William Rufus* (2 vols.) show an immense command of detail, but are biased by the author's rather eccentric views of British imperialism. Many of the less reliable conclusions of Stubbs and Freeman will be found corrected in the works of MAITLAND, which are of primary importance in more than one field. His *Roman Canon Law in the Church of England* (1898) is of the very highest Value as correctly stating the position of the English Church in regard to the Holy See. His *History of English Law* (1895), *Domesday Book and Beyond* (1897), and various contributions to TRAILL, *Social England* (1901), are of great moment from a legal and constitutional point of view. For the later period ending in the reign of Henry VIII or Mary, the writings of J. S. BREWER, particularly the *Prefaces to the Calendars* reedited under the title of *The Reign of Henry VIII to the Death of Wolsey* (2 vols., 1884), and of DR. J. GAIRDNER are of primary importance, especially as correcting the reckless inaccuracy of Froude. DR. GAIRDNER in particular has recently published a work entitled *Lollardy and the Reformation* (2 vols., 1908), which does fullest justice to the Catholic position.

Among other works of note may be mentioned: BÖHMER, *Kirche und Staat in England und in der Normandie* (Leipzig, 1899); ID., *Die Fälschungen Erzbischof Lanfranks* (Leipzig, 1902) -- inconclusive, as Saltet and others have shown; ROUND, *Feudal England* (London, 1895); NORGATE, *England under the Angevin Kings* (2 vols., London, 1887); ID., *John Lackland* (London, 1902); STEVENSON, *Robert Grosseteste* (London, 1899); BLISS AND TWEMLOW, *Calendars of Entries in Papal Registers Relating to Great Britain and Ireland* (8 vols. already published); JENSEN, *Der englische Peterspfennig* (Heidelberg, 1903); CREIGHTON, *Historical Essays* (London, 1902); ID., *Historical Lectures* (London, 1903) -- both these able works are much biased by the writer's Anglican standpoint; JESSOPP, *The Coming of the Friars* (London, 1889); BREWER, *Preface to the Monumenta Franciscana in R. S.*, and to the works of GIRALDUS CAMBRENSIS; MAKOWER, *Constitutional History of the Church of England* (London, 1895); WYLIE, *History of England under Henry IV* (4 Vols., 1882-96); WORKMAN, *John Wyclif* (London, 1902); *Dr. Gasquet and the Old English Bible in the Church Quarterly Review*, Vol. LI (1901); LANG, *The Maid of France* (London, 1908); GAIRDNER, *The Paston Letters* (3 vols., London, 1872-5); DIXON, *History of the Church of England from 1529* (6 vols., London, 1878-1902); EHSES, *Röm. Dok. zur Gesch. der Ehescheidung Heinrichs VIII* (Paderborn, 1902) -- a Cath. work. Of the Divorce the best account is by GAIRDNER, *New Lights on the Divorce in Eng. Hist. Rev.*, XI-XII (1896-97). TYTLER, *England under Edward VI and*

Mary (2 vols., London, 1839); LEACH, *English Schools at the Reformation* (London, 1896); POCOCK, on *The Reign of Edward VI in English Historical Review*, July, 1895.

For social and economic condition of England, see ASHLEY, *An Introd. to Eng. Economic Hist. and Theory* (2 vols., London, 1893); CUNNINGHAM, *The Growth of Eng. Industry and Commerce* (2 vols., Cambridge, 1896); THOROLD ROGERS, *Hist. of Eng. Agriculture and Prices* (6 vols., London, 1866-87); ID., *Six Centuries of Work and Wages* (2 vols 1891); RASHDALL, *Universities of the M. A.* (3 vols., Oxford, 1895); CHAMBERS, *The Medieval Stage* (2 vols., Oxford, 1903).

HERBERT THURSTON

England (Since the Reformation)

England (Since the Reformation)

The Protestant Reformation is the great dividing line in the history of England, as of Europe generally. This momentous Revolution, the outcome of many causes, assumed varying shapes in different countries. The Anglican Reformation did not spring from any religious motive. Lord Macaulay is well warranted in saying in his essay on Hallam's "Constitutional History", that "of those who had any important share in bringing it about, Ridley was, perhaps, the only person who did not consider it a mere political job", and that "Ridley did not play a very prominent part". We shall now proceed, first, to trace the history of the so-called Reformation in England, and then to indicate some of its results.

I. HISTORY

Henry VIII (1509-1547)

It was not until the twenty-sixth year of the reign of Henry the Eighth -- the year 1535 -- that the English Schism was consummated. The instrument by which that consummation was effected was the "Act concerning the King's Highness to be the Supreme Head of the Church of England, and to have authority to reform and redress all errors, heresies and abuses in the same". This statute severed England from the unity of Christendom and transferred the jurisdiction of the supreme pontiff to "the Imperial Crown" of that realm. That is the unique peculiarity of the Anglican Reformation -- the bold usurpation of all papal authority by the sovereign. "The *clavis potentiae* and the *clavis scientiae*, the universal power of Government in Christ's Church, the power to rule; to distribute, suspend or restore jurisdiction, and the power to define Verities of the Faith and to interpret Holy Scripture has descended on the shoulders of the Kings and Queens of England. The actual bond of the Church of England, her characteristic as a religious communion, that which makes her a whole, is the right of

the civil power to be the supreme judge of her doctrine." (Allies, "See of S. Peter", 3rd ed., p. 54.) The Act of Supremacy was the outcome of a struggle between Henry VIII and the pope, extending over six years. Assuredly no such measure was originally contemplated by the king, who, in the early part of his reign, manifested a devotion to the Holy See which Sir Thomas More thought excessive (Roper's Life of More, p. 66).

The sole cause of his quarrel with the See of Rome was supplied by the affair of the so-called Divorce. On 22 April, 1509, he ascended the English throne, being then eighteen years old; and on 3 June following he was wedded, by dispensation of Pope Julius, to the Spanish princess, Catherine, who had previously gone through the form of marriage with his elder brother Arthur. That prince had died in 1502, at the age of sixteen, five months after this marriage, which was held not to have been consummated; and so Catherine, at her nuptials with Henry, was arrayed not as a widow, but as a virgin, in a white robe, with her hair falling over her shoulders. Henry cohabited with her for sixteen years, and had issue three sons, who died at their birth or shortly afterwards, as well as one daughter, Mary, who survived. At the end of that time the king, never a model of conjugal fidelity, conceived a personal repulsion for his wife, who was six years older than himself, whose physical charms had faded, and whose health was impaired; he also began to entertain scruples as to his union with her. Whether, as an old Catholic tradition avers, these scruples were suggested to him by Cardinal Wolsey, or whether his personal repulsion prepared the way for them, or merely seconded them, is uncertain. But certain it is that about this time, to use Shakespeare's phrase, "the King's conscience crept too near another lady", that lady being Anne Boleyn. Here, again, exact chronology is impossible. We know that in 1522 Cardinal Wolsey repelled Lord Percy from a project of marriage with Anne on the ground that "the King intended to prefer her to another". But there is no evidence that Henry then desired her for himself. However that may have been, several years elapsed before his passion for her, whatever the date of its origin, gathered that overmastering force which led him to resolve with fixed determination to put away Catherine in order to possess her. For marriage was the price on which, warned by experience, she insisted. Henry's relations with her family had been scandalous. There is evidence, strong if not absolutely conclusive -- it is summed up in the Introduction to Lewis' translation of Sander's work, "De Schismate Anglicano" (London, 1877) -- that he had had an intrigue with her mother, whence the report, at one time widely credited, that she was his own daughter. It is certain that her sister Mary had been his mistress, and had been very poorly provided for by him when the liaison came to an end, a fact which doubtless put Anne upon her guard. That the king had contracted precisely the same affinity with her, by reason of this intrigue, as that which he alleged to be the cause of his

conscientious scruples with regard to Catherine, did not in the least weigh with her, or with him.

The first formal step towards the putting away of Catherine appears to have been taken in 1527, when Henry caused himself to be cited before Cardinal Wolsey and Archbishop Warham on the charge of living incestuously with his brother's widow. The proceedings were secret, and the Court held three sessions, then adjourning *sine die* for the purpose of consulting the most learned bishops of the kingdom on the question whether marriage with a deceased brother's wife was lawful. The majority of the replies were in the affirmative, with the proviso that a papal dispensation had been obtained. Henry, thus baffled, then determined to proceed in common form of law, and Sir Francis Geary in his learned work, "Marriage and Family Relations", has summed up the proceedings as follows: "By a process well known to Ecclesiastical Law, the King wished to institute his suit in the Appeal Court for this purpose given original jurisdiction. With this object, instead of, as originally intended, suing in an English Consistory or Arches Court, from which appeal lay to Rome, then menaced or actually occupied by the armies of Charles V, a commission from Pope Clement, dated June 9, and confirmed by a *pollicitatio* dated July 13, 1528, was obtained constituting the two cardinals a Legatine Papal Court of both original supreme and ultimate jurisdiction and to proceed judicially. The Court opened May 21, 1529; there followed citation, articles, examination, and publication, and on Friday, July 23, 1529, the cause was ripe for judgment. At that day Campejus [Campeggio] adjourned till October, on the ground that the Roman Vacation, which he was bound to observe, had already begun. But in September the advocacy of the cause to Rome, and inhibition of the Legatine Court, given by Clement contrary to his written promise on the word of a Pope, had arrived in England, and the Court never sat again. Henry waited for more than three years, negotiating to have the suit brought to judgment, till at last, in November, 1532, he married Anne Boleyn, and in the following year, May, 1533, Cranmer, Archbishop of Canterbury, gave sentence of nullity. At Rome the cause dragged on, -- there is a gap at this epoch in the reports of the Rota, and it does not appear if there was any argument either by the advocates of the 'orator' or 'oratrix', or by the defensor, -- till at last, on March 25, 1534, the Pope, in a Consistory of Cardinals, of whom a minority voted against the marriage, pronounced the marriage with Katherine valid, and ordered restitution of conjugal rights."

The Statute of 1535 (26 Hen. VIII, c. 1) above quoted -- it is commonly called the Act of Supremacy which transferred to the king the authority over the Church in England hitherto exercised by the pope, may be regarded as Henry's answer to the papal sentence of 1534. But, as Professor Brewer remarks, "to this result the King was brought by slow and silent steps". The Act of Supremacy was in truth simply the last

of a series of enactments whereby, during the whole progress of the matrimonial cause, the king sought to intimidate the pontiff and to obtain a decision favourable to himself. Seven statutes in particular may be noted as preparing the way for, and leading up to, the Act of Supremacy. The 21 Hen. VIII, c. 13, prohibited, under pecuniary penalties, the obtaining from the Holy See of licences for pluralities or non-residence. The 23 Hen. VIII, c. 9, forbade the citation of a person out of the diocese wherein he or she dwelt, except in certain specified cases. The 23 Hen. VIII, c. 6, which is entitled "Concerning the restraint of payment of annates to the See of Rome", was not only an attempt to intimidate, but also to bribe the pope. It forbade, under penalties, the payment of firstfruits to Rome, provided that, if the Bulls for a bishop's consecration were in consequence denied, he might be consecrated without them, and authorized the king to disregard any consequent ecclesiastical censure of "our Holy Father the Pope" and to cause Divine service to be continued in spite of the same; and further *empowered the King by letters patent to give or withhold his assent to the Act, and at his pleasure to suspend, modify, annul and enforce it*. The Act was in fact what Dr. Lingard has called it, "a political experiment to try the resolution of the Pontiff". The experiment failed, and in the next year the royal assent was given to the Act by letters patent. In this year also was passed the Statute, 24 Hen. VIII, c. 12, prohibiting appeals to Rome in testamentary, matrimonial, and certain other causes, and requiring the clergy to continue their ministrations in spite of ecclesiastical censures from Rome. The next year witnessed the passing of the Act (25 Hen. VIII, c. 19) "for the submission of the clergy to the King's Majesty", which prohibited all appeals to Rome. The Act following this in the Statute Book abolished annates, forbade, under the penalties of *pn munire*, the presentation of bishops and archbishops to "the Bishop of Rome, otherwise called the Pope", and the procuring from him of Bulls for their consecration, and established the method still existing in the Anglican Church (of which more will be said later on) of electing, confirming, and consecrating bishops. It was immediately followed by an Act forbidding, under the same penalties, the king's subjects to sue to the pope, or the Roman See, for "licenses, dispensations, compensations, faculties, grants, rescripts, delegacies or other instruments or writings", to go abroad for any visitations, congregations, or assembly for religion, or to maintain, allow, admit, or obey any process from Rome. The net effect of these enactments was to take away from the pope the headship of the Church of England. That headship the Act of Supremacy conferred on the king.

This sudden falling away of a whole nation from Catholic unity, is an event so strange and so terrible as to require some further explanation than Macaulay's, who refers it to the "brutal passion" and "selfish policy" of Henry VIII; In fact the struggle between that monarch and the pope was the last phase of a contest between the papal and the regal power which had been waged, with longer or briefer truces, from the

days of the Norman Conquest. The Second Henry was no less desirous than the Eighth to emancipate himself from the jurisdiction of the supreme pontiff, and the destruction and pillage of the shrine of St. Thomas à Becket was not merely a manifestation of uncontrollable fury and unscrupulous greed; it was also Henry VIII's way of redressing a quarrel of nearly four hundred years' standing. The reason why Henry VIII succeeded where Henry II, a greater man, had failed must be sought in the political and religious conditions of the times. Von Ranke has pointed out that the state of the world in the sixteenth century was "directly hostile to the Papal domination . . . The civil power would no longer acknowledge any higher authority" (*Die römischen Päpste*, I, 39). In England the monarch was virtually a tyrant. The Wars of the Roses had destroyed the old nobility, formerly an effective check upon regal despotism. "The prerogative", Brewer writes, "was absolute both in theory and practice. Government was identified with the will of the Sovereign; his word was law for the conscience as well as the conduct of his subjects. He was the only representative of the nation. Parliament was little more than an institution for granting subsidies" (*Letters and State Papers*, II, Part I, p. cxci, Introd.). The lax lives led by too many of the clergy, the abuses of pluralities, the scandals of the Consistorial Courts, had tended to weaken the influence of the priesthood; "the papal authority", to quote again Brewer, "had ceased to be more than a mere form, a decorum to be observed." The influence of the ecclesiastical order as a check upon arbitrary power was extinct at the death of Wolsey. "Thus it was that the royal supremacy was now to triumph after years of effort, apparently fruitless and often purposeless. That which had been present to the English mind was now to come forth in a distinct consciousness, armed with the power that nothing could resist. Yet that it should come forth in such a form is marvellous. All events had prepared the way for the King's temporal supremacy: opposition to Papal authority was familiar to men; but a spiritual supremacy, an ecclesiastical headship as it separated Henry VIII from all his predecessors by an immeasurable interval, so was it without precedent and at variance with all tradition" (Brewer, *Letters and State Papers*, I, cvii, Introd.).

Henry VIII made full proof of his ecclesiastical ministry. In 1535 he appointed Thomas Cromwell his vicegerent, vicar-general, and principal official, with full power to exercise all and every that authority appertaining to himself as head of the Church. The vicar-general's function was, however, confined to ecclesiastical discipline. The settlement of doctrine Henry took under his own care and, as is related in the preamble to the "Act abolishing diversity of opinions" (31 Hen. VIII, c. 14), "most graciously vouchsafed, in his own princely person, to descend and come into his High Court of Parliament" and there expounded his theological views, which were embodied in that Statute, commonly called "The Statute of the Six Articles". It was in 1539 that this Act was passed. It asserted Transubstantiation, the sufficiency of communion under one

kind, the obligation of clerical celibacy, the validity "by the law of God" of vows of chastity, the excellence of private masses, the necessity of the sacrament of penance. The penalty for denial of the first article was the stake; of the rest imprisonment and forfeiture as of felony. But while thus upholding, after his own fashion, Catholic doctrine, Henry had possessed himself of a vast amount of ecclesiastical property by the suppression first of the smaller and then of the larger religious houses, thus laying the foundation of English pauperism.

Edward VI (1547-1553)

After the death of Henry (1547) the direction of ecclesiastical affairs passed chiefly into the hands of Thomas Cranmer. Lord Macaulay has described him accurately as "a supple, timid, interested courtier, who rose into favour by serving Henry in the disgraceful affair of his first divorce", who was "equally false to political and religious obligations", and who "conformed forwards and backwards as the King changed his mind". During the minority of Edward VI, no longer cowed by the "vultus instantis tyranni", he favoured first Lutheranism, then Zwinglianism, and lastly Calvinism, so that it may seem doubtful what form of Protestantism, if any, he really held. Certain it is, however, that he had "the convictions of his own interests", and that these were bound up with the anti-Catholic party. He had judicially pronounced the invalidity of Henry's marriage with Catherine and the illegitimacy of Mary, thereby deeply offending and scandalizing Catholics, who were by no means mollified because, not long afterwards, he had similarly prostituted his judicial office in dealing with Anne Boleyn and her daughter Elizabeth. He was married, contrary to the Statute of the Six Articles, to a daughter of the Protestant divine Osiander, whom, according to a tradition preserved by Sander and Harpsfield (both first-rate authorities), he was in the habit of carrying about in a chest until, in the latter part of Henry VIII's reign, he judged it prudent to send her, for greater security, to Germany. Shortly after the death of the king, he reclaimed her, showing her publicly as his wife. To him are chiefly due the legalization of the marriage of the clergy (23 Ed. VI, c. 21), the desecration and destruction of altars, for which tables were substituted, and of images and pictures, which gave place to the royal arms. He had the chief part in the inspiration and compilation of the first Prayer Book of Edward VI (1548) in supersession of the Breviary and the Missal, a work which, in the preamble of the Act of Parliament sanctioning and enjoining it, is said to have "been drawn up by the aid of the Holy Ghost". Notwithstanding this encomium, it was superseded, within four years, by a second Cranmerian Prayer Book, not similarly commended in the Act prescribing it, in which the slight outward similarity to the Mass, preserved in the Communion Service of the first Prayer Book, was obliterated. The Ordinal underwent similar treatment; the sacrificing Priest, like the Sacrifice, was abolished. Another of Cranmer's exploits was the compilation of

Forty-two Articles of Religion which, reduced to Thirty-nine and slightly recast, still form the Confession of Faith of the Anglican Communion.

Mary I (1553-1558)

In 1556, under Mary, Cranmer met his death at the stake, after vainly endeavouring by copious recantations -- Sander avers that "he signed them seventeen times with his own hand" -- to save his life. This severity, though doubtless impolitic, can hardly be deemed unjust if his career be carefully considered. But his work lived after him and formed the basis of the ecclesiastical legislation of Elizabeth, when Mary's brief reign came to an end, and with it the ineffectual endeavour to destroy the new religion by the fagot.

Mary's fiery zeal for the Catholic Faith failed to undo the work of her two predecessors, and unquestionably did ill service to the Catholic cause. It would be foolish to blame her for not practising a toleration utterly alien from the temper of the times. But there can be no question that Green is well warranted in writing that to her is due "the bitter remembrance of the blood shed in the cause of Rome which, however partial and unjust it must seem to an historic observer, still lies graven deep in the temper of the English people" (Short History, p. 360).

Elizabeth I (1558-1603)

The first act of Elizabeth, when she found herself firmly seated on the throne, was to annul the religious restorations of her sister. "All Laws and Statutes made against the See Apostolic of Rome since the twentieth year of King Henry VIII" had been abolished by the 1 and 2 Philip and Mary, c. 8, which "enacted and declared the Pope's Holiness and See Apostolic to be restored, and to have and enjoy such authority, pre-eminence and jurisdiction as His Holiness used and exercised, or might lawfully have used and exercised, by authority of his supremacy, before that date". Elizabeth, by the first Act of Parliament of her reign, repealed this Statute, and revived the last six of the seven Acts against the Roman pontiff passed between the 21st and 26th year of Henry VIII of which we have given an account, and also certain other anti-papal Statutes passed subsequently to the enactment of Henry's Act of Supremacy. That Act was not revived, doubtless because Elizabeth, as a woman, shrank from assuming the title of Supreme Head of the Church bestowed by it on the sovereign. But, although she did not take to herself that title, she took all the authority implied therein by this first Act of her reign. It vests the plenitude of ecclesiastical jurisdiction in the Crown and the Queen's Highness, who is described as "the only Supreme Governor of this realm as well in all spiritual and ecclesiastical things or causes as temporal", and it prescribes an oath recognizing her to be so for all holding office in Church and State. The next Act on the Statute Book is the Act of Uniformity. It orders the use in the churches of the second Prayer Book of Edward VI, in the place of the Catholic rites,

and provides penalties for ministers disobeying this injunction. It also enforces the attendance of the laity at the parish church on Sundays and holidays, for the new service. This was the definite establishment of the new religion in England, the consummation of the revolution initiated by Henry VIII. The bishops, with the exception of Kitchen of Llandaff, refused to accept it, as did about half the clergy. The majority of the laity passively acquiesced in it, just as they had acquiesced in the ecclesiastical changes of Henry, and Edward, and Mary. Its effect was, virtually, to reduce the Church of England to a department of the State. The Anglican bishops became, and are still, nominees of the Crown, election by the dean and chapter, where it exists -- in some of the newer dioceses there are no chapters, and the bishops are appointed by Letters Patent -- being a mere farcical form of which Emerson has given a pungent description: "The King sends the Dean and Canons a cong d' lire, or leave to elect, but also sends them the name of the person whom they are to elect. They go into the Cathedral, chant and pray; and after these invocations invariably find that the dictates of the Holy Ghost agree with the recommendation of the King." If they arrived at any other conclusion, they would be involved in the penalties of a *pr munire*. The Convocations of York and Canterbury are similarly fettered. They cannot proceed so much as to discuss any project of ecclesiastical legislation without "Letters of Business" from the Crown. The sovereign is the ultimate arbiter in causes, whether of faith or morals within the Anglican Church, and his decisions of them given by the voice of his Privy Council, are irreformable. But of course in these days the sovereign practically means the Legislature. "The National Church", Cardinal Newman writes in his "Anglican Difficulties", "is strictly part of the Nation, just as the Law or the Parliament is part of the Nation." "It is simply an organ or department of the State, all ecclesiastical acts really proceeding from the civil government." "The Nation itself is the sovereign Lord and Master of the Prayer Book, its composer and interpreter."

Queen Elizabeth's Acts of Supremacy and Uniformity form, in the words of Hallam, "the basis of that restrictive code of laws which pressed so heavily, for more than two centuries, upon the adherents of the Roman church". It is not necessary here to describe in detail that "restrictive code". An account of it will be found in the first chapter of "A Manual of the Law specially affecting Catholics", by W. S. Lilly and J. P. Wallis (London, 1893). But we may observe that the queen who originated it was animated by very different motives from those which influenced her father in his revolt against Rome. Sander has correctly said, "he gave up the Catholic faith for no other reason in the world than that which came from his lust and wickedness"; and, indeed, while severing himself from Catholic unity, and pillaging the possessions of the Church, he was as far as possible from sympathizing with the doctrinal innovations of Protestantism and savagely repressed them. Elizabeth, by the very necessity of her position, was

driven -- we speak *ex humano die* -- to espouse the Protestant cause. No doubt, as Lingard writes, "it is pretty evident that she had no settled notions of religion", and she freely exhibited her contempt for her clergy on many occasions -- notably on her death-bed, when she drove away from her presence the Archbishop of Canterbury and certain other Protestant prelates of her own making, telling them "she knew full well that they were hedge priests, and took it for an indignity that they should speak to her" (Dodd, "Church History", III, 70). But, like Cranmer, if she had no religious convictions, she had the conviction of her interests. Her lot was plainly cast in with the Protestant party. Rome had declared her mother's marriage null, and her own birth illegitimate. Catholics, in general, looked upon Mary Queen of Scots as the rightful claimant to the throne which she occupied. Throughout her reign

Church policy and State policy are conjoint:
But Janus-faces, looking different ways.

The Anglican Church, as established by her, was a mere instrument for political ends; in her own phrase, she tuned her pulpits. The maxim, *Cujus regio ejus religio*, was currently accepted in her time. It seemed according to the natural order of things that the people should profess the creed of the prince. Elizabeth is not open to the charges made against her sister of religious fanaticism. But she was given up to that "self will and self worship" which Bishop Stubbs justly attributes to her father. And, in the well-weighed words of Hallam, "she was too deeply imbued with arbitrary principles to endure any deviation from the mode of worship she should prescribe".

It was on the feast of St. John Baptist, 1559, that the statute took effect which abolished throughout England the old worship, and set up the new. Thenceforth Catholic rites could be performed only by stealth, and at the risk of severe punishment. But during the first decade of the queen's reign Catholics were treated with comparative lenity, occasional fines, confiscations, and imprisonments being the severest penalties employed against them. Camden and others assert that they enjoyed "a pretty free use of their religion". But this is too strongly put. The truth is that a vast number who were Catholics at heart temporized, resorting to the new worship more or less regularly, and attending secretly, when opportunity offered, Catholic rites celebrated by the Marian clergy commonly called "the old priests". Of these a considerable number remained scattered up and down the country, being generally found as chaplains in private families. These occasional conformists were supported by the vague hope of political change which might give relief to their consciences. Elizabeth and her counsellors calculated that when the old priests dropped off, through death and other causes, people generally would be won over to the new religion. But it fell out otherwise. As the old priests disappeared, the question of a supply of Catholic clergy began to engage

the minds of those to whom they had ministered. Moreover, stricter conceptions of their duty in respect of heretical worship were gaining ground among English Catholics, partly on account of the decision of a congregation appointed by the Council of Trent, that attendance at it was "grievously sinful", inasmuch as it was "the offspring of schism, the badge of hatred of the Church". Then a man appeared whom Father Bridgett rightly describes as "the father, under God, of the Catholic Church in England after the destruction of the ancient hierarchy", to whom "principally, we owe the continuation of the priesthood, and the succession of the secular clergy".

That man was William Allen, afterwards cardinal. He conceived the idea of an apostolate having for its object the perpetuation of the Faith in England, and in 1568 he founded the seminary at Douai, then belonging to Spanish Flanders, which was for so many generations to minister to the wants of English Catholics. It is notable as the first college organized according to the rules and constitution of the Council of Trent. The missionaries, full of zeal, and not counting their lives dear, who were sent over from this institution, revived the drooping spirits of the faithful in England and maintained the standard of orthodoxy. Elizabeth viewed with much displeasure this frustration of her hopes, nor was the Bull "Regnans in excelsis", by which, in 1570, St. Pius V declared her deposed and her Catholic subjects released from their allegiance, calculated to mollify her. Increased severity of the penal laws marks the rest of Elizabeth's reign. By the Act of Supremacy Catholics offending against that statute had been made liable to capital punishment as traitors, the queen hoping thereby to escape the odium attaching to the infliction of death for religion. Few will now dissent from the words of Green in his "Short History": "There is something even more revolting than open persecution in the policy which brands every Catholic priest as a traitor, and all Catholic worship as disloyalty." But, for a time, the policy succeeded, and the martyrs who suffered for no other cause than their Catholic faith were commonly believed to have been put to death for treason. In 1581 this offence of spiritual treason was the subject of a far more comprehensive enactment (23 Eliz., c. 1). It qualified as traitors all who should absolve or reconcile others to the See of Rome, or willingly be so absolved or reconciled. Many English historians (Hume is the most considerable of them) have affirmed that "sedition, revolt, even assassination were the means by which seminary priests sought to compass their ends against Elizabeth". But this sweeping accusation is not true. No doubt Cardinal Allen, the Jesuit Persons, and other Catholic exiles were cognizant of, and involved in, plots which had for their end the queen's overthrow, nor would some of the conspirators have shrunk from taking her life any more than she shrank from taking the life of Mary Queen of Scots. But, in spite of all their sufferings, the great body of English Catholics maintained their loyalty. From the political intrigues in which the exiles were so deeply involved they held aloof, nay, many of

them viewed with suspicion not only the exiles, but the whole Society of which Persons was a foremost representative, and desired the exclusion of Jesuits from English Colleges and from the English mission. When the Armada was expected they repaired in every county to the standard of the Lord Lieutenant, imploring that they might not be suspected of bartering the national independence for their religious belief. They received from Elizabeth a characteristic reward. "The Queen," writes Lingard, "whether she sought to satisfy the religious animosities of her subjects, or to display her gratitude to the Almighty by punishing the supposed enemies of His worship, celebrated her triumph with the immolation of human victims" (History of England, VI, 255). In the four months between 22 July and 27 November, of 1588, twenty-one seminary priests, eleven laymen, and one woman were put to death for their Catholic faith. During the rest of Elizabeth's life her Catholic subjects groaned under incessant persecution, of which one special note was the systematic use of torture. "The rack seldom stood idle in the Tower during the latter part of her reign", Hallam remarks. The total number of Catholics who suffered under her was one hundred and eighty-nine, one hundred and twenty-eight of them being priests, fifty-eight laymen, and three women. To them should be added, as Law remarks in his "Calendar of English Martyrs" (London, 1870), thirty-two Franciscans who were starved to death.

Notwithstanding the severities of Elizabeth, the number of Catholic clergy on the English missions in her time was considerable. It has been estimated that at the end of the sixteenth century they amounted to three hundred and sixty-six, fifty being survivors of the old Marian priests, three hundred priests from Douai and the other foreign seminaries, and sixteen priests of the Society of Jesus.

James I (1603-1625)

On the queen's death the eyes of the persecuted remnant of the old faith turned hopefully towards James. Their hopes were doomed to disappointment. That prince took himself seriously as head of the English Church. He chose rather to be the successor of Elizabeth than the avenger of Mary Stuart, and continued the savage policy of the late queen. The year after his accession an Act was passed "for the due execution of the Statutes against Jesuits, Seminary priests and other priests", which took away from Catholics the power of sending their children to be educated abroad, and of providing schools for them at home. In the course of the same year a proclamation was issued banishing all missionary priests out of the kingdom. The next year is marked by the Gunpowder Plot, "the contrivance", as Tierney well observes, "of half a dozen persons of desperate fortunes, who, by that means, brought an odium upon the body of Catholics, who have ever since laboured under the weight of the calumny, though no way concerned". Soon afterwards a new oath of allegiance was devised, rather for the purpose of dividing than of relieving Catholics. It was incorporated in "An Act for

the better discovery and repression of Popish recusants" (a recusant Catholic was simply one who refused to be present at the new service of the Protestant religion in the parish church), and was directed against the deposing power. The Holy See disallowed it, but some Catholics took it, among them being Blackwell the Archpriest. Twenty-eight Catholics, of whom eight were laymen, suffered under James I, but that prince was more concerned to exact money from his Catholic subjects than to slay them. According to his own account he received a net income of 36,000 a year from the fines of Popish recusants (Hardwick Papers, I, 446).

Charles I (1625-1649)

With the accession of Charles I (1625) a somewhat brighter time began for English Catholics. He was unwilling to shed their innocent blood -- indeed only two underwent capital punishment while he bore rule -- and this reluctance was one of the causes of rupture between him and the Parliament. His policy, Hallam writes, "with some fluctuations, was to wink at the domestic exercise of the Catholic religion, and to admit its professors to pay compensations for clemency, which were not regularly enforced". The number of Catholic clergy in England received a considerable augmentation in his reign. Panzani reported to the Holy See that in 1634 there were on the English mission five hundred secular priests, some hundred and sixty Jesuits, a hundred Benedictines, twenty Franciscans, seven Dominicans, two Minims, five Carmelites, and one Carthusian lay brother, besides the clergy, nine in number, who served the queen's chapel. This large increase in the number of Jesuits was not regarded by all as an un-mixed gain, unquestionable as was their zeal and devotion. It was considered by some as the cause of rivalries and dissensions, unpleasant to read of, among the small remnant who kept the faith. The Jesuits seem to have been, at times, open to the charge of aggressiveness, and certainly they did not succeed in dissipating the prejudice so universal against them. One of the burning questions among English Catholics was concerning the episcopal succession. The secular clergy desired a bishop, and Allen had proposed to Gregory XIII that one should be sent. Though Persons' influence at Rome, which was very great, instead of a bishop an archpriest was appointed (1598) in the person of George Blackwell, who has been already mentioned, a friend of his own, who was deprived by the Holy See ten years later for taking the oath of allegiance under James I. Birkhead succeeded him, and Harrison succeeded Birkhead, until, in 1623, Dr. William Bishop was appointed Vicar Apostolic of England. He died in 1624, and was succeeded by Dr. Richard Smith. Shortly afterwards there was an outbreak of persecution occasioned by the Puritan party in the House of Commons led by Sir John Elliot, and Bishop Smith withdrew to France at the end of 1628, never to return to England, which remained without a bishop till 1685.

When war broke out between Charles I and the Parliament, English Catholics, to a man, espoused the cause of the king. They could not do otherwise. Hatred of Catholicism was a dominant note of the Parliamentary party, who bitterly resented the quasi-toleration which the Catholics had for some years enjoyed; and between the meeting of the Long Parliament and the death of Cromwell twenty-four adherents of the Faith suffered martyrdom. The Catholics, as Hallam points out, were "the most strenuous of the King's adherents"; they were also the greatest sufferers for their loyalty. One hundred and seventy Catholic gentlemen lost their lives in the royal cause; and Catholics were especially oppressed under the Commonwealth.

Charles II (1660-1685)

At the Restoration of Charles II, in 1660, English Catholics expected, not unnaturally, to receive some recompense for their unswerving devotion to the royal cause, and this more especially as the new king's personal obligations to them were very great. After his total overthrow at the battle of Worcester, he owed his life to the Catholics of Staffordshire, the Huddlestones, the Giffards, the Whitegreaves, the Penderells. But "Let not virtue seek remuneration for the thing it was" is a lesson written on every page of the history of the Stuarts. Catholics asked, in a petition presented to the House of Lords by Lord Arundell of Wardour, that they might receive the benefit of the Declaration of Breda. Charles was inclined to give them "liberty of conscience", but Lord Chancellor Hyde, afterwards Earl of Clarendon, we read in Kenneth's "Register and Chronicle", "was so hot upon the point, that His Majesty was obliged to yield rather to his importunities than his reasons". The king, who, as he himself expressed it, was not minded to set out again on his travels, recognized that there was in the nation a strong anti-Catholic feeling, and bowed to it, though himself intellectually convinced of the truth of the Catholic religion. The laws against Papists remained on the statute book, and, from time to time, proclamations -- they were, it is true, for the most part *brutum fulmen* -- were issued requiring Jesuits and other priests to quit the kingdom under the statutory penalties. A singular instance of overmastering anti-Catholic prejudice prevailing in the nation is supplied by the monument erected by the Corporation of London to commemorate the Great Fire of 1666. It bore an inscription in which Catholics were accused of being the authors of that calamity, a monstrous assertion for which no shred of evidence was ever adduced. --

Where London's column pointing to the skies,
Like a tall bully lifts its head and lies,

Pope had the courage to write. But not until the nineteenth century was well advanced was the calumny erased.

It is not possible here to follow, even in briefest outline, the course of Charles II's reign. We may, however, point out that two things are necessary to a right view of it: to understand the character and aims of Charles II, and to realize the dominant temper of the English nation. Idle, voluptuous, and good-humouredly cynical, Charles certainly was; but he possessed deep knowledge of human nature, great political tact, and remarkable tenacity of purpose. That he preferred the Catholic religion to any other, is certain; and he was glad to embrace it on his death-bed. But he recognized the strong Protestant feeling of the people over whom he ruled, and was not prepared to imperil his crown by defying it. He was, however, really desirous to do what he could, without risk to himself, for the relief of Catholics; and this was the motive of his Declaration of Indulgence in 1672, by which he ordered "that all manner of penal laws on matters ecclesiastical against whatever sort of Nonconformist or recusants" should be suspended, and gave liberty of public worship to all dissentients, except Catholics, who were allowed to celebrate the rites of religion in private houses only. This declaration was sovereignly displeasing to all parties in the House of Commons, who answered it by a resolution "that penal statutes in matters ecclesiastical cannot be suspended except by consent of Parliament", and refused supplies until the declaration was recalled. That was a convincing argument to Charles. He recalled the declaration forthwith. Parliament then proceeded to pass a bill -- it went through both Houses without opposition, and Charles dared not refuse his royal assent to it -- which required every one in the civil and military employment of the Crown to take the oaths of allegiance and supremacy, to subscribe a declaration against Transubstantiation, and to receive the Eucharist according to the rites of the Church of England. One effect of this Act (13 Car. II, St. 2, c. 1) was to deprive James, Duke of York, who had become a Catholic, of his office of Lord High Admiral.

During the next nine years the struggle between the king and the Parliament continued. The popular leader was Ashley, Earl of Shaftesbury -- for some time Chancellor -- whose character has been delineated by Dryden with merciless severity, but with substantial accuracy, in "Absalom and Achitophel". This statesman's own Protestantism was of the haziest kind, but he was zealous, from political motives, for the national religion, and for that reason was bent upon excluding the Duke of York from the succession to the throne. To accomplish this end, he fought strenuously, unremittingly, nor was any weapon too vile for his use. The Second Test Act, passed through his exertions in 1678, rendered Catholics incapable of sitting in Parliament, and thus deprived twenty-one Catholic peers of their seats in the House of Lords; but the king contrived to procure the insertion of a clause exempting the Duke of York from the operation of the Statute. It was in this same year that Titus Oates appeared on the scene with his pretended Popish Plot. There is no evidence that Ashley was the

instigator of the colossal villainy, but he did not scruple to employ it for his own purposes. "The origin of the Plot", says a recent well-informed writer in "Blackwood's Magazine" (May, 1908), "is a mystery. We know no more than that the English people, being mad, interrupted the course of justice, insisted that the judges should condemn every man brought before them, suspected of papistry, and easily believed the crazy stories of hired perjurers. It is most probable that Oates himself contrived the death of Sir Edmund Godfrey." However that may have been, certain it is that the calumnies of Oates and his confederates and imitators awakened the Elizabethan Statutes into fresh activity. The king was far too shrewd to give credence to what Macaulay has well called "a hideous romance resembling rather the dream of a sick man than any transaction which ever took place in this world." But he was powerless to save the victims of popular fanaticism; "I cannot pardon them", he said, "for I dare not." And so, in 1679, the horrors of 1588 were repeated, eight priests of the Society of Jesus, two Franciscans, five secular priests, and seven laymen being put to death, while many more died in their foul prisons. The next year witnessed the judicial murder of Lord Stafford, his peers being unable to withstand the madness of the people. In 1681 Oliver Plunket, the Archbishop of Armagh, was executed at Tyburn, after a mock trial. His was the last blood shed for the Catholic religion in England. The persecution, which had begun with the execution of the three saintly Carthusian friars in the twenty-sixth year of Henry VIII, had lasted, with little intermission, for a century and a half. Three hundred and forty-two martyrs had sealed their faith with their blood, while some fifty confessors, in the reign of Elizabeth and her successors, ended their lives in prison. The king's long struggle with the popular party ended in his complete victory. No more consummate master of political strategy ever perhaps existed; and the violence of the party led by Shaftesbury played into his hands. Shaftesbury himself was arrested on a charge of suborning false witnesses to the Plot; although the Grand Jury of Middlesex ignored the bill of his indictment, he saw that the tide of popular feeling, which had begun to ebb with the execution of Lord Stafford, was now turned completely against him, and at the end of 1682 he fled to Holland, where, two months afterwards, he died.

Charles II was the most popular of kings during the last two years of his reign, and he was careful not to mar his popularity by illegal acts or by measures opposed to the feeling of the nation. The statute for the regulation of printing, passed immediately after the Restoration, had expired in 1679; Charles made no attempt for its renewal. In the same year the Habeas Corpus Act -- that great charter of the liberty of the subject -- was passed; Charles acquiesced in it. He did indeed infringe the Test Act by the Duke of York's readmission to the Council and restoration to the office of lord high admiral. But, in the recrudescence of loyalty, this tribute to fraternal affection passed

unblamed. In his last illness the churches were thronged with crowds praying that God would raise him up again to be a father to his people; and on his death, in February, 1685, all sorts and conditions of his subjects made great lamentation over him.

James II (1685-1688)

In the first year of the reign of James II Dr. Leyburn was appointed by the Holy See as vicar Apostolic. In the next year Dr. Giffard received a like appointment, as did Dr. Ellis and Dr. Smith the year after that, England being divided into four districts: the London, the Midland, the Western, and the Northern, in each of which the papal vicar exercised all the authority possessed by an ordinary. The new king came to the throne with advantages which he could hardly have hoped for. He inherited, in some sort, the popularity of his brother, and his religion was forgotten in his blood. He began his reign by a solemn pledge to keep the laws inviolate and to protect the Church of England, and the nation believed him. "We have the word of a king", it was said, "and of a king who was never worse than his word." The saying, whoever was its author, went abroad. It expressed the general conviction, and his first Parliament made proof of exuberant loyalty, granting to the monarch, without demur, a revenue of nearly two millions for life. Argyll's rebellion in the North and Monmouth's in the West but served to bring out the devotion of the nation at large to the sovereign. But the cruelties of Kirke and the savageries of Jeffreys in the "Bloody Circuit" caused a change in the general feeling. The king's popularity began to wane, and the measures to which he now resorted soon put an end to it. Monmouth's revolt was made the pretext for raising the army to twenty thousand men, and it soon appeared that James supposed himself able, with this force at his command, to place himself above the law. He attempted to nullify the provisions of statutes by the exercise of his dispensing powers. Judges who refused to fall in with his plans were dismissed; and it was held by a bench packed with his creatures that his dispensation could be pleaded in bar of an Act of Parliament. Armed with this decision, the king proceeded to set aside the disabilities of Catholics and the restraints upon the exercise of their religion. They were admitted to civil and military offices closed to them by the law; members of religious orders appeared in the streets of London in their habits; the Jesuits opened a school which was soon crowded. Further, the king found himself *ex officio* supreme head of the Anglican Communion, and he resolved to use his supremacy as a weapon for its overthrow. Following the precedent of Elizabeth, he appointed an Ecclesiastical Commission, in defiance of an Act of Charles I which declared that court illegal; and he placed Jeffreys at the head of it. He forbade the clergy to preach against popery, and suspended the Bishop of London for refusing to carry out this order. At Oxford he presented a Catholic to the deanery of Christ Church and converted Magdalen College into a Catholic society. Among English Catholics most men of reputation stood aghast at

this reckless violence. Few approved it but converts of broken fortune and tarnished reputation. Rome gave no countenance to it. Macaulay is absolutely warranted in writing: "Every letter which went from the Vatican to Whitehall recommended patience, moderation and respect for the prejudices of the English people". "The Pope", he observes in another page, with equal justice,

was too wise a man to believe that a nation so bold and stubborn could be brought back to the Church of Rome by the violent and unconstitutional exercise of the royal authority. It was not difficult to see that if James attempted to promote the interests of his religion by illegal and unpopular measures, his attempt would fail: the hatred with which the heretical islanders regarded the true faith would become fiercer and stronger than ever: and an indissoluble association would be created in men's minds between Protestantism and civil freedom, between Popery and arbitrary power.

This is precisely what happened. And indeed it is not too much to say that British Catholics have, in great measure, to thank the two last Catholic sovereigns for the strong feeling which so long existed against them throughout the nation, and which, even now, has not wholly disappeared. The severities of Mary appeared to give countenance to the popular Protestant opinion that Catholics rely chiefly on the argument from fire and are always ready, if they can, to burn dissidents from their religious belief. The conduct of James II seemed an object lesson confirmatory of the vulgar conviction that Catholics are not bound to keep faith with heretics, and that any violation of law, any "crooked and indirect bye-ways" are justifiable means to the end of advancing the Catholic religion.

The reign of James II lasted only three years. It is not too much to say that before two of them were out he had succeeded in alienating the devotion of the entire nation. The famous Declaration of Indulgence supplied the supreme proof of his folly and was the immediate occasion of his downfall. The gist of it was that by the royal authority all laws against all classes of Nonconformists were suspended, that all religious tests imposed upon them by statute as a qualification for office were abrogated. Only an absolute monarch could claim to exercise such a prerogative. It is true that the Declaration was full of professions of love of liberty of conscience -- professions which came oddly from a monarch with James's record. Moreover, as we now know, upon the very eve of publishing it he had written to congratulate Louis XIV upon his revocation of the Edict of Nantes, an example which Barillon, a very competent judge, thought he would have only too gladly followed if he had been able. Those hollow and palpably false professions deceived no one, and the failure of the Declaration to conciliate the

support of those who would have chiefly benefited by it, might have suggested caution to a wiser man. But James would brook no opposition; and on 27 April, 1688, he ordered the Anglican clergy to read his Declaration of Indulgence during divine service on two successive Sundays. Nearly all the clergy refused to obey, and Sancroft, the Archbishop of Canterbury, with six of his suffragans, addressed to the king a respectful and temperate protest. The document was treated as a libel, and the famous trial of the seven bishops was the result. The acquittal of the prelates was greeted throughout the country with a tumult of acclaim, which was the signal for the Revolution, whereby the ancient liberties of England were vindicated, and a Parliamentary title to the crown was substituted for an hereditary one. (See ENGLISH REVOLUTION OF 1688).

William III & Mary II (1688-1702)

The disfavour with which Catholics were viewed when William and Mary were placed on the throne vacated by James II, was natural enough. They shared in the hatred inspired by the perfidy, cruelty, and tyranny of the absconded sovereign. William, indeed, would have gladly extended to them the same measure of toleration which, in spite of Tory opposition, he was able to secure for Protestant Nonconformists. He was under great obligations not only to the emperor, but also to the pope, whose sympathy and diplomatic support had been of much help to him in his perilous enterprise. He was, by temperament and by conviction, averse from religious persecution. Moreover, as Hallam justly observes, "no measure would have been more politic, for it would have dealt to the Jacobite cause a more deadly wound than any which double taxation or penal laws were able to effect." And this, no doubt, was one of the reasons why the High Tories persistently opposed it. But the Legislature did not content itself with leaving on the statute book the former statutes against Catholics; it enacted new disqualifications and penalties. The Bill of Rights provides that no member of the reigning house who is a Catholic, or has married a Catholic, can succeed to the throne, and that the sovereign, on becoming a Catholic, or marrying a Catholic, thereby forfeits the crown. This article of the constitution was confirmed by the Act of Settlement (12 & 13 Will. III, c. 5, s. 2), which conferred the succession on the descendants of the Electress Sophia (a daughter of James I), being Protestants. Another statute, of the first year of William and Mary, prohibited Catholics from residing within ten miles of London and empowered justices to tender to reputed Papists "the oath appointed by law", providing that any who refused it, and yet remained within ten miles of London, was to forfeit and suffer as a Papist recusant convict. A third Act of the same year (1 W. & M., c. 15) provides that no suspected Papist who shall neglect to take the oath appointed by law, when tendered to him by two justices of the peace, and who shall not appear before them upon notice from one authorized under their hands and seals, shall keep any arms, ammunition, or horse above the value of five pounds in his possession, and

in that of any other person to his use (other than such as shall be allowed him by the sessions for defence of his house and person); that any two justices may authorize by warrant any person to search for all such arms, ammunition, and horses in the daytime, with the assistance of the constable or his deputy or tithing-man, and to seize them for the king's use; and that if any person shall conceal such arms, ammunition, or horses, he shall be imprisoned for three months and shall forfeit to the king treble the value of such arms, ammunition, or horse. The 7 & 8 Will. III, c. 24, closed to Catholics the professions of counsellor-at-law, barrister, attorney, and solicitor; and the 7 & 8 Will. III, c. 27, declared that any person who refuses to take the oaths of allegiance and supremacy, when lawfully tendered, should be liable to suffer as a Popish recusant convict; and that no person who should refuse the said oath should be admitted to give a vote at the elections of any member of Parliament. In 1700 an Act was passed which, Sir Erskine May observes, "cannot be read without astonishment". It incapacitated every Roman Catholic from inheriting or purchasing land, unless he abjured his religion upon oath; and on his refusal it vested his property, during his life, in his next of kin being a Protestant. He was even prohibited from sending his children abroad, to be educated in his own faith. And while his religion was thus proscribed, his civil rights were further restrained by the oath of abjuration. It prescribed imprisonment for life for all Catholic priests, and enacted that an informer, in the event of their being convicted of saying Mass, was to receive a reward of one hundred pounds.

Concerning this Act of William III Hallam remarks, "So unprovoked, so unjust a persecution is the disgrace of the Parliament that passed it." But he goes on to add, "The spirit of Liberty and tolerance was too strong for the tyranny of the law and this statute was not executed according to its purpose. The Catholic landholders neither renounced their religion nor abandoned their inheritance. The judges put such constructions upon the clause of forfeiture as eluded its efficiency." No doubt this is generally true. But as Charles Butler tells us in his "Historical Memoirs" (London, 1819-21), "in many instances the laws which deprived Catholics of their landed property were enforced." He adds that "in other respects they were subject to great vexation and contumely". They were a very small and very unpopular minority in an age when a common creed was regarded, in every European country, as the chief bond of civil polity and dissidents from it were more or less rigorously repressed. As a matter of fact, it is to a great English magistrate that we owe the ruling which placed an almost insuperable difficulty in the way of the tribe of informers. At the trial of the Rev. James Webb on the 25th of June, 1768, at Westminster, at the suit of a notorious common informer named Payne, Lord Mansfield told the jury that the defendant could not be condemned "unless there were sufficient proof of his ordination". Such proofs, of course, were not forthcoming. Lord Mansfield, as Charles Butler relates in his above-

mentioned "Historical Memoirs", discountenanced the prosecution of Catholic priests and took care that the accused should have every advantage that the form of proceedings, or the letter or spirit of the law, could allow. And at that period the same temper animated English judges generally.

After William and Mary

As the second half of the eighteenth century wore on, English Catholics ceased to be regarded by the Government as politically dangerous. A certain number of them had taken part in the rising of 1715, and in the far more serious rising of 1745, and had in some instances been executed for their pains. But in 1758 the Old Pretender died, and the Young Pretender, upon whom his claim devolved, had ceased to excite either dread or enthusiasm. Men no longer took him seriously, and English Catholics in time -- it was no very long time -- acquiesced in the Revolution of 1688. Nay, they did something more than acquiesce. In 1778 an address was presented to George III, bearing the signatures of the Duke of Norfolk and nine other peers, and of one hundred and sixty-three commoners, on behalf of the Catholic body. It represents to the sovereign their "true attachment to the civil constitution of the country, which having been perpetuated through all changes of religious opinions and establishments, has been at length perfected by that Revolution which has placed your Majesty's illustrious house on the throne of these Kingdoms, and inseparably united your title to the crown with the law and liberties of your people". In this year, 1778, the first Catholic Relief Act was passed. It repealed the worst portions of the Statute of 1699 above mentioned, and set forth a new oath of allegiance which a Catholic could take without denying his religion. Though a very modest measure of relief, it was extremely distasteful to some bigoted Protestants, among whom it is distressing to find the name of John Wesley. But in truth Wesley -- it is not a rare case -- was no less ignorant and narrow-minded than zealous and devout, as is sufficiently evident from his "Letter concerning the Principles of Roman Catholics". In this document, besides other equally foolish assertions, he alleges that they hold an oath not binding if administered by heretics, and that they believe in the remission of future sins through the Sacrament of Penance. The conclusion he draws is that no government "ought to tolerate men of the Roman Catholic persuasion". There can be no doubt that the diatribes of Wesley and his followers largely swelled the agitation for the repeal of the Act of 1778, which was conducted by the Protestant Association, and which issued in the Lord George Gordon Riots.

It would be an error to impute the prevalence of a milder spirit towards Catholics at this period to sympathy with their religion. It arose rather from the relaxation of dogmatic belief, the latitudinarianism, the indifferentism which is a notable sign of those times, and which infected Catholics as well as Protestants throughout Europe.

In England it was manifested, among other ways, in the apostasy of nine Catholic peers, while many other Catholic laymen, of position and influence, assumed a quite un-Catholic attitude towards the episcopate and towards the Government. They desired, legitimately enough, further deliverance from the penal laws; and to compass this end they had recourse to means not at all legitimate. In May, 1783, five of these constituted themselves "a Committee appointed to manage the further affairs of Catholics in this kingdom", to use their own words. "It was in some respects", writes Canon Flanagan (*History of the Church in England*, II, 393), "a useful institution, working zealously for the supposed interests of the Catholic body. Its zeal, unfortunately, was not according to knowledge. It sought to win emancipation by making to Protestants every concession that it believed it could in conscience, but it forgot meantime that minute theological knowledge would be necessary for so delicate a task; or rather it forgot that it was unintentionally perhaps, but not the less certainly, usurping the place of the bishops and of the Holy See. It was now in treaty with the government for fresh measures of relief. It complained that the Catholics were not allowed their own 'mode of worship'; were punished severely for educating their children 'in their own religious principles', whether at home or abroad; could not practise any of the professions of the law, or serve in the Army or Navy, or vote in the elections, or hold a seat in either House; and it prayed William Pitt, who was now prime minister, to aid them in their intended application for redress". Pitt was favourably inclined towards the committee, whose proceedings, however, were soon marked by great unwisdom. Protestant Nonconformists were at that time striving to obtain a complete toleration, and held out the right hand of fellowship to Catholics. The Catholic committees were well pleased by the proposed alliance, and in a bill which they drafted for the House of Commons, they inserted a clause providing that the relief to be given by it was to be available to those only who subscribed their names, in a Court of Justice, in the following form: "I, A.B., do hereby declare myself to be a *Protesting Catholic Dissenter*. The four vicars Apostolic, in an encyclical letter, condemned this and other vagaries of the Catholic Committee, and declared that none of the faithful clergy or laity under their care ought to take any oath or subscribe to any instrument wherein the interests of religion are concerned without the previous approbation of their respective bishops. The Holy See approved this letter. In the Relief Act which was passed in 1791 the foolish phrase "*Protesting Catholic Dissenters*" was struck out, and the oath proposed by the Catholic Committee was utterly discarded, the inoffensive Irish oath of 1778, with slight variations, being substituted for it. Catholics taking this oath were relieved from the penalties of the Statutes of Recusancy and from the obligation of taking the oath of supremacy prescribed by the Statute of William and Mary. Various disabilities were removed, and toleration was extended to Catholic schools and worship. Shortly

after this Act was passed the Catholic Committee turned itself into the Cisalpine Club and continued under that name, for thirty years, to trouble more or less the vicars Apostolic.

There can be little doubt that the passing of the Relief Act was facilitated by the outbreak of the Revolution in France. Another result, at first extremely prejudicial to the Catholic Church in England, of that great upheaval was the closing of the seminaries on the Continent, which had furnished to that country a supply of priests. Douai was seized by the French Revolutionary Government in 1793. The English Benedictine houses in France also disappeared. The closing of the English Catholic colleges in France was, however, to some extent compensated by the influx of clergy from that country. No less than eight thousand of these confessors of the Christian Faith sought the hospitality of Protestant England, and it was ungrudgingly given. The King's House at Winchester sheltered a thousand of them, and for several years a considerable sum was voted for their relief by Parliament and was largely supplemented by voluntary subscriptions. A certain number of these priests sought and found work on the English Mission. By far the greater part of them returned home when Napoleon had concluded his Concordat with the Holy See and re-established Christian worship in France. Of those who remained a few were irreconcilably dissatisfied with the new ecclesiastical arrangements in their country. They were known as Blanchardists, from their leader Blanchard, and were a source of much annoyance to the vicars Apostolic. The heroic Milner was especially prominent in combating them, and in asserting the rights of the Holy See. That strenuous champion of orthodoxy had, at the same time, to contend with Catholics of his own nationality. The spirit which had animated the Catholic Committee and the Cisalpine Club was by no means extinct, and led to the formation in 1808, of what was called a "Select Board" which professed as its object the organization of an association for "the general advantage of the Catholic body". That "general advantage" turned out to be the further removal of Catholic disabilities, and the price which the Select Board was prepared to pay for such removal was the vesting in the Crown of an effectual negative upon the appointment of Catholic bishops -- commonly called the Veto. The Irish episcopate unanimously opposed this arrangement, and passed a vote of thanks to Dr. Milner for his "apostolic constancy" in withstanding it. On 30 April, 1813, Grattan brought forward a Catholic relief bill in the House of Commons, which substantially provided for the Veto. It was thrown out on the third reading. Eight years later a similar bill passed the House of Commons, but was rejected by the House of Lords. Of the eventual emancipation of Catholics Dr. Milner had no doubt. Twelve years before his death, which took place in 1826, he assured the pope that it was certain to come. But he would not purchase it by the slightest sacrifice of Catholic principle. In 1826 a declaration was put forward by all the vicars Apostolic

of England explanatory of various articles of the Catholic Faith greatly misunderstood by many Protestants. It was widely read and doubtless helped to remove prejudice. In the same year Sidney Smith published his masterly "Letter on the Catholic Question". Not, however, till March, 1829, was the long desired boon conceded to Catholics. It was wrung, so to speak, from statesmen who had always opposed it. The Clare election convinced Peel and the Duke of Wellington, who were then in power, that the settlement of the Irish question was a political necessity. The duke reminded the House of Lords that when the Irish Rebellion of 1798 had been suppressed the Legislative Union had been proposed in the next year mainly for the purpose of introducing this very measure of concession, and not obscurely intimated his opinion that further to refuse it must lead to civil war. This relief bill passed both Houses by large majorities. The king's consent was reluctantly given, and the Emancipation Act became law. It should be noted that before the passing of the Emancipation Act the friction of which we have been obliged to speak, between certain prominent members of the Catholic laity and the vicars Apostolic, was virtually at an end. The Cisalpine Club still existed; but, as Monsignor Ward remarks (*Catholic London A Century Ago*, p. 38), "there was very little Cisalpinism in it". This was largely due to the personal influence of Dr. Poynter, Vicar Apostolic of the London District, whose gentleness and meekness triumphed where the fiery zeal of Milner failed.

When the nineteenth century opened, the Catholics of Great Britain were, to quote Cardinal Newman's words, "a *gens lucifuga*, found in corners and alleys and cellars and the housetops, or in the recesses of the country". Their chapels were few and far between, and were purposely placed in quarters where they were unlikely to attract observation. It was common to locate them in mews, and in their exterior they were hardly distinguishable from the adjoining stables. George Eliot has well remarked in *Felix Holt*, "Till the agitation about the Catholics in '29, rural Englishmen had hardly known more of Catholics than of the fossil mammoths." Their political emancipation was the beginning of a great change in their social condition. "The steps were higher than men took"; their ostracism began to pass away. Moreover, the reaction which had followed the French Revolution had told in favour of Catholicism even in England. Chateaubriand's "Génie du christianisme" had a world-wide influence, and some of the historical novels of Sir Walter Scott, however deficient in accuracy, presented a much kinder view of the ancient faith than had been commonly taken in Protestant countries.

In the history of the Catholic Church in England since 1829 two events require special notice. One was the rise of what is called "The Oxford Movement". Cardinal Newman used to date that movement from the year 1833, when Keble preached at Oxford his famous assize sermon on "National Apostasy". But indeed it was simply

the bodying-forth of tendencies which had been long in the air. The old notion of the medieval period as "a millennium of darkness" had passed away; and from the contemplation of its masterpieces in architecture and painting men proceeded to study its intellectual and spiritual life. They were also led to investigate, in the light of facts and first principles, the claims of Anglicanism. No doubt the "Lectures on the History and Structure of the Prayer Book of the Church of England" delivered by Dr. Lloyd, the Regius Professor of Divinity at Oxford, set many of his hearers thinking, Newman among them. But the object of the leaders of the Oxford Movement at its beginning was not to examine, but to defend, the Anglican Church. This was the intention of the "Tracts for the Times", begun in 1833. It is not here possible, or indeed necessary, to follow the course of the movement, which, as it went on, departed ever more and more widely from the standards -- even the highest -- of Anglicanism, and approximated ever more and more closely to the Catholic ideal. It culminated in the famous "Tract XC", the theme of which was that the Thirty-nine Articles were susceptible of a Catholic interpretation and could be accepted by one who held all the dogmas of the Council of Trent. Of course the movement greatly interested Catholics, and by no one was it more closely and anxiously followed than by Dr. Wiseman, who had made the acquaintance of Newman and Froude upon the occasion of their visiting Rome in 1833. In September, 1840, Wiseman arrived at Oscott from Rome -- where almost all his previous life had been spent -- to take up his residence as president of that college and Vicar Apostolic of the Midland District. He felt from the day of his arrival there, as he wrote in a memorandum eight years afterwards, that a new era had commenced in England. To help forward that era was the end to which his great gifts and his large heart were utterly devoted. The majority of hereditary English Catholics were much prejudiced against the Tractarians. Dr. Lingard warned Bishop Wiseman not to trust them. Dr. Griffiths, the Vicar Apostolic of the London District, used similar language. But Wiseman did trust them. He held that Catholic principles, if honestly entertained, must lead to the Catholic Church, and he fully believed in the honesty of Newman and Newman's followers. How Newman was influenced by a paper of his on the Donatists, published in the Dublin Review in 1839, is well known. The Oxford Movement had been directed to the impossible aim of unprotestantizing the Anglican Church. Newman and many of his friends came gradually to see that the aim was impossible. The kindly light which they had so faithfully followed step by step led them on to Rome. Wiseman testified: "The Church has not received at any time a convert who has joined her in more docility and simplicity of faith than Newman."

Wiseman had earnestly desired "an influx of fresh blood" into the Catholic Church in England. The accession of the converts due to the Oxford Movement brought it. And no doubt it accelerated the restoration of the hierarchy which had been so strongly

desired by generations of Catholics. In 1840 Gregory XVI had increased the number of English vicars Apostolic from four to eight. Ten years afterwards Pius IX decreed that "the hierarchy of Bishops ordinary, taking their titles from their sees, should, according to the usual rules of the Church, again flourish in the Kingdom of England". The whole of the country was formed into one province consisting of the metropolitan See of Westminster, and the twelve suffragan sees of Southwark, Plymouth, Clifton, Newport and Menevia, Shrewsbury, Liverpool, Salford, Hexham and Newcastle, Beverley, Nottingham, Birmingham, Northampton. This restoration of the hierarchy was certainly not designed as an act of war; it was indeed "unattended by any suspicion that it would give offence to others". But it did give dire offence, and the country resounded with denunciations of what was called "The Papal Aggression". An "insolent and insidious aggression", Lord John Russell, the premier, pronounced it to be, and shortly afterwards introduced into the House of Commons a bill by which the Catholic bishops were prohibited, under penalties, from assuming the territorial titles conferred upon them by the pope. The bill became law after long and angry debates, but was, from the first, a dead letter. There can be no question that Cardinal Wiseman's appeal to the people of England largely contributed to allay the popular passion which his pastoral letter "From without the Flaminian Gate" had had no small share in exciting. Though a somewhat lengthy pamphlet, it was printed *in extenso* in "The Times" and in four other London newspapers, and its circulation was immense. The cardinal appealed to the "manly sense and honest heart" of his countrymen, to "the love of honourable dealing and fair play, which is the instinct of an Englishman", and he did not appeal in vain.

Cardinal Wiseman filled the metropolitan See of Westminster from 1850 to 1865, and it would be hard to overrate the greatness of his services to the Catholic cause in England. Manning truly said in the sermon preached at his funeral: "When he closed his eyes he had already seen the work he had begun expanding everywhere, and the traditions of three hundred years everywhere dissolving before it." When he began that work, there were less than five hundred priests in England; when he ceased from it there were some fifteen hundred. The number of converts during these fifteen years had increased tenfold, and fifty-five monasteries had come into being. But mere statistics give no sufficient notion of the progress made by the Catholic Church under Wiseman's rule, a progress directly due to him in large measure. Not the least important item of his service to religion was the way in which he presented the Church to his countrymen. Mr. Wilfrid Ward is well warranted when he writes: "Wiseman may claim to have been the first effectively to remind Englishmen in our own day of the historical significance of the Catholic Church, which so much impressed Macaulay, and which affected permanently such a man as Comte, which kindled the historical enthusiasm

of a De Maître, a Görres and a Frederick Schlegel." The organization of the Catholic Church, as it now exists in England, may be said to be due to him. He himself drew up, almost entirely, the decrees regarding it for the First Provincial Synod, held at Oscott (1852). His work, indeed, was not done in the tranquillity which he loved. "Without were fightings, within were fears." Some of the converts did not fuse with the hereditary Catholics, "the little remnant of Catholic England", whom they judged to be ill-educated and behind the times, and this prejudice Wiseman regarded as ungenerous, even if, to some extent, it was not unfounded. He deprecated strongly the spirit of party and sought in all gentleness, to put it down and to guide his flock into the way of peace. On the other hand, some of the old clergy, taking their stand upon the ancient ways, regarded with distrust certain innovations of discipline and devotion introduced by the more zealous of the converts. They looked upon the Oratorians as extravagant. They viewed Monsignor Manning with suspicion. It is unnecessary to enter into the dissensions which embittered Wiseman's declining years. The last two, indeed, were passed in comparative quiet, but amid much physical suffering. Not long before he died he said: "I have never cared for anything but the Church. My sole delight has been in everything connected with her."

Cardinal Wiseman's successor in the See of Westminster -- the successor he desired -- was the provost of his chapter, Monsignor Manning, whose episcopate lasted until 1892. They were twenty-seven years of fruitful activity, through evil report and through good report. For some time he was certainly unpopular, not only among his Protestant fellow countrymen but among his own clergy, who did not like his strict discipline and some of whom by no means sympathized with what was called his "ultra-papalism". But gradually the prejudice against him wore off, and his great qualities obtained general recognition. It was the victory of his faith unfeigned, his deep devotion, his spotless integrity, his indomitable courage, his singleness of aim, his entire devotion to the cause which, in his heart of hearts, he believed to be the only cause worth living for. One who knew him well said of him: "He was an Archbishop who lived among his people", "the door-steps of his house were worn with the footsteps of the fatherless and the widow, the poor, the forlorn, the tempted and the disgraced, who came to him in their hours of trouble and sorrow." No doubt he made mistakes, some of them grave enough -- as, for example, his persistent opposition to the frequentation of the Universities of Oxford and Cambridge by Catholic young men -- and his abortive and costly attempt to supply the loss of academical training by a college of higher studies at Kensington under the direction of Monsignor Capel. But it is certainly true that the active part which he played in every department of social reform revealed him not only as a great philanthropist and a great churchman, but also as a statesman of no mean order. It was said by an able writer, upon the occasion of the twenty-fifth an-

niversary of his consecration: "To him, more than to any man, it is due that English Catholics have at last outgrown the narrow cramped life of their past of persecution, and stand in all things upon a footing of equality with their fellow countrymen." No doubt this happy result was largely due to Manning; but perhaps it was more largely due to another. The revelation of his inner life which John Henry Newman thought himself obliged to put before his countrymen in order to vindicate himself from the wanton attacks of Charles Kingsley, in 1864, came like a revelation to multitudes of what Catholicism as a religion really is. The "Apologia pro Vita Sua" was like a burst of sunlight putting to flight the densest mists of Protestant prejudice. And the "Letter to the Duke of Norfolk" (1875), in reply to Gladstone's pamphlet on the Vatican decrees which appeared in 1874, may be said to have made an end of the old error that a loyal Catholic cannot be a loyal Englishman. It was enough for Newman to affirm that there was no incompatibility between the two characters. His countrymen believed him on his word. Lord Morley of Blackburn, a very competent judge, writes: "Newman raised his Church to what would, not so long before, have seemed a strange and incredible rank in the mind of Protestant England" (Miscellanies, Fourth Series, p. 161).

Herbert Vaughan, who succeeded Cardinal Manning in the See of Westminster, ruled the diocese as archbishop, and the province as metropolitan for nearly eleven years. It was reserved for him to take up a work which his predecessor had put aside -- the erection of a cathedral for Westminster. The first public act which Manning had to perform after his nomination to the archbishopric -- it was even before his consecration -- was to preside over a meeting summoned to promote the building of a cathedral in memory of Cardinal Wiseman. He declared on that occasion: "It is a work which I will take up and will to the utmost of my power promote -- when the work of the poor children in London is accomplished, and not till then." This work for the poor Catholic children of London -- provision for their education in their religion -- was Cardinal Manning's life-work; and before he passed away it was accomplished. The building of the cathedral he left, as he announced in 1874, to his successor. The magnificent fane conceived by the genius of John Francis Bentley may, in some sort, be considered as Cardinal Vaughan's monument, as being the outcome of his energy and zeal. It is a memorial of him, as well as of Cardinal Wiseman.

II. CURRENT POSITION OF THE CHURCH

So much must suffice regarding the history of Catholicism in England from the so-called Reformation to the present day. We now proceed to give some account of the actual position of the Church in that country. We have already seen that in 1850 Pope Pius IX reconstituted the hierarchy, making England one ecclesiastical province under the metropolitan See of Westminster, with the twelve suffragan Sees of Southwark, Hexham and Newcastle, Beverley, Liverpool, Salford, Newport and Menevia,

Clifton, Plymouth, Nottingham, Birmingham, and Northampton. In 1878 the Diocese of Beverley was divided into the Dioceses of Leeds and Middlesborough; in 1882 the Diocese of Southwark was divided into the Dioceses of Southwark and Portsmouth, and in 1895 Wales, excepting Glamorganshire, was separated from the Diocese of Newport and Menevia, and formed into the Vicariate Apostolic of Wales. Three years later this vicariate was erected into the Diocese of Menevia, so that the Archbishop of Westminster now has fifteen suffragans. Hitherto, since the Reformation, England had been regarded as a missionary country and had been immediately subject to the Congregation of Propaganda. But Pius X, by his Constitution, "Sapienti Consilio", transferred (1908) England from that state of tutelage to the common law of the Church.

The number of priests, secular and regular, in England, according to the most recent list, is three thousand five hundred and twenty-four, and the number of churches, chapels, and institutes, one thousand seven hundred and thirty-six. Of the regulars who are over a thousand in number, many are French exiles, and a considerable number of them are not engaged in parochial or missionary work. There are three hundred and eleven monasteries and seven hundred and eighty-three convents, a great increase during the half-century which has passed away since 1851, when there were only seventeen monasteries and fifty-three convents. During the same period many churches of imposing proportions, adorned with more or less magnificence, have been erected. Conspicuous among them is the cathedral of Westminster of which mention has been already made. It is in the Byzantine style and is certainly one of the noblest of modern religious edifices. Nearly two hundred and fifty thousand pounds have already been expended on it, and, although still unfinished, it has been open for daily use since Christmas, 1903.

Catholics in England are still subject to various legal disabilities. We have already seen that by the Bill of Rights (11 Will. and Mary sen. 2, c. 2) no member of the reigning house who is a Catholic, or has married a Catholic, can succeed to the throne, that the sovereign, on becoming a Catholic, or marrying a Catholic, thereby forfeits the crown, and that the Act of Settlement (12 and 13 Will. III, c. 2, s. 2), by which the succession was confined to the descendants of the Electress Sophia, being Protestants, confirms this article of the Constitution. This last-mentioned statute further enacts "that whosoever shall hereafter come to the possession of the Crown of England shall join in communion with the Church of England as by law established". The Emancipation Act (10 Geo. IV, c. 7), which was largely a disabling Act, provides that nothing contained in it "shall extend or be construed to enable any person otherwise than he is now by law entitled, to hold the office of Lord Chancellor of England or Lord Lieutenant of Ireland", and the common opinion is that Catholics cannot now fill these great positions, but this view appears questionable. The point is discussed at length in

Lilly and Wallis's "Manual of the Law specially affecting Catholics", pp. 36-43. The Emancipation Act also contains sections imposing fresh disabilities upon "Jesuits and members of other religious orders, communities or Societies of the Church of Rome, bound by monastic or religious vows". These sections have never been put in force; still, as they remain on the statute book, they have the serious effect of disabling religious orders of men from holding property. An Act of 1860 (23 and 24 Vict., c. 134) has, however, somewhat mitigated this hardship, as also a like hardship regarding bequests for what are deemed superstitious uses, such as Masses for the dead. Such bequests are held by English law to be void, but the Irish courts do not follow the English on this point. It should be noted that up to the passing of the Emancipation Act, trusts for the promotion of Catholic charities were held to be illegal. Nor did that enactment expressly refer to them, so that three years later, in order to remove all doubts concerning them, the Roman Catholic Charities Act was passed, by which such charities were made subject to the same laws as Protestant Dissenting charities. The English law as to trusts for Catholic purposes, which are neither charitable nor void as being for "superstitious uses" or for support of forbidden orders, is the same as that which applies to other bequests which are lawful but not charitable.

The only other Catholic disability which need be noticed here is that no person in Holy orders of the Church of Rome is capable of being elected to serve in Parliament as a Member of the House of Commons. This disability is shared by the clergymen of the Church of England, who, however, can escape from it by the legal process vulgarly, though incorrectly, called renouncing their orders, but not by Protestant Dissenting ministers.

It should be noticed that in England provision is made for securing religious liberty for pauper and criminal Catholics. In every workhouse a creed register is kept in which the religion of every inmate is entered by the master, upon admission, and the Guardians of the Poor are empowered to appoint Catholic clergymen, at suitable salaries, to minister to the Catholic paupers. Similarly, Catholic chaplains may be appointed in public lunatic asylums. Catholic pauper children may be transferred from the workhouse schools to schools of their own religion, and, if boarded out, provision is made for their attending the Catholic church. Catholic ministers to prisons are appointed by the Home Secretary, and are duly remunerated. There are sixteen commissioned army chaplains paid by the State. In the Navy there are twenty-three Catholic chaplains, and a hundred and thirty priests receive capitation allowances.

We go on to say some words on Catholic education in England since the Reformation. Of course it hardly existed when the penal law's were enforced in their full rigour. The clergy, as we have seen, were trained abroad at Rome, at Douai, at Lisbon, at Valladolid. The young laity benefited in intermittent and uncertain fashion by the

teaching of the priests. Shakespeare, whom there is strong reason for accounting a Catholic (see Lilly's "Studies in Religion and Literature"), was "reared up", according to an old tradition, by an old Benedictine monk, Dom Thomas Combe, or Coombes. In Pope's time a few Catholic schools were found here and there, and he was sent to one of them, a "Roman Catholic seminary", it is called, at Twyford, kept by Thomas Deane, an ex-fellow of Magdalen College, Oxford. But these "seminaries" were carried on with difficulty, being illegal, and it was not until the outbreak of the French Revolution that much was effected for the cause of Catholic education in England. The professors and pupils of the University of Douni, after enduring many hardships, returned to England in 1795, some going to Herefordshire, in the South, and some to Tudhoe, in the North. The Herefordshire establishment developed in time into St. Edmund's College. The school founded at Tudhoe, and removed first to Crook Hill, has expanded into the great college of Ushaw, which now also serves as a seminary for the five northern Dioceses of Hexham and Newcastle, Leeds, Middlesborough, Salford, and Shrewsbury. Thus these two noble institutions may claim as their far-off founder Cardinal Allen. The magnificent Jesuit college of Stonyhurst may in like manner derive its origin from Father Persons, for it was founded by the religious who fled from the house established by him at St. Omer. The not less magnificent college of Downside is the descendant of St. Gregory's, Douai, i.e. of the Benedictine monastery and college founded there in 1606. The monks fleeing from the fury of the French Revolution were received at Acton Burnell in Shropshire by Sir Edward Smith who had been one of their pupils. It was in 1814 that they settled at Downside. The great college of Oscott is now a seminary in which priests are trained for the southern dioceses and is under the joint direction of the Archbishop of Westminster and the Bishops of Birmingham, Clifton, Menevia, Newport, Northampton, and Portsmouth.

St. Joseph's Missionary College was founded by Cardinal Vaughan, who ever took the deepest interest in it, and who is buried in the grounds. Of Catholic higher schools two deserve special mention; that at Edgbaston, founded by Cardinal Newman, and that at Beaumont, established by the Jesuits. Until 1895 Catholic young men were discouraged -- nay were inhibited, without special permission of the ecclesiastical authorities -- from frequenting the Universities of Oxford and Cambridge, but in that year a letter from the Congregation of Propaganda to Cardinal Vaughan announced that the Holy See had removed this restriction, the bishops, however, being enjoined to make proper provision for Catholic worship and instruction for Catholic young men resorting to these ancient seats of learning. Elementary education has also been largely provided for by Catholics in England. Before the Protestant Reformation all the great monasteries had, attached to them, primary schools for poor children. These of course disappeared with the monasteries. In the eighteenth century a number of

Protestant charity schools were founded, but it was not until the end of the first quarter of the nineteenth century that provision for elementary public instruction began to be recognized as a public duty. In 1833 a Parliamentary grant was first made "for the purpose" of education. It was divided between two Protestant societies, the British and Foreign School, which ignored dogmatic religious teaching, and the National, which represented the Church of England. In 1847 Catholic elementary schools, which had much increased in numbers, were admitted to share in the government grant, and the Catholic Poor School Committee was founded to supervise and direct them, a duty which this body, now called the Catholic Education Council, still fulfils.

Catholic journalism in England is zealously represented by "The Tablet" newspaper, which was founded so long ago as 1840. It is published weekly. Other Catholic journals are the "Catholic Times", "Catholic Meekly", "Catholic Herald", "Catholic News", and "Universe". The chief Catholic review is the "Dublin Review", founded by Cardinal Wiseman, long edited by W. G. Ward, and now by his son Mr. Wilfrid Ward. It is published quarterly. "The Month", a magazine of general literature edited by Fathers of the Society of Jesus, is issued monthly, as its name denotes. An extremely important publication is the "Catholic Directory", which in its present form dates from the year 1838. But for nearly a century previously there had been a Directory which, however, in its earliest issues was merely an Ordo, or Calendar, for the use of priests reciting Office.

It remains now to speak of certain Catholic societies existing in England. In the first place mention must be made of the Catholic Union of Great Britain, founded in 1871. The earliest meeting recorded in the minute book was held at Norfolk House, on the 10th of February of that year, when it was unanimously agreed, "that a Society of Catholics be founded, under the title of the Catholic Union of Great Britain, to promote all Catholic interests, especially the restoration of the Holy Father to his lawful Sovereign rights". The establishment of the society was sanctioned by the archbishops and bishops of England and by the vicars Apostolic of Scotland (the hierarchy in that country was not restored until 1878), and was emphatically approved by Pius IX. In the rules of the Catholic Union the following means of effecting its objects are specified:

- 1 By meetings of the Union and of the Council;
- 2 By public meetings;
- 3 By petitions or memorials, or deputations to the Authorities;
- 4 By local branches;

- 5 By correspondence with similar societies in other countries;
- 6 By procuring and publishing information on subjects of interest to Catholics;
- 7 By co-operation with approved Confraternities, Institutions, and Charitable Associations, for the furtherance of their respective objects; which co-operation shall, in each case, be sanctioned by the Bishop of the Diocese;
- 8 By any other mode approved of by the Council and the Bishops.

For thirty-seven years the Catholic Union has worked steadily and successfully on the lines thus indicated. It has also been of great utility in affording advice and assistance to Catholics, especially the clergy, in matters of doubt and difficulty, legal and administrative. It is governed by a president and council elected by the general body of members. From the first the office of president has been held by the Duke of Norfolk, and for many years the Marquis of Ripon has been the vice-president. On its list of members will be found most British Catholics of position and influence.

The Catholic Truth Society was founded in 1884 by the late Cardinal Vaughan, then rector of the Foreign Missionary College at Mill Hill, and has since had a career of much usefulness. Its main objects are to disseminate among Catholics small and cheap devotional works; to assist the uneducated poor to a better knowledge of their religion; to spread among Protestants information about Catholic truth; to promote the circulation of good, cheap, and popular Catholic books. It holds every year a Conference for the elucidation and discussion of questions affecting the work of the Catholic Church in England. During the twenty years of its existence it has issued publications, great and small, at the rate of about a million a year. It has formed a lending library of books for the blind; and it has a collection of about forty sets of lantern views, with accompanying readings on subjects connected with Catholic faith and history. It has been copied by societies bearing the same names in Scotland and Ireland, in the United States, Canada, Bombay, and Australia.

The Catholic Association was originally founded in 1891. Its objects are stated in its Rules as being;

- To promote unity and good fellowship among Catholics by organizing lectures, concerts, dances, whist tournaments, excursions, and other gatherings of a social character, and
- to assist, whenever possible, in the work of Catholic organization, and in the protection and advancement of Catholic interests.

It has been particularly successful in the organization of pilgrimages to Rome and other places of Catholic interest.

We cannot better bring to an end this brief survey of the career of Catholicism in England since the Protestant Reformation than in some eloquent and touching words with which Abbot Gasquet concludes his "Short History of the Catholic Church in England": -- "When we recall the state to which the long years of persecution had reduced the Catholic body at the dawn of the nineteenth century, we may well wonder at what has been accomplished since then. Who shall say how it has come about? Where out of our poverty, for example, have been found the sums of money for all our innumerable needs? Churches and colleges and schools, monastic buildings and convents, have all had to be built and supported; how, the Providence of God can alone explain. . . . From the first years of the nineteenth century, when the principle 'suffer it to be' was applied to the English Catholic Church, there have been signs of the dawn of the brighter, happier days for the old religion. Slight indeed were the signs at first, slight but significant, and precious memories to us now, of the workings of the Spirit, of the rising of the sap again in the old trunk, and of the bursting of bud and bloom in manifestation of that life which, during the long winter of persecution, had been but dormant. *Succisa virescit*. Cut down almost to the ground, the tree planted by Augustine has manifested again the divine life within it; it has put forth once more new branches and leaves, and gives promise of abundant fruit."

Anything like a complete bibliography of the subject treated in the foregoing article would attain to the dimensions of a large library catalogue. But the following books may be mentioned: BELLESHEIM, *Wilhelm Cardinal Allen, 1532-1594, und die englischen Seminare auf dem Festlande* (Mainz, 1885); BUTLER, *Historical Memoirs of English, Scottish, and Irish Catholics* (3 vols., London, 1819-21); ID., *Historical account of the Laws respecting the Roman Catholics* (London, 1795); ID., *The Book of the Roman Catholic Church* (London, 1825); BREWER, GAIRDNER, AND BRODIE, eds., *Calendar of Letters and Papers foreign and domestic of the reign of Henry VIII* (18 vols., London, 1862-1902); CHALLONER, *Memoirs of the Missionary priests and other Catholics that suffered death in England, 1577-1684* (2 vols., Manchester, 1803; Derby, 1843); COLLIER, *History of the Church of England* (London, 1708-09); DODD, *Church History of England from 1500 to 1688* (Brussels, 1737-42), and new edition by TIERNEY (5 vols., London, 1839); FOLEY, *Records of the English Province of the Society of Jesus* (7 vols., London, 1880); GASQUET, *Henry VIII and the English Monasteries* (5th ed., London, 1893); ID. AND E. BISHOP, *Edward VI and the Book of Common Prayer* (London, 1890); GILLOW, *Literary and biographical history of Roman Catholics* (5 vols., London, 1886); GILLOW ed., *Haydock Papers* (London, 1888); HALLAM, *Constitutional History of England from the accession of Henry VII to death of George*

II (3 vols., tenth ed., London, 1863); HAUDEC UR, *La Conservation providentielle du Catholicisme en Angleterre* (Reims, 1898); HUSENBETH, *Notices of the English Colleges and Convents on the Continent after the dissolution of the religious houses in England* (Norwich, 1849); KNOX, *Records of the English Catholics under the Penal Laws* (2 vols., London, 1882-4); LAW, *A Calendar of the English Martyrs of the sixteenth and seventeenth centuries* (London, 1876); LILLY AND WALLIS, *A Manual of the Law specially affecting Catholics* (London, 1893); MACAULAY, *Works* (8 vols., London, 1866); MAY (LORD FARNBOROUGH), *Constitutional History of England, 1760-1860* (2 vols., 2nd ed., London, 1863-5); MILNER, *Letters to a Prebendary; ans. to Reflections on Popery by J. Sturges, remarks on the opposition of Hoedlyism to the doctrines of the Church of England* (7th ed., London, 1822); ID., *Supplementary Memoirs of English Catholics* (London, 1820); ID., *The End of Religious Controversy*; ID., *Vindication of the end of religious controversy from exceptions of T. Burgess and R. Grier* (London, 1822); PANZANI, *Memoirs, giving account of his agency in England, 1634-6*, tr. by BERINGTON, added, *State of English Catholic Church* (Birmingham, 1793); VON RANKE, *Die r m. Ppste in d. letzten vier Jhdtn* (3 vols., 7th ed., Leipzig, 1878); SANDER, *Rise of the Anglican Schism (1585)*, with continuation by RISHTON, tr., with notes, etc., by LEWIS (London, 1877); SIMPSON, *Edmund Campion* (London, 1867); *Statutes at Large*; STRYPE, *Annals of Reformation* (London, 1708-09); WARD, *Catholic London a Century ago* (London, 1905).

W.S. LILLY

English Literature

English Literature

It is not unfitting to compare English Literature to a great tree whose far spreading and ever fruitful branches have their roots deep down in the soil of the past. Over such a tree, since the small beginnings of its growth, many vicissitudes of climate have passed; periods of storm, of calm, of sunshine, and of rain; of bitter winds and of genial life-bearing breezes; each change leaving its trace behind in the growth and development of the living plant. It is obvious, then., that to present the complete history of such an organism in a few pages is impossible; all that can be attempted in this article is to describe the main lines of its life.

It should not be forgotten, at the outset, that English literature has been no isolated growth. It has sprung from the common Aryan root, has branched off from the primal stem, and has received, and continues to receive, in the course of its growth, multitudinous influences from other literatures growing up around it, as well as from those of an earlier time. Yet, as Freeman said, "We are ourselves, and not somebody

else", and one of the most remarkable things about English literature is its power of assimilation. Latin, French, Italian, Greek, Spanish literatures, to name only a few, have poured their influences upon us, not once only, but time after time leaving their trace, and yet our character, our language, our literature, remain unmistakably English. The ancestors of the English (the Teutonic tribes of Angles, Saxons, Jutes, and some Frisians) spent nearly one hundred and fifty years (455 to 600) in the conquest of the island from the British tribes who had been abandoned by the Roman colonizers nearly fifty years earlier, in 410. Little by little these fierce and hardy heathen tribes, after much fighting among themselves for the supremacy, settled down, and a slow process of civilization made itself felt among them. Christianity, preached by St. Augustine in 597, bringing in its train education, science, and the arts, was the main factor in this refining change. Such British tribes as had escaped the English destroyer remained for a time almost entirely apart, though they and their literature were afterwards to have no small influence upon the literary development of England.

It is not unlikely that the written literature may have begun as early as the sixth century, but at any rate, by the middle of the seventh century the traces of it are clear in the work of Cædmon, according to the testimony of Bede. Between this date and the Norman Conquest, Anglo-Saxon or Old English writers (recent scholars often prefer the latter term as preserving the idea of continuity) produce a body of literature in prose and verse such as was furnished by no other Teutonic nation either in amount or quality during the same centuries. There are extant at least 20,000 lines of verse, and of prose somewhat more. It is almost certain, too, that a good deal has been lost. The language in which we possess it is English of the oldest form, before any notable foreign admixture had taken place. The verse, with rare exceptions, is of the Teutonic alliterative type. Speaking generally, this body of literature may be classed under two great periods: the first, when the monasteries of Northumbria were the homes of learning, between about 670 and 800, when, according to the legend, Cædmon, a lay brother of Whitby, received the gift of poetry and passed it on to not unworthy followers; and the second, from the time of King Alfred (871), with some spaces of interruption, to the early part of the eleventh century, when literature, driven from the North by the Danes, came South and spoke in prose of the vernacular. In all this work, more particularly in the verse, there is great variety. Growth may be traced and changes of style.

Putting aside minor verse we come first upon the "Beowulf", a narrative poem which, together with a few other fragments, is all we have of the old English epic. It seems clear that the matter of it is much older than its present form. It is a storehouse of the thinking and feeling of the forefathers of the English people when they were still heathen and before they came to Britain, even though the poem may not have been

actually put together in its present form until the ninth or tenth century. It gives a picture of very great interest of certain aspects of the actual life of the people. The English temper of mind at its best, enduring and heroic, pervades it throughout.

But this was before Christianity and the monasteries. After the introduction of the new religion the first important record of literature comes under the patriarchal name of Cædmon. It is clear from recent research that Cædmon himself only wrote a very small portion of the so-called Cædmonian poems, but the story of his vision, given by Bede, even if only legend, testifies clearly that the first poetry produced in England began among the people and in religion. The chief interest of the work lies, not in the actual subject-matter, Scriptural paraphrase, but in the way the matter is treated, a Teutonic aspect being frequently given to the narrative. The craving for freedom, the exultation in war, the longing for moral goodness, the respect for women, all these and many other things come out in the rendering of the "Fall of the Angels", the "Temptation of Man", and elsewhere. It is quite clear that several hands have worked at the Cædmonian poems, but in the next great group, a hundred years later, we come upon one individual poet who has signed at least four poems with his name, Cynewulf, and he insists upon our knowing him as the Ancient Mariner constrained the Wedding Guest. He reveals his personality, he becomes real to us. His poems are religious, and perhaps the finest is the "Christ". He is a poet of high order. Among the rest of Old English poetry the elegies and the war poems stand out as the most original.

Old English prose, if we except St. Bede's lost translation of St. John's Gospel, groups itself round two names, those of Alfred and Ælfric. Alfred (849-901) was eager for his people's education, and his literary work consists chiefly of translations of important books of his time: -- Gregory the Great's "Pastoral Care", Orosius's "History of the World", Boethius's "Consolation of Philosophy", and (probably done under his superintendence) Bede's "Ecclesiastical History" and Bishop Werfrith's "Dialogues". To some of these he added prefaces and notes in simple, unaffected English, which make us realize his remarkable and lovable character, both as man and king.

Many years after, Ælfric (c. 955-1025), Abbot of Eynsham, a much more cultivated scholar, and a more finished, though not more attractive, prose writer than Alfred, put forth volumes of homilies, saints' lives, translations of books of the Old Testament, and other works, which were greatly and justly prized by his hearers and readers.

The "Old English Chronicle", of which there are seven manuscripts, a record of events in England from the sixth century to 1154, was meanwhile being written in the monasteries, undisturbed by the many changes passing over England. It is almost certain that Alfred encouraged this work and set it on a surer foundation, perhaps himself adding portions of the record where it concerned his own reign. One other piece of prose literature must be mentioned. In Wulfstan's "Address to the English",

with its vivid indignation at the sufferings of the people from the Danes, the author is often as impassioned as an English reformer might be over the abuses of present-day society. It brings us up in date to the last half-century before the Norman Conquest.

The Norman Conquest is as important in the history of English literature as in that of England's political and social life. It brought a new and invigorating influence to bear upon the English genius, though in the immediate present of the eleventh century it seemed a crushing disaster for the nation. For nearly one hundred and fifty years the race, the language, and the literature of the people were apparently stifled. It seemed as if everything became Norman-French. But as long as the down-trodden English kept life in them the springs of poetry and art could not dry up; and though Robert of Gloucester says that only "low men" held to English at this time, yet there were a good many of these "low men", and we have proof that the native population had still their songs and their wandering bards, while in certain of the monasteries the monks went on chronicling events in their mother tongue much as they had done when a Saxon king had ruled England. The continuity of native verse and prose was never really broken, and just as the English race was at last to absorb its foreign conquerors, and to gain infinitely more than it had suffered from them, so English language and literature were by the same means to be enriched and ennobled to an extent no one then looking on could have dreamed of.

Yet at first literature was apparently silenced, and until the beginning of the thirteenth century there is no writing of much importance except the "Old English Chronicle", which ends in 1154. There was, of course, writing in Latin and in French, and the French was even looked upon by some as likely to be more enduring than the Latin. But the Latin writing was in reality no enemy to English; it was the tongue, then as now, of the Church, and it was the medium for communication between scholars and the language of nearly all books of scholarship. The native work, however, never quite disappearing, revives unmistakably at the beginning of the thirteenth century, and between that date and the death of Chaucer in 1400 there is produced a great mass of literature of endless variety but of varying value.

We come then to the Middle Ages, called "of Faith"; the age of the Crusades, "of cathedrals, tournaments, old coloured glass, and other splendid things" the age to which, in times of dryness, artists, lovers of romance, as well as pious souls of all kinds, have often looked back and have drawn from it fresh inspiration. It has stimulated in modern times new and noble movements in art and in poetry, and its power of inspiration is not yet exhausted. It was an age of contrasts, of faith and of unbelief, of extraordinary saintliness and of strange wickedness, of reverence and of ribaldry. It was the great Catholic age, when the sacred robe of the Church, spotted though it might be in places through human frailty, was still unrent, whole, and she herself was every-

where acknowledged in Europe as the Divinely appointed mother of men. The history of English literature from the beginning of its revival in the thirteenth century is first that of transition (up to about 1250), then of development for about eighty years, in which the work is largely anonymous, finally, a period of achievement, the second half of the fourteenth century, in which individual writers of power begin to emerge, and among them one supreme artist, Geoffrey Chaucer. We trace, too, during these ages the rise of the drama in the miracle- and morality-plays.

On the threshold of the revival stand two works: "The Brut" (1205), a poem of 30,000 lines concerning the history of Britain, written by Layamon, a patriotic English priest of Worcester; full of more or less historical stories, partly translated from French sources and written in an alliterative metre; and it gives us the first account in English of King Arthur, the British hero. The second, a religious work, "The Ormulum", a series of metrical homilies upon the daily Gospels of the Church, was written by Ormin, an Augustinian canon. After this the stream of English literature is continued in poems of great variety, of which many are lyrics. In "The Owl and the Nightingale", a delightful poem standing at the end of this "transition period", we have a happy combination of old and new elements which have already begun to form a fresh native poetry. Nor had prose been idle; one of the most interesting books of the time is the "Ancren Riwele" (q.v.), a series of exhortations on their rule for a community of Dorsetshire nuns.

Passing on over these fifty years we are met by a further outpouring of literary work, abundant and various, if not remarkably original, poetry always taking the chief place. The main kinds of literature in this period of quick development are romances; tales; religious works (legends of saints, treatises and homilies on morality and religion); the great book called *Cursor Mundi*"; historical writings; lyrics of love and religion, and songs of political and social life. In all this, French influence is very strong, but there gradually appear among it English elements which are now beginning to hold their own. The romances concerned with the adventures of well-known heroes are the most prominent among all this literature, and these in some cases are translated directly from the French, though never without English touches. The religious work of this time is edifying, but the prose homilies and treatises are sometimes very long and commonplace. Yet a simple faith and tender piety, together with a most sane sense of humour and some imagination, make the religious writings not unfrequently attractive, even from the literary point of view. But regarded as literature, the lyrics of the thirteenth century are perhaps the most remarkable. They are native, and though they bear the marks of artistic culture in their matter, they remind us more of the country than the town. There is a real though un-self-conscious love of nature in them, and the promise of that peculiar and fine quality of the later English lyric which is one of

the glories of our literature. Nature, love, and religion are the inspiration of these little medieval poems.

This multitudinous work formed a discipline and preparation, and resulted in the achievements of the latter half of the century. The period 1360 to 1400 is marked by a strong reassertion of the national spirit, and in literature there is a curious reappearance of the Old English alliterative verse after 300 years of apparent neglect. Amongst other poems in this metre there are four by an anonymous writer of high poetic power, one of them, "The Pearl", of great beauty and of deep religious feeling. To this alliterative class belongs too the well-known "Piers the Plowman". Chaucer's work, coming almost at the same time, has to some extent overshadowed this poem, but as a picture of the society and ideals of the time it forms a complement to Chaucer's "Canterbury Tales". In "Piers the Plowman" we have that grave outlook upon life which marks the English character at its best, carried almost to excess. The author (or authors, we ought now to say, for it has been recently proved that at least three writers must have had a hand in its making) looks upon the society of his time as a realist". He describes the world almost entirely on its dark side, and though the remedies he offers are good ("Love is the physician of Life"), and though he never altogether loses his belief in a Divine over-ruling order, yet there is an accent of uncertainty and sometimes of despair in his voice.

Chaucer (1340-1400), on the other hand, does not care for problems of life or dark thinking. His picture of society is, on the whole, from its bright side, when men are out on holiday, and when over-seriousness would seem out of place. Poetically, and in its structure, "Piers the Plowman" is much below Chaucer's work, but its forcefulness, its pathos, its sincerity, its grim humour, its realistic descriptiveness, and its dramatic moments make it a great poem. Chaucer's work marks the full flowering of English literature in the Middle Ages, and it was he who first raised English poetry to a European position. It is the custom of historians of literature to divide the literary life of Chaucer into a French, an Italian, and an English period, according as his work was influenced by the manner of each national literature. This division represents a fact if it be remembered that he carried on, all through his career, certain of the lessons he had learned from the foreign source in the earlier time. There is little doubt that the impulse to write verse came to Chaucer from France. Old English literature was practically unknown to him, but he was saturated with French poetry, for the literature of France was then, outside the classics, the most influential in Europe. Among many shorter poems of this early time, the very first of which is a hymn to the Blessed Virgin, the translation (in part) of the long French allegorical poem of the "Romance of the Rose", and his original and most interesting elegy on the "Death of Blanche the Duchess", are the most important. It is, however, after he has come upon the literature

of Italy -- Dante, Petrarch, and Boccaccio -- that his true genius begins to show itself. "Troilus and Cressida", "The Parlement of Foules", "The House of Fame", and "The Legend of Good Women" (the two last unfinished), as well as some of the "Canterbury Tales", belong to this time. They show him as a true artist, feeling his way through experiment to greater perfection of work and developing his unique sense of humour. Then, in the later years of his life, he strikes upon the fruitful idea of the Canterbury pilgrimage as a framework in which to show the full power of his art in his picture of the life of his own, and, to some extent of all, time; and into this frame he fitted tales he had already written, as well as new ones. But, of it all, nothing exceeds the power and truth of the "Prologue" to the "Tales". His picture of life and the commentary upon it comes straight out of his own observation and character. As he saw men so he fearlessly portrays them, the good, the bad, the indifferent. A few of his tales reflect the coarseness of the time, and it is just possible that the apology placed at the end of the manuscript of "The Parson's Tale" was written by himself at the close of his life. But, however that may be, over all he writes he throws his own sunny humour and wide charity, and in this as in the width of his sympathies he is not unworthy to be named with Shakespeare. He is the one supreme literary artist before Spenser, and the best brief summary of him" and his work is given in that proverb quoted by Dryden in his criticism of Chaucer, "Here is God's plenty". The name of John Gower (1330-1408) is linked by custom with that of Chaucer, but we recognize now what his contemporaries did not, that Gower's lengthy books in verse are the work rather of an expert journeyman than of a genius. But we may legitimately class together the two writers in their influence on the language. Both being widely read, they helped to make the East Midland dialect in which they wrote the literary language of England, and by their choice or rejection of French words welded the language into greater stability and unity. The English language, at the end of the fourteenth century, had begun to assume nearly that modern form we know. People, language, and literature had now become wholly English.

After reviewing this brilliant half century of poetry, the prose of the same time seems a poor matter. There is no great progress to record, nothing really original of importance was written, and the style follows Latin models rather than the simpler natural manner of the Old English prose. Chaucer wrote prose which in its mediocrity is a curious contrast to his poetry. Sir John Mandeville's "Travels" was a translation of an amusing book, and Wyclif's translation or paraphrase of the Vulgate (in which, however, several other hands than his own had a share), together with his vigorous but heretical tracts and sermons form the chief prose work of this time.

After the death of Chaucer, poetry declined in quality with strange swiftness. For the next one hundred and fifty years there is no great poet; the art of poetry, chiefly

owing to the scarcity of native poetical genius, but also partly to the swift changes the language was undergoing and to the carelessness of those who attempted verse, ceased to be finely exercised. The tradition of Chaucer almost disappeared. In the earlier part of the fifteenth century Lydgate (1370?-1451?) and Hoccleve (1370-1450?) tried to follow in the footsteps of the master they revered, but frankly recognized their own failure. Their voluminous and mediocre work, especially Lydgate's, is not without interest to the student, but certain anonymous poets, such as the authors of "The Flower and the Leaf" and "London Lickpenny" (formerly given to Lydgate), succeeded better than they, and the latter poem shows that Chaucer's power of social satire had not disappeared. Satire, as always in the decline after a rich imaginative period of verse, came to the front as subject-matter for verse, and later in the century the scathing verse of John Skelton (1460?-1529), though poor as art, is of interest in the light it throws upon the social life of the times. This poet and Stephen Hawes (d. 1523?), who tried in the "Pastime of Pleasure" to revive the old allegorical style, are the only English names of any note in verse in the latter part of the century. In Scotland, however, the followers of Chaucer, of whom the chief were King James I, Dunbar Henryson, and Gawain Douglas, were producing and continued to produce poetry worthy of immortality.

Fifteenth-century prose was less barren than the poetry of the age. Since the Conquest nearly all serious subject-matter, with few exceptions, had been written of in Latin, but with the invention of printing, and as the power to read and write spread downwards, English prose became more widely recognized as a medium for the treatment of many varied as well as more popular kinds of matter. Four names -- Pecoek, Fortescue, Caxton, Malory -- are recognized as leaders of this movement, but out of their work only Sir Thomas Malory's has become classic. His "Morte D'Arthur", which draws together as many stories and series of stories about King Arthur as he could lay hands upon, is a work of genius, and remains a living book. Its matter is of great intrinsic value and interest, but it is the beauty of its strange child like style, its un-self-conscious appreciation of lovely and noble things in man and nature, and its underlying religious mysticism, which make it a book of the first order.

The medieval drama, which grew up during these centuries, was, with one or two exceptions, not the work of poets or literary artists, yet it was one of the most educative influences of the time. Beginning in connection with the liturgy of the Church, there gradually developed; a whole cycle of religious plays, showing forth the history of the world from the Creation to the Last Judgment. These, acted in a series, in public places of the towns, at certain great church festivals, provided as much instruction as amusement. There is no doubt that, in spite of passages in them which may now seem to us materialistic or irreverent, these simple and rude dramatic representations, both

miracle-plays and the later developed moralities, pressed home great religious truths upon the people. From the point of view of the development of drama, we may say that English tragedy and comedy have, at least to some extent, their roots in these crude plays in doggerel verse.

Leaving the Middle Ages behind us, we come now to the threshold of the most fateful epoch in the history of the English people -- the disruption of the Church, or the so-called "Reformation". This was preceded and accompanied by the earlier movement called the "Renaissance", which, having opened up fresh branches of classical learning, more especially that of Greek poetry and philosophy, awakened and stimulated the human mind both to good and to evil. In England the "New Learning" movement, in the hands of men like More and Colet tended to enlightenment and true learning. The "Utopia" of Sir Thomas More, a book of the noblest ideals, represents its spirit at the best. But the effect of the Renaissance on the manners and morals of those Englishmen who came back imbued with its intoxication from Italy, was much lamented by contemporary writers, as we find in Ascham's "Schoolmaster". Yet it is to this acquaintance with Italy and its literature that we owe the revival of English poetry after its long relapse since the death of Chaucer. In the work of Sir Thomas Wyatt and of the Earl of Surrey, young men who had studied and felt the beauty and power of the great Italian poets, we discover a new beginning, a new poetic art. It was yet uncertain of itself, experimental, hesitating, and not engaged with deep or very noble subject-matter, but, while observing certain common laws of scansion and diction which the last one hundred years had ignored, attempted new and better melodies.

The publication of Tottel's "Miscellany" in 1557, which contains the work of these two poets, marks an epoch in literature; It set up a standard of poetic art below which no future work could sink. The literary world of that age grew full of expectation looking for a new poet who should embody still more fully the poetic ideals of the time.

The new poet came in Edmund Spenser (1552-1599). Seldom has a young writer been so immediately recognized and acclaimed by the accredited literary judges of his own time as Spenser was. And posterity has agreed with their judgment. He forms the second great landmark in English poetry after Chaucer, from whom he received inspiration. He had been bred in the stimulating atmosphere of the new learning and was greatly influenced by classic and Italian literature, but he also appreciated earlier English literature, and the only master he openly acknowledged was Chaucer. Spenser's poetry throughout is of wonderful beauty in its art, and is marked by nobility of aim, purity of spirit, and reverence for religion. His "minor poems" are many, and as Professor Saintsbury remarks, would be "major poems" for any smaller poet. He was, for example, a satirist of no mean order and a sonneteer, but in the general judgment, and

rightly, Spenser is the poet of the "Faerie Queene". All his special powers are shown there, and all his character, one might almost say all his history. The large allegorical ground-plan of the "Faerie Queene", not half completed, interesting as it is, does not form the great attraction of the poem. That lies in the pure and appealing beauty of the versification, in the varied and glorious description, often minutely detailed, in the wealth of imagination, and in the impassioned love of everything beautiful which enthral the reader as it did the poet. That there are flaws in the poem goes without saying, more especially as Spenser died leaving it half finished.

The complete plan of the work cannot be gathered from the poem itself. Spenser's letter to Sir Walter Raleigh, prefixed to all editions, is necessary to make it clear. "The centre falls outside the circle." For Catholics, too, the historical allegory is seriously marred by the anti-Catholic bias of the poet's time. In places, the Church is bitterly assailed, though in other passages Spenser clearly deprecates the desecration of monasteries, churches, altars, and images as the work of the "Blatant Beast of Calumny". Nor does he give by any means undiluted approval to the Anglican Church or the Puritans. Modern criticism, however, places little emphasis upon any portion of the historical allegory, regarding it as an antiquated hindrance rather than a living help to the true appreciation of the poem. The more purely spiritual elements of the allegory, such as the struggles of the human will against evil, aided by Divine power, are those which are valued by discerning readers. Considered in its essential aspect, the *Faerie Queene* is "the poem of the noble powers of the human soul struggling towards union with God". Spenser holds the supreme place among a multitude of other poets of as real though of less genius than his in the sixteenth century, and the work of these, outside the drama, is perhaps seen at its best in the song and the sonnet, two forms which had now an extraordinary vogue. Nearly a dozen anthologies of Elizabethan lyrics, of which the finest is England's "Helicon" (1600), remain to show us the sweetness, beauty, and rarity of these songs. The sonnets, one of the new Italian poetic forms, introduced by Surrey and Wyatt, are less original, and many of them are translations from foreign sources, but those of Sidney and Shakespeare, at least, stand out by their exceptional force and beauty.

Among the many lesser poets of the time Michael Drayton (1563-1631) has been singled out as especially representative of the general character of Elizabethan poetical genius. He wrote every sort of poetry that was the fashion except moral allegory. His work deserves more notice than is often given to it, and his name is sometimes only associated with his long historical poem of the "Polyolbion". This type of poetry reflects the patriotism of the age, and Samuel Daniel and William Warner, both poets of some genius, also worked at it; The huge "Mirror for Magistrates", begun in 1555, and not in its final edition until James I's reign, had encouraged this kind of verse. Poetry of

an argumentative and philosophic type was produced towards the end of the century, but very little of value that was religious, except the work of Robert Southwell. This heroic young Jesuit and martyr wrote with a high object: to show to the brilliant young poets of his time, whose love poems often expressed unworthy passion, "how well verse and virtue sort together". And he did this by using the literary manner of the age, "weaving", as he himself says, "a new web in their old loom". His book had a distinct influence on contemporary and later poetry, touching even Ben Jonson and perhaps Milton himself. Its quaintness of wit (allying it somewhat to the "metaphysical" school of the next generation) are shot through with warm human feeling which makes its direct appeal to the reader. And sincerity is the very note of it all.

But it is, of course, in the drama that we find all the well-known poets -- with the one exception of Spenser -- putting forth their greatest force. The sudden rise of the drama in the latter half of the sixteenth century is the most remarkable phenomenon of this supremely remarkable literary age. It has never been fully accounted for. Many of the contemporary records concerning plays and the theatre have undoubtedly been lost, so that we have to form our own judgment of Elizabethan dramatic literature and its causes upon, comparatively speaking, insufficient grounds. Out of some 2000 plays known to have been acted, only about 500 exist, as far as we know, and discoveries of new contemporary testimony or work might revolutionize our judgment on the history of Elizabethan drama. However that may be, the facts, as we have them, are that in the earlier half of the sixteenth century we find scarcely any dramatic work that would enable us to foresee the rise of the great romantic drama. Miracle-plays were acted up to 1579, but clearly no great development could come from these, and still less, perhaps, from the scholarly movement towards a so-called classical drama, imitations of the Latin comedies of Plautus and Terence, such as "Ralph Roister Doister", named the "first English comedy", or of the dramas of Seneca, as in "Gorboduc", the "first English tragedy". There was also a popular tragi-comic drama of a somewhat rude kind (such as Shakespeare travestied in the play of "Pyramus and Thisbe" in the "Midsummer Night's Dream"), but this was no more prophetic than the others. Then suddenly there appear between 1580 and 1590 plays with life, invention, and imagination in them, often faulty enough, but living. The predecessors of Shakespeare, Peele, Greene, Kyd, and others, but most of all that wild and poetic genius, Marlowe, "whose raptures were all air and fire", and who practically created our dramatic blank verse, prepare the way for Shakespeare. Rejecting, gradually, by a sort of instinct, those elements in the drama of the past that were alien to the English genius, they struck out, little by little, the now well-known type of Elizabethan romantic drama which in Shakespeare's hands was to attain its highest. And Shakespeare's genius made of it not only a vehicle for the expression of Elizabethan ideals of drama and of life, but a mouthpiece of humanity itself.

Shakespeare belongs not to England but to the whole world, and most modern nations have vied with each other in acute and wondering appreciation of his genius. A mass of critical literature has grown up round his name, discussing problems literary, artistic, personal, of every kind, and continues to grow. Shakespeare and his work furnish inexhaustible matter for meditation upon almost every human interest and problem. After his time there are some fine dramatists, but none can approach him in completeness and height of genius. Ben Jonson, Chapman, Webster, Ford, Massinger, and Shirley -- the two last Catholic converts -- with others, carry on the line of dramatic writing with genius, skill, and energy, but the glory gradually departs until one is led to think that if the theatres had not been closed in 1640 on account of the civil war they would have ceased of themselves for want of good plays. Not only had the technical skill in versification, dialogue, and plot decayed, but the moral tone had so much degenerated that most of the hard charges brought against the drama by the Puritans at this time seem well justified.

When we turn to Elizabethan prose we find it a much inferior and less practised form of art than verse. No standard of good prose towards which writers might aim was recognized, and the masterpieces of the Elizabethan age are few. Hooker's "Ecclesiastical Polity" has rightly, by its weighty argument and its grave eloquence, won a place among classics. Lyly in his two volumes of "Euphues" was the first, perhaps, to treat prose as equally worthy with poetry of artistic elaboration, and his book, a medley of story-telling and moralizing, often most excellent as well as interesting in its ethical musing, instituted a fashion of speech and writing from which for some years few writers stood aloof. Sir Philip Sidney's "Arcadia", a long pastoral romance of sentiment, however, broke the spell and in its turn created a vogue. The novels of this time follow the "Euphues" or the "Arcadia" in most examples, but there is also a third type in the work of Nash, the novel of wild and reckless adventure, which was afterwards to become famous in the greater work of Smollet. Criticism of poetry, history, often in the form of chronicles, geography, and adventure, such as in Hakluyt's collection of "Voyages", together with innumerable translations from classical and modern authors, were some of the matters treated in prose. In the novel, as in the drama, the foreign influences, especially those of Spain and Italy, are easy to trace. Though not of the first order of art, the Elizabethan prose is yet most attractive, for it reflects the varied interests and the complex character of the strange and wonderful time of the sixteenth century, and it exhibits in their early stages certain forms of literature, such as criticism and the novel, which were afterwards to develop into orders of the first importance. It is scarcely needful to say that Catholics, of necessity, in this epoch, for them, of disaster and persecution, took little part in the great output of literature.

From one point of view the history of English poetry would seem to be a record of action and reaction, of a struggle between one type of poetry and another, between that in which the matter delivered is all important, and that where correctness of form is the chief end at which the poets aim -- between, in fact, the romantic and the classical schools. This general trend may be most clearly seen in the work of the crowd of secondary poets in any age, but the few who excel will be found to combine and reconcile in themselves, more or less, the opposing elements, though, naturally, both small and great poets will exhibit some individual bias, however slight, towards one type of work or another. This statement is practically true of the seventeenth century. In the very heart of the romantic poetry of the immediate successors of the Elizabethans, there arose, in the early years of the century, a few young men who began to write verse of another kind altogether, whose work was not developed to its full meaning, however, until Dryden took it up. Meanwhile, one matchless poet, John Milton, living through the greater part of the century, went his own way ("his soul was like a star and dwelt apart"), taking little notice of prevailing types or subject-matter, fusing romantic and classical elements into one superb kind of work that we can find no name for but "Miltonic".

Before looking in any detail at seventeenth-century verse, it is well to glance at the general character of the age. It is a contrast to that which had preceded it. The Elizabethan time had been exuberant almost to intoxication, rejoicing in the great range of possibilities for human life that new knowledge, exploration, and learning seemed to open out before it. But over this mood at the end of the century there passed a change. Questioning succeeded the brilliant joy in things as they had appeared; self-consciousness followed the almost impersonal delight in life; the very foundations of religion, politics, and social life were called up for investigation. There had in reality always been a good deal of unrest beneath the surface, even after the settlement of these matters attempted and apparently in part accomplished by Elizabeth. Now the unrest increased, and a sceptical spirit, light or sad, according to the author's temperament, pervades much of the most capable writing. At the same time there are religious writers who express both in prose and verse the best spirit of the Anglican Church when under the sway of Archbishop Laud, and now there rises also to its full height the great Puritan movement (already, however, split up into a growing number of sects), strongly and narrowly affirmative of certain views concerning Divine and human things, passing oftener than not into intolerance and wild fanaticism. Milton, on the whole, represents this movement at its best, though its weaknesses may be discovered, especially in his prose work, even in him.

At the beginning of the reign of James I we find the group of poets whose inspiration was Spenser, amongst whom the chief are the two Fletchers, William Browne,

and George Wither. All have a sweetness and fullness in their work which links them to the Elizabethans. Passing on to the reign of Charles I, we are struck by a more widely spread order of poets, men who, at their best, are all more or less touched by the desire to find behind material objects an imaginative idea, "the search for the after-sense", and who in trying to express that which they thought they found used an overabundance of imagery, sometimes beautiful, but often pedantic and fantastic to the point of absurdity. To these Dr. Johnson gave the name of "metaphysical", and to see them at their worst one should look at his quotations from them in his "Life of Cowley". The movement was not confined to England; Italy, France, and Spain had felt it earlier. John Donne (whose verse belongs in date to the reign of Elizabeth) is reckoned as the founder of this school in England. Herrick and the amourists known as "Cavalier Lyrists" form one group in it, and Crashaw, Herbert, and Vaughan, religious poets, together with Herrick, are the only ones whose work has secured immortality. Crashaw, a fervent Catholic convert, whose religious verses are often very beautiful, shows in a marked degree the great strength and the great weakness of this school. Professor Saintsbury, the most discerning critic of this poetical group, has said that if Crashaw "could but have kept himself at his best he would have been the greatest of English poets". Of another Catholic poet, William Habington, Crashaw's contemporary, but less than he, though occasionally writing fine passages, the same critic remarks that he is "creditably distinguished" from too many others "by a very strict and remarkable decency of thought and language".

But this was poetry which could not develop; it was a kind of second crop from the Elizabethan field, and it gradually withered away. Some time before its end, certain young poets, several of whom had been in France, exiled with the Queen, Henrietta Maria, and had caught a new spirit, turned to fresh ways of verse. Edmund Waller (1605-1687) led the way as early as 1620. Denham, Cowley, and Davenant (a Catholic and romantic, brought up in the house of Lord Brooke, Sir Philip Sidney's friend) followed him in varying degrees. These young poets initiated a change of far-reaching effect. In their hands poetry took on another aspect. It discarded nearly all forms of metre except the heroic couplet, refused to use any but rather commonplace imagery, and turning away from all passionate emotion, tended to treat of subjects which belonged to the intellect rather than to imagination or feeling. Satire or didactic poetry gradually usurped almost the whole field. But this was not accomplished in full until Dryden came. It was he who stamped this school with its leading marks, and gave the heroic couplet its "long resounding march and energy divine". Yet the restricted and prosaic subject-matter of this verse -- satiric, didactic, and argumentative work on religion ("The Hind and the Panther" Was written in the cause of the Church) and

politics -- has made some critics deny to it, unjustly, the name of poetry. it is poetry of a certain restricted kind.

John Dryden (1631-1700), had he lived in a time more favourable to imaginative work, would have written verse more purely poetic. He had about him something of the amplitude, inventiveness, and freedom of the Elizabethans, and the history of his poetic development shows him passing from stage to stage of excellence. Though he was the crown and chief of the so-called "classical school", he was indeed deeply tinged with romantic feeling, and he himself knew and acknowledged that poetry was capable of a higher flight and wider range than it had ever taken in his own day. He was, moreover, a man of many powers. He was a prolific dramatist, and his critical writings have made an epoch in the history of English prose. In the course of his life he changed his politics and his religion; and though doubts have been cast upon his good faith in this respect, the most recent criticism is of opinion that he had nothing but spiritual ends to gain by his conversion to Catholicism. It is unfortunate that we cannot exonerate him as an author from the charge of that sensuality which mars a good deal of his dramatic writing -- it is no better and sometimes worse than the immoral thought brilliantly witty drama of his time. He himself at the close of his life wrote a full apology for this trait in his work.

Dryden's lines on Milton show the exalted estimate he had formed of his greater and earlier contemporary, and time has proved the general truth of it. The poetry of Milton (1608-1674) has become an English classic, and "Paradise Lost" has been translated into many tongues. It is regarded as the one great epic in English, and its fame has somewhat overshadowed that of Milton's earlier work -- "L'Allegro", "Il Penseroso", "Comus", and "Lycidas" -- poems within their own limits as perfect as anything he ever did. It is when we turn to his prose that we realize, from the immeasurable difference between it and his verse, how comparatively low the received standard of prose must have been. "Milton, the great architect of the paragraph and the sentence in verse, seems to be utterly ignorant of the laws of both in prose, or at least utterly incapable or careless of obeying those laws." Yet it contains some splendid passages more like poetry than prose, but the controversial matter which is the subject of most of it -- to say nothing of its often violent manner -- is scarcely interesting to the present generation. Prose in the seventeenth century had an eventful history, and in spite of the lack of a high common standard, produced some masterpieces. At the beginning of it there is the weighty work of Sir Francis Bacon (1561-1626), embracing in many volumes matters of natural science, philosophy, history, ethics, worldly wisdom, even fiction, and in the "Essays" and the "Advancement of Learning" especially, adding to English classics. Lord Clarendon's "History" presents a noble gallery of portraits; there is Sir Thomas Browne (accounted by his enthusiastic admirers one of the greatest

prose writers in all the range of English) is the finest of the rhetorical, fantastic, and wholly delightful set of writers who arose at this time, treating in a semi-speculative fashion a wide, various range of subject-matter. A number of religious and devotional works appear, among which the sermons of Jeremy Taylor stand high, and John Bunyan in "The Pilgrim's Progress" produced a masterpiece of English. Nor must we forget the Authorized Version of the Bible, in 1611 -- a work of a wonderful prose style, eclectic, drawn from many sources, and yet having the appearance of absolute naturalness and simplicity. Preaching was a notable feature of the time, and the very long sermons of Tillotson, Barrow, Stillingfleet, and others make good literature. Dryden claimed Archbishop Tillotson as his master in prose, and it is when we come to Dryden's own work in the latter half of the century that we find prose beginning to take its place as "the other harmony" of verbal artistic expression. On the whole, it is the mark of Restoration prose to become conversational, and we may say that modern prose, easy, flexible, and fitted for general use, arose in Dryden's critical prefaces.

Dryden died in 1700, and with the opening of the eighteenth century we pass into an age of strongly marked characteristics. The Revolution by which the Stuart dynasty was displaced had been accomplished, involving, naturally, great changes in the fortunes of religious and political life, particularly disastrous to the Catholic Faith in England. In its earlier stages the century is filled by the party strife of Whigs and Tories, and by the religious movements known as Methodism and Deism -- two strange opposites. In the upper classes there was a general lowering of spiritual and emotional temperature -- to be enthusiastic was "bad form" -- and religion and literature equally suffered. The growing middle class seems to some extent to have escaped this tepidity, and the preaching of Methodism touched their hearts. The "Church of England", now the State "established" Church, was, however, in a state of spiritual poverty -- many of her best clergy having left her for conscience' sake at the time of the Act of Uniformity. As far as the current stream of poetry was concerned, it had become an affair of a circle of leisured and fashionable people. A great admiration prevailed for the classics and classical principles, seen generally through the eyes of French critics.

The century opened badly for literature. For years there had not been such a barren literary time. Dryden had just died, and though much verse was being written, it was mostly poor. In prose, there were few men of any mark. The only work showing power was the drama, in the brilliant and immoral comedies of Congreve, Vanburgh, and Farquhar. But within ten years there was a remarkable change. Pope came to the front in verse, and for many years poetry was to be almost synonymous with his name. In prose there was a galaxy of genius, Swift (1667-1746), Addison (1672-1719), Steele (1671-1726), Berkeley (1685-1753), to mention only a few, in whose hands modern prose -- mature, varied, capable, combining, when at its best, strength, sweetness,

grace, and magnificence -- becomes henceforth a secure possession of English literature. But this was not all at once. Prose had first to go through a discipline from the hands not only of writers just mentioned, together with the great novelists in the first half of the century, but from Dr. Johnson and those who followed him, especially the historians Gibbon and Robertson. It thus took on a certain formality and stateliness not known before.

Pope and Johnson are the two names that dominate almost tyrannically the first and second half respectively of the eighteenth century. Most of the elements of his age are more or less represented in the work of Alexander Pope (1688-1744), though, as a Catholic, his religious sympathies lay in another direction than those of his day. His first important poem, the "Essay on Criticism", lays down rules for the guidance of critics according to the prevalent classical ideals; his "Rape of the Lock", perhaps his best poem, gives a brilliant and witty picture of the high society of his time; his translation of Homer is a Greek story told in an eighteenth-century manner; his "Essay on Man" is a versifying of Shaftesbury's philosophy; and the "Essays and Epistles" and the "Dunciad" are didactic and satiric. Dryden and Pope share between them the chief honours of English satire. Pope's picture of Atticus (Addison) and Dryden's of Zimri (Buckingham) have no equals in our satiric literature. The subject-matter of Pope's poetry may sometimes fail to interest us, but the versification always claims attention. Pope refined and polished and super-refined the heroic couplet until it became the most perfect instrument for satiric verse; It has not the original vigour and variety of Dryden's couplet, but it has a finer finish and a more subtle thrust.

The greatest strength of literature, however, at this time went into prose, and the prose writers contemporary with Pope are men of genius, with Swift by far the greatest of them. His "Tale of a Tub" and "Gulliver's Travels" -- to mention only the two greatest of his writings -- show a power of intellect and imagination worthy to be employed upon much finer subject matter. The first part of "Gulliver's Travels" finds him, perhaps, at his happiest, and is less marred by the bitter rage against men and life, and the touches of foulness, which spoil so much of his work. He is, too, one of the great humourists, and his style is marked by sincerity, clearness, force, flexibility, and sometimes grace.

But the greatest work in prose, on the whole, was done by Addison and Steele in the essays of "The Tatler" and "The Spectator". They were men of less genius than Swift, but who looked at life humanly and wished to add to men's peace and happiness. They expressed with wit, kindness, and literary skill their views and their intentions. Their definite aim was to bring together the opposing parties in politics and religion by showing them how much of life and interests they possessed in common, and by gentle raillery and wellbred exhortation, to "rub off their corners". They did accomplish much

of this; everybody, regardless of politics, read the Essays, which came out several times a week, or daily, and everyone enjoyed and talked them over. Polite literature by this means permeated and helped to refine the great and growing middle class.

Another form of prose which arises now, and was destined to even a much greater future than the essay, was the novel. The modern novel is born with the work of Richardson and Fielding -- the work of the one viewing things from an emotional standpoint, that of the other giving a more comprehensive and objective picture of life. Richardson wrote out of his own native feeling and somewhat restricted experience; Fielding, equally original, was largely and beneficially influenced by Cervantes and the novel of Spain. Both are men of genius, whose work grips the reader, but their offences against good taste and morality will always prevent their becoming household companions as Scott and Dickens have become. Smollett and Sterne continue the life of the novel, and Goldsmith, in his masterpiece, "The Vicar of Wakefield", has earned the gratitude of all readers. Biography, philosophy, and history have a large and distinguished place in the prose of this time. Samuel Johnson (1709-1784) accomplished many kinds of literature. His earliest attempt as well as his latest is biography; of essays he wrote many, but his genius is not best suited to that form, and the work is too often ponderous and mannered; novel and ethical treatise are combined in the delightful pages of "Rasselas". His great dictionary is philology with an autobiographical flavour; his lives of the poets are partly biographical, but mainly critical, while criticism fills a good space in his edition of Shakespeare. But it is not only the range and value of all this work which makes it so attractive, but -- in spite of its limitations -- the sincere, strong, kindly character that animates every line of it.

"That fellow calls forth all my powers", said Johnson of Burke. Edmund Burke (1729-1797) is now looked upon as England's greatest political philosopher, and his writings belong in subject-matter to history and politics, rather than to literature. Their style, however, rich, imaginative, full of energy, varied to suit its theme, moving among worlds of knowledge, and selecting just the right word and illustration in each place, puts him among the great literary writers of the century. Both Johnson and Burke are touched with the romantic spirit, but Johnson would have vigorously repudiated any charge of romanticism in his work, and indeed he stood as a great bulwark against the flood of new thought and feeling which, becoming apparent after the death of Pope, had been rising little by little, especially in poetry, ever since the twenties. The great romantic movement, so difficult to define, and yet so easy to trace, becomes the supreme point of interest for the literary historian in the later eighteenth century. There is no class of poetry written during this time but stands in some relation to it, and its influence, as we have said, may be seen, though less clearly, in many of the prose writings.

This movement was for the widening and deepening of literature. New fields of subject-matter were taken in hand, and the treatment of these gradually became more imaginative and emotional than it had been since the Elizabethan age. Nature and human life, after suffering from somewhat frigid treatment at the hands of the classical school, seemed to unstiffen and to become warm, living, and natural with the romantic writers. But this was a very gradual process, and began in the very heart of the classical movement; we may even see traces of it in the unrealized longings of Pope himself, who loved Spenser, and who wished he could write a fairy tale. We see the change coining in the gradual rise of fresh metres, and especially of blank verse, in opposition to the heroic couplet; in fact the struggle of romantic against classic centred to some extent round these two forms.

But just as marked is the choice of new subject-matter. "Nature for her own sake" -- natural description imbedded in other matter, or even forming the sole subject of poems -- now occupy the writer. Human life, in aspects neglected by the school of Pope, begins to assert itself. And all this new matter, treated first in a melancholy moralizing spirit, gradually grows in imaginative strength, simplicity, and naturalness, until we reach the poetry of Wordsworth and Coleridge, in which the movement is brought to its height and at the same time takes on a new freshness and impetus. James Thomson (1700-1748) published his blank-verse poem of "The Seasons" in 1726-30, and, even though there are many traces in it of the school of Pope, it sounds the first clear note of revolt. It is the first blank-verse poem of importance in the century, and the first important poem devoted to natural description. Many new elements are found in it, too, such as the interest in the poor and the labouring class, and in lands beyond England, as well as a new feeling and affection for animals. In 1748, the year of his death, Thomson published his "Castle of Indolence", the best imitation of Spenser's verse and manner that exists, and this was another sign of change. There were many poems written in blank verse or in Spenserian stanza between this poet and the work of Gray, whose contribution to the romantic movement is seen perhaps most clearly in his translations from the Icelandic and Gaelic, where he opened up a new field of subject-matter for the interest of readers and the use of poets. And Gray's poems, small in quantity, but exquisitely finished, were not his only work; as a prose writer he gives us in his letters and journals firsthand and beautiful descriptions of nature in unaffected English. But his poetry is less simple, and, with its restraint of manner, might in some aspects be claimed by the classical school. It is in the decade after his death that we find the movement towards the more natural style expressing itself unmistakably in the half-mournful glamour of Macpherson's rhythmical prose "translations" of the Celtic poetry of Ossian, in the poems of the unhappy boy-genius Chatterton, and in the collection of "Percy Ballads".

Following on these, however, there is a strong attempt at reaction in the poetry of Dr. Johnson, Churchill, and Goldsmith -- though Goldsmith's charming poems are more romantic than he knew. But in the next few years the battle is quickly won for romance by four poets: Burns, Cowper, Crabbe, and Blake, whose significance in the movement is more fully recognized now than it was then. Burns, who wrote the best of his poetry in a mixed Scottish dialect, had been nourished on the best English poets of the past, and the clearness and precision of his verse as well as its satirical and didactic subject-matter belongs to the school of Pope at its best. But, on the other hand, the essential spirit of his satire, in contrast with the detached coldness of Pope's, is a consuming fire, as Swinburne has pointed out, while his songs, full of melody and passionate feeling, though all in the line of previous Scottish poetry, were new as regards England, and were truly romantic in tone and manner. There are poems and passages of verse that we wish Burns had never written, but the largest part of his work belongs to our great literary store of things noble and humane.

In William Cowper (1731-1800) we come to a poet whose influence is more and more recognized as of first importance in the romantic trend of eighteenth-century poetry. Living the most retired of lives, and not writing much until over fifty years of age, he has left a body of poetry marked with his own gentle, affectionate, humorous, and sometimes tragic genius, much of which has become classic in English. His best long poem, "The Task", in blank verse, contains his most original work in the clear and simple descriptions of natural scenery. He also, like Gray, was one of the best of our letter-writers. George Crabbe (1754-1832) wrote nearly all his poetry in the heroic couplet, but used that form with more freedom than his contemporaries. Much of his work is of the story kind, and some of his poems are like novels in verse. Though he chose a hackneyed form for his work, and though all his sketches and stories tend to edification in a didactic way, he is never dull, and his analysis of motive and temperament and his realism are strangely modern in the antiquated setting of the heroic couplet. His work deserves more notice than English readers as a rule give to it. William Blake (1757-1827), the fourth of these poets, is one of those geniuses who belong to no one time or place. Some of the simple and charming poems in his two best known little volumes, "Songs of Innocence" and "Songs of Experience", might have been written by an Elizabethan, while his long mystical works in verse, not truly poetical, show him in the light of a dreamer whose dreams are rooted in some spiritual reality which only a very few readers can discern with him. But his poetry, as a whole, though scarcely heeded at all by the public of his own day, has been found, as it has received more attention recently, to contain within itself the germs of many later developments of thought and feeling in society and literature. He was an engraver and painter as well

as a poet, and his work in these capacities cannot be neglected if one wishes to understand the character of his genius.

Crabbe and Blake carry us on into the nineteenth century, but before their death Wordsworth and Coleridge accomplished the first of their epoch-making work. With these two poets we enter upon the story of our modern literature. Wordsworth and Coleridge are still in some sense with us, as their predecessors of the seventeenth and eighteenth century are not. All English modern poets are directly or indirectly influenced by them. They deliberately determined to be missionaries in poetry, and they accomplished a mission in the face of great discouragement and opposition. The small volume of "Lyrical Ballads" published in 1798, when they were young men together under thirty, made a revolution in poetry and was the fulfilment of nearly all that the romantic writers had been trying half unconsciously to bring about. The "Ancient Mariner", which opened the book, and the "Tintern Abbey Lines", which closed it, to say nothing of the many successes and few failures which fill up the space between, were alone enough to set up a poetic standard of high and peculiar significance. In these poems there was accurate nature-description of the best kind, shot through with the poet's own imagination and feeling; there was love of, and interest in vivid human life, regardless of class or country; there was weighty ethical matter without dullness. It is perhaps in this seriousness with which life is viewed that we find one of the key-notes of the poetical literature of the later Victorian age. It has been said of William Wordsworth (1770-1850) that he wrote of "what is in all men", and the leading ideas of his poetry are indeed those in which all natural and sane human beings can join. The healing and joy-giving power of nature, the strength, beauty, and pathos of the simplest human affections, more especially as seen in the less sophisticated men and women of the poorer classes in the country, may be realized by all. But Wordsworth had also a philosophy of nature and her relationship to human beings which was the foundation of all his teaching, and which he expounded in poem after poem, in passages often of very great beauty, and in much variety of style. It may be here noticed that Wordsworth's style varies more than the ordinary judgment gives him credit for. In his eagerness for freedom from conventional phrasing, he strove, as he himself tells us in his prose critical prefaces to the poems, for utter simplicity of language which to us at times seems bare and even puerile in its effect; but he is capable more than most of a richness of style and diction, especially in his blank verse, that is the very opposite of his own theory. He has many styles, and no critical summing up of his manner is ever quite satisfactory to the Wordsworthian who realizes this.

The poetry of Samuel Taylor Coleridge (1772-1834) does not represent the poet with anything like the same fullness as does that of Wordsworth. Those of Coleridge's poems which are of the first order of poetry are few, but they are inimitable and perfect

of their kind, and have a melody of peculiar witchery. Coleridge was a greater, wider genius than Wordsworth, and his deepest thoughts went into pedestrian prose. He has left only fragmentary work on philosophy and criticism behind him, but even that has affected and still affects the thought of our own time. Had Coleridge possessed the will-power and endurance of Wordsworth in addition to his own genius, no one can tell to what heights he might have attained. His career is a tragedy of character.

On these two poets when young men, as well as on Southey and others, the altruistic philosophy of the French revolutionary movement had a profound effect, and in Wordsworth's "Prelude" we may see to some extent the extraordinary and stimulating influence of these ideas upon some of the young and generous English minds. But in spite of much that was true in it, the elements of error, inadequacy, and crudeness in this philosophy became apparent, especially in the course of the French Revolution and a revulsion from it fell upon both Coleridge and Wordsworth. Wordsworth alone of the two emerged from the trial unembittered -- thanks to nature and to his sister Dorothy -- though how crucial to his life this crisis was he has himself told us. No one can properly understand the poetry of this time, nor of the following age of Shelley, Byron, and Keats, if he does not to some extent realize the high and generous hopes raised by the ideas of the Revolution in certain ardent minds in England. They saw countless evils and oppression in the social life of the time, and here, in the working out of the ideas of Liberty, Equality, and Fraternity, seemed a full remedy. The three poets just mentioned lived in the reaction from these hopes. Byron was embittered, partly from personal causes, and partly because of the state of the society in which he lived. He saw no redemption at hand. Shelley was fired by the revolutionary principles as he found them interpreted by the rationalism of Godwin, even while he shared, too, in the reaction caused by the excesses of France. Keats never entered into them at all, but turned by a sort of instinct away from the dreariness of life, as he saw it around him, to nature and beauty.

But there is one great writer who was untouched either by the action or reaction of the revolutionary ferment. Sir Walter Scott (1771-1832) loved the past and believed in it and to the end of his life he was conservative in religion and politics. In his novels and in much of his poetry he made popular those romantic elements in the life of the past which are more particularly associated with the Ages of Faith. His close and affectionate description of the Scottish scenery he loved so much was a strong influence in developing the care for natural scenery which has become one of the leading marks of the nineteenth century. His poetry at its very best is found in many of his short songs and ballads, and in detached passages of his longer poems, and it is verse not unworthy to be placed beside the finest romantic work of the time. But his best-known narrative poems -- "The Lay of the Last Minstrel", "Marmion", and "The Lady of the

Lake" -- have all through a great and special charm, and their style, clear, rapid, full of energy, together with their almost faultless diction, make them worthy of their place among our classics. The popularity of Scott's narrative poetry was overshadowed, however, by the narrative work of Lord Byron, but to our gain, since this led Scott to turn to another form of art and to produce "The Waverley Novels".

Of the three young poets of genius whose short lives accomplished such remarkable poetic work, Lord Byron (1788-1824) is now perhaps the least influential, though at the time his fame overshadowed every other writer of verse. His extraordinarily vigorous satires, marked by his study of Pope, whose poetry he championed in a literary controversy of the time, are unique in the energy of their style and the strength and sting of their wit. It is unfortunate that a large part of them are marred, for the ordinary reader, by their extreme voluptuousness. His verse tales of romantic adventure are imaginative, but pail upon us by their tendency to sentimentality. His songs and occasional pieces, together with "Childe Harold" -- parts of which have fine nature-description -- show him in a more agreeable poetic light. His many dramas are not truly dramatic, but are rather the outpouring of his own powerful mind seeking an outlet. If we are inclined to take an anti-Byronic attitude, it is well to remember, first, that his brilliant, undisciplined, passionate work, though it never reached the height of the noblest art, yet taught a lesson of force, vitality, and sincerity to an age which, in spite of its good, was marked by much artificiality, callousness, and insincerity in both life and literature. He did this in a rude and melodramatic way, but he did it. And secondly, let those who judge Byron's wild private career not forget to read the last poem that he wrote, and realize that a change of temper, aspiration towards nobler things, was awakening in him before he died.

Keats and Shelley invite comparison; their difference and their likeness are equally striking. They lived the same length of time, did all their work before thirty, dying young and with tragedy. They left behind them poetry of the highest order -- their lyrics are masterpieces -- containing the promise of still finer work. They were the devoted lovers of beauty, believing in it as the supreme reality, and were in earnest over their art, both of them leaving behind grave poems expressing their unfinished, and therefore often unsatisfactory and misleading, philosophy of life. Each poet also has written remarkable prose. It is a great mistake to consider Percy Bysshe Shelley (1792-1822) as the "ineffectual angel" sketched by Matthew Arnold. He was quite half human, and not at all ineffectual. His most ethereal lyrics will be found to possess a basis of logical thought, while his prose writings show him as a thinker quite capable of keeping the imagination in her place. There are signs, too, in the development of his work that he was growing more and more capable of preserving the balance of the intellect and the imagination. The work that he accomplished in his short life is much

and varied. Putting aside his early poems, there is the almost perfect "Adonais", the grave and beautiful lyrical drama of "Prometheus Unbound", in which he states his hopes (not always well grounded and apparently anti-Christian, though he revered certain elements in Christianity) for the future of the world; there is a crowd of short and exquisite lyrics -- the highest watermark of English poetry of this kind -- as well as the fateful and mystic "Triumph of Life", to say nothing of many others, and amongst them some fine dramatic work in blank verse. And he was only twenty-eight when he was drowned. Upon his errors of thought and of conduct we need not dwell. They are plain before us in his life. Outside his literary work, and, now and then intruding into it, a certain crudity of youth appears. But all he does and says is in good faith, and for his errors he suffered bitterly during his short life. One of the noblest and most discerning of tributes ever paid to his genius has been lately published from the pen of the now well-known Catholic poet, Francis Thompson. John Keats (1795-1821) accomplished less actual work, but had in him, it is generally allowed, greater potentiality of genius. He started life handicapped in circumstance and physical health, while he had no influence or following in his own short lifetime, and "it is the copious perfection of work accomplished so early and under so many disadvantages which is the wonder of biographers". His odes on "The Nightingale", "A Grecian Urn", and "Autumn" are supreme art. Some of his narrative poems are among the best of their kind and his fragment of "Hyperion" shows what he might have accomplished had he lived to practise this graver type of poetry. His fame, however, is now established, and his poetic influence has been one of the strongest in the nineteenth century.

After the death of Keats poetry seems for a time to have exhausted itself. There is little to chronicle except the chirpings of small poets until the great age of Victorian poetry opens with Tennyson and Browning. But, to fill up the early years of the century, there is fine work in prose. The great series of Sir Walter Scott's novels extend from 1814 to 1831, and many smaller efficient writers are ranged round this central figure. The wild enthusiasm with which the Waverley novels were received can perhaps never be renewed. A multitude of causes have tended to divert and disturb the public taste for these great books, and it now fluctuates sometimes farther from, sometimes nearer to, them. But such work as his is immortal, and regardless of human fluctuations, it will, and does, appeal always to a multitude of readers -- learned or unlearned -- whose mind and imagination are open to receive the gifts of genius apart from the trend of fashion. Scott's novels are full of kindly humanity, of close and accurate drawing of many types of character, only to be equalled by Shakespeare or Chaucer, of wide and detailed historical knowledge, though, to Catholic regret, he never understood or adequately represented the Church, handled magnificently with equal imagination and sanity, so that age after age lives again, not only as the dry facts of history which have

been brought laboriously together "bone to his bone", but as a living human world whose dwellers have been raised out of silence to their feet by the creative voice -- "an exceeding great army". Of Scott's work even more than of Chaucer's, we may say, with Dryden, "Here is God's plenty".

Scott died in 1832, and the Victorian age opened in literary faintness. Alfred Tennyson and Robert Browning were on the verge of the horizon, but it was not until 1840 or so that there came that dazzling revival of literature such as had not been seen since the Elizabethan age, and which in extent and swiftness of production eclipsed that age. Into the causes of this it is impossible here to enter. Tennyson and Browning are leaders among the poets far into the century, while Elizabeth Barrett Browning makes a distant third. Tennyson and Browning are representative of the most important phases of the Victorian age, universally acknowledged, though general opinion is still divided as to their relative merits. Both are artists of a high order, but Tennyson is the greater and more consistent. Both feel the importance, gravity, and interest of life. Both take a religious view of life and have that spirit of reverence which is lacking in many of their followers. Both believe in their mission to call men to forsake materialism, and each, in his own particular way, is a lover of natural beauty. Browning's sympathies are, in a sense, wider than Tennyson's, but Tennyson's feeling goes deeper, perhaps, on the great religious and moral questions than Browning's.

If we are still too near Tennyson and Browning to be able to form a true estimate of them, we are even less able to judge the writers of the latter half of the nineteenth century. The numerous streams of literature become bewildering to follow. We distinguish before the end of the career of the two greatest poets the fine but smaller figures of Rossetti, William Morris, Matthew Arnold, and others, doing work of true genius though not all of equal power. None of them, however, have the vivid inspirations of great, impelling, impersonal ideas such as filled Wordsworth and Shelley. The note of melancholy and uncertainty concerning life and its meaning and the future beyond this life, is always more or less there in undertone. The optimism of Browning and the faith of Tennyson are not to be found, but their love of beauty is fervent and stimulating.

In the last quarter of the century poetry has taken on many strange and sometimes beautiful forms. A high level of excellence has prevailed on the whole. Poets of remarkable promise and achievement have appeared. Amongst these, Francis Thompson (1859-1907), in the opinion of most, takes the commanding place. The appreciation of him by well-known and most able critics has been extraordinarily unanimous and unstinted. He seems "to have reached the peaks of Parnassus at a bound". He has been compared with almost every great previous English poet, and whatever may be the more balanced verdict of the future, his poetic immortality is assured. And his Catholic religion was his deepest inspiration.

The prose which grew up around the greatest Victorian poetry was worthy of its company. A brilliant group of writers as well as of thinkers in many spheres of knowledge and art appeared, and in this respect the age has surpassed the Elizabethan. The development of the novel is the most distinguishing mark of Victorian prose literature. Dickens and Thackeray follow upon Scott, with a host of other novelists, men and women, of varying grades of power, who come up to our own day. Graver forms of literature also have been many and splendid. There are the essayists, with Lamb and Hazlitt as the chief; the historians with Macaulay and Carlyle, Froude, Freeman, and Green; Ruskin, with his immense and varied work upon art, economics, and the conduct of life, and whose influence, all for good, in spite of the vagaries of literary taste, is still strong and growing. The enormous extent and range of theological literature is a remarkable feature of the last fifty years, and here the writings of John Henry Newman stand out as a supreme "literary glory". Newman touched poetry with imagination, grace, and skill, but it is by his prose that he is recognized as a great master of English style. While all critics agree that the "Apologia" is a masterpiece, and that "nothing he wrote in prose or verse is superfluous", there is some difference of opinion as to the respective literary values of his earlier and later work. R.H. Hutton, however, one of his acutest non-Catholic critics, considers that "in irony, in humour, in imaginative force, the writings of the later portions of his career far surpass those of his theological apprenticeship".

Catholic writers are now many. After long years of repression they have their full freedom in the arena of literature, and there is more than a promise that when the history of the twentieth century comes to be written many Catholic names will be found in the highest places on the roll of honour.

K.M. WARREN

John England

John England

First Bishop of Charleston, South Carolina, U.S.A.; b. 23 September, 1786, in Cork, Ireland; d. at Charleston, 11 April, 1842. He was educated in Cork until his fifteenth year, was then taught privately for two years, and entered Carlow College, 31 August, 1803. In his nineteenth year he began to deliver catechetical instructions in the parish chapel and zealously instructed the soldiers in garrison at Cork. He also established a female reformatory together with male and female poor schools. Out of these schools grew the Presentation Convent. He was ordained priest in Cork, 10 October, 1809, and was appointed lecturer at the cathedral. Wherever he preached people thronged to hear him. Pending the opening of the Magdalen Asylum he maintained and min-

istered to many applicants. In the same year he published the "Religious Repertory", established a circulating library in the parish of St. Mary, Shandon, and attended the city jail. In the elections of 1812 he fearlessly exerted his influence, maintaining that, "in vindicating the political rights of his countrymen, he was but asserting their liberty of conscience". In the same year he was appointed president of the new diocesan College of St. Mary, where he taught theology. In 1814 he vigorously and successfully assailed with tongue and pen the insidious Veto measure which threatened disaster to the Church in Ireland. Next to O'Connell's his influence was the greatest in the agitation which culminated in Catholic Emancipation. To help this cause he founded "The Chronicle" which he continued to edit until he left Ireland. In 1817 he was appointed parish priest of Bandon. (The bigotry and prejudice of this city at that time may be conjectured from the inscription over its gates: "Turk, Jew or Atheist may enter here, but not a Papist.") In spite of the prejudices which he found there, he soon conciliated men of every sect and party.

He was consecrated Bishop of Charleston at Cork, 21 Sept., 1820, and refused to take the customary oath of allegiance to the British Government, declaring his intention to become a citizen of the United States as soon as possible. He arrived in Charleston 30 Dec., 1820. Conditions were most uninviting and unpromising in the new diocese, which consisted of the three States of South Carolina, North Carolina, and Georgia. The Catholics were scattered in little groups over these States. The meagre number in Charleston consisted of very poor immigrants from Ireland and ruined refugees from San Domingo and their servants. In 1832, after twelve years of labour, Bishop England estimated the Catholics of his diocese at eleven thousand souls: 7500 in South Carolina, 3000 in Georgia, and 500 in North Carolina. South Carolina was settled as a royal province by the Lords Proprietors, who brought with them the religion of the Established Church, and it was only in 1790 that enactments imposing religious disabilities were expunged from the constitution of the new State. Religious and social antecedents and traditions, and the resultant public opinion, were unfavourable, if not antagonistic, to the growth of Catholicism. The greatest need was a sufficient number of Catholic clergy. This sparsely settled section, with scattered and impoverished congregations, had not heretofore attracted many men of signal merit and ability. Bishop England faced these unfavourable conditions in a brave and determined spirit. The day after his arrival he assumed formal charge of his see, and almost immediately issued a pastoral and set out on his first visitation of the three States comprising his diocese. No bishop could be more regular and constant in these visitations. He went wherever he heard there was a Catholic, organized the scattered little flocks, ministered to their spiritual needs, appointed persons to teach catechism, and wherever possible urged the building of a church. During these visitations he preached in halls, court houses,

State houses, and in chapels and churches of Protestant sects, sometimes at the invitation of the pastors. When in Charleston he preached at least twice every Sunday and delivered several courses of lectures besides various addresses on special occasions. He successfully advocated before the Legislature of South Carolina the granting of a charter for his diocesan corporation, which had been strongly opposed through the machinations of the disaffected trustees. In 1826 he delivered, by invitation, an eloquent discourse before the Congress of the United States. It was the first time a Catholic priest was so honoured. He was chiefly instrumental in having the First Provincial Council of Baltimore convened, and pending this, formulated a constitution for his diocese defining its relations to civil and canon law. This was incorporated by the State and adopted by the several congregations. He also organized conventions of representative clergy and laity in each of the States in his diocese, to meet annually. In 1840 these were merged into one general convention. He held a synod of the clergy, 21 Nov., 1831, and in 1832 established a seminary and college under the name of "The Philosophical and Classical Seminary of Charleston", hoping with the income from the collegiate department to maintain the seminary. Notwithstanding his many and varied duties he devoted himself to this institution as teacher of classics and professor of theology. Organized bigotry soon assailed it, reducing the attendance from one hundred and thirty to thirty; but he continued and it became the alma mater of many eminent laymen and apostolic priests. In the words of Chancellor Kent, "Bishop England revived classical learning in South Carolina". In 1822 he organized and incorporated a Book Society to be established in each congregation, and in the same year his indefatigable energy and zeal led him to establish the "United States Catholic Miscellany", the first distinctively Catholic newspaper published in the United States. It continued to be published until 1861 and is a treasury of instructive and edifying reading. He also compiled a catechism and prepared a new edition of the Missal in English with an explanation of the Mass. He was an active member of the Philosophical Society of Charleston, assisted in organizing the Antiduelling Society, and strenuously opposed Nullification in a community where it was vehemently advocated. His intense loyalty to his faith led him into several controversies which he conducted with a dignity and charity that commanded the respect of his opponents and elicited touching tributes from some of them at his death.

In 1830 he established in Charleston the Sisters of Our Lady of Mercy "to educate females of the middling class of society; also to have a school for free colored girls, and to give religious instruction to female slaves; they will also devote themselves to the service of the sick". Subsequently their scope was enlarged, and branch houses were established at Savannah, Wilmington, and Sumter. In 1834 he further promoted education and charity by the introduction of the Ursulines. In 1835 Rt. Rev. William

Clancy arrived from Ireland as the coadjutor of Bishop England, but, after a year's dissatisfied sojourn, he requested and obtained a transfer to another field. Bishop England had originally asked for the appointment of the Rev. Dr. Paul Cullen, then rector of the Irish College, Rome (afterwards the first Irish cardinal), as his coadjutor.

A striking phase of Bishop England's apostolic character was manifested in his spiritual care of the negroes. He celebrated an early Mass in the cathedral for them every Sunday and preached to them at this Mass and at a Vesper service. He was accustomed to deliver two afternoon sermons; if unable to deliver both, he would disappoint the rich and cultured who flocked to hear him, and preach to the poor ignorant Africans. In the epidemics of those days he exhibited great devotion to the sick, while his priests and the Sisters of Mercy volunteered their services in the visitations of cholera and yellow fever. His personal poverty was pitiable. He was known to have walked the streets of Charleston with the bare soles of his feet to the ground. Several times the excessive fatigue and exposure incurred in his visitations and ministrations prostrated him, and more than once he was in danger of death. Twice he visited Hayti as Apostolic Delegate. In 1823 he was asked to take charge of East Florida and, having been given the powers of vicar-general, made a visitation of that territory.

In the interests of his impoverished diocese he visited the chief towns and cities of the Union, crossed the ocean four times, sought aid from the Holy Father, the Propaganda, the Leopoldine Society of Vienna, and made appeals in Ireland, England, France, Italy, wherever he could obtain money, vestments, or books. After Easter, in 1841, he visited Europe for the last time. On the long and boisterous return voyage there was much sickness, and he became seriously ill through his constant attendance on others. Though very weak, notwithstanding, on his arrival in Philadelphia, he preached seventeen nights consecutively, also four nights in Baltimore. With his health broken and his strength almost exhausted, he promptly resumed his duties on his return to Charleston, where he died, sincerely mourned by men of every creed and every party. His apostolic zeal, saintly life, exalted character, profound learning, and matchless eloquence made him a model for Catholics and an ornament of his order.

Most of his writings were given to the public through the columns of the "United States Catholic Miscellany", in the publication of which he was aided by his sister, a woman of many-sided ability and talents. His successor, Bishop Reynolds, collected his various writings, which were published in five volumes at Baltimore, in 1849. A new edition, edited by Archbishop S.B. Messmîr of Milwaukee, was published at Cleveland in 1908.

REYNOLDS. *The Works of the Rt. Rev. John England*, 5 vols. (Baltimore 1849; Cleveland ed. Messmîr, 1908); SHEA, *Hist. Cath. Ch. in U.S.* (New York, 1889-92); O'GORMAN, *A Hist. of the R. C. Ch. in U.S.* (New York, 1895); CLARKE, *Lives of the*

Deceased Bishops (New York, 1872); *Catholic Miscellany* (Charleston, April, 1842) files; REUSS, *Biog. Cycl. Cath. Hierarchy of U.S.* (Milwaukee, 1898); *The Messenger* (New York, 1892), 370 74; *Ibid.* (1890), 769 82; AM. CATH. HIST. SOC., *Records* (Philadelphia, March June, 1895); READ, *Sketch of Bishop England*; O'CONNELL, *Catholicity in the Carolinas and Virginia*; MORAN in *The Seven Hills Magazine* (Dublin, June, 1907).

P.L. DUFFY

Sir Henry Charles Englefield

Sir Henry Charles Englefield, Bart.

Antiquary and scientist, b. 1752; d. 21 March, 1822. He was the eldest son of Sir Henry Englefield, sixth baronet, by his second wife, Catherine, daughter of Sir Charles Bucke, Bart. His father, who was the son of Henry Englefield, of White Knights near Reading, had in 1728 succeeded to the title and the Englefield estates at Wooton Bassett, Wilts; so that Henry Charles inherited both White Knights and Wooton Bassett on the death of his father, 25 May, 1780. He was never married and devoted his entire life to study. In 1778 at the early age of twenty-six he was elected a Fellow of the Royal Society, and in the following year Fellow of the Society of Antiquaries. For many years he was vice-president of the latter, and succeeded the Marquess Townshend as president. Owing, however, to his being a Catholic, objection was taken to his re-election, and he was replaced by the Earl of Aberdeen. Under his direction the society produced between 1797 and 1813 the series of engravings of English cathedrals, to which series he contributed the dissertations on Durham, Gloucester, and Exeter. In 1781 Englefield joined the Dilettanti Society and acted as its secretary for fourteen years. Besides his antiquarian studies, which resulted in many contributions to "Archaeologia", he carried on research in chemistry, mathematics, astronomy, and geology. His "Discovery of a Lake from Madder" won for him the gold medal of the Society of Arts. He took no part in public life, owing to Catholic disabilities, but was intimate with Charles James Fox, and his cheerful temperament and vivacious conversation won him many friends. His portrait was painted by Sir Thomas Lawrence, and two bronze medals were struck bearing his likeness.

In Catholic affairs Englefield took a prominent part, being elected in 1782 a member of the Catholic Committee, formed by the laity for the promotion of Catholic interests, a body which subsequently found itself in conflict with the vicars Apostolic. In the early stages of this dispute he was one of the moving spirits and contributed the pamphlet, mentioned below, in answer to Dr. Horsley, the Anglican prelate. The latter afterwards became the friend of the Catholics, and it was through his influence that

the Catholic Relief Bill of 1791 was modified to suit the requirements of the bishops. Throughout the dispute Englefield took an independent line, and at times went rather far in his opposition to the vicars Apostolic, as in 1792, when he was prepared to move a strong resolution at the general meeting of English Catholics. He was dissuaded at the last moment by the three who undertook to act as "Gentlemen Mediators" between the two parties. During his latter years his eyesight failed; he died at his house, Tilney St., London, the baronetcy thereupon becoming extinct. His works are: "tables of the Apparent Places of the Comet of 1661" (London, 1788); "Letter to the Author of 'The Review of the Case of the Protestant Dissenters'" (London, 1790); "On the Determination of the Orbits of Comets" (London, 1793); "A Walk Through Southampton" (Southampton, 1801); "Description of a New Transit Instrument, Improved by Sir H. Englefield" (London, 1814); "The Andrian, a Verse Translation from Terrence" (London, 1814); "Description of the Principal Beauties, Antiquities and Geological Phenomena of the Isle of Wight", with engravings from his own drawings, and a portrait (London, 1816); "Observations on the Probable Consequences of the Demolition of London Bridge" (London, 1821). Gillow has printed (op. cit. inf.) a list of papers contributed to the transactions of the Society of Antiquaries, Royal Society, Royal Institution, Society of Arts, and the Linnaean Society, as well as to "Nicholson's Journal" and "Tillock's Philosophical Magazine".

EDWIN BURTON

The English College, in Rome

The English College, in Rome

I. FOUNDATION

Some historians (e.g., Dodd, II, 168, following Polydere Vergil, Harpsfield, Spelman, etc.) have traced the origin of the English College back to the Saxon school founded in Rome by Ina, King of the West Saxons, in 727. To an antiquity so great, however, the college, venerable though it be, has no just claim. It dates from about the middle of the fourteenth century, when the Hospice of St. Thomas of Canterbury was founded. This hospice owed its establishment to the jubilees, which brought pilgrims to the Holy City from every country of Europe. Those who arrived from England in 1350 to perform their devotions, found it difficult to obtain suitable accommodation. This suggested an institution, national in character, where English pilgrims might receive shelter and hospitality. The archives of the English College seem to point to the establishment of a guild of laymen, which acquired certain property on the Via Monserrato, the principle persons who took part in the transaction being John Shepherd and Alice his wife, who devoted themselves to the service of the pilgrims in the hospice, and

William Chandler, chamberlain, Robert de Pines, syndic, and John Williams, officials of the community and society of the English in the city. The deeds show that the property in question was acquired in the year 1362, which therefore may be taken as the date of the foundation of the hospice. But from the time of Henry VII the hospice began to decline, After the persecution had broken out anew under Elizabeth, many of the clergy went into exile. Some of those who found their way to Rome were received into the hospice, and formed a permanent community therein. During Dr. William Allen's visit to Rome in 1576, it was arranged with Pope Gregory XIII that a college should be founded there for the education of priests for the English mission. As soon as he returned to Douai (30 July, 1576) he sent ten students to Rome to form the nucleus of the new college; six more went in 1577, and again six in 1578. Dr. Gregory Martin, writing on 26 May, 1578, to Father Campion, tells him that twenty-six students are living either in the hospice itself or in the house next door, which has internal communication with the hospice (Douai Diaries, Appendix, p. 316). Indeed, the Pope had already determined to convert the hospice into a seminary, and at Christmas, 1578, "there came out a *Breve* from the Popes Holines commanding all the ould Chaplines to depart within 15 dayes, and assigning all the rents of the Hospitall unto the use of the Seminary, which was presently obayed by the said Priests" (Father Person's Memoirs: Catholic Record Society, II, 144). Unfortunately, however, Cardinal Morone, the Protector of England, and also therefore of the College, appointed as its rector Dr. Clenock, the warden of the hospice, who was assisted by two Jesuit Fathers as prefect of Studies and procurator. Dr. Gregory Martin, again writing to Father Campion, 18 Feb, 1579 (from Rheims) informs him that there are in the college at Rome, "at the present moment forty-two of our students, most of whom are divines, one rector, three Fathers of your Society, and six servants. They live in the hospital, and in the adjoining house. The revenues of the hospital have been transferred to the seminary, except what is required for the entertainment of the pilgrims" (Douai Diaries, lviii, and Appendix, p. 319). However, internal dissensions soon arose. Most of the students of the college were, of course, English; but there were also seven or eight Welshmen, for no national distinction was made between the Cambrian and the Saxon, all being considered as English for the purposes of the institution. The Welsh rector was accused of favoring his fellow countrymen; and finally the English students broke out in open mutiny. They petitioned the Holy Father that the college should be entrusted to the Fathers of the Society of Jesus, and declared that they would rather leave the college than remain under Dr. Clenock.

The students were ordered by the Cardinal Protector to submit under pain of expulsion; but they preferred to go, and began to make preparations for the journey back to Douai and Rheims, or to England. Much sympathy, however, was shown for them

in Rome, and, intercession being made with the Pope on their behalf, they were reinstated in the college after two days, and their petition was granted. Dr. Clenock was removed from the rectorship, and the college handed over to the Jesuits, the famous Father Robert Persons being given temporary charge till the appointment of the first permanent rector, Father Alphonsus Agazzari, on 23 April, 1579. This day is the real birth day of the English College in Rome; for on this day the Bull of Foundation was signed by Pope Gregory XIII; on this day the students took an oath to lead an ecclesiastical life, and proceed to England when it should seem good to their superiors; and on this day the College Register begins. The Bull, however, was not published till 23 Dec., 1580. Under this date, the entry occurs in the *College Annals (Liber Ruber)* II, 12; of which the following is the translation: "A.D. 1580, on the 23rd of December, to the praise and glory of the Most Holy Trinity and of St. Thomas the martyr, was expedited the Bull of the Foundation of this College, which, though it was granted by Pope Gregory XIII in April of last year, did not reach our hands before the above date, and in which, as besides many faculties and spiritual and temporal favours, all the goods of the English Hospice were united with the College, we received possession of them on 29th. Dec., which is dedicated to St. Thomas the Martyr; and although it does not explicitly appear in the Bull, yet the Pope declared by word of mouth that this college is bound to receive and maintain the English pilgrims according to the statutes of the sia Hospice. This Bull has been deposited in the College Archives."

Thus the English College, the oldest but two of all the national colleges of Rome (the German College and the Greek College), was launched on its career, the number of students at the time in the college being fifty, a number which later rose to seventy-five. That the college did its work efficiently, and fulfilled the purpose for which it was founded, is abundantly attested by the list of names of the priests sent into the mission field, and especially by the roll of its martyrs. During the period 1682-1694, under the Cardinal Protector Howard, O.P., the greater part of the college was rebuilt.

The eighteenth century was a period of decline. Contrary to the original constitutions of the college. boys were admitted for the course of humanities, and some, of very tender years, for more elementary studies. In August, 1773, the Society of Jesus was suppressed, and the administration of the college was handed over to Italian secular priests. During this period, the students were ill-treated, the college was mismanaged, and a large portion of the archives sold for waste-paper. "At the time of the suppression, the number of students was reduced to four divines, three philosophers, and three grammarians . . . Of those divines and philosophers, only three were ordained at Rome, and two at Douay; and the whole number of those ordained at Rome from 1775 to the year 1798, a period of 23 years, did not exceed seven, and of those, two never performed any missionary duties, and the third but for a short time. In that same

period four died in the College, and 34, if not more, quitted the house *re infecta!* -- Six, however, afterwards pursued their studies in other Colleges, and were ordained priests." (Catholic Magazine, 1832, pp. 359-360.) Bishop Challoner, and afterwards the three vicars Apostolic, Bishops James and Thomas Talbot and Matthew Gibson, entreated the Pope to restore the college to its first administrators, the English secular clergy; and finally on 12 April, 1783, the Congregation for Propaganda answered that when the rectorship fell vacant, an English priest might be appointed to the post. Cardinal Baschi, the Protector, wrote to Bishop Douglas on 4 November, 1797, informing him that the rector was about to resign, and requesting him to choose, in consultation with Mgr. (afterwards Cardinal) Erskine, an English priest for the office. But before this could be done, the French had invaded Rome, the college seized and suppressed, and the students sent to England. On the 30th of July, 1814, Cardinal Litta, Prefect of Propaganda, wrote to Bishop Poynter, vicar Apostolic of the London District, informing him that the college was about to be reopened, and inquiring about the fitness of the Rev. Stephen Green, who had been recommended by Bishop Milner for the rectorship. But Fr. Green died, and other obstacles arose, and nothing more was done for three years. Then Cardinal Consalvi, Secretary of State, acting as protector of the college, directed the English vicars Apostolic to suggest a priest as rector, and to send him to Rome at once. They chose Rev. Robert Gradwell, who received his appointment on 8 March, 1818. Ten students, among whom were the future Cardinal Nicholas Wiseman, arrived in the following December. Thus the English College began to live again, and continued to flourish in its career of usefulness to the Church in England.

II. SCHOLASTIC STATUS

In the Bull of Foundation, Gregory XIII confers on the college the privileges and rights of a university with the power of conferring the degrees of Bachelor, Licentiate, Doctor, and Master in Arts and Divinity. The students, from the beginning, attended the lectures of the Roman College, and then during the suppression of the Society of Jesus, at the University of St. Apollinare (the Roman Seminary). They returned, however, to the Roman College or Gregorian University, in 1855, and still attend it, taking its degrees in philosophy and theology, as the English College does not exercise its faculty of conferring degrees. The college is immediately subject to the Holy See, which is represented by a cardinal protector. The immediate superiors are the rector, appointed by the pope on the recommendation of the English hierarchy, and vice-rector, appointed by the rector. The first rector, Dr. Maurice Clenock (1578-9), belonged to the English secular clergy. The Jesuits took the reins of government in 1579, and held them for one hundred and ninety-four years. Three of the rectors were Italians, and the rest English, the last one being Wm. Hothersall, who, on the suppression of the Society, handed the college over to Italian secular priests. &From the restoration in

1818 the rectors have always been chosen from the English secular clergy. The college has the privilege of extra-parochiality, the rector being parish-priest for all its members, and exemption from the jurisdiction of the cardinal vicar and other ordinaries and tribunals.

III. ILLUSTRIOUS STUDENTS

Among the names of those included on the college lists, who have laid down their lives for the Faith, and the supremacy of the Holy See, six have been beatified, and thirty-six declared venerable. The former are Ralph Sherwin, John Shert, Luke Kerby, Laurence Richardson (*vere* Johnson), William Lacy, and William Hart. Shert was the first missionary priest from the college to enter England. The Venerables are: George Haydock, Thomas Hemerford, John Munden, John Lowe, Robert Morton, Richard Leigh, Christopher Buxton, Edward James, Christopher Ba(y)les, Edmund Duke, Eustace White, Polidore Plasden (Palmer). Thomas Pormont, Joseph Lampton, John Cornelius, S.J., John Ingram, Robert Southwell, S.J., Henry Wallpole, S.J., Edward Thwing, Robert Middleton, Thomas Tichborne, Robert Watkins (Wilson), Edwards Oldcorne, S.J., John Roberts, O.S.B., Richard Smith (Newport), John Almond, John Thules, John Lascelles (*vere* Lockwood), Edward Morgan (John Singleton), Henry Morse (*alias* Claxton), S.J., Brian Cansfield, S.J., John Woodcock (*alias* Farrington), O.F.M., Edward Mico (*alias* Banes), Anthony Turner (*alias* Ashby), S.J., John Wall (*alias* Marsh) O.F.M., and David Lewis (*alias* Charles Baker), S.J. The cause of beautification of the following, who all died in prison, has not yet been introduced: Roche Chaplain, James Lomax, Martin Sherson, John Brushford, John Harrison, and Edward Turner.

The famous Father Robert Persons was rector of the college in 1588, and again from 1598 until his death in 1610. Father Muzio Vitelleschi, afterwards General of the Society of Jesus, held the rectorship from 1592 to 1594, and again from 1597 to 1598. Cardinal Wiseman went to the College as a student in 1818, became rector in 1828, and became bishop in 1840. The English College may claim as teachers the great Jesuit theologians of the Roman College: Bellarmine, Suarez, Vasquez in the distant past; and in modern times, Perrone, Franzelin, Ballerini, Billot.

IV. INFLUENCE ON THE CHURCH IN ENGLAND

The College shares with Douai and other continental seminaries, the honour of having kept alive the lamp of the Faith in England during the dark days of persecution. Without these colleges, the supply of priests for the English missions would have entirely failed. Moreover, the college in Rome was for English Catholics a connecting unit with the Centre and Head of Christendom; and the missionaries sent thence formed a visible and tangible bond of union with that Holy See for the supremacy of

which the faithful in England were suffering so much. When we turn to the nineteenth century, it suffices to mention the name of Cardinal Nicholas Wiseman, the "Man of Providence" who had the greatest share in the work of the re-establishment of the Catholic Hierarchy in England in 1850, and as its head, by his genius reconciled the English people to what they first regarded as "Papal Aggression". It was he who put the Church in England on a firm basis, and, under God, whom we have to thank for the "Second Spring". But Wiseman was not alone. Of the rectors of the nineteenth century, all but two were made bishops, and in every part of the country the English College alumni may be found in positions of responsibility, vicars-general, canons, and especially professors of the ecclesiastical colleges and seminaries, whence the purity of the Roman Faith is diffused throughout the length and breadth of the land.

The Diary of the English College (1579-1783); published in English by Foley, S. J., Records of the English Province of the Society of Jesus (London, 1880, VI. The title of the original MS. is *Annales Collegii, Pars I, Nomina Alumnorum* (i.e., the College Register), and *Annales Collegii, Pars II*, (the real Diary). Foley's version is sometimes inaccurate and defective in both the transcript and the translation, names having been omitted from the Register without any indication of such omission; Catholic Record Society, *Miscellanea, II* (London, 1906), *The memoirs of Father Robert Persons, S.J.; Dodd, Church History of England, Tiernet, ed.* (London, 1839), II and III, with documents in the appendices; Knox, *Records of the English Catholics I, Douai Diaries* (London, 1878); II, *The Letters and Memorials of William, Cardinal Allen* (London, 1882); *The Catholic Magazine* (Birmingham, 1832): Various letters relating principally to the period 1773-1818; and *A Short Account of the English College in Rome; Probably by Dr. Gradwell, rector, 1818-1828; Challoner, Memoirs of Missionary Priests* (Derby, 1843); *Camm, Lives of the English Martyrs* (London, 1905), and *William Cardinal Allen* (London, 1908); *Wiseman, Recollections of the Last Four Popes* (London, 1858); *Ward, The Life of Cardinal Wiseman* (London, 1897); *Choke, Dublin Review* (July and October, 1898), and in the *Atti del Congresso internaz. di Scienze stor.* (Rome, 1903), *The National English Institutions of Rome during the Fourteenth Century; Gillow, Biog. Dict. of Eng. Cath.; Bartoli, Dell' Istoria della Compagnia di Gesu, L'Inghilterra* (Rome, 1667).

CHARLES J. CRONIN

English Confessors and Martyrs (1534-1729)

English Confessors and Martyrs (1534-1729)

Though the resistance of the English as a people to the Reformation compares very badly with the resistance offered by several other nations, the example given by

those who did stand firm is remarkably interesting and instructive. (1) They suffered the extreme penalty for maintaining the unity of the Church and the Supremacy of the Apostolic See, the doctrines most impugned by the reformation in all lands, and at all times. (2) They maintained their faith almost entirely by the most modern methods, and they were the first to so maintain it, i.e., by education of the clergy in the seminaries, and of Catholic youth in colleges, at the risk, and often at the cost of life. (3) The tyranny they had to withstand was, as a rule, not the sudden violence of a tyrant, but the continuous oppression of laws, sanctioned by the people in Parliament, passed on the specious plea of political and national necessity, and operating for centuries with an almost irresistible force which the law acquires when acting for generations in conservative and law-abiding counties. (4) The study of their causes and their acts is easy. The number of martyrs are many; their trials are spread over a long time. We have in many cases the papers of the prosecution as well as those of the defense, and the voice of Rome is frequently heard pronouncing on the questions of the debate, and declaring that this or that matter is essential, on which no compromise can be permitted; or by her silence she lets it be understood that some other formula may pass.

THE CAUSE OF THE BEATIFICATION

The cause of the beatification of the English Martyrs is important not for England only, but for all missionary countries, where its precedents may possibly be followed. The English cause is a very ancient one. Pope Gregory XIII, between 1580 and 1585, made several important *viva voce* concessions. Relics of these martyrs might, in default of others, be used to consecrate altars, a *Te Deum* might be publically sung on the receipt of the news of their martyrdoms, and their pictures, and their pictures with their names attached might be placed in the church of the English College, Rome. These permissions were given without any systematic inquiry that we know of. Pope Urban VII, in 1642, commenced such an inquiry, and though the outbreak of the civil war in 1642 postponed indefinitely the public progress of the cause, a list was drawn up by the the vicar Apostolic, Dr. Richard Smith, Bishop of Chalcedon, which was subsequently amplified and published by Dr. Richard Challoner. It was not until 1855 that the cause was revived, when Canon John Morris (a Jesuit after 1866) became its apostle. After several unsuccessful petitions, as that of the Third Synod of Westminster in 1859, to obtain an immediate sanction for their cultus by papal decree, a formal "ordinary process" was held in London, June to September, 1874. The work was one of much difficulty, first because nothing of the sort had been attempted in England before, and secondly because of the multitude of the martyrs. Largely, however, through the public spirit of the Fathers of the London Oratory, who devoted themselves to it unitedly, success was achieved, both in gathering together a body of evidence, and in

fulfilling the multifarious ceremonial precautions on which the Roman jurists so strongly insist. After the cause had been for twelve years in the Roman courts, two decrees were issued which, broadly speaking, gave full force and efficacy to the two ancient papal ordinations before mentioned (*see* BEATIFICATION AND CANONIZATION).

Thus Pope Gregory's concession resulted in the equivalent beatification of sixty-three martyrs mentioned by name in the pictures (at first, in 1888, fifty-four were admitted; in 1895, eight more were added, with one not in the Roman pictures), while the lists drawn up by Bishops Smith and Challoner led to the "admission of the cause" of two hundred and forty-one martyrs (all but twelve post-Gregorian), who are therefore called "Venerables". Forty-four were left with their fate still in suspense, and are called *Dilati*. Except seven, these are all "Confessors", who certainly died in prison for their faith, though it is not yet proven that they died precisely because of their imprisonment. There is yet another class to be described. While the foregoing cause was pending, great progress was being made with the arrangement of papers in the Public record Office of London, so that we now know immeasurably more of the persecution and its victims than before the cause began. In short, over 230 additional sufferers seem possibly worthy of being declared martyrs. They are called *Prætermissi*, because they were passed over in the first cause. A new cause was therefore held at Westminster (September, 1888, to August, 1889), and the proceedings have been sent to Rome. For reasons which it is not necessary to touch upon here, it was thought best to include every possible claimant, even those of whom there was very little definite information, and the far-reaching cause of Queen Mary Stuart. This, however, proved a tactical mistake. An obscure cause needs as much attention as a clear cause, or more. Moreover, the Roman courts are, on the one hand, so short-handed, that they grudge giving men to a work which will lead to little result, and on the other hand they are overwhelmed with causes which certainly need attention. In order to facilitate progress, therefore, the cause has been split up; the case of Queen Mary has been handed over to the hierarchy of Scotland, and other simplifications have been attempted; nevertheless the cause of the *Prætermissi* so far hangs fire. Apostolic letters for a *Processus de Scriptis* were issued by the Sacred Congregation on Rites on 24 March, 1899, ordering the then Archbishop of Westminster to gather up copies of all the extant writings of the martyrs declared Venerable. This proved a lengthy task, and when complete, the collection comprised nearly 500 *scripta*, and over 2000 pages. It was not completed till 17 June, 1904. Then, by special concession, four censors were appointed to draw up a special *censura* in England, and this was forwarded to Rome, where, after further consideration, a decree was drawn up and confirmed by the Pope on 2 March, 1906, declaring that none of the writings produced would hinder the cause of the martyrs now under dis-

cussion. In the course of the same year a further decree was obtained allowing altars for the *beati*, but not without many restrictions.

I. BEATI

The sixty-three blessed will be noted in detail elsewhere, and the principal authorities will be there noted. Their names are here arranged in companies when they were tried or died together.

(1) Under King Henry VIII

- *Cardinal*: John Fisher, Bishop of Rochester, 22 June, 1535.
- *Lord Chancellor*: Sir Thomas More, 6 July, 1535.
- *Carthusians*: John Houghton, Robert Lawrence, Augustine Webster, 4 May, 1535; Humphrey Middlemore, William Exmew, Sebastian Newdigate, 19 June, 1535; John Rochester, James Walworth, 11 May, 1537; Thomas Johnson, William Greenwood, John Davye, Robert Salt, Walter Pierson, Thomas Green, Thomas Scryven, Thomas Redyng, Richard Bere, June-September, 1537; Robert Horne, 4 August, 1540.
- *Benedictines*: Richard Whiting, Hugh Farringdon, abbots, 15 November, 1539; Thomas Marshall (or John Beche), 1 December, 1539; John Thorne, Richard James, William Eynon, John Rugg, 15 Nov., 1539.
- *Doctors of Divinity*: Thomas Abel, Edward Powell, Richard Fetherstone, 30 July, 1540.
- *Other secular priests*: John Haile, 4 May 1535; John Larke, 7 March, 1544.
- *Other religious orders*: Richard Reynold, Brigittine (4 May, 1535); John Stone, O.S.A., 12 May, 1538; John Forrest, O.S.F., 22 May, 1538.
- *Laymen and women*: Adrian Fortescue, Knight of St. John, 9 July, 1539; Margaret Pole, Countess of Salisbury, 28 May, 1541; German Gardiner, 7 March, 1544.

(2) Under Queen Elizabeth

- *Martyrs connected with the Excommunication*: John Felton, 8 Aug., 1570; Thomas Plumtree p., 4 Jan., 1571; John Storey, D.C.L., 1 June, 1571; Thomas Percy. Earl of Northumberland, 22 Aug., 1572; Thomas Woodhouse p., 13 June, 1573.
- *First martyrs from the seminaries*: Cuthbert Mayne, Protomartyr of Douai College, 29 Nov., 1577; John Nelson p., and S.J. before death, 3 Feb., 1578; Thomas Nelson, church student, 7 Feb., 1578; Everard Hanse p., 31 July, 1581.

- *Martyrs of the Catholic Revival*: Edmund Campion, S.J., Ralph Sherwin, Protomartyr of the English College, Rome, Alexander Briant p., and S.J. before death, 1 Dec., 1581; John Payne p., 2 April, 1582; Thomas Ford p., John Shert p., Robert Johnson p., 28 May, 1582; William Firby p., Luke Kirby p., Lawrence Richardson p., Thomas Cottom p., and S.J. before death, 30 May, 1582.
- *York martyrs*: William Lacey p., Richard Kirkman p., 22 Aug., 1582; James Thomson p., 28 Nov., 1582; William Hart p., 15 March, 1583; Richard Thirkeld p., 29 May, 1583.

II. VENERABLES

Separate notices will be given of the more notable martyrs and groups of martyrs. But, though they all died heroically, their lives were so retired and obscure that there is generally but little known about them. It may, however, be remarked that, being educated in most cases in the same seminaries, engaged in the same work, and suffering under the same procedures and laws, the details which we know about some of the more notable martyrs (of whom special biographies are given) are generally also true for the more obscure. The authorities, too, will be the same in both cases.

(1) Under King Henry VIII (12)

- *1537-38*: Anthony Brookby, Thomas Belchiam, Thomas Cort, Franciscans, thrown into prison for preaching against the king's supremacy. Brookby was strangled with his own girdle, the others died of ill treatment.
- *1539*: Friar Waire, O.S.F., and John Griffith p. (generally known as Griffith Clarke), Vicar of Wandsworth, for supporting the papal legate, Cardinal Pole, drawn and quartered, (8 July) at St. Thomas Waterings; Sir Thomas Dingley, Knight of St. John, beheaded, 10 July, with Bl. Adrian Fortescue. John Travers, Irish Augustinian, who had written against the supremacy; before execution his hand was cut off and burnt, but the writing fingers were not consumed, 30 July.
- *1540-1544*: Edmund Brindholme p., of London, and Clement Philpot l., of Calais, attainted for having "adhered to the Pope of Rome", hanged and quartered at Tyburn, 4 Aug., 1540; Sir David Gonson (also Genson and Gunston), Knight of St. John, son of Vice-Admiral Gonson, attainted for "adhering" to Cardinal Pole, hanged and quartered at St. Thomas Waterings, 1 July, 1541; John Ireland p., once a chaplain to More, condemned and executed with Bl. John Larke, 1544; Thomas Ashby l., q. v., 29 March, 1544.

(2) Under Queen Elizabeth

- 1583: John Slade l., q. v., 30 Oct., Winchester, with John Bodley l., 2 Nov., Andover.
- 1584: William Carter l., q. v., 11 Jan., Tyburn; George Haydock p., q. v., with James Fenn p., Thomas Hemerford p., John Nutter p., John Munden p., 12 Feb., Tyburn; James Bell p., q. v., with John Finch l. q. v., 20 April, Lancaster; Richard White l. q. v., 17 Oct., Wrexham.
- 1585: Thomas Alfield p., q. v., with Thomas Webley l., 6 July, Tyburn; Hugh Taylor p., q. v., with Marmaduke Bowes l., 26 Nov., York. From this time onwards almost all the priests suffered under the law of 27 Elizabeth, merely for their priestly character.
- 1586: Edward Stransham p., q. v., with Nicholas Woodfen p., 21 Jan., Tyburn; Margaret Clitherow l., q. v., 25 March, York; Richard Sergeant p., q. v., with William Thompson p., 20 April, Tyburn; Robert Anderton p., q. v., with William Marsden p., 25 April, Isle of Wight; Francis Ingleby p., 3 June, York; John Finglow p., 8 Aug., York; John Sandys p., 11 Aug., Gloucester; John Adams p., q. v., with John Lowe p., 8 Oct., Tyburn, and Richard Dibdale p., 8 Oct; Tyburn; Robert Bickerdike p., 8 Oct., York; Richard Langley l., 1 Dec., York.
- 1587: Thomas Pilchard p., 21 March, Dorchester; Edmund Sykes p., q. v., 23 March, York; Robert Sutton p., q. v., 27 July, Stafford; Stephen Rowsham p., q. v., July or earlier, Gloucester; John Hambley p., q. v., about same time, Chard in Somerset; George Douglas p., 9 Sept., York; Alexander Crowe, 13 Nov., York.
- 1588: Nicholas Garlick p., with Robert Ludlum p. and Richard Sympson p., 24 July, Derby; Robert Morton p., q. v., and Hugh Moor l., in Lincoln's Inn Fields; William Gunter p., Theatre, Southwark; Thomas Holford p., Clerkenwell; William Dean p., and Henry Webley l., Mile End Green; James Claxton p.; Thomas Felton, O.S.F., Hounslow. These eight were condemned together and suffered on the same day, 28 Aug. Richard Leigh p., q. v., Edward Shelly l., Richard Martin l., Richard Flower (Floyd or Lloyd) l., John Roche l., Mrs. Margaret Ward, q. v., all condemned with the last, and all suffered 30 Aug., Tyburn. William Way p., 23 Sept., Kingston-on-Thames; Robert Wilcox p., q. v., with Edward Champion p., Christopher Buxton p., Robert Windmerpool l., 1 Oct., Canterbury; Robert Crocket p., q. v., with Edward James p., 1 Oct., Chichester; John Robertson p., 1 Oct., Ipswich; William Hartley p. q. v., Theatre, Southwark, with John Weldon (*vere* Hewett) p., Mile End Green, Robert Sutton l., Clerkenwell, and Richard Williams (Queen Mary priest, who was more probably executed in 1592, and his name, erroneously transferred here, seems

to have pushed out that of John Symons, or Harrison), 5 Oct., Halloway; Edward Burden p., 29 Nov., York; William Lampley l., Gloucester, day uncertain.

- 1589: John Amias p., q. v., with Robert Dalby p., 16 March, York; George Nichols p., q. v., with Richard Yaxley p., Thomas Belson l., and Humphrey Pritchard l., 5 July, Oxford; William Spenser p., q. v. with Robert Hardesty l., 24 Sept., York.
- 1590: Christopher Bayles p., Fleet Street, with Nicholas Horner l., Smithfield, and Alexander Blake, l., 4 March, Gray's Inn Lane; Miles Gerard p., q. v., with Francis Dicconson p., 30 April, Rochester; Edward Jones p., Conduit, Fleet Street, and Anthony Middleton p., 6 May, Clerkenwell; Edmund Duke p., with Richard Hill p., q. v., John Hogg p., and Richard Holliday p., 27 May, Durham.
- 1591: Robert Thorpe p., q. v., with Thomas Watkinson l., 31 May, York; Monford Scott p., q. v., with George Beesley p., 2 July, Fleet Street, London; Roger Dicconson p., with Ralph Milner l., 7 July, Winchester; William Pikes l., day not known, Dorchester; Edmund Jennings p., q. v., with Swithin Wells l., Gray's Inn Fields; Eustace White p., q. v., with Polydore Plasden p., Brian Lacey l., John Masson l., Sydney Hodgson l., all seven, 10 Dec., Tyburn.
- 1592: William Patenson p., 22 Jan., Tyburn; Thomas Pormort p., q. v., 20 Feb., St. Paul's Churchyard. London; Roger Ashton l., q. v., 23 June, Tyburn.
- 1593: Edward Waterson p., 7 Jan. (but perhaps of the next year), Newcastle-on-Tyne; James Bird l., hanged 25 March, Winchester; Joseph Lampton p., q. v., 27 July, Newcastle-on-Tyne; William Davies p., q. v., 21 July, Beaumaris.
- 1594: John Speed l., condemned for receiving a priest, 4 Feb., Durham; William Harrington p., q. v., 18 Feb., Tyburn; John Cornelius, S.J., q. v., with Thomas Bosgrave l., John Carey l., Patrick Salmon l., 4 July, Dorchester; John Boste p., q. v., Durham, with John Ingram p., q. v., Newcastle-on-Tyne, and George Swallowell, a convert minister, tried together, they suffered 24, 25, and 26 July, Darlington; Edward Osbaldeston p., 16 Nov., York.
- 1595: Robert Southwell p., S.J., q. v., 21 Feb., Tyburn; Alexander Rawlins p., with Henry Walpole p., S.J., q. v., 7 April, York; William Freeman p., q. v., 13 Aug., Warwick; Philip Howard, q. v., Earl of Arundel, 19 Oct., Tower of London.
- 1596: George Errington, gentleman, William Knight l., William Gibson l., Henry Abbott l., 29 Nov., York.

- 1597: William Andleby p., q. v., with Thomas Warcop l., Edward Fulthrop l., 4 July, York.
- 1598: John Britton l., q. v., 1 April, York; Peter Snow p., q. v., with Ralph Gromston l., 15 June, York; John Buckley O.S.F., q. v., 12 July, St. Thomas Waterings; Christopher Robertson p., 19 Aug., Carlisle; Richard Horner p., 4 Sept., York;
- 1599: John Lion, l., 16 July, Oakham; James Dowdal, l., 13 Aug., Exeter.
- 1600: Christopher Wharton p., 28 March, York; John Rigby l., q. v., 21 June, St. Thomas Waterings; Thomas Sprott p., q. v., with Thomas Hunt p., 11 July, Lincoln; Robert Nutter p., q. v., with Edward Thwing p., 26 July, Lancaster; Thomas Palasor p., q. v., with John Norton l., and John Talbot l., 9 Aug., Durham.
- 1601: John Pibush p., 18 Feb., St. Thomas Waterings; Mark Barkworth, O.S.B., q. v., with Roger Filcock, S.J., and Anne Linne q. v., 27 Feb., Tyburn; Thurstan Hunt p., q. v., with Robert Middleton p., 31 March Lancaster; Nicholas Tichborne l., with Thomas Hackshot l., 24 Aug., Tyburn;
- 1602: James Harrison p., q. v., with Anthony Battie or Bates l., 22 March, York; James Duckett l., q. v., 19 April, Tyburn; Thomas Tichborne p., q. v., with Robert Watkinson p., and Francis Page, S. J., 20 April, Tyburn.
- 1603: William Richardson p., 17 Feb., Tyburn.

(3) Under James I and Charles

1604: John Sugar p., q. v., with Robert Grissold l., 16 July, Warwick; Lawrence Bailey l., 16 Sept., Lancaster; 1605: Thomas Welborne l., with John Fulthering l., 1 Aug., York; William Brown l., 5 Sept., Ripon; 1606: Martyrs at the time of the Powder Plot: Nicholas Owen, S.J., day unknown, Tower; Edward Oldcorne, S.J., q. v., with Robert Ashley, S.J., q. v., 7 April, Worcester. From this time to the end of the reign the martyrs might have saved their lives had they taken the condemned oath of allegiance. 1607: Robert Drury p., 26 Feb., Tyburn; 1608: Matthew Flathers p., 21 March, York; George Gervase, O.S.B., q. v., 11 April, Tyburn; Thomas Garnet, S.J., q. v., 23 June, Tyburn. 1610: Roger Cadwallador p., q. v., 27 Aug., Leominster; George Napper p., q. v., 9 No., Oxford; Thomas Somers p., 10 Dec., Tyburn; John Roberts, O.S.B., q. v., 10 Dec., Tyburn; 1612: William Scot, O.S.B., q. v., with Richard Newport p., 30 May, Tyburn; John Almond p., 5 Dec., Tyburn; 1616: Thomas Atkinson p., q. v., 11 March, York; John Thouless p., with Roger Wrenno l., 18 March, Lancaster; Thomas Maxfield p., q. v., 1 July, Tyburn; Thomas Tunstall p., 13 July, Norwich; 1618: William Southerne

p., 30 April, Newcastle-under-Lyne. 1628: Edmund Arrowsmith, S. J., (see Edmund Arrowsmith) with Richard Herst l., 20 and 21 Aug., Lancaster.

(4) Commonwealth

All these suffered before the death of Oliver Cromwell. - 1641: William Ward p., q. v., 26 July, Tyburn; Edward Barlow, O.S.B., q. v., 10 Sept., Lancaster; 1642: Thomas Reynolds p., with Bartholomew Roe, O.S.B., 21 January, Tyburn; John Lockwood p., q. v., with Edmund Catherick p., q. v., 13 April, York; Edward Morgan p., q. v., 26 April, Tyburn; Hugh Green p., q. v., 19 Aug., Dorchester; Thomas Bullaker, O.S.F., q. v., 12 Oct., Tyburn; Thomas Holland, S.J., q. v., 12 Dec., Tyburn. 1643: Henry Heath, O.S.F., q. v., 17 April, Tyburn; Brian Cansfield, S.J., 3 Aug., York Castle; Arthur Bell, O.S.V., q. v., 11 Dec., Tyburn; 1644: Richard Price, colonel, 7 May, Lincoln; John Duckett p., with Ralph Corbin, S.J., q. v., 7 Sept., Tyburn; 1645: Henry Morse, S.J., q. v., 1 Feb., Tyburn; John Goodman p., q. v., 8 April, Newgate; 1646: Philip Powell, O.S.B., 30 June, Tyburn; John Woodcock, O.S.F., with Edward Bamber p., q. v., and Thomas Whitaker p., 7 Aug., Lancaster. 1651: Peter Wright, S.J., q. v., 19 May, Tyburn. 1654: John Southworth p., q. v., 28 June, Tyburn.

(5) The Oates Plot

1678: Edward Coleman l., q. v., 3 Dec., Tyburn; Edward Mico, S.J., 3 Dec., in Newgate; Thomas Beddingfeld, 21 Dec., in Gatehouse Prison; 1679: William Ireland, S.J., q. v., with John Grove l., 24 Jan, Tyburn; Thomas Pickering O.S.B., 9 May, Tyburn; Thomas Whitbread S.J., with William Harcourt, S.J., John Fenwick, S.J., John Gavin or Green S.J., and Anthony Turner, S.J., 20 June, Tyburn; Francis Nevil, S.J., Feb., in Stafford Gaol; Richard Langhorne l., q. v., 14 July, Tyburn; William Plessington p., 19 July, Chester; Philip Evans, S.J., 22 July, with John Lloyd p., 22 July, Cardiff; Nicholas Postgate p., 7 Aug., York; Charles Mahoney, O.S.V., 12 Aug., Ruthin; John Wall, O.S.F., q. v., 29 Aug., Worcester; Francis Levinson, O.S.F., 11 Feb., in prison; John Kemble p., q. v., 22 Aug., Hereford; David Lewis, S.J., q. v., 27 Aug., Usk. 1680: Thomas Thwing p., q. v., 23 Oct., York; William Howard, q. v., Viscount Stafford, 29 Dec., Tower Hill. The cause of Irish martyr Oliver Plunkett, q. v., 1 July, Tower hill, was commenced with the above martyrs. The cause of his beatification is now being actively proceeded with by the Cardinal Archbishop of Armaugh.

III. THE FORTY-FOUR DILATI

These, as has been explained above, are those "put off" for further proof. Of these, the majority were confessors, who perished after a comparatively short period of imprisonment, though definite proof of their death *ex oerumnis* is not forthcoming.

(1) Under Queen Elizabeth (18)

Robert Dimock, hereditary champion of England, was arrested at Mass, and perished after a few weeks' imprisonment at Lincoln, 11 Sept., 1580; John Cooper, a young

man, brought up by the writer, Dr. Nicholas Harpsfield, and probably a distributor of Catholic books, arrested at Dover and sent to the Tower, died of "hunger, cold, and stench", 1580; Mr. Ailworth (Aylword), probably of Passage Castle, Waterford, who admitted Catholics to Mass at his house, was arrested, and died after eight days, 1580; William Chaplain p., Thomas Cotesmore p., Roger Holmes p., Roger Wakeman p., James Lomax p., perished in 1584. Cotesmore was a bachelor of Oxford in 1586; of Wakeman's suffering several harrowing details are on record. Thomas Crowther p., Edward Pole p., John Jetter p., and Laurence Vaux p., q. v., perished in 1585; John Harrison p., 1586; Martin Sherson p., and Gabriel Thimelby p., 1587; Thomas Metham S.J., 1592; Eleanor Hunt and Mrs. Wells, gentlewomen, on unknown days in 1600 and 1602.

(2) Under the Commonwealth (8)

Edward Wilkes p., died in York Castle before execution in 1642; Boniface Kempe (or Francis Kipton) and Idlephonse Hesketh (or William Hanson) O.S.B., professed of Montserrat, seized by Puritan soldiery in Yorkshire, and worried to death, 26 July (?), 1644; Richard Bradley S.J., b. at Bryning Hall, Lancs, 1605, of a well-known Catholic family, seized, imprisoned, but died before trial at Manchester, 20 Jan, 1640; John Felton, S.J., visiting another Father in Lincoln, was seized and so badly used that, when released (for no one appeared against him) he died within a month, 17 Feb., 1645; Thomas Vaughan of Cortfield p., and Thomas Blount p., imprisoned at Shrewsbury, d. at unknown date; Robert Cox, O.S.B., died at the Clink Prison, 1650.

(3) During the Oates Plot (10)

Thomas Jennison S.J., d. after twelve months' imprisonment, 27 Sept., 1679. he had renounced a handsome inheritance in favour of his brother, who, nevertheless, having apostatized, turned king's evidence against him. William Lloyd, d. under sentence of death, Brecknock, 1679. Placid Aldham or John Adland (O.S.B.), a convert clergyman, chaplain to Queen Catherine of Braganza, d. under sentence in 1679. William Atkins, S.J., condemned at Stafford, was too deaf to hear the sentence. When it was shouted in his ear he turned and thanked the judge; he was reprieved and died in bonds, 7 March, 1681. Richard Birkett p., d. 1680 under sentence in Lancaster Castle; but our martyrologists seem to have made some confusion between him and John Penketh, S.J., a fellow prisoner (see Gillow, *Cath. Rec. Soc.*, IV, pp. 431-440). Richard Lacey (Prince), S.J., Newgate, 11 March, 1680; William Allsion p., York Castle, 1681; Edward Turner, S.J., 19 March, 1681, Gatehouse; Benedict Counstable, O.S.B., professed at Lamspring, 1669, 11 Dec., 1683, Durham Gaol; Willaim Bennet (Bentney), S.J., 30 Oct., 1692, Leicester Gaol under William III.

(4) Others Put Off for Various Causes (8)

John Mawson, 1614, is not yet sufficiently distinguished from John Mason, 1591; there is a similar difficulty between Matthias Harrison, assigned to 1599, and James Harrison, 1602; William Tyrwhit, named by error for his brother Robert; likewise the identity of Thomas Dyer, O.S.B., has been fully proved; James Atkinson, killed under torture by Topcliffe, but evidence is wanted of his consistency to the end. Fr. Henry Garnet, S.J., q. v., was he killed *ex odio fidei*, or was he believed to be guilty of the Powder Plot, by merely human misjudgment, not through religious prejudice? The case of Lawrence Hill and Robert Green at the time of the Oates Plot is similar. Was it due to *odium fidei*, or an unprejudiced error?

IV. THE PRÆTERMISSI (242)

(1) Martyrs on the Scaffold

1534: Elizabeth Barton, q.v. (The Holy Maid of Kent), with five companions; John Dering, O.S.B., Edward Bocking, O.S.B., Hugh Rich, O.S.F., Richard Masters p., Henry Gold p., 1537. Monks, 28. - After the pilgrimage of grace and the rising of Lincolnshire many, probably several hundred, were executed, of whom no record remains. The following names, which do survive, are grouped under their respective abbeys or priories. - Barling: Matthew Mackerel, abbot and Bishop of Chalcedon, Ord. Præm. Bardney: John Tenent, William Cole, John Francis, William Cowper, Richard Laynton, Hugh Londale, monks. Bridlington: William Wood, Prior. Fountains: William Thyrsk, O. Cist. Guisborough: James Cockerel, Prior. Jervaulx: Adam Sedbar, Abbot; George Asleby, monk. Kirkstead: Richard Harrison, Abbott, Richard Wade, William Swale, Henry Jenkinson, monks. Lenten: Nicholas Heath, Prior; William Gylham, monk. Sawlet: William Trafford, Abbott; Richard Eastgate, monk. Whalley: John Paslew, Abbott; John Eastgate, William Haydock, monks. Woburn: Robert Hobbes, Abbott; Ralph Barnes, sub-prior; Laurence Blonham, monk. York: John Pickering, O.S.D., Prior. Place unknown: George ab Alba Rose, O.S.A. Priests: William Burraby, Thomas Kendale, John Henmarsh, James Mallet, John Pickering, Thomas Redforth. Lords: Darcy and Hussey. Knights: Francis Bigod, Stephen Hammerton, Thomas Percy. Laymen (11): Robert Aske, Robert Constable, Bernard Fletcher, George Hudswell, Robert Lecche, Roger Neeve, George Lomley, Thomas Moyne, Robert Sotheby, Nicholas Tempest, Philip Trotter. 1538 (7): Henry Courtney, the Marquess of Exeter; Henry Pole, Lord Montague; Sir Edward Nevell and Sir Nicholas Carew; George Croft p., and John Collins p.; Hugh Holland l. Their cause was "adhering to the Pope, and his Legate, Cardinal Pole". 1540 (6): Lawrence Cook O. Carm., Prior of Doncaster; Thomas Empson, O.S.B.; Robert Bird p.; William Peterson p.; William Richardson p.; Giles Heron l. 1544 (3): Martin de Courdres, O.S.A., and Paul of St. William, O.S.A.; Darby Genning l. 1569, 1570 (8): Thomas Bishop, Simon Digby, John Fulthrope, John Hall, Christopher Norton, Thomas Norton, Robert Pennyman, Oswald Wilkinson, Laymen,

who suffered, like Blessed Thomas Percy, Earl of Northumberland, q. v., on the occasion of the Northern Rising. Various Years (6): Thomas Gabyt, O. Cist., 1575; William Hambleton p., 1585; Roger Martin p., 1592; Christopher Dixon, O.S.A., 1616; James Laburne, 1583; Edward Arden, 1584.

(2) Martyrs in Chains

Bishops (2): Richard Creagh, Archbishop of Armaugh, in Tower of London; Thomas Watson, Bishop of Lincoln, in Wisbeach Castle. Priests in London Prisons (18): Austin Abbott, Richard Adams, Thomas Belser, John Boxall, D.D., James Brushford, Edmund Cannon, William Chedsey, D.D., Henry Cole, D.D., Anthony Draycott, D.D., Andrew Fryer, -- Gretus, Richard Hatton, Nicholas Harpsfield, -- Harrison, Francis Quashet, Thomas Slythurst, William Wood, John Young, D.D. Laymen in London Prisons (35): Alexander Bales, Richard Bolbet, Sandra Cubley, Thomas Cosen, Mrs. Cosen, Hugh Dutton, Edward Ellis, Gabriel Empringham, John Fitzherbert, Sir Thomas Fitzherbert, John Fryer, Anthony Fugatio (Portuguese), -- Glynne, David Gwynne, John Hammond (alias Jackson). Richard Hart, Robert Holland, John Lander, Anne Lander, Peter Lawson, Widow Lingon, Phillipe Lowe, -- May, John Molineaux, Henry Percy, Earl of Northumberland, Richard Reynolds, Edmund Sexton, Robert Shelly, Thomas Sommerset, Francis Spencer, John Thomas, Peter Tichborne, William Travers, Sir Edward Waldegrave, Richard Weston. Priests in York (12): John Ackridge, William Baldwin, William Bannersly, Thomas Bedal, Richard Bowes, Henry Comberford, James Gerard, Nicholas Grene, Thomas Harwood, John Pearson, Thomas Ridall, James Swarbrick. Laymen in York (31): Anthony Ash, Thomas Blinkensop, Stephen Branton, Lucy Budge, John Chalmer, Isabel Chalmer, John Constable, Ralph Cowling, John Eldersha, Isabel Foster, -- Foster, Agnes Fuister, Thomas Horsley, Stephen Hemsworth, Mary Hutton, Agnes Johnson, Thomas Layne, Thomas Luke, Alice Oldcorne, -- Reynold, -- Robinson, John Stable, Mrs. Margaret Stable, Geoffrey Stephenson, Thomas Vavasour, Mrs. Dorothy Vavasour, Margaret Webster, Frances Webster, Christopher Watson, Hercules Welborn, Alice Williamson. In Various Prisons: Benedictines (11): James Brown, Richard Coppinger, Robert Edmonds, John Feckinham, Lawrence Mabbs, William Middleton, Placid Peto, Thomas Preston, Boniface Wilford, Thomas Rede, Sister Isabel Whitehead. Brigittine: Thomas Brownel (lay brother). Cistercians (2): John Almond, Thomas Mudde. Dominican: David Joseph Kemys. Franciscans: Thomas Ackridge, Paul Atkinson, q. v. (the last of the confessors in chains, died in Hurst Castle, after thirty years' imprisonment, 15 Oct., 1729), Laurence Collier, Walter Coleman, Germane Holmes. Jesuits (12): Matthew Brazier (alias Grimes), Humphrey Browne, Thomas Foster, William Harcourt, John Hudd, Cuthbert Prescott, Ignatius Price, Charles Pritchard, Francis Simeon, Nicholas Tempest, John Thompson, Charles Thursley. Priests (4): William Baldwin, James Gerard, John

Pearson, James Swarbick. Laymen (22): Thurstam Arrowsmith, Humphrey Beresford, William Bredstock, James Clayton, William Deeg, Ursula Foster, -- Green, William Griffith, William Heath, Richard Hocknell, John Jessop, Richard Kitchin, William Knowles, Thomas Lynch, William Maxfield, -- Morecock, Alice Paulin, Edmund Rookwood, Richard Spencer, -- Tremaine, Edmund Vyse, Jane Vyse.

V. THE ELEVEN BISHOPS

Since the process of the *Prætermissi* has been held, strong reasons have been shown for including on our list of sufferers, whose causes ought to be considered, the eleven bishops whom Queen Elizabeth deprived and left to die in prison, as Bonner, or under some form of confinement. Their names are: Cuthbert Turnstall, b. Durham, died 18 Nov. 1559; Ralph Bayle b. Lichfield, d. 18 Nov., 1559; Owen Ogle Thorpe, b. Carlisle, d. 31 Dec., 1559; John White, b. Winchester, d. 12 Jan., 1560; Richard Pate, b. Worcester, d. 23 Nov., 1565; David Poole, b. Peterborough, d. May, 1568; Edward Bonner, b. London, d. 5 Sept., 1569; Gilbert Bourne, b. Bath and Wells, d. 10 Sept., 1569; Thomas Thurlby, b. Ely, d. 26 Aug., 1570; James Thurberville, b. Exeter, d. 1 Nov., 1570; Nicholas Heath, Archbishop of York, d. Dec. 1578.

Lives of the English Martyrs, ed. Camm (2 vols., London, 1904), covering the lives of the Beati; the other lives are now in course of preparation; Challoner, Missionary Priests (London, 1878); Gillow, Bil. Dict. Eng. Cath.; Pollen, Acts of English Martyrs (London, 1891); Id., English Martyrs, (1594-1603), in Cath. Rec. Soc., Vol. V. (1908); Stanton, Menology for England (London, 1892); Dodd, Church History (London, 1839-43); Phillips, Extinction of the Ancient Hierarchy (London, 1906).

J.H. POLLEN

Magnus Felix Ennodius

Magnus Felix Ennodius

Rhetorician and bishop, b. probably at Arles, in Southern Gaul, in 474; d. at Pavia, Italy, 17 July, 521. When quite young he went to Pavia, where he was educated, was betrothed, and eventually became a priest, his fiancée at the same time becoming a nun. It does not appear certain that he ever married. Shortly after the death of his benefactor, Epiphanius (496), he received minor orders at Milan, attracted thither no doubt by his uncle Laurentius, bishop of that city. Soon he was ordained deacon and taught in the schools. About this time (498) two popes were elected simultaneously, the deacon Symmachus and the archpriest Laurentius. King Theodoric was in favour of the former, and convened a council at Rome in 501, the famous *Synodus Palmaris*, to settle this question and put an end to much scandal. On this occasion Ennodius

acted as secretary to Laurentius of Milan, who was the first to sign the decrees of the council. The adherents of the archpriest Laurentius, who was rejected by the council, wrote against the decisions of the latter. Ennodius answered them and defended the synod in a still extant work entitled "Libellus adversus eos qui contra synodum scribere praesumpserunt". After referring to the objections urged against the incompetency and irregularity of the council, he attacks the enemies of Symmachus and proclaims the inability of human judges to decide matters pertaining to popes: "God no doubt consented to the affairs of men being settled by men; He reserved to Himself the passing of judgment upon the pontiff of the supreme see" (Libellus, sect. 93). In 513 Ennodius was still at Milan, but shortly afterwards he was made Bishop of Pavia. In 515 and 517 he headed two successive embassies which Pope Hormisdas sent to Emperor Anastasius at Constantinople, both of which, however, were barren of results. The unrelenting enmity of the emperor endangered the lives of the envoys in 517. Of the remaining years of his episcopate nothing is known. His epitaph, found by accident, gives the date of his death.

The works of Ennodius comprise poems for special occasions and epigrams, particularly inscriptions for churches or other religious monuments. His defence of the synod of 502, often known as "Libellus pro Synodo", his autobiography (Eucharisticum), his panegyric on King Theodoric, and the biographies of his predecessor Epiphanius of Milan, and a monk, Antonius of Lérins, are interesting from an historical point of view; the first four especially. As much can be said of his numerous letters, addressed to various correspondents. Notwithstanding their verbosity, they contain much useful information concerning the addresses and the customs of the time. Ennodius is the last representative of the ancient schools of rhetoric. His "Paraenesis didascalica" (511) celebrates the wonderful power of that foremost of the liberal arts, by which a guilty man is made to appear innocent, and vice versa. He illustrates his own method in a few declamatory exercises called "Dictiones"; they deal with themes once the delight of pagan rhetoricians, e.g. grief of Thetis on beholding the corpse of Achilles; Menelaus contemplating the ruins of Troy; the lament of Dido forsaken by Æneas, etc. Again, with all the resources of his rhetoric he denounces a man who placed a statue of Minerva in a place of ill-repute; a player who gambled away the field in which his parents lay buried; etc. He shared the popular fallacy of his contemporaries who saw in the reign of Theodoric a revival of the Roman Empire under the control of men of letters. Ennodius remained to the end faithful to the academic traditions of the Roman schools, whose mythological apparatus he was the last to retain; thus in an epithalamium he describes the beauty of the nude Venus, and makes love argue against virginity. Nevertheless, he refutes elsewhere the fables of the poets and points out that the understanding of the Christian Scriptures is the highest intellectual ideal. In him are visible

the two tendencies whose conflict is never quite absent from Christian life; outwardly he remains true to classic tradition. His diction is exuberant and florid, but occasionally manifests vigour. The best editions of his writings are those of Hartel, in the sixth volume of the "Corpus ecclesiasticorum latinorum" (Vienna, 1881), and of Vogel in "Monumenta Germaniae Hist.: Auct." (Berlin, 1885), VII.

PAUL LEJAY

Ulrich Ensingen

Ulrich Ensingen

(ULRICH ENSINGER)

Belonged to a family of architects who came from Einsingen near Ulm, Wurtemberg, and who shared as master-builders in the construction of the most important Gothic buildings of the fifteenth century in Southern Germany. Ulrich, the founder of the family, is known from the year 1391; d. at Strasburg, 10 Feb., 1419. Apparently he learned his craft in the stonemason's guild of Ulm, and was also, perhaps, a pupil of Master Heinrich the Younger of Ulm. In 1391 he was asked to take charge of the work on the Milan cathedral, but he seems at that time to have stayed in Ulm, where he was architect of the cathedral until his death. At first his engagement at Ulm was for five years only, but in 1397 he was appointed master architect for life. Ulrich completed the choir, began the nave, and made the ground-plan of the tower. In 1394-95 he worked on the cathedral of Milan, but, disagreeing with the Duke of Milan as to questions of artistic detail, he went back to Ulm. His connexion with the work on the Strasburg cathedral, however, lasted longer; at Strasburg he was master-builder during 1399-1419 and built the north tower from the platform to the great window. At the same time he completed the nave and the lower part of the tower of the church of Our Lady at Esslingen. Besides two daughters Ulrich had three sons; his sons all followed the calling of their father. At first they used Ulrich's official title *Kirchenmeister* as a family name, but later adopted that of Ensingen (Ensinger).

(2) CASPAR ENSINGEN was the oldest son; very little is known of him.

(3) MATTHIAS ENSINGEN, another son, d. 1438. There is evidence that he was employed on the Ulm cathedral from 1427 and at Esslingen during 1436-38.

(4) MATTHÄUS ENSINGEN, the youngest and most gifted son, can be traced during the years 1420-1463. In 1420 he worked at Strasburg; in the same year he was appointed master-builder for the work on the minster at Berne. The cornerstone of this was laid in 1421 and Matthäus conducted the work until 1449. In addition he had his father's position as architect at Esslingen (1419-1463). It can be proved that he was engaged on the cathedral of Ulm from 1446, but it was not until 1451 that he had

charge of its construction as master-builder; before this last appointment he worked (1449-51) on the cathedral at Strasburg without occupying any well-defined position. On the Ulm cathedral he completed the vaulting of the choir and built the tower as high as the nave. During his last years he was for a short time again at Berne.

(5) VINCENZ ENSINGEN, son of Matthäus, employed at Berne from 1448; during 1462-85 he worked at Constance, and in 1472 he built the small cloister at Basle.

JOSEPH SAUER

Entablature

Entablature

A superstructure which lies horizontally upon the columns in classic architecture. It is divided into three parts: the architrave (the supporting member carried from column to column); the frieze (the decorative portion); and the cornice (the crowning and projecting member). Each of the orders has its appropriate entablature, of which both the general height and the subdivisions are regulated by a scale of proportion derived from the diameter of the column. It is occasionally used to complete, architecturally, the upper portion of a wall, even when there are no columns, and in the case of pilasters or detached or engaged columns is sometimes profiled round them.

THOMAS H. POOLE

Enthronization

Enthronization

(From Greek *'enthronízein*, to place on a throne).

This word has been employed in different meanings: (1) formerly, it meant the solemn placing of the relics upon the altar of a church which was to be consecrated, hence a newly consecrated church was called *naos enthroniasmenos* (*naòs 'enthroniasménos*). (2) In the Middle Ages we find the *inthronizatio matrimonii*, or enthronization of marriage, which was nothing else than the blessing in the nuptial Mass (*benedictio nuptiarum*). (3) In the East it was employed, but seldom, to denote the induction into a parochial benefice. (4) It was used especially to designate the ceremony of enthronization which accompanies the consecration of a bishop. After receiving episcopal consecration, the newly consecrated bishop was solemnly conducted to the episcopal throne, of which he took possession. He received the kiss of peace and listened to the reading of a passage of Holy Scripture, whereupon he pronounced an address or *sermo inthronisticus*. The letters which it was customary for him to send to the other bishops

in token of his being in communion with them in the same faith, were called *litteræ inthronisticæ*, or *syllabai enthronistikai* (*sullabai 'enthronistikai*), and the gifts which it was customary for him to present to the bishops who had consecrated him, and to those who had taken part in the ceremonies were called the *inthronisticon* (*'enthronistikón*). At present, after the consecration has taken place, the new bishop is conducted by the consecrating bishop and one of the assistants to the throne occupied by the consecrator during the ceremony, or to the seat usually taken by the bishop, if the consecration has taken place in the cathedral church. The enthronization can also take place independently of the consecration; in this case, the bishop, after taking his seat upon the throne, receives there the homage of all ecclesiastics present in the cathedral. These ceremonies have no longer the slightest juridical importance (see BISHOP). (5) The enthronization of the pope in the Chair of St. Peter, *Cathedra Petri*, was formerly a very important ceremony, which took place at St. Peter's in Rome, or, exceptionally, in the church of St. Peter *ad Vincula*, where there was also a *Cathedra Petri*. This ceremony was performed immediately after the election, if the latter had taken place in the church of St. Peter, or before the coronation. Its object was to proclaim to the Christian world that the newly elected pope was the lawful successor of St. Peter. Before this ceremony had taken place, he was forbidden to take part in the administration of the Church. In 1059 Pope Nicholas II declared that the omission of the enthronization did not prevent the pope from administering the Church. This custom disappeared in the thirteenth century, owing to the fact that in that period the popes seldom resided in Rome. Equivalent to enthronization is the *adoratio* of the pope by the cardinals, which is performed in St. Peter's after the election of the pontiff. It is a simple ceremony and does not confer the slightest right. (6) The Roman Pontifical mentions enthronement amongst the ceremonies which accompany the solemn consecration of a king. It is still practised in the Anglican Episcopal Church at the coronation of the King of England (see CORONATION).

Jahrhundert* (Göttingen, 1871), 235-265; Wurm, *Die Papstwahl* (Cologne, 1902), 125-26.

A. Van Hove

Sts. Eoghan

Sts. Eoghan

(1) EOGHAN OF ARDSTRAW was a native of Leinster, and, after presiding over the Abbey of Kilnamanagh (Co. Wicklow) for fifteen years, settled in the valley of Mourne (Co. Tyrone), his mother's country, about the year 576. He was followed by many disciples including St. Kevin of Glendalough, who completed his studies under this saint. As a boy he had been carried off to Britain, and subsequently he was taken captive to Brittany, together with St. Tighernach, who is best known as the founder of the abbey of Clones, Co. Monaghan. So great was the fame of the sanctity and learning of St. Eoghan, at Mourne, that he was consecrated first Bishop of Ardstraw about the year 581. It is difficult to give his chronology with any degree of exactness, but the Irish annalists give the date of his death as 23 Aug., 618. His name is generally latinized as Eugenius, but the Irish form is *Eoghan* (Owen), hence *Tir Eoghain*, or Tyrone.

Ardstraw continued as an episcopal see until 1150, when it was translated to Rathlure and subsequently to Maghera, but in 1254 it was definitely removed to Derry. In all these changes St. Eoghan was regarded as the clan patron, and hence he is the tutelary guardian of the See of Derry to this day. His feast is celebrated on 23 August.

(2) EOGHAN OF CLONCULLEN, Co. Tipperary, has been identified with Eoghan, son of Saran of Cloncullen, for whom St. Ailbe of Emly composed a rule. He is entered in the Martyrologies of Tallaght and Donegal, and is venerated on 15 March.

(3) EOGHAN, Bishop, is commemorated in the Martyrology of Tallaght on 18 April, and is included by the Bollandists under that date, but the particulars of his life are scanty in the extreme.

(4) EOGHAN THE SAGE (Sapiens) finds a place in the Irish martyrologies, and he is also included in the "Acta Sanctorum", but no reliable data as to his life is forthcoming. His feast is celebrated on 28 May.

(5) EOGHAN OF CRANFIELD (Co. Antrim) has been described as Abbot of Moville, but there is reason to believe that he is to be identified with the preceding saint of the same name, especially as the Bollandists style him *Episcopus et Sapiens de-Magh-cremhcaille*. A St. Ernan of Cremhcaille (Cranfield) is honoured on 31 May, but this is also the feast day of St. Eoghan. However, "Ernan" may be a scribal error for "Eoghan", and this would account for the seeming mistake of name in regard to the patron of Cranfield.

There are other Irish saints of this name, but their history is somewhat obscure, and it is not easy to reconcile their chronology.

W.H. GRATTAN-FLOOD

Epact

Epact

(Gr. *épaktai hemérai*; Lat. *dies adjecti*).

The surplus days of the solar over the lunar year; hence, more freely, the number of days in the age of the moon on 1 January of any given year. The whole system of epacts is based on the Metonic Lunar Cycle (otherwise known as the Cycle of Golden Numbers), and serves to indicate the days of the year on which the new moons occur.

THE CHURCH LUNAR CALENDAR

It is generally held that the Last Supper took place on the Jewish Feast of the Passover, which was always kept on the fourteenth day of the first month of the old Jewish calendar. Consequently, since this month always began with that new moon of which the fourteenth day occurred on or next after the vernal equinox, Christ arose from the dead on Sunday, the seventeenth day of the so-called paschal moon. It is evident, then, that an exact anniversary of Easter is impossible except in years in which the seventeenth day of the paschal moon falls on Sunday. In the early days of Christianity there existed a difference of opinion between the Eastern and Western Churches as to the day on which Easter ought to be kept, the former keeping it on the fourteenth day and the latter on the Sunday following. To secure uniformity of practice, the Council of Nicæa (325) decreed that the Western method of keeping Easter on the Sunday after the fourteenth day of the moon should be adopted throughout the Church, believing no doubt that this mode fitted in better with the historical facts and wishing to give a lasting proof that the Jewish Passover was not, as the Quartodeciman heretics believed, an ordinance of Christianity.

As in the Julian calendar the months had lost all their original reference to the moon, the early Christians were compelled to use the Metonic Lunar Cycle of the Greeks to find the fourteenth day of the paschal moon. This cycle in its original form continued to be used until 1582, when it was revised and embodied in the Gregorian calendar. The Church claims no astronomical exactness for her lunar calendar; we shall show presently the confusion which would necessarily result from an extreme adherence to precise astronomical data in determining the date of Easter. She wishes merely to ensure that the fourteenth day of the calendar moon shall fall on or shortly after the real fourteenth day but never before it, since it would be chronologically absurd to keep Easter on or before the Passover. Otherwise, as Clavius plainly states (*Romani Calendarii a Gregorio XIII P.M. restituti explicatio*, cap. V, § 13, p. 85), she regards with indifference the occurrence of the moons on the day before or after their proper

seats and cares much more for peace and uniformity than for the equinox and the new moon. It may be mentioned here that Clavius's estimate of the accuracy of the calendar, in the compilations of which he took such a leading part, is extremely modest, and the seats assigned by him to the new moons tally with strict astronomical findings in a degree which he seems never to have anticipated. The impossibility of taking the astronomical moons as our sole guide in finding the date of Easter will be best understood from an example: Let us suppose that Easter is to be kept (as is at least implied by the British Act of Parliament regulating its date) on the Sunday after the astronomical full moon, and that this full moon, as sometimes happens, occurs just before midnight on Saturday evening in the western districts of London or New York. The full moon will therefore happen a little after midnight in the eastern districts, so that Easter, if regulated strictly by the paschal full moon, must be kept on one Sunday in the western and on the following Sunday in the eastern districts of the same city. Lest it be thought that this is carrying astronomical exactness to extremes, we may say that, if Easter were dependent on the astronomical moons, the feast could not always be kept on the same Sunday in England and America. Seeing, therefore, that astronomical accuracy must at some point give way to convenience and that an arbitrary decision on this point is necessary, the Church has drawn up a lunar calendar which maintains as close a relation with the astronomical moons as is practicable, and has decreed that Easter is to be kept on the Sunday after the fourteenth day of the paschal moon as indicated by this calendar.

METONIC LUNAR CYCLE OR CYCLE OF GOLDEN NUMBERS

In the year now known as 432 B.C., Meton, an Athenian astronomer, discovered that 235 lunations (i.e. lunar months) correspond with 19 solar years, or, as we might express it, that after a period of 19 solar years the new moons occur again on the same days of the solar year. He therefore divided the calendar into periods of 19 years, which he numbered 1, 2, 3, etc. to 19, and assumed that the new moons would always fall on the same days in the years indicated by the same number. This discovery found such favour among the Athenians that the number assigned to the current year in the Metonic Cycle was henceforth written in golden characters on a pillar in the temple, and, whether owing to this circumstance or to the importance of the discovery itself, was known as the Golden Number of the year. As the 19 years of the Metonic Cycle were purely lunar (i.e. each contained an exact number of lunar months) and contained in the aggregate 235 lunations, it was clearly impossible that all the years should be of equal length. To twelve of the 19 years 12 lunations were assigned, and to the other seven 13 lunations, the thirteenth lunation being known as the embolismic or intercalary month.

Length of the Lunations

The latest calculations have shown that the average duration of the lunar month is 29 days, 12 hours, 44 mins., 3 secs. To avoid the difficulty of reckoning fractions of a day in the calendar, all computators, ancient and modern, have assigned 30 and 29 days alternately to the lunations of the year, and regarded the ordinary lunar year of 12 lunations as lasting 354 days, whereas it really lasts some 8 hours and 48 mins. longer. This under-estimation of the year is compensated for in two ways: (1) by the insertion of one extra day in the lunar (as in the solar) calendar every fourth year, and (2) by assigning 30 days to six of the seven embolismic lunations, although the average lunation lasts only about 29.5 days. A comparison of the solar and lunar calendars for 76 years (one cycle of 19 years is unsuitable in this case, since it contains sometimes 4, sometimes 5, leap years) will make this clearer:

76 solar years = (76 X 365) + 19, i.e. 27,759 days.

Therefore 940 calendar lunations (since 19 years equal 235 lunations) contain 27,759 days (29 d., 12 hrs., 44 mins., 3 secs. times 940 equals 27,758 d., 18 hrs., 7 mins.). But 940 lunations averaging 29.5 days equal only 27,730 days. Consequently, if we assign 30 and 29 days uninterruptedly to alternate lunations, the lunar calendar will, after 76 years, anticipate the solar by 29 days. The intercalation of the extra day every fourth year in the lunar calendar reduces the divergent to 10 days in 76 years i.e. 2.5 days in 19 years. The divergence is removed by assigning to the seven embolismic months (which would otherwise have contained 7 times 29.5, or 206.5, days) 209 days, 30 days being assigned to each of the first six and 29 to the seventh.

THE MANNER OF INSERTION OF THE EMBOLISMIC MONTHS

As the Gregorian and Metonic calendars differ in the manner of inserting the embolismic months, only the former is spoken of here. It has just been said that seven of the 19 years of the lunar cycle contain a thirteenth, or embolismic, month, consisting in six cases of 30 days and in the seventh of 29 days. Granted that the first solar and lunar years begin on the same day (i.e. that the new moon occurs on 1 January), it is evident that, as the ordinary lunar year of 12 lunations is 11 days shorter than the solar, the lunar calendar will, after three years, anticipate the solar by 33 days. To the third lunar year, then, is added the first embolismic month of 30 days, reducing the divergence between the calendars to three days. After three further years, i.e. at the end of the sixth year, the divergence will have mounted to 36 (3 X 11 + 3) days, but, by the insertion of the second embolismic lunation, will be reduced to six days. Whenever, then, the divergence between the calendars amounts to more than 30 days, an embolismic month is added to the lunar year; at the end of the nineteenth lunar year, the divergence will be 29 days, and, as the last embolismic month consists of 29 days, it is clear that after the insertion of this month the nineteenth solar and lunar years will end on the same day and that the first new moon of the twentieth (as of the

first) year will occur on 1 January. The divergence, therefore, at the end of the 19 successive years of the lunar cycle is: 11, 22, 3, 14, 25, 6, 17, 28, 9, 20, 1, 12, 23, 4, 15, 26, 7, 18, and days.

CYCLE OF EFACTS

We have defined an epact as the age of the moon on 1 January, i.e. at the beginning of the year. If, then, the new moon occurs on 1 January in the first year of the Lunar Cycle, the Epact of the year is or, as it is more usually expressed, *; and since the lunar year always begins with the new moon, it is clear that the divergence between the solar and lunar calendars, of which we have just been speaking, gives the Epacts of the succeeding years. Thus, after the first year, the divergence between the calendars amounts to 11 days; therefore, the new moon occurs 11 days before 1 January of the second solar year, which is expressed by saying that the Epact of the second solar year is XI. Granted, then, that the new moon occurs on 1 January in the first year of the Lunar Cycle, the epacts of the 19 years are as follows:

Golden Numbers	1	2	3	4	5	6	7	8		
Epacts	*	XI	XXII	III	XIV	XXV	VI	XVII		
9	10	11	12	13	14	15	16	17	18	19
XXVIII	IX	XX	I	XII	XXIII	IV	XV	XXVI	VII	XVIII

INACCURACY OF THE METONIC CYCLE

Meton's theory, as adopted by the Church until the year 1582, might be briefly expressed as follows: The average Lunar Cycle consists of,

19 lunar years averaging 354.25 days, i.e. 6730.75 days.

6 extra, or embolismic, months of 30 days, i.e. 180 days.

1 embolismic month of 29 days.

Total.....6939.75 days.

19 solar years averaging 365.25 days equal 6939.75. But later computators found that the average lunation lasts 29 days, 12 hours, 44 minutes, 3 seconds, consequently:

235 calendar lunations (one Lunar Cycle) equal 6939 d. 18 h. m. s.

235 astronomical lunations equal 6939 d. 16 h. 31 m. 45 s.

Difference....1 h. 28 m.15 s.

We thus see that the average Lunar Cycle is about 1 hour too long, and that, though the new moons occur on the same dates in successive cycles, they occur, on an average, 1.5 hours earlier in the day. The astronomers entrusted with the reformation of the calendar calculated that after a period of 312.5 years (310 years is according to our

figures a closer approximation) the new moons occur on the day preceding that indicated by the Lunar Cycle, that is, that the moon is one day older at the beginning of the year than the Metonic Cycle, if left unaltered would show, and they removed this inaccuracy by adding one day to the age of the moon (I. e. to the Epacts) every 300 years seven times in succession and then one day after 400 years (i.e. eight days in 8×312.5 or 2500 years). This addition of one to the Epacts is known as the Lunar Equation, and occurs at the beginning of the years 1800, 2100, 2400, 2700, 3000, 3300, 3600, 3900, 4300, 4600, etc. A second disturbance of the Epacts is caused by the occurrence of the non-bissextile centurial years. We have seen above that the assigning of 6939.75 days to 19 lunar years leads to an error of one day every 312.5 years, and that within these limits the lunar calendar must not be disturbed; but the assigning of 6939.75 days to every 19 solar years amounts to an error of 3 days every 400 years, and it is therefore necessary to omit one day from the solar calendar in every centurial year not divisible by 400. Consequently, since this extra day in February every fourth year is an essential part of the lunar calendar, the new moons will occur one day later in the non-bissextile centurial years than indicated by the Lunar Cycle (e.g. a new moon which under ordinary circumstances would have occurred on 29 February will occur on 1 March) and the age of the moon will, after the omission of the day, be one day less on all succeeding days of the solar year. As the fact that the January and February moons are not properly indicated is immaterial in a system whose sole object is to indicate as nearly as practicable the fourteenth day of the moon after 21 March, the subtraction of one from the Epacts takes place at the beginning of all non-bissextile centurial years and is known as the Solar equation. In the following table, +1 is written after the years which have the Lunar Equation, and -1 after those which have the Solar:

1600	+1	-1	2800	+1	-1	4000	+1	-1
1700	+1	-1	2900	+1	-1	4100	+1	-1
1800	+1	-1	3000	+1	-1	4200	+1	-1
1900	+1	-1	3100	+1	-1	4300	+1	-1
2000		-1	3200		-1	4400		-1
2100		-1	3300		-1	4500		-1
2200		-1	3400		-1	4600		-1
2300		-1	3500		-1	4700		-1
2400		-1	3600		-1	4800		-1
2500			3700			4900		
2600			3800			5000		
2700			3900			5100		

Clavius continued this table as far as the year 300,000, inserting the Lunar Equation eight times every 2500 years and the Solar three times every 400 years. As he thus treats the year 5200 as a leap year his table is untrustworthy after 5199.

INDICATION OF NEW MOONS

Before proceeding further, it will be convenient to consider the method devised by Lilius of indicating the new moons of the year in the Gregorian calendar. As the first lunation of the year consists of 30 days, he wrote the Epacts *, XXIX, XXVIII . . . III, II, I opposite the first thirty days of January; then continuing, he wrote * opposite the thirty-first, XXIX opposite the first of February and so on to the end of the year, except that in the case of the lunations of 29 days he wrote the two Epacts XXV, XXIV opposite the same day (cf. 5 Feb., 4 April, etc. in the Church calendar). From this arrangement it is evident that if, for example, the Epact of a year is X, the new moons will occur in that year on the days before which the Epact X is placed in the calendar. One qualification must be made to this statement. According to the Metonic Cycle, the new moon can never occur twice on the same date in the same nineteen years (the case is exceedingly rare even in the purely astronomical calendar); consequently, whenever the two Epacts XXV and XXIV occur in the same nineteen years, the new moons of the year whose Epact is XXV are indicated in the months of 29 days by Epact XXVI, with which the number 25 is for this object associated in the Church calendar.

HOW TO FIND THE EPACT

We have already seen that the Church used the Metonic Cycle until the year 1582 as the only practical means devised of finding the fourteenth day of the paschal moon. Now, this cycle has always been regarded as starting from the year 1 B.C., and not from the year of its introduction (432 B.C.), probably (although all the authors we have seen appear to have overlooked the point) because such change was found necessary if the leading characteristic of the Metonic Cycle were to be retained in changing from a lunar to a solar calendar viz., that the first lunar and solar years of the cycle should begin on the same day. That two nations with calendars so fundamentally different as those of the Greeks and the Romans should regard the solar year as beginning with the same phases of the sun would be highly improbable, even if there were no direct evidence that such was not the case. But we have shown that when the solar and lunar years begin on the same day, the Epacts of the successive years of the cycle are:

Golden Num- bers	1	2	3	4	5	6	7	8
Epacts	*	XI	XXII	III	XIV	XXV	VI	XVII

9	10	11	12	13	14	15	16	17	18	19
XXVIII	IX	XX	I	XII	XXIII	IV	XV	XXVI	VII	XVIII

Consequently, if we divide the calendar into cycles of 19 years from 1 B.C., the first year of each cycle will have the Epact *, the second the Epact XI and so on, or, in other words, the Epact of any year before 1582 depends solely on its Golden Number. The Golden Number of any year may be found by adding 1 to the year and dividing by 19, the quotient showing the number of complete cycles elapsed since 1 B.C. and the remainder (or, if there be no remainder, 19) being the Golden Number of the year. Thus, for example, the Golden Number of 1484 is 3, since $(1484+1) \div 19 = 78$, with 3 as remainder; therefore the Epact of the year 1484 is XXII.

In the course of time it was found that the paschal moon of the Metonic Cycle was losing all relation to the real paschal moon, and in the sixteenth century (c. 1576) Gregory XIII entrusted the task of reforming the calendar to a small body of astronomers, of whom Lilius and Clavius are the most renowned. These astronomers having drawn up the table of equations to show the changes in the Epacts necessary to preserve the relations between the ecclesiastical and astronomical calendars, proceeded to calculate the proper Epacts for the years of the Lunar Cycle after 1582. These they found to be as follows:

Golden Numbers	1	2	3	4	5	6	7	8		
Epacts	I	XII	XXIII	IV	XV	XXVI	VII	XVIII		
9	10	11	12	13	14	15	16	17	18	19
XXIX	X	XXI	II	XIII	XXIV	V	XVI	XXVII	VIII	XIX

Now the essential difference between the Metonic Cycle and the Gregorian system of Epacts lies in this, that, whereas the sphere of application of the former was held to be unlimited, that of the latter is bounded by the Lunar and Solar equations. Since, then, a Solar Equation occurs in 1700, the Cycle of Epacts just given holds only for the period 1582-1699, after which a new cycle must be formed. To understand the reason of the changes we must remember

(1) that by treating 365 days as equivalent to one solar year and to 12 lunations plus 11 days, we under-estimate the solar year by about 5.8 hours and the lunations by 8.8 hours;

(2) that in consequence of this under-estimation of the solar year, one day must be inserted in every fourth solar year except in the case of the centurial years not divisible by 400; and

(3) that the under-estimation of the lunations by 6 hours every year (the additional 2.8 hours are compensated for in the embolismic months and by the Lunar Equation) necessitates the insertion of one extra day in the lunar calendar every fourth year without exception.

To take an example: the Epact of 1696 (its Golden Number being 6) is XXVI, and since this Epact is found opposite 4 February in the Church calendar we know that in 1696 the new moon happened on that date and that consequently 23 February was the twentieth day of the calendar moon. But, since the under-estimation of the lunations amounts to one day in every four years, the following day (our 24 Feb.) was only nominally the twenty-first day of the moon and the proper twenty-first was our 25 February. The Church therefore inserted an extra day after 23 February and treated this and the real 24 Feb. (our 24 and 25) as one continuous day in both the solar and lunar calendars, and consequently 25 February (our 26) was again legitimately regarded as the twenty-second day of the moon and the fifty-sixth day of the astronomical solar year. Coming now to the year 1700, we find its Epact to be X, consequently the new moon occurred on 19 February and 23 February was the fifth day of the calendar moon. But, since no extra day could be inserted in February, 1700, the twenty-fourth and twenty-fifth of this month had to be treated as the sixth day of the moon, and the age of the moon on every subsequent day of the year 1700 was one day less than indicated by the Epact X. As the moons of January and February are of very secondary importance in the Church calendar, we may say that the age of the moon in 1700 and all subsequent years was one day less than indicated by the above Cycle of Epacts, and thus the Epacts for the years of the Lunar Cycle after 1700 are:

Golden Numbers	1	2	3	4	5	6	7	8		
Epacts	*	XI	XXII	III	XIV	XXV	VI	XVII		
9	10	11	12	13	14	15	16	17	18	19
XXVIII	IX	XX	I	XII	XXIII	IV	XV	XXVI	VII	XVIII

In the year 1800, both the Lunar and Solar Equations (i.e. the addition and subtraction of 1) occur and no change of Epacts takes place. In 1900 the Solar Equation occurs and we must again subtract 1 from the Epacts. No change takes place in 2000 or in 2100, the former being a leap year and the latter having both equations. In 2200 and in 2300, we must again subtract 1, while in 2400, in which the Lunar Equation occurs and is not neutralized as usual by the Solar Equation, we add 1 to all the Epacts. The accompanying table [below] gives the Epact of every year from 1 B.C. to A. D. 3099.

Examples. (1) To find the Epact of the year 3097. Golden Number is 1, since $(3097+1) \div 19 = 163$, with 1 as remainder. Epact corresponding to Golden Number 1 after 2900 is XXV; therefore the Epact of 3097 is XXV.

(2) On what Sunday will Easter fall in the year 2459? Golden Number of 2459 is 9, and Epact of ninth year of Lunar Cycle after 2400 is XXVI. Since the Epact of 2459 is XXVI, the new moons of this year will occur on the days before which XXVI is placed in the church calendar (e.g. in the Breviary). Now, since the paschal moon is that whose fourteenth day falls on or next after 21 March, the paschal new moon can never happen before 8 March. The first day after 8 March to which the Epact XXVI is prefixed in the Church calendar is 4 April: consequently the paschal new moon in the year 2459 will occur on 4 April. Counting 14 days from 4 April, which we include in our reckoning, we find the fourteenth day of the paschal moon to be 17 April. In 2459, therefore, Easter will be kept on the Sunday after 17 April, which with the help of the Dominical Letters is found to be 20 April.

THOMAS KENNEDY

Eparchy

Eparchy

(*eparchia*).

Originally the name of one of the divisions of the Roman Empire. Diocletian (284-305) and Maximian divided the empire into four great *Prefectures* (Gaul, Italy, Illyricum, and the East). Each was subdivided into (civil) *Dioceses*, and these again into *Eparchies* under governors (*praesides*, *pegemones*). The Church accepted this division as a convenient one for her use. The Prefectures of Gaul, Italy, and Illyricum made up the Roman Patriarchate; the Prefecture of the East was divided (in the fourth century) between the Patriarchs of Alexandria and Antioch and three exarchs. The Diocese of Egypt was the Patriarchate of Alexandria, the Diocese of the East (not to be confused with the Prefecture of the East) became that of Antioch. Asia was under the Exarch of Ephesus, Pontus under Cappadocia, and Thrace under Heraclea. Under these patriarchates and exarchates came the eparchies under metropolitans; they had under them the bishops of the various cities. The original ecclesiastical eparchies then were provinces, each under a metropolitan. The First Council of Nicaea (325) accepts this arrangement and orders that: "the authority [of appointing bishops] shall belong to the metropolitan in each eparchy" (can. iv). That is to say that in each such civil eparchy there shall be a metropolitan bishop who shall have authority over the others. This is the origin of our provinces. Later in Eastern Christendom the use of the word was gradually modified and now it means generally the diocese of a simple bishop. The name *Eparchy* is, however, not commonly used except in Russia. There it is the usual one for a diocese. The Russian Church now counts eighty-six eparchies, of which three (Kiev, Moscow, and St. Petersburg) are ruled by bishops who always bear the title "Metropolitan", and fourteen others are under archbishops.

HINSCHIUS, *Kirchenrecht*, I, 538, 576; FORTESCUE, *The Orthodox Eastern Church* (London, 1907), 22-23, 297.

ADRIAN FORTESCUE

Charles-Michel de l'Epee

Charles-Michel de l'Epée

A philanthropic priest and inventor of the sign alphabet for the instruction of the deaf and dumb; was b. at Versailles, 25 November, 1712; d. at Paris, 23 December, 1789. He studied theology, but, having refused to sign a condemnation of Jansenism, was denied ordination by Christophe de Beaumont, Archbishop of Paris. He then studied law, but no sooner had he been admitted to the Bar than the Bishop of Troyes consented to ordain him. This bishop died shortly afterwards, whereupon the Abbé de l'Epée returned to Paris, and began to occupy himself with the education of two deaf and dumb sisters who had been recommended to him by Father Vanin, of the Congregation of the Christian Doctrine. He endeavoured to develop the minds of his pupils by means of certain conventional signs constituting a complete alphabet. Succeeding in this attempt, he resolved to devote himself to the education of the deaf and dumb, and founded a school for their instruction at his own expense. His method is based on the principle that "the education of deaf mutes must teach them through the eye what other people acquire through the ear". Several other methods had been tried, previous to this time, to enable the deaf and dumb to communicate with one another and with the rest of mankind, but there can be no doubt that he attained far greater success than Pereira, Bulwer, Dalgano, Dr. John Wallis, or any of his predecessors, and that the whole system now followed in the instruction of deaf mutes virtually owes its origin to his ingenuity and devotion. His own system has, in its turn, been replaced by a newer method, which teaches the pupils to recognize words and, in time, to utter them, by closely watching, and afterwards imitating, the motions of the lips and tongue in speech, the different portions of the vocal organs being shown by means of diagrams. Excellent results have thus been attained, deaf and dumb persons acquiring the ability to converse fluently. This method has of late increased in favour. But it remains true that the Abbé de l'Epée by his sign system laid the foundations of all systematic instruction of the deaf and dumb, a system which was further developed by his pupil and successor, the Abbé Sicard.

The Abbé de l'Epée became known all over Europe. The Emperor Joseph II himself visited his school. The Duke of Penthièvre, as well as Louis XVI, helped him with large contributions. In 1791, two years after his death, the National Assembly decreed that his name should be enrolled among the benefactors of mankind, and undertook the

support of the school he had founded. In 1838 a bronze monument was erected over his grave in the church of Saint-Roch in Paris. He published in 1776 "Institution des sourds-muets par la voie des signes méthodiques"; in 1794, "La véritable manière d'instruire les sourds et muets, confirmée par une longue expérience". He also began a "Dictionnaire général des signes", which was completed by the Abbé Sicard. (See EDUCATION OF THE DEAF AND DUMB.)

JEAN LEBARS

Eperies

Eperies

DIOCESE OF EPERIES (EPERIENSIS RUTHENORUM).

Diocese of the Greek Ruthenian Rite, suffragan to Gran. Detached in 1818 from the Diocese of Munkacs, this diocese has had the following bishops: Gregory Tarkovics (1818-41); Joseph Garganecs (1843-75); Nicholas Toth (1876-81); John Valyi (1882). The city of Eperies, called by the Slovaks Pressova, was founded by a German colony in the twelfth century on the Tarcza, a tributary of the Danube, and is now the capital of the county of Saros, Hungary, with a population of 11,000. It is famous for its sugar factories, its mineral waters, and the rock salt mine situated at Sovar, several miles distant. The diocese contains 160,000 Ruthenian Catholics; 212 priests (nearly all married); 190 parishes scattered over the territory of six counties; 190 churches, 25 chapels, 24 parochial schools, with 28,000 pupils, a college for boys, 2 convents of Basilians, and a theological seminary with 40 students. The episcopal residence, the seminary, and most of the diocesan institutions are situated at Eperies.

S. VAILHÉ

Epistle to the Ephesians

Epistle to the Ephesians

This article will be treated under the following heads:

- I. Analysis of the Epistle;
- II. Special Characteristics:

- ☒ (1) Form: (a) Vocabulary; (b) Style;
 - ☒ (2) Doctrines;
- III. Object;
- IV. To Whom Addressed;
- V. Date and Place of Composition; Occasion;
- VI. Authenticity:
- ☒ (1) Relation to other books of the New Testament;
 - ☒ (2) Difficulties arising from the form and doctrines;
 - ☒ (3) Tradition.

I. ANALYSIS OF THE EPISTLE

The letter which, in the manuscripts containing the Epistles of St. Paul, bears the title "To the Ephesians" comprises two parts distinctly separated by a doxology (Eph., iii, 20 sq.). The address, in which the Apostle mentions himself only, is not followed by a prologue; in fact, the entire dogmatic part develops the idea which is usually the subject of the prologue in the letters of St. Paul. In a long sentence that reads like a hymn (Eph., 1, 3-14), Paul praises God for the blessings which He has bestowed upon all the faithful in accordance with the eternal plan of His will, the sublime plan by which all are to be united under one head, Christ, a plan which, although heretofore secret and mysterious, is now made manifest to believers. Those to whom the Epistle is addressed, having received the Gospel, have, in their turn, been made participants of these blessings, and the Apostle, having recently learned of their conversion and their faith, assures them that he ceases not to give thanks to Heaven for the same (Eph., i, 15, 16) and that, above all, he prays for them. The explanation of this prayer, of its object and motives, constitutes the remainder of the dogmatic part (cf. Eph., iii, 1, 14). Paul asks God that his readers may have a complete knowledge of the hope of their calling, that they may be fully aware both of the riches of their inheritance and the greatness of the Divine power which guarantees the inheritance. This Divine power manifests itself first in Christ, Whom it raised from the dead and Whom it exalted in glory above all creatures and established head of the Church, which is His body. Next, this power and goodness of God was evidenced in the readers, whom it rescued from their sins and raised and exalted with Christ. But it shone forth, above all, in the establishment of a community of salvation welcoming within its fold both Jews and Gentiles

without distinction, the Death of Christ having broken down the middle wall of partition, i.e. the Law, and both sections of the human race having thus been reconciled to God so as thenceforth to form but one body, one house, one temple, of which the apostles and Christian prophets are the foundation and Christ Himself is the chief cornerstone. (Eph., 1, 16-ii, 20.) Paul, as his readers must have heard, was the minister chosen to preach to the Gentiles of this sublime mystery of God, hidden from all eternity and not revealed even to the angels, according to which the Gentiles are made coheirs with the Jews, constitute a part of the same body, and are joint partakers in the same promises (Eph., iii, 1-13). Deeply imbued with this mystery, the Apostle implores the Father to lead his readers to the perfection of the Christian state and the complete knowledge of Divine charity (Eph., iii, 14-19), continuing the same prayer with which he had begun (Eph., 1, 16 sq.).

Having praised God anew in the solemn doxology (Eph., iii, 20 sq.), Paul passes on to the moral part of his letter. His exhortations, which he bases more than is his wont on dogmatic considerations, all revert to that of chapter iv, verse 1, wherein he entreats his readers to show themselves in all things worthy of their vocation. First of all, they must labour to preserve the unity described by the author in the first three chapters and here again brought into prominence: One Spirit, one Lord, one faith, one baptism, one God. There is, of course, a diversity of ministries, but the respective offices of apostles, prophets, etc. have all been instituted by the same Christ exalted in glory and all tend to the perfection of the society of saints in Christ (Eph., iv, 2-16). From these great social duties, Paul proceeds to the consideration of individual ones. He contrasts the Christian life that his readers are to lead, with their pagan life, insisting above all on the avoidance of two vices, immodesty and covetousness (Eph., iv, 17-v, 3). Then, in treating of family life, he wells on the duties of husbands and wives, whose union he likens to that of Christ with His Church, and the duties of children and servants (v, 21-vi, 9). In order to fulfil these duties and to combat adverse powers, the readers must put on the armour of God (vi, 10-20).

The Epistle closes with a short epilogue (vi, 21-24), wherein the Apostle tells his correspondents that he has sent Tychicus to give them news of him and that he wishes them peace, charity, and grace.

II. SPECIAL CHARACTERISTICS

(1) Form

(a) Vocabulary

This letter like all of those written by St. Paul, contains *hapax legomena*, about seventy-five words which are not found in the Apostle's other writings; however, it were a mistake to make this fact the basis of an argument against Pauline authenticity. Of these words nine occur in quotations from the Old Testament and others belong

to current language or else designate things which Paul elsewhere had had no occasion to mention. Others, again, are derived from roots used by the Apostle and besides, in comparing these *hapax legomena* one with another, it is impossible to recognize in them a characteristic vocabulary that would reveal a distinct personality. (Cf. Brunet, *De l'authenticité de l'épître aux Ephésiens; preuves philologiques*", Lyons 1897; Nägeli, "Der Wortschatz des Apostels Paulus", Göttingen, 1905.)

(b) Style

This Epistle, even more than that to the Colossians, is remarkable for the length of its periods. The first three chapters contain hardly more than three sentences and these are overlaid with relative or participial clauses that are simply strung together, frequently without being connected by the logical particles that occur so frequently in St. Paul. Each particular clause is itself encumbered with numerous prepositional modifiers (especially with *en* and *syn*) of which it is difficult to state the exact meaning. Often, too, several synonyms are in juxtaposition and in very many cases a noun has an explanatory genitive, the sense of which differs but very slightly from that of the noun itself. For all of these reasons the language of the Epistle, heavy, diffuse, and languid, seems very different from the dialectical, animated, and vigorous style of the Apostle's uncontested letters. It is important to note that in the moral part of the Epistle these peculiarities of style do not appear and hence they would seem to depend more on the matter treated than on the author himself; in fact, even in the dogmatic expositions in the great Epistles, St Paul's language is frequently involved (cf. Rom., ii 13 sq; iv, 16 sq; v, 12 sq.; etc.). Moreover, it must be observed that all these peculiarities spring from the same cause: They all indicate a certain redundancy of ideas surging in upon a deep and tranquil meditation on a sublime subject, the various aspects of which simultaneously appear to the author's mind and evoke his admiration. Hence also the lyric tone that pervades the first three chapters, which constitute a series of praises, benedictions, thanksgivings, and prayers. A sort of rhythmic composition has been pointed out in chapter i (cf. T. Innitzer, "Der 'Hymnus' im Eph., i, 3-14" in "Zeitschrift für katholische Theologie", 1904, 612 sq.), and in chapter iii traces of liturgical hymnology have been observed (Eph., iii, 20), but they are no more striking than in I Cor. and are not to be compared with the liturgical language of I Clement.

(2) Doctrines

The doctrines on justification, the Law, faith, the flesh, etc., that are characteristic of the great Pauline Epistles, are not totally lacking in the Epistle to the Ephesians, being recognizable in chapter ii (1-16). However, the writer's subject does not lead him to develop these particular doctrines. On the other hand, he clearly indicates, especially in chapter i, the supreme place which, in the order of nature and grace, is allotted to Christ, the author and centre of creation, the point towards which all things

converge, the source of all grace, etc. Although, in his great Epistles, St. Paul sometimes touches upon these doctrines (cf. I Cor., viii, 6; xv, 45 sq.; II Cor., v, 18 sq.), they constitute the special object of his letter to the Colossians, where he develops them to a much greater extent than in that to the Ephesians. In fact this Epistle treats more of the Church than of Christ. (On the doctrine of the Church in the Epistle to the Ephesians see Méritan in "Revue biblique", 1898, pp. 343 sq., and W. H. Griffith Thomas in the "Expositor", Oct., 1906, pp. 318 sq.) The word *church* no longer means, as is usual in the great Epistles of St. Paul (see, however, Gal., i, 13; I Cor., xii, 28, xv, 9), some local church or other, but the one universal Church, and organic whole uniting all Christians in one body of which Christ is the head. Here we find the systematized development of elements insinuated from time to time in the letters to the Galatians, Corinthians, and Romans. The author who has declared that there is now neither Jew nor Greek but that all are one in Jesus (Gal., iii, 28); that in each Christian the life of Christ is made manifest (Gal., ii, 20; II Cor., iv, 11 sq.); that all are led by the Spirit of God and of Christ (Rom., viii, 9-14); that each one of the faithful has Christ for head (I Cor., xi, 3), could, by combining these elements, easily come to consider all Christians as forming but one body (Rom., xii, 5; I Cor., xii, 12, 27), animated by one spirit (Eph., iv, 4), a single body having Christ for head. To this body the Gentiles belong by the same right as the Jews. Undoubtedly this mysterious dispensation of Providence was, according to the Epistle to the Ephesians, made manifest to all the Apostles, a declaration which, moreover, the Epistle to the Galatians does not contradict (Gal., ii, 3-9); however, this revelation remains, as it were, the special gift of St. Paul (Eph., iii, 3-8). The right of pagans seems to be no longer questioned, which is easily understood at the close of the Apostle's life. At the death of Christ the wall of separation was broken down (cf. Gal., iii, 13), and all have since had access to the Father in the same spirit. They do not meet on the Jewish ground of the abolished Law but on Christian ground, in the edifice founded directly on Christ. The Church being thus constituted, the author contemplates it just as it appears to him. Besides, if in the extension of the Church he beholds the realization of the eternal decree by which all men have been predestined to the same salvation, he is not obliged to repeat the religious history of mankind in the way he had occasion to describe it in the Epistle to the Romans; neither is he constrained to explore the historical privileges of the Jews, to which he nevertheless alludes (Eph., ii, 12) nor to connect the new economy to the old (see, however, Eph., iii, 6) nor indeed to introduce, at least into the dogmatical exposition, the sins of the pagans, whom he is satisfied to accuse of having lacked intimate communion with God (Eph., ii, 12). For the time being all these points are not the main subject of meditation. It is rather the recent, positive fact of the union of all men in the Church, the body of Christ, that he brings into prominence; the Apostle contemplates Christ Himself in His actual

influence over this body and over each of its members; hence it is only occasionally that he recalls the redemptive power of Christ's Death. (Eph., i, 7; ii, 5, 6.) From heaven, where He has been exalted, Christ bestows His gifts on all the faithful without distinction, commanding, however, that in His Church certain offices be held for the common welfare. The hierarchical terms used so constantly later on (*episkopoi, presbyteroi, diakonoi*) are not met with here. The apostles and prophets, always mentioned together, in the Epistle to the Ephesians, play a like part, being the founders of the Church (Eph., ii, 20). Thus placed on an equality with the prophets, the apostles are not the chosen Twelve but, as indicated in the letters of St. Paul, those who have seen Christ and been commissioned by Him to preach His Gospel. It is for the same purpose that the prophets in the Epistle to the Ephesians used the charisma, or spiritual gifts described in I Cor., xii-xiv. The evangelists, who are not noticed in Eph, ii, 20, or iii, 5, are inferior in dignity to the apostles and prophets in connection with whom they are, nevertheless, mentioned (Eph., iv, 11). In his first letters St. Paul had no occasion to allude to them, but they belong to the Apostolic age, as at a later epoch they are never referred to. Finally the "pastors and doctors" (A. V. pastors and teachers), who are clearly distinguished (Eph., iv, 11) from the apostles and prophets, founders of the churches, seem to be those local authorities already indicated in I Thess., v, 12; I Cor., xvi, 15 sq.; Act, xx, 28. While the attention given to these different ministers forms a distinctive note in the Epistle to the Ephesians, we cannot therefore admit (with Klöpffer, for example) that the author is preoccupied with the hierarchy as such. The unity of the Church, a point that he clearly emphasizes, is not so much the juridical unity of an organized society as the vital unity that binds all the members of the body to its head, the glorified Christ. Nor is it true that the author already predicts centuries of future existence for this Church (Klopper) as, properly speaking, the ages to come, referred to in the Epistle to the Ephesians (ii, 7) are to come in the Kingdom of Heaven (cf. ii, 6). On the other hand we know that St. Paul's hope of soon witnessing Christ's second coming kept constantly diminishing, and therefore, in the latter years of his life, he might well define (Eph., v, 22 sq.) the laws of Christian marriage, which at an earlier period (I Cor, vii, 37 sq.) he regarded only in the light of the approaching advent of Christ.

The exposition that we have given of the doctrines proper to the Epistle to the Ephesians has been so made as to show that none of these doctrines taken separately contradicts the theology of the great Pauline Epistles and that each one individually can be connected with certain elements disseminated in these Epistles. It is nevertheless true that, taken in its entirety, this letter to the Ephesians constitutes a new doctrinal system, the Pauline authenticity of which can only be critically defended by pointing out the circumstances in consequence of which the Apostle was able thus to develop

his first theology and profoundly to modify his manner of setting it forth. Naturally this leads us first of all to try to ascertain the object of the letter to the Ephesians.

III. OBJECT

It has been said that St. Paul combated immoral doctrines and an antinomian propaganda that especially endangered those to whom the letters were addressed (Pfleiderer), but this hypothesis would not explain the dogmatic part of the Epistle, and even in the hortatory part nothing betokens polemical preoccupation. All the warnings administered are called forth by the pagan origin of the readers, and when the author addresses his prayers to Heaven in their behalf (Eph., i, 17 sqq; iii, 14. sqq.) he does not mention any particular peril from which he would have God deliver their Christian life. Klopfer thought that the author had Judeo-Christians in view, still denying converted pagans their full right in the Church, and Jacquier gives this as an additional motive. Others have said that the Gentile-Christians of the Epistle had to be reminded of the privileges of the Jews. But not one word in the letter, even in the section containing exhortations to unity (Eph., iv, 2 sq), reveals the existence of any antagonism among those to whom the Apostle writes, and there is no question of the reproduction or re-establishment of unity. The author never addresses himself to any save converted pagans, and all his considerations tend solely to provide them with a full knowledge of the blessings which, despite their pagan origin, they have acquired in Christ and of the greatness of the love that God has shown them. If, in chapter iii, St. Paul speaks of his personal Apostleship, it is not by way of defending it against attacks but of expressing all his gratitude for having been called, in spite of his unworthiness, to announce the great mystery of which he had sung the praises. Briefly, nothing in the letter allows us to suspect that it responds to any special need on the part of those to whom it is addressed, nor that they, on their side, had given the author any particular occasion for writing it. In so far as either its dogmatic or moral part is concerned, it might have been addressed to any churches whatever founded in the pagan world.

IV. TO WHOM ADDRESSED

To whom, then, was the Epistle addressed? This question has evoked a variety of answers. There are critics who maintain the traditional opinion that the Epistle was written to the Ephesians exclusively (Danko, Cornely), but the greater number consider it in the light of a circular letter. Some maintain that it was addressed to Ephesus and the churches of which this city was, so to speak, the metropolis (Michelis, Harless, and Henle), while others hold that it was sent to the Seven Churches of the Apocalypse (H. Holtzmann) or to the circle of Christian communities within and around Colossae and Laodicea (Godet, Haupt, Zahn, and Belser); or again to the faithful of Asia Minor

(B. Weiss) or to all the Gentile-Christian Churches (Von Soden). The question can only be solved by comparing the Epistle with the knowledge possessed of the life and literary activity of the Apostle. Those who deny the authenticity of the letter must certainly grant that the Pseudo-Paul (i, 1) was careful to conform to literary and historical probabilities, and if not, since the letter vouchsafes no direct indication as to the correspondents whom he supposed the Apostle to be addressing, it would be idle to imagine who they were.

The words *en Epheso*, in the first verse of the Epistle, do not belong to the primitive text. St. Basil attests that, even in his day, they were not met with in the ancient MSS.; in fact they are missing from the Codices B and *Aleph* (first hand). Moreover, the examination of the Epistle does not warrant the belief that it was addressed to the church in which the Apostle had sojourned longest. When St. Paul writes to one of his churches, he constantly alludes to his former relations with them (see Thess., Gal., Cor.), but here there is nothing personal, no greeting, no special recommendation, no allusion to the author's past. Paul is unacquainted with his correspondents, although he has heard them spoken of (Eph., i, 15), and they have heard of him (Eph., iii, 2; cf. iv, 21). When addressing himself to any particular church, even be it at the time still a stranger to him as, for instance, Rome or Colossae, the Apostle always assumes a personal tone; hence the abstract and general manner in which he treats his subject from the beginning to the end of the Epistle to the Ephesians can best be accounted for by beholding in this Epistle a circular letter to a group of churches still unknown to Paul. But this explanation, founded on the encyclical character of the Epistle, loses its value if the Church of Ephesus is numbered among those addressed; for, during his three years' sojourn in this city, the Apostle had had frequent intercourse with the neighbouring Christian communities, and in this case he would have had Ephesus especially in view, just as in writing to all the faithful of Achaia (II Cor., i, 1) it was chiefly to the Church of Corinth that he addressed himself.

Nevertheless, it was to a rather restricted circle of Christian communities that Paul sent this letter, as Tychicus was to visit them all and bring news of him (Eph., vi, 21 sq.), which fact precludes the idea of all the churches of Asia Minor or of all the Gentile-Christian churches. Moreover, since Tychicus was bearer of the Epistle to the Colossians and that to the Ephesians at one and the same time (Col., iv, 7 sq.), those to whom the latter was addressed could not have been far from Colossae, and we have every reason to suppose them in Asia Minor. However, we do not believe that the Epistle in question was addressed to the churches immediately surrounding Colossae, as the perils which threatened the faith of the Colossians virtually endangered that of the neighbouring communities, and wherefore, then, two letters differing in tone and object? Having had no personal intercourse with the Colossians, the Apostle would have been satisfied to

address to them and their Christian neighbours an encyclical letter embodying all the matter treated in both Epistles. Hence it behooves us to seek elsewhere in Asia Minor, towards the year 60, a rather limited group of churches still unknown to St. Paul. Now, in the course of his three journeys, Paul had traversed all parts of Asia Minor except the northern provinces along the Black Sea, territory which he did not reach prior to his captivity. Nevertheless, the First Epistle of St. Peter shows us that the Faith had already penetrated these regions; hence, with the historical data at our disposal, it is in this vicinity that it seems most reasonable to seek those to whom the Epistle was addressed. These Christians must have been named in the authentic text of the inscription of this Epistle, as they are in all of St. Paul's letters. Now, whenever the substantive participle appears in one of these inscriptions, it serves the sole purpose of introducing the mention of locality. We are therefore authorized to believe that, in the address of the Epistle to the Ephesians (Eph., i, 1: *tois hagiois ousin kai pistois en Christo Iesou*), this participle, so difficult to understand in the received text, originally preceded the designation of the place inhabited by the readers. One might assume that the line containing this designation was omitted owing to some distraction on the part of the first copyist; however, it would then be necessary to admit that the mention of locality, now in question, occurred *in the midst* of qualifying adjectives applied by the Apostle to his readers (*hagiois tois ousin pistois*), and this is something that is never verified in the letters of St. Paul. Hence we may suppose that, in this address, the indication of place was corrupted rather than omitted, and this paves the way for conjectural restorations. We ourselves have proposed the following: *tois hagiois tois ousin kat Irin tois en Christo Iesou*. (Ladeuze in *Revue biblique*, 1902, pp 573 sq.) Grammatically, this phrase corresponds perfectly with the Apostle's style (cf. Gal., i, 22; I Cor., i, 2; Phil., i, 1) and palaeographically, if transcribed in ancient capitals, it readily accounts for the corruption that has certainly been produced in the text. The Epistle to the Ephesians was, therefore, written to distant churches, located perhaps in various provinces [Pontus, Galatia, Polemonium (the kingdom of Polemon)] and, for this reason, requiring to be designated by the general term, but all situated along the River Iris.

These churches of the north-east of Asia Minor played rather an obscure part in the first century. When the first collection of the Apostle's letters was made, a collection on which the entire textual tradition of these letters depends (cf. Zahn, *Geschichte des N. T. Kanons*, I, ii, p. 829), it was Ephesus that furnished the copy of this Epistle, having obtained it when Tychicus landed at that port, thence to set out for Colossae and in the direction of Pontus, and in this copy the text of the address had already been corrupted. Having come from Ephesus, this letter quickly passed for one to the Ephesians, the more so as there was no other written by the Apostle to the most celebrated of

churches. This explains why, from the beginning, all except Marcion, even those who did not read the words *en Epheso* in the first verse (Origen, Tertullian), look upon this letter as an Epistle to the Ephesians, and why in all MSS., it is transcribed under this title.

V. DATE AND PLACE OF COMPOSITION; OCCASION

Like the Epistles to the Colossians, to the Philippians, and to Philemon, that to the Ephesians was written during the leisure hours of one of the Apostle's imprisonments (Eph., iii, 1; iv, 1; vi, 20), when he had but little reason to resort to the services of a disciple to write in his name (De Wette, Ewald, and Renan). Lisco (*Vincula Sanctorum*, Berlin, 1900) is the only one nowadays who claims that these letters antedate the great captivity of St. Paul, maintaining that the Apostle must have written them while a prisoner in Ephesus in 57 and prior to those which he sent to the Corinthians and Romans. But we are not acquainted with any of the details of this captivity at Ephesus. Moreover, the doctrine set forth in the letters in question belongs to an epoch subsequent to the composition of the Epistle to the Romans (58); hence they were not written previously to the captivity in Caesarea (58-60). On the other hand, they are anterior to the first persecution, to which the author makes no allusion when describing the armour and combats of the faithful; wherefore they cannot be assigned to the last captivity. It consequently remains for them to be ascribed to a period between 58 and 63, but whether they were produced in Caesarea or in Rome (61-63) is still a much mooted question. The information gleaned here and there is very vague and the arguments brought forward are very doubtful. However, the freedom allowed Paul, and the evangelical activity he displays at the time of writing these letters, would seem more in keeping with his captivity in Rome (Acts, xxviii, 17-31) than in Caesarea (Acts, xxiii, sq.). One thing, however, is certain, once the authenticity of the Epistles to the Colossians and to the Ephesians is admitted, and that is that they were written at the same time. They both show fundamentally and formally a very close connection of which we shall speak later on. Tychicus was appointed to convey both Epistles to those to whom they were respectively addressed and to fulfil the same mission in behalf of them (Col., iv, 7 sq; Eph., vi, 21 sq.). Verse 16 of chapter iv of Colossians does not seem to allude to the letter to the Ephesians, which would need to have been written first; besides, the Epistle here mentioned is scarcely an encyclical, the context leading us to look upon it as a special letter of the same nature as that sent to the Colossians. If, moreover, Paul knew that, before reaching Colossae, Tychicus would deliver the Epistle to the Ephesians to the Christians at Laodicea, there was no reason why he should insert greetings for the Laodiceans in his Epistle to the Colossians (Col., iv, 15). It is more probable that the Epistle to the Ephesians was written in the second place. It would be less easy to understand why, in repeating to the Colossians the same exhortations that

he had made to the Ephesians, for instance, on remarriage (Eph., v, 22 sqq.), the author should have completely suppressed the sublime dogmatic considerations upon which these exhortations had been based. Moreover we believe with Godet that: It is more natural to think that, of these two mutually complementary letters, the one provoked by a positive request and a definite need [Col.] came first, and that the other [Eph.] was due to the greater solicitude evoked by the composition of the former."

How, then, admitting that St. Paul wrote the Epistle to the Ephesians, shall we explain the origin of this document? The Apostle, who was captive at Rome, was informed by Epaphras of the dogmatic and moral errors that had come to light in Colossae and the neighbouring cities, in churches of which he was not the founder. He also learned that he had been censured for not bringing to the perfection of Christianity those whom he had once converted, and for not taking sufficient interest in churches that had sprung up side by side with his own, although without his personal intervention (Col., i, 28-ii, 5). At the same time that Paul received the news concerning Colossae, and its surroundings, he also heard (Eph., i, 15) that in a distant part of Asia Minor Christian communities had been brought to the Faith, perhaps by evangelists (Eph., iv, 11). Impressed by the accusations made against him, Paul took advantage of the departure of Tychicus for Colossae, to enter into communication with those Christians who had heard of him (Eph., iii, 2) and to address them a letter in which he had to limit himself to general considerations on Christianity, but he wished to prove his Apostolic solicitude for them by making them realize not only the dignity of their Christian vocation, but the oneness of the Church of God and the intimate union by which all the faithful, no matter what their history, are constituted a single body of which Christ is the head.

VI. AUTHENTICITY

If one would only remember to whom the Epistle was addressed and on what occasion it was written, the objections raised against its Pauline authenticity could be readily answered.

(1) Relation to Other Books of the New Testament

The letter to the Ephesians bears some resemblance to the Epistle to the Hebrews and the writings of St. Luke and St. John, in point of ideas and mode of expression, but no such resemblance is traceable in the great Pauline Epistles. Of course one of the Apostle's writings might have been utilized in these later documents but these similarities are too vague to establish a literary relationship. During the four years intervening between the Epistle to the Romans and that to the Ephesians, St. Paul had changed his headquarters and his line of work, and we behold him at Rome and Caesarea connected with new Christian centres. It is, therefore, easy to understand why his style should savour of the Christian language used in these later books, when

we recall that their object has so much in common with the matter treated in the Epistle to the Ephesians. Whatever may now and then have been said on the subject, the same phenomenon is noticeable in the Epistle to the Colossians. If, indeed, the Epistle to the Ephesians agrees with the Acts in more instances than does the Epistle to the Colossians, it is because the two former have one identical object, namely, the constitution of the Church by the calling of the Jews and Gentiles.

The relationship between the Epistle to the Ephesians and I Peter is much closer. The letter to the Ephesians, unlike most of the Pauline Epistles, does not begin with an act of thanksgiving but with a hymn similar, even in its wording, to that which opens I Peter. Besides, both letters agree in certain typical expressions and in the description of the duties of the domestic life, which terminates in both with the same exhortation to combat the devil. With the majority of critics, we maintain the relationship between these letters to be literary. But I Peter was written last and consequently depends on the Epistle to the Ephesians; for instance, it alludes already to the persecution, at least as impending. Sylvanus, the Apostle's faithful companion, was St. Peter's secretary (I Peter, v, 12), and it is but natural that he should make use of a letter, recently written by St. Paul, on questions analogous to those which he himself had to treat, especially as according to us, those addressed in both of these Epistles are, for the greater part, identical (cf. I Peter, i, 1).

The attacks made upon the authenticity of the Epistle to the Ephesians have been based mainly on its similarity to the Epistle to the Colossians, although some have maintained that the latter depends upon the former (Mayerhoff). In the opinion of Hitzig and Holtzmann, a forger living early in the second century and already imbued with Gnosticism used an authentic letter, written by Paul to the Colossians against the Judeo-Christians of the Apostolic Age, in composing the Epistle to the Ephesians, in conformity to which he himself subsequently revised the letter to the Colossians, giving it the form it has in the canon. De Wette and Ewald looked upon the Epistle to the Ephesians as a verbose amplification of the uncontroversial parts of the letter to the Colossians. However, it is only necessary to read first one of these documents and then the other, in order to see how exaggerated is this view. Von Soden finds a great difference between the two letters but nevertheless holds that several sections of the Epistle to the Ephesians are but a servile paraphrase of passages from the letter to the Colossians (Eph., iii, 1-9 and Col., 1, 23-27; Eph., v, 21-vi, 9 and Col., iii, 18-iv, 1) and that still more frequently the later author follows a purely mechanical process by taking a single verse from the letter to the Colossians and using it to introduce and conclude, and serve as a frame, so to speak, for a statement of his own. Thus, he maintains that in Eph., iv, 25-31, the first words of verse 8 of Col., iii, have served as an introduction (Eph., iv, 25) and the last words of the same verse as a conclusion (Eph., iv, 31). Evid-

ently such methods could not be attributed to the Apostle himself. But, neither are we justified in ascribing them to the author of the Epistle to the Ephesians. For instance, the duties of husband and wife are well set forth in Col., iii, 18, 19, but in these verses there is no comparison whatever between Christian marriage and that union of Christ with His Church such as characterizes the same exhortation in Eph., v, 22 sq.; consequently, it would be very arbitrary to maintain the latter text to be a vulgar paraphrase of the former. In comparing the texts quoted, the phenomenon of *framing*, to which von Soden called attention, can be verified in a single passage (Eph., iv, 2-16, where verse 2 resembles Col., iii, 12 sq and where verses 15, 16, are like Col., 11, 19). In fact, throughout his entire exposition, the author of the Epistle to the Ephesians is constantly repeating ideas and even particular expressions that occur in the letter to the Colossians, and yet neither a servile imitation nor any one of the well-known offences to which plagiarists are liable, can be proved against him.

Moreover, it is chiefly in their hortatory part that these two letters are so remarkably alike and this is only natural if, at intervals of a few days or hours, the same author had to remind two distinct circles of readers of the same common duties of the Christian life. In the dogmatic part of these two Epistles there is a change of subject, treated with a different intention and in another tone. In the one instance we have a hymn running through three chapters and celebrating the call of both Jews and Gentiles and the union of all in the Church of Christ; and in the other, an exposition of Christ's dignity and of the adequacy of the means He vouchsafes us for the obtaining of our salvation, as also thanksgiving and especially prayers for those readers who are liable to misunderstand this doctrine. However, these two objects, Christ and the Church, are closely akin. Besides, if in his letter to the Ephesians, St. Paul reproduces the ideas set forth in that to the Colossians, it is certainly less astonishing than to find a like phenomenon in the Epistles to the Galatians and to the Romans, as it is very natural that the characteristic expressions used by the Apostle in the Epistle to the Colossians should appear in the letter to the Ephesians, since both were written at the same time. In fact it has been remarked that he is prone to repeat typical expressions he has one coined (cf. Zahn, *Einleitung*, I, p. 363 sq.). Briefly, we conclude with Sabatier that: "These two letters come to us from one and the same author who, when writing the one, had the other in mind and, when composing the second, had not forgotten the first." The vague allusions made in the Epistle to the Ephesians to some of the doctrinal questions treated in the Epistle to the Colossians, can be accounted for in this manner, even though these questions were never proposed by those to whom the former Epistle was addressed.

(2) Difficulties Arising from the Form and Doctrines

The denial of the Pauline authenticity of the Epistle to the Ephesians is based on the special characteristics of the Epistle from the viewpoint of style as well as of doctrine, and, while differing from those of the great Pauline Epistles, these characteristics although more marked, resemble those of the letter to the Colossians. But we have already dwelt upon them at sufficient length.

The circumstances under which the Apostle must have written the Epistle to the Ephesians seem to account for the development of the doctrine and the remarkable change of style. During his two years' captivity in Caesarea, Paul could not exercise his Apostolic functions, and in Rome, although allowed more liberty, he could not preach the Gospel outside of the house in which he was held prisoner. Hence he must have made up for his want of external activity by a more profound meditation on "his Gospel". The theology of justification, of the Law, and of the conditions essential to salvation, he had already brought to perfection, having systematized it in the Epistle to the Romans and, although keeping it in view, he did not require to develop it any further. In his Epistle to the Romans (viii-xi, xvi, 25-27) he had come to the investigation of the eternal counsels of Providence concerning the salvation of men and had expounded, as it were, a philosophy of the religious history of mankind of which Christ was the centre, as indeed He had always been the central object of St. Paul's faith. Thus, it was on Christ Himself that the solitary meditations of the Apostle were concentrated; in the quiet of his prison he was to develop, by dint of personal intellectual labour and with the aid of new revelations, this first revelation received when "it pleased God *to reveal His Son* in him". He was, moreover, urged by the news brought him from time to time by some of his disciples, as, for instance, by Epaphras, that, in certain churches, errors were being propagated which tended to lessen the role and the dignity of Christ, by setting up against Him other intermediaries in the work of salvation. On the other hand, separated from the faithful and having no longer to travel constantly from one church to another, the Apostle was able to embrace in one sweeping glance all the Christians scattered throughout the world. While he resided in the centre of the immense Roman Empire which, in its unity, comprised the world, it was the one universal Church of Christ, the fulfilment of the mysterious decrees revealed to him, the Church in which it had been his privilege to bring together Jews and pagans, that presented itself to him for contemplation.

These subjects of habitual meditation are naturally introduced in the letters that he had to write at that time. To the Colossians he speaks of Christ's dignity; to the Ephesians, and we have seen why, of the unity of the Church. But in these Epistles, Paul addresses those who are unknown to him; he no longer needs, as in preceding letters, to combat theories which undermined the very foundation of the work and to refute enemies who, in their hatred, attacked him personally. Accordingly, there is no

further occasion to use the serried argumentation with which he not only overthrew the arguments of his adversaries but turned them to the latter's confusion. There is more question of setting forth the sublime considerations with which he is filled than of discussions. Then, ideas so crowd upon him that his pen is overtaxed; his sentences teem with synonyms and qualifying epithets and keep taking on new propositions, thus losing the sharpness and vigour of controversy and assuming the ample proportions of a hymn of adoration. Hence we can understand why, in these letters, Paul's style grows dull and sluggish and why the literary composition differs so widely from that of the first Epistles. When writing to the Colossians he at least had one particular church to deal with and certain errors to refute, whereas, in the Epistle to the Ephesians, he addressed himself at one and the same time to a group of unknown churches of which he had received but vague information. There was nothing concrete in this and the Apostle was left entirely to himself and to his own meditations. This is the reason why the special characteristics already indicated in the Epistle to the Colossians appear even more pronounced in that to the Ephesians, particularly in the dogmatic part.

(3) Tradition

If we thus keep in mind the circumstances under which Paul wrote both of these letters, their peculiar character seems no obstacle to their Pauline authenticity. Therefore, the testimony which, in their inscriptions (Col., i, 1; Eph., i, 1), they themselves render to this authenticity and the very ancient tradition which unanimously attributes them to the Apostle preserve all their force. From the traditional viewpoint the Epistle to the Ephesians is in the same class as the best attested letters of St. Paul. Used in the First Epistle of St. Peter, in the Epistle of St. Polycarp, in the works of St. Justin, perhaps in the Didache and I Clement, it appears to have been already well known towards the end of the first century. Marcion and St. Irenaeus ascribe it to St. Paul and it seems that St. Ignatius, when writing to the Ephesians, had already made use of it as Pauline. It is also to be noted that if the authenticity of this Epistle has been denied by most of the liberal critics since Schleiermacher's day, it is nevertheless conceded by many modern critics, Protestants among them, and held at least as probable by Harnack and Julicher. In fact the day seems to be approaching when the whole world will recognize as the work of St. Paul, this Epistle to the Ephesians, of which St. John Chrysostom admired the sublime sentences and doctrines: *noematon meste hypselon kai dogmaton*.

Consult Introductions to the New Testament. We shall content ourselves here with indicating the latest commentaries, in which the earlier bibliography is mentioned. Catholic Commentaries: Bisping, Erklärung der Briefe an die Epheser, Philipper und Kolosser (Munster, 1866); Henle, Der Epheserbrief des hl. Apostela Paulus erklärt (Augsburg, 1908); Belser, Der Epheserbrief übersetzt und erklärt (Freiburg im Br.,

1908); Maunoury, *Commentaire sur l'epitre aux Galates, aux Ephesiens, etc.* (Paris, 1881). Non-Catholic Commentaries: Oltramare, *Commentair sur les epitres de S. Paul aux Colossiens, aux Ephesiens et a Philemon* (Paris, 1891); Von Soden, *Die Briefe an die Kolosser, Epheser, Philemon in Hand-Commeniar sum N. T., ed. P. LADEUZE

Ephesus

Ephesus

A titular archiepiscopal see in Asia Minor, said to have been founded in the eleventh century B.C. by Androcles, son of the Athenian King Codrus, with the aid of Ionian colonists. Its coinage dates back to 700 B.C., the period when the first money was struck. After belonging successively to the kings of Lydia, the Persians, and the Syrian successors of Alexander the Great, it passed, after the battle of Magnesia (199 B.C.), to the kings of Pergamum, the last of whom, Attalus III, bequeathed his kingdom to the Roman people (133 B.C.). It was at Ephesus that Mithradates (88 B.C.) signed the decree ordering all the Romans in Asia to be put to death, in which massacre there perished 100,000 persons. Four years later Sulla, again master of the territory, slaughtered at Ephesus all the leaders of the rebellion. From 27 B.C. till a little after A.D. 297, Ephesus was the capital of the proconsular province of Asia, a direct dependency of the Roman Senate. Though unimportant politically, it was noted for its extensive commerce. Many illustrious persons were born at Ephesus, e.g. the philosophers Heraclitus and Hermodorus, the poet Hipponax, the painter Parrhasius (all in the sixth or fifth century B.C.), the geographer Artemidorus, another Artemidorus, astrologer and charlatan, both in the second century of the Christian Era, and the historian and essayist, Xenophon. Ephesus owed its chief renown to its temple of Artemis (Diana), which attracted multitudes of visitors. Its first architect was the Cretan Chersiphron (seventh to sixth century B.C.) but it was afterwards enlarged. It was situated on the bank of the River Selinus and its precincts had the right of asylum. This building,

which was looked upon in antiquity as one of the marvels of the world, was burnt by Herostratus (356 B.C.) the night of the birth of Alexander the Great, and was afterwards rebuilt, almost in the same proportions, by the architect Dinocrates. Its construction is said to have lasted 120 years, according to some historians 220. It was over 400 feet in length and 200 in breadth, and rested upon 128 pillars of about sixty feet in height. It was stripped of its riches by Nero and was finally destroyed by the Goths (A.D. 262).

It was through the Jews that Christianity was first introduced into Ephesus. The original community was under the leadership of Apollo (I Cor., i, 12). They were disciples of St. John the Baptist, and were converted by Aquila and Priscilla. Then came St. Paul, who lived three years at Ephesus to establish and organize the new church; he was wont to teach in the schola or lecture-hall of the rhetorician Tyrannus (Acts, xix, 9) and performed there many miracles. Eventually he was obliged to depart, in consequence of a sedition stirred up by the goldsmith Demetrius and other makers of ex-votoes for the temple of Diana (Acts, xv111, 24 sqq.; xix, 1 sqq.). A little later, on his way to Jerusalem, he sent for the elders of the community of Ephesus to come to Miletus and bade them there a touching farewell (Acts, xx, 17-35). The Church of Ephesus was committed to his disciple, St. Timothy, a native of the city (I Tim., 1, 3; II Tim., 1, 18; iv, 12). The Epistle of St. Paul to the Ephesians was not perhaps addressed directly to them; it may be only a circular letter sent by him to several churches. The sojourn and death of the Apostle St. John at Ephesus are not mentioned in the New Testament, but both are attested as early as the latter part of the second century by St. Irenaeus (*Adv. Haer.*, III, iii, 4), Polycrates, Bishop of Ephesus (Eusebius, *Hist. Eccl.*, V, xxi), Clement of Alexandria, the "*Acta Joannis*", and a little earlier by St. Justin and the Montanists. Byzantine tradition has always shown at Ephesus the tomb of the Apostle. Another tradition, which may be trustworthy, though less ancient, makes Ephesus the scene of the death of St. Mary Magdalen. On the other hand the opinion that the Blessed Virgin died there rests on no ancient testimony; the often quoted but ambiguous text of the Council of Ephesus (431), means only that there was at that time at Ephesus a church of the Virgin. (See Ramsay in "*Expositor*", June, 1905, also his "*Seven Cities of Asia*".) We learn, moreover, from Eusebius (*Hist. Eccl.*, V, xxiv) that the three daughters of the Apostle St. Philip were buried at Ephesus.

About 110 St. Ignatius of Antioch, having been greeted at Smyrna by messengers of the Church of Ephesus, sent to it one of his seven famous epistles. During the first three centuries, Ephesus was, next to Antioch, the chief centre of Christianity in Asia Minor. In the year 190 its bishop, St. Polycrates, held a council to consider the paschal controversy and declared himself in favour of the Quartodeciman practice; nevertheless the Ephesian Church soon conformed in this particular to the practice of all the other Churches. It seems certain that the sixth canon of the Council of Nicaea (325), con-

firmed for Ephesus its ecclesiastical jurisdiction over the whole "diocese" or civil territory of Asia Minor, i.e. over the eleven ecclesiastical provinces; at all events, the second canon of the Council of Constantinople (381) formally recognized this authority. But Constantinople was already claiming the first rank among the Churches of the East and was trying to annex the Churches of Thrace, Asia, and Pontus. To resist these encroachments, Ephesus made common cause with Alexandria. We therefore find Bishop Memnon of Ephesus siding with St. Cyril at the Third Ecumenical Council, held at Ephesus in 431 in condemnation of Nestorianism, and another bishop, Stephen, supporting Dioscorus at the so-called Robber Council (*Latrocinium Ephesinum*) of 449, which approved the heresy of Eutyches. But the resistance of Ephesus was overcome at the Council of Chalcedon (451), whose famous twenty-eighth canon placed the twenty-eight ecclesiastical provinces of Pontus, Asia, and Thrace under the jurisdiction of the Patriarch of Constantinople. Henceforth Ephesus was but the second metropolis of the Patriarchate of Constantinople, nor did it ever recover its former standing, despite a council of 474 in which Paul, the Monophysite Patriarch of Alexandria restored its ancient rights. Egyptian influence was responsible for the hold which Monophysitism gained at Ephesus during the sixth century; the famous ecclesiastical historian, John of Asia, was then one of its bishops. The metropolis of Ephesus in those days ruled over thirty-six suffragan sees. Justinian, who imitated Constantine in stripping the city of many works of art to adorn Constantinople, built there a magnificent church consecrated to St. John; this was soon a famous place of pilgrimage.

Ephesus was taken in 655 and 717 by the Arabs. Later it became the capital of the theme of the Thracians. During the Iconoclastic period two bishops of Ephesus suffered martyrdom, Hypatius in 735 and Theophilus in the ninth century. In the same city the fierce general Lachanodracon put to death thirty-eight monks from the monastery of Pelecete in Bithynia and other partisans of the holy images. In 899 Leo the Wise transferred the relics of St. Mary Magdalen to Constantinople. The city was captured in 1090 and destroyed by the Seljuk Turks, but the Byzantines succeeded in retaking it and rebuilt it on the neighbouring hills around the church of St. John. Henceforth it was commonly called *Hagios Theologos* (the holy theologian, i.e. St. John the Divine), or in Turkish *Aya Solouk* (to the Greeks the Apostle St. John is "the Theologian"); the French called the site *Altelot* and the Italians *Alto Luogo*. At the beginning of the thirteenth century its metropolitan, Nicholas Mesarites, had an important role at the conferences between the Greeks and the Latins. The city was again plundered by the Turks in the first years of the fourteenth century, then by the Catalonian mercenaries in the pay of the Byzantines, and once more by the Turks. The church of St. John was transformed into a mosque, and the city was ruled by a Turkish ameer, who carried on a little trade with the West, but it could no longer maintain its Greek bishop.

A series of Latin bishops governed the see from 1318 to 1411. The ruin of Ephesus was completed by Timur-Leng in 1403 and by nearly a half-century of civil wars among its Turkish masters. When at the council of Florence in 1439 Mark of Ephesus (Marcus Eugenicus) showed himself so haughty toward the Latins, he was the pastor of a miserable village, all that remained of the great city which Pliny once called *alterum lumen Asiae*, or the second eye of Asia (Hist. nat., V, xxix; also Apoc., ii, 5; cf. W. Brockhoff, "Ephesus vom vierten christlich. Jhdt. bis seinem Untergang", Jena, 1906).

Today Aya Solouk has 3000 inhabitants, all Greeks. It is situated in the *caza* of Koush Adassi, in the vilayet of Aiden or Smyrna, about fifty miles from Smyrna, on the Smyrna-Aidin railway. The ruins of Ephesus stand in the marshy and unhealthy plain below the village. There are the remains of the temple of Diana, the theatre, with a capacity of 25,000 spectators, the stadium, the great gymnasium, and the "Double Church", probably the ancient cathedral, one aisle of which was dedicated to the Blessed Virgin, the other to St. John, where the councils of 431 and 449 were held. The Greek metropolitan resides at Manissa, the ancient Magnesia.

S. VAILHÉ

Council of Ephesus

Council of Ephesus

The third ecumenical council, held in 431.

THE OCCASION AND PREPARATION FOR THE COUNCIL

The idea of this great council seems to have been due to Nestorius, the Bishop of Constantinople. St. Cyril, Patriarch of Alexandria, had accused him to Pope St. Celestine

of heresy, and the pope had replied on 11 August, 430, by charging St. Cyril to assume his authority and give notice in his name to Nestorius that, unless he recanted within ten days of receiving this ultimatum, he was to consider himself excommunicated and deposed. The summons was served on Nestorius on a Sunday, 30 November, or 7 December, by four bishops sent by Cyril. But Nestorius was evidently well informed of what he was to expect. He regarded himself as having been calumniated to the pope, and he did not choose to be given over into the hands of Cyril. The latter was, in his opinion, not merely a personal enemy, but a dangerous theologian, who was reviving to some extent the errors of Apollinarius. Nestorius had influence over the Emperor of the East, Theodosius II, whom he induced to summon a general council to judge of the difference between the Patriarch of Alexandria and himself, and he worked so well that the letters of convocation were issued by the emperor to all metropolitans on 19 November, some days before the messengers of Cyril arrived. The emperor was able to take this course without seeming to favour Nestorius too much, because the monks of the capital, whom Nestorius had excommunicated for their opposition to his heretical teaching, had also appealed to him to call together a council. Nestorius, therefore, paid no attention to the pope's ultimatum, and refused to be guided by the advice to submit which his friend John, the Patriarch of Antioch, volunteered.

The pope was pleased that the whole East should be united to condemn the new heresy. He sent two bishops, Arcadius and Projectus, to represent himself and his Roman council, and the Roman priest, Philip, as his personal representative. Philip, therefore, takes the first place, though, not being a bishop, he could not preside. It was probably a matter of course that the Patriarch of Alexandria should be president. The legates were directed not to take part in the discussions, but to give judgment on them. It seems that Chalcedon, twenty years later, set the precedent that the papal legates should always be technically presidents at an ecumenical council, and this was henceforth looked upon as a matter of course, and Greek historians assumed that it must have been the case at Nicaea.

The emperor was anxious for the presence of the most venerated prelate of the whole world, Augustine, and sent a special messenger to that great man with a letter in honourable terms. But the saint had died during the siege of Hippo in the preceding August, though the troubles of Africa had prevented news from reaching Constantinople.

Theodosius wrote an angry letter to Cyril, and a temperate one to the council. The tone of the latter epistle and of the instructions given to the imperial commander, Count Candidian, to be absolutely impartial, are ascribed by the Coptic Acts to the influence exercised on the emperor by the Abbot Victor, who had been sent to Con-

stantinople by Cyril to act as his agent at the Court on account of the veneration and friendship which Theodosius was known to feel for the holy man.

ARRIVAL OF THE PARTICIPANTS AT EPHESUS

Nestorius, with sixteen bishops, and Cyril, with fifty, arrived before Pentecost at Ephesus. The Coptic tells us that the two parties arrived on the same day, and that in the evening Nestorius proposed that all should join in the Vesper service together. The other bishops refused. Memnon, Bishop of Ephesus, was afraid of violence, and sent his clergy only to the church. The mention of a Flavian, who seems to be the Bishop of Philippi, casts some doubt on this story, for that bishop did not arrive till later. Memnon of Ephesus had forty suffragans present, not counting twelve from Pamphylia (whom John of Antioch calls heretics). Juvenal of Jerusalem, with the neighbouring bishops whom he looked upon as his suffragans, and Flavian of Philippi, with a contingent from the countries which looked to Thessalonica as their metropolis, arrived soon after Pentecost. The Patriarch of Antioch, John, an old friend of Nestorius, wrote to explain that his suffragans had not been able to start till after the Octave of Easter. (The Coptic Acts say that there was a famine at Antioch.) The journey of thirty days had been lengthened by the death of some horses; he would accomplish the last five or six stages at leisure. But he did not arrive, and it was said that he was loitering because he did not wish to join in condemning Nestorius. Meanwhile the heat was great. Many bishops were ill. Two or three died. Two of John's metropolitans, those of Apamea and Hierapolis, arrived and declared that John did not wish the opening of the council to be deferred on account of his delay. However, these two bishops and Theodoret of Cyrus, with sixty-five others, wrote a memorial addressed to St. Cyril and Juvenal of Jerusalem, begging that the arrival of John should be awaited. Count Candidian arrived, with the imperial decree, and he took the same view.

THE COUNCIL ITSELF

But Cyril and the majority determined to open the council on 22 June, sixteen days having passed since John had announced his arrival in five or six. It was clear to the majority that this delay was intentional, and they were probably right. Yet it is regrettable that all possible allowance was not made, especially as no news had yet come from Rome. For Cyril had written to the pope with regard to an important question of procedure. Nestorius had not recanted within the ten days fixed by the pope, and he was consequently treated as excommunicate by the majority of the bishops. Was he to be allowed a fresh trial, although the pope had already condemned him? Or, on the other hand, was he to be merely given the opportunity of explaining or excusing his contumacy? One might have presumed that Pope Celestine, in approving of the council, intended that Nestorius should have a full trial, and in fact this was declared

in his letter which was still on the way. But as no reply had come to Cyril, that saint considered that he had no right to treat the pope's sentence as a matter for further discussion, and no doubt he had not much wish to do so.

First Session (June 22)

The council assembled on 22 June, and St. Cyril assumed the presidency both as Patriarch of Alexandria and "as filling the place of the most holy and blessed Archbishop of the Roman Church, Celestine", in order to carry out his original commission, which he considered, in the absence of any reply from Rome, to be still in force.

In the morning 160 bishops were present, and by evening 198 had assembled. The session began by a justification of the decision to delay no longer. Nestorius had been on the previous day invited to attend. He had replied that he would come if he chose. To a second summons, which was now dispatched, he sent a message from his house, which was surrounded with armed men, that he would appear when all the bishops had come together. Indeed only some twenty of the sixty-eight who had demanded a delay had rallied to Cyril, and Nestorius's own suffragans had also stayed away. To a third summons he gave no answer. This attitude corresponds with his original attitude to the ultimatum sent by Cyril. He would not acknowledge Cyril as a judge, and he looked upon the opening of the council before the arrival of his friends from Antioch as a flagrant injustice.

The session proceeded. The Nicene Creed was read, and then the second letter of Cyril to Nestorius, on which the bishops at Cyril's desire, severally gave their judgment that it was in accordance with the Nicene faith, 126 speaking in turn. Next the reply of Nestorius was read. All then cried Anathema to Nestorius. Then Pope Celestine's letter to St. Cyril was read, and after it the third letter of Cyril to Nestorius, with the anathematisms which the heretic was to accept. The bishops who had served this ultimatum on Nestorius deposed that they had given him the letter. He had promised his answer on the morrow, but had not given any, and did not even admit them.

Then two friends of Nestorius, Theodotus of Ancyra and Acacius of Mitylene, were invited by Cyril to give an account of their conversations at Ephesus with Nestorius. Acacius said that Nestorius had repeatedly declared *dimeniaion e trimeniaion me dein legesthai Theon*. Nestorius's own account of this conversation in his "Apology" (Bethune-Baker, p. 71) shows that this phrase is to be translated thus: "We must not say that God is two or three months old." This is not so shocking as the meaning which has usually been ascribed to the words in modern as well as ancient times (e.g. by Socrates, VII, xxxiv): "A baby of two or three months old ought not to be called God." The former sense agrees with the accusation of Acacius that Nestorius declared "one must either deny the Godhead (*theotes*) of the Only-begotten to have become man, or else admit the same of the Father and of the Holy Ghost." (Nestorius means that the

Divine Nature is numerically one; and if Nestorius really said *theotes*, and not *hypostasis*, he was right, and Acacius was wrong.)

Acacius further accused him of uttering the heresy that the Son who died is to be distinguished from the Word of God. A series of extracts from the holy Fathers was then read, Peter I and Athanasius of Alexandria, Julius and Felix of Rome (but these papal letters were Apollinarian forgeries), Theophilus, Cyril's uncle, Cyprian, Ambrose, Gregory Nazianzen, Basil, Gregory of Nyssa, Atticus, Amphilochius. After these, contrasted passages from the writings of Nestorius were read. These were of course *pièces justificatives* brought forward by Cyril, and necessary to inform the council as to the question at issue. Hefele has wrongly understood that the bishops were examining the doctrine of Nestorius afresh, without accepting the condemnation of the pope as necessarily correct. A fine letter from Capreolus, Bishop of Carthage, and primate of a greater number of bishops than any of the Eastern patriarchs, was next produced. He writes in the midst of the devastation of Africa by the Vandals, and naturally could neither hold any synod nor send any bishops. No discussion followed (and Hefele is wrong in suggesting an omission in the Acts, which are already of extraordinary length for a single day), but the bishops accepted with acclamation the words of Capreolus against novelty and in praise of ancient faith, and all proceeded to sign the sentence against Nestorius. As the excommunication by St. Celestine was still in force, and as Nestorius had contumaciously refused to answer the threefold summons enjoined by the canons, the sentence was worded as follows:

The holy synod said: "Since in addition to the rest the most impious Nestorius has neither been willing to obey our citation, nor to receive the most holy and god-fearing bishops whom we sent to him, we have necessarily betaken ourselves to the examination of his impieties; and, having apprehended from his letters and from his writings, and from his recent sayings in this metropolis which have been reported, that his opinions and teachings are impious, we being necessarily impelled thereto both by the canons [for his contumacy] and by the letter [to Cyril] of our most holy father and colleague Celestine, Bishop of the Roman Church, with many tears have arrived at the following grievous sentence against him: Our Lord, Jesus Christ, Who has been blasphemed by him, has defined by this holy synod that the same Nestorius is excluded from all episcopal dignity and from every assembly of bishops.

This sentence received 198 signatures, and some more were afterwards added. A brief notification addressed to "the new Judas" was sent to Nestorius. The Coptic Acts tell us that, as he would not receive it, it was affixed to his door. The whole business

had been concluded in a single long session, and it was evening when the result was known. The people of Ephesus, full of rejoicing, escorted the fathers to their houses with torches and incense. Count Candidian, on the other hand, had the notices of the deposition torn down, and silenced the cries in the streets. The council wrote at once to the emperor and to the people and clergy of Constantinople, though the Acts had not yet been written out in full. In a letter to the Egyptian bishops in the same city and to the Abbot Dalmatius (the Coptic substitutes Abbot Victor), Cyril asks for their vigilance, as Candidian was sending false reports. Sermons were preached by Cyril and his friends, and the people of Ephesus were much excited. Even before this, Nestorius, writing, with ten bishops, to the emperor to complain that the council was to begin without waiting for the Antiochenes and the Westerns, had spoken of the violence of the people, egged on by their bishop Memnon who (so the heretic said) had shut the churches to him and threatened him with death.

Arrival of John of Antioch (June 27)

Five days after the first session John of Antioch arrived. The party of Cyril sent a deputation to meet him honourably, but John was surrounded by soldiers, and complained that the bishops were creating a disturbance. Before he would speak to them, he held an assembly which he designated "the holy synod". Candidian deposed that he had disapproved of the assembling of the bishops before John's arrival; he had attended the session and read the emperor's letter (of this not a word in the Acts, so Candidian was apparently lying). John accused Memnon of violence, and Cyril of Arian, Apollinarian, and Eunomian heresy. These two were deposed by forty-three bishops present; the members of the council were to be forgiven, provided they would condemn the twelve anathematisms of Cyril. This was absurd, for most of these could not be understood in anything but a Catholic sense. But John, who was not a bad man, was in a bad temper. It is noticeable that not a word was said in favour of Nestorius at this assembly. The party of Cyril was now complaining of Count Candidian and his soldiers, as the other side did of Memnon and the populace. Both parties sent their report to Rome. The emperor was much distressed at the division, and wrote that a collective session must be held, and the matter begun afresh. The official named Palladius who brought this epistle took back with him many letters from both sides. Cyril proposed that the emperor should send for him and five bishops, to render an exact account.

Second Session (10 July)

At last on 10 July the papal envoys arrived. The second session assembled in the episcopal residence. The legate Philip opened the proceedings by saying that the former letter of St. Celestine had been already read, in which he had decided the present question; the pope had now sent another letter. This was read. It contained a general

exhortation to the council, and concluded by saying that the legates had instructions to carry out what the pope had formerly decided; doubtless the council would agree. The Fathers then cried:

This is a just judgment. To Celestine the new Paul! To the new Paul
Cyril! To Celestine, the guardian of the Faith! To Celestine agreeing to
the Synod! The Synod gives thanks to Cyril. One Celestine, one Cyril!

The legate Projectus then says that the letter enjoins on the council, though they need no instruction, to carry into effect the sentence which the pope had pronounced. Hefele wrongly interprets this: "That is, that all the bishops should accede to the Papal sentence" (vol. III, 136). Firmus, the Exarch of Caesarea in Cappadocia, replies that the pope, by the letter which he sent to the Bishops of Alexandria, Jerusalem, Thessalonica, Constantinople, and Antioch, had long since given his sentence and decision; and the synod -- the ten days having passed, and also a much longer period -- having waited beyond the day of opening fixed by the emperor, had followed the course indicated by the pope, and, as Nestorius did not appear, had executed upon him the papal sentence, having inflicted the canonical and Apostolic judgment upon him. This was a reply to Projectus, declaring that what the pope required had been done, and it is an accurate account of the work of the first session and of the sentence; *canonical* refers to the words of the sentence, "necessarily obliged by the canons", and *Apostolic* to the words "and by the letter of the bishop of Rome". The legate Arcadius expressed his regret for the late arrival of his party, on account of storms, and asked to see the decrees of the council. Philip, the pope's personal legate, then thanked the bishops for adhering by their acclamations as holy members to their holy head -- "For your blessedness is not unaware that the Apostle Peter is the head of the Faith and of the Apostles." The Metropolitan of Ancyra declared that God had shown the justice of the synod's sentence by the coming of St. Celestine's letter and of the legates. The session closed with the reading of the pope's letter to the emperor.

Third Session (July 11)

On the following day, 11 July, the third session took place. The legates had read the Acts of the first session and now demanded only that the condemnation of Nestorius should be formally read in their presence. When this had been done, the three legates severally pronounced a confirmation in the pope's name. The exordium of the speech of Philip is celebrated:

It is doubtful to none, nay it has been known to all ages, that holy and blessed Peter, the prince and head of the Apostles, the column of the Faith, the foundation of the Catholic Church, received from our Lord Jesus Christ, the Saviour and Redeemer of the human race, the keys of the Kingdom, and that to him was given the power of binding and loosing sins, who until this day and for ever lives and judges in his successors. His successor in order and his representative, our holy and most blessed Pope Celestine. . .

It was with words such as these before their eyes that Greek Fathers and councils spoke of the Council of Ephesus as celebrated "by Celestine and Cyril". A translation of these speeches was read, for Cyril then rose and said that the synod had understood them clearly; and now the Acts of all three sessions must be presented to the legates for their signature. Arcadius replied that they were of course willing. The synod ordered that the Acts should be set before them, and they signed them. A letter was sent to the emperor, telling him how St. Celestine had held a synod at Rome and had sent his legates, representing himself and the whole of the West. The whole world has therefore agreed; Theodosius should allow the bishops to go home, for many suffered from being at Ephesus, and their dioceses also must suffer. Only a few friends of Nestorius held out against the world's judgment. A new bishop must be appointed for Constantinople.

Fourth session (July 16)

On 16 July a more solemn session was held, like the first, in the cathedral of the Theotokos. Cyril and Memnon presented a written protest against the *conciliabulum* of John of Antioch. He was cited to appear, but would not even admit the envoys.

Fifth Session (July 17)

Next day the fifth session was held in the same church. John had set up a placard in the city accusing the synod of the Apollinarian heresy. He is again cited, and this is counted as the third canonical summons. He would pay no attention. In consequence the council suspended and excommunicated him, together with thirty-four bishops of his party, but refrained from deposing them. Some of John's party had already deserted him, and he had gained only a few. In the letters to the emperor and the pope which were then dispatched, the synod described itself as now consisting of 210 bishops. The long letter to Celestine give a full account of the council, and mentions that the pope's decrees against the Pelagians had been read and confirmed.

Sixth Session

At the end of the sixth session, which dealt only with the case of two Nestorianizing priests, was made the famous declaration that no one must produce or compose any other creed than (*para, proeter*, "beyond" -- "contrary to"?) the Nicene, and that anyone who should propose any such to pagans, Jews, or heretics, who wished to be converted,

should be deposed if a bishop or cleric, or anathematized if a layman. This decision became later a fruitful source of objections to the decrees of later synods and to the addition of the *filioque* to the so-called Constantinopolitan Creed; but that creed itself would be abolished by this decree if it is taken too literally. We know of several matters connected with Pamphylia and Thrace which were treated by the council, which are not found in the Acts. St. Leo tells us that Cyril reported to the pope the intrigues by which Juvenal of Jerusalem tried at Ephesus to carve himself a patriarchate out of that of Antioch, in which his see lay. He was to succeed in this twenty years later, at Chalcedon.

Seventh Session (July 31)

In the seventh and last session on 31 July (it seems) the bishops of Cyprus persuaded the council to approve their claim of having been anciently and rightly exempt from the jurisdiction of Antioch. Six canons were also passed against the adherents and supporters of Nestorius.

IMPERIAL AND PAPAL CONFIRMATION OF THE COUNCIL

The history of the intrigues by which both parties tried to get the emperor on their side need not be detailed here. The orthodox were triumphant at Ephesus by their numbers and by the agreement of the papal legates. The population of Ephesus was on their side. The people of Constantinople rejoiced at the deposition of their heretical bishop. But Count Candidian and his troops were on the side of Nestorius, whose friend, Count Irenaeus, was also at Ephesus, working for him. The emperor had always championed Nestorius, but had been somewhat shaken by the reports of the council. Communication with Constantinople was impeded both by the friends of Nestorius there and by Candidian at Ephesus. A letter was taken to Constantinople at last in a hollow cane, by a messenger disguised as a beggar, in which the miserable condition of the bishops at Ephesus was described, scarce a day passing without a funeral, and entreaty was made that they might be allowed to send representatives to the emperor. The holy abbot, St. Dalmatius, to whom the letter was addressed, as well as to the emperor, clergy, and people of Constantinople, left his monastery in obedience to a Divine voice and, at the head of the many thousand monks of the city, all chanting and carrying tapers, made his way through enthusiastic crowds to the palace. They passed back right through the city, after the abbot Dalmatius had interviewed the emperor, and the letter was read to the people in the church of St. Mocius. All shouted "Anathema to Nestorius!"

Eventually the pious and well-meaning emperor arrived at the extraordinary decision that he should ratify the depositions decreed by both councils. He therefore declared that Cyril, Memnon, and John were all deposed. Memnon and Cyril were kept in close confinement. But in spite of all the exertions of the Antiochan party, the

representatives of the envoys whom the council was eventually allowed to send, with the legate Philip, to the Court, persuaded the emperor to accept the great council as the true one. Nestorius anticipated his fate by requesting permission to retire to his former monastery. The synod was dissolved about the beginning of October, and Cyril arrived amid much joy at Alexandria on 30 October. St. Celestine was now dead, but his successor, St. Sixtus III, confirmed the council.

JOHN CHAPMAN

Robber Council of Ephesus (Latrocinium)

Robber Council of Ephesus

(Latrocinium).

The Acts of the first session of this synod were read at the Council of Chalcedon, 451, and have thus been preserved to us. The remainder of the Acts (the first session being wanting) are known only through a Syriac translation by a Monophysite monk, published from the British Museum MS. Addit. 14,530, written in the year 535. On the events which preceded the opening of the council, 8 August, 449, see DIOSCORUS. The emperor had convoked it, the pope had agreed. No time had been left for any Western bishops to attend, except a certain Julius of an unknown see, who, together with a Roman priest, Rhenatus (he died on the way), and the deacon Hilarus, afterwards pope, represented St. Leo. The Emperor Theodosius II gave Dioscorus, Patriarch of Alexandria, the presidency -- *ten authentian kai ta proteia*. The legate Julius is mentioned next, but when this name was read at Chalcedon, the bishops cried: "He was cast out. No one represented Leo." Next in order was Juvenal of Jerusalem, above both the Patriarch of Antioch, Domnus, and St. Flavian of Constantinople. The number of bishops present was 127, with eight representatives of absent bishops, and lastly the deacon Hilarus with his notary Dulcitus. The question before the council by order of the emperor was whether St. Flavian, in a synod held by him at Constantinople in November, 448, had justly deposed and excommunicated the Archimandrite Eutyches for refusing to admit two natures in Christ. Consequently Flavian and six other bishops, who had been present at his synod, were not allowed to sit as judges in the council. The brief of convocation by Theodosius was read, and then the Roman legates explained that it would have been contrary to custom for the pope to be present in person, but he had sent a letter by them. In this letter St. Leo had appealed to his dogmatic letter to Flavian, which he intended to be read at the council and accepted by it as a rule of faith. But Dioscorus took care not to have it read, and instead of it a letter of the emperor, ordering the presence at the council of the fanatical anti-Nestorian monk Barsumas, was presented. The question of faith was next proceeded with. Dioscorus de-

clared that this was not a matter for inquiry: they had only to inquire into the recent doings. He was acclaimed as a guardian of the Faith. Eutyches then was introduced, and declared that he held the Nicene Creed, to which nothing could be added, and from which nothing could be taken away. He had been condemned by Flavian for a mere slip of the tongue, though he had declared that he held the faith of Nicaea and Ephesus, and had appealed to the present council. He had been in danger of his life. He now asked for judgment against the calumnies which had been brought against him.

The accuser of Eutyches, Bishop Eusebius of Dorylaeum, was not allowed to be heard. The bishops agreed that the Acts of the condemnation of Eutyches, at a council held at Constantinople in November, 448, should be read, but the legates asked that the pope's letter might be heard first. Eutyches interrupted with the complaint that he did not trust the legates; they had been to dine with Flavian, and had received much courtesy. Dioscorus decided that the Acts of the trial should have precedence, and so the letter of St. Leo was never read at all. The Acts were then read in full (for an account of them see EUTYCHES), and also the account of an inquiry made on 13 April into the allegation of Eutyches that the synodal Acts had been incorrectly taken down, and of another inquiry on 27 April into the accusation made by Eutyches that Flavian had drawn up the sentence against him beforehand. While the trial was being related, cries arose of belief in one nature, that two natures meant Nestorianism, of "Burn Eusebius", and so forth. St. Flavian rose to complain that no opportunity was given him of defending himself. The Acts of the Robber Council now give a list of 114 votes in the form of short speeches absolving Eutyches. Even three of his former judges joined in this, although by the emperor's order they were not to vote. Barsumas added his voice in the last place. A petition was read from the monastery of Eutyches, which had been excommunicated by Flavian. On the assertion of the monks that they agreed in all things with Eutyches, and with the holy Fathers, the synod absolved them.

Next in order to establish the true Faith an extract was read from the Acts of the first session of the Council of Ephesus of 431. Many of the bishops, and also the deacon Hilarus, expressed their assent, some adding that nothing beyond this faith could be allowed. Dioscorus then spoke, declaring that it followed that Flavian and Eusebius must be deposed. No less than 101 bishops gave their votes orally, and the signatures of all the 135 bishops follow in the Acts. Flavian and Eusebius had previously interposed an appeal to the pope and to a council under his authority. Their formal letters of appeal have been recently published by Amelli. The evidence given at Chalcedon is conclusive that the account in the Acts of this final scene of the session is not to be trusted. The secretaries of the bishops had been violently prevented from taking notes. It was declared that both Barsumas and Dioscorus struck Flavian, though this may be exagger-

ation. But we must believe that many bishops threw themselves on their knees to beg Dioscorus for mercy to Flavian, that the military were introduced and also Alexandrine Parabolani, and that a scene of violence ensued; that the bishops signed under the influence of bodily fear, that some signed a blank paper, and that others did not sign at all, the names being afterwards filled in of all who were actually present.

The papal legate Hilarus uttered a single word in Latin, *Contradicitur*, annulling the sentence in the pope's name. He then escaped with difficulty. Flavian was deported into exile, and died a few days later in Lydia. No more of the Acts was read at Chalcedon. But we learn from Theodoret, Evagrius, and others, that the Robber Council deposed Theodoret himself, Domnus, and Ibas. The Syriac Acts take up the history where the Chalcedonian Acts break off. Of the first session only the formal documents, letters of the emperor, petitions of Eutyches, are known to be preserved in Syriac, though not in the same MS. It is evident that the Monophysite editor thoroughly disapproved of the first session, and purposely omitted it, not because of the high-handed proceedings of Dioscorus, but because the Monophysites as a general rule condemned Eutyches as a heretic, and did not wish to remember his rehabilitation by a council which they considered to be ecumenical.

In the next session, according to the Syriac Acts, 113 were present, including Barsumas. Nine new names appear. The legates were sent for, as they did not appear, but only the notary Dulcitus could be found, and he was unwell. The legates had shaken off the dust of their feet against the assembly. It was a charge against Dioscorus at Chalcedon that he "had held an (ecumenical) council without the Apostolic See, which was never allowed". This manifestly refers to his having continued at the council after the departure of the legates. The first case was that of Ibas, Bishop of Edessa. This famous champion of the Antiochian party had been accused of crimes before Domnus, Bishop of Antioch, and had been acquitted, soon after Easter, 448. His accusers had gone to Constantinople and obtained a new trial from the emperor. The bishops Photius of Tyre, Eustathius of Berytus, and Uranius of Imeria were to examine the matter. These bishops met at Tyre, removed to Berytus, and returned to Tyre, and eventually acquitted Ibas once more, together with his fellow-accused, Daniel, Bishop of Harran, and John of Theodosianopolis. This was in February, 449. The bishops had been too kind, Cheroeas, Governor of Osrhoene was now ordered to go to Edessa to make a new inquiry. He was received by the people on 12 April with shouts (the detailed summary of which took up some two or three pages of his report), in honour of the emperor, the governor, the late Bishop Rabbula, and against Nestorius and Ibas. Cheroeas sent to Constantinople, with two letters of his own, an elaborate report, detailing all the accusations he could manage to rake together against Ibas. The emperor ordered that a new bishop should be chosen. It was this report, which provided a history

of the whole affair, that was now read at length by order of Dioscorus. When the famous letter of Ibas to Maris was read, cries arose such as "These things pollute our ears . . . Cyril is immortal . . . Let Ibas be burnt in the midst of the city of Antioch . . . Exile is of no use. Nestorius and Ibas should be burnt together!" A final indictment was made in a speech by a priest of Edessa named Eulogius. Sentence was finally given against Ibas of deposition and excommunication, without any suggestion that he ought to be cited or that his defence ought to be heard. It is scandalous to find the three bishops who had acquitted him but a few months previously, only anxious to show their concurrence. They even pretended to forget what had been proved at Tyre and Berytus. In the next case, that of Ibas's nephew, Daniel of Harran, they declared that at Tyre they had clearly seen his guilt, and had only acquitted him because of his voluntary resignation. He was quickly deposed by the agreement of all the council. He was, of course, not present and could not defend himself.

It was next the turn of Irenaeus, who as an influential layman at the former Council of Ephesus had shown much favour to Nestorius. He had later become Bishop of Tyre, but the emperor had deposed him in 448, and the miserable Photius, already mentioned, had succeeded him. The synod made no difficulty in ratifying the deposition of Irenaeus as a bigamist and a blasphemer. Aquilinus, Bishop of Byblus, because he had been consecrated by Irenaeus and was his friend, was next deposed. Sophronius, Bishop of Tella, was a cousin of Ibas. He was therefore accused of magic, and his case was reserved for the judgment of the new Bishop of Edessa -- a surprisingly mild decision. The council turned to higher game. The great Theodoret, whose learning and eloquence in the pulpit and with the pen were the terror of the party of Dioscorus, had been confined by the emperor within his own diocese in the preceding year, to prevent his preaching at Antioch; and Theodosius had twice written to prevent his coming to Ephesus to the council. It was not difficult to find reasons for deposing him in his absence. Far as he was from being a Nestorian, he had been a friend of Nestorius, and for more than three years (431-4) the most redoubtable antagonist of St. Cyril. But the two great theologians had come to terms and had celebrated their agreement with great joy. Theodoret had tried to make friends with Dioscorus, but his advances had been rejected with scorn. A monk of Antioch now brought forward a volume of extracts from the works of Theodoret. First was read Theodoret's fine letter to the monks of the East (see Mansi, V, 1023), then some extracts from a lost "Apology for Diodorus and Theodore" -- the very name of this work sufficed in the eyes of the council for a condemnation to be pronounced. Dioscorus pronounced the sentence of deposition and excommunication.

When Theodoret in his remote diocese heard of this absurd sentence on an absent man against whose reputation not a word was uttered, he at once appealed to the pope

in a famous letter (Ep. cxiii). He wrote also to the legate Renatus (Ep. cxvi), being unaware that he was dead. The council had a yet bolder task before it. Domnus of Antioch is said to have agreed in the first session to the acquittal of Eutyches. But he refused, on the plea of sickness, to appear any more at the council. He seems to have been disgusted, or terrified, or both, at the tyranny exercised by Dioscorus. The council had sent him an account of their actions, and he replied (if we may believe the Acts) that he agreed to all the sentences that had been given and regretted that his health made his attendance impossible.

It is almost incredible that immediately after receiving this message, the council proceeded to hear a number of petitions from monks and priests against Domnus himself. He was accused of friendship with Theodoret and Flavian, of Nestorianism, of altering the form of the Sacrament of Baptism, of intruding an immoral bishop into Emesa, of having been uncanonically appointed himself, and in fact of being an enemy of Dioscorus. Several pages of the MS. are unfortunately lost; but it does not seem that the unfortunate patriarch was cited to appear, or given a chance of defending himself. The bishops shouted that he was worse than Ibas. He was deposed by a vote of the council, and with this final act of injustice the Acts come to an end. The council wrote the usual letter to the emperor (see Perry, trans., p. 431), who was charmed with the result of the council and confirmed it with a letter (Mansi, VII, 495, and Perry, p. 364). Dioscorus sent an encyclical to the bishops of the East, with a form of adhesion to the council which they were to sign (Perry, p. 375). He went to Constantinople and appointed his secretary Anatolius bishop of that great see. Juvenal of Jerusalem had become his tool, he had deposed the Patriarchs of Antioch and Constantinople; but one powerful adversary yet remained. He halted at Nicaea, and with ten bishops (no doubt the ten Egyptian metropolitans whom he had brought to Ephesus), "in addition to all his other crimes he extended his madness against him who had been entrusted with the guardianship of the Vine by the Saviour" -- in the words of the bishops at Chalcedon -- and excommunicated the pope himself.

Meanwhile St. Leo had received the appeals of Theodoret and Flavian (of whose death he was unaware), and had written to them and to the emperor and empress that all the Acts of the council were null. He excommunicated all who had taken part in it, and absolved all whom it had condemned, with the exception of Domnus of Antioch, who seems to have had no wish to resume his see and retired into the monastic life which he had left many years before with regret. (For the results of the Robber Council, or Latrocinium -- the name given to it by St. Leo -- see CHALCEDON, EUTYCHES, and POPE LEO I.)

JOHN CHAPMAN

The Seven Sleepers of Ephesus

The Seven Sleepers of Ephesus

The story is one of the many examples of the legend about a man who falls asleep and years after wakes up to find the world changed. It is told in Greek by Symeon Metaphrastes (q.v.) in his "Lives of the Saints" for the month of July. Gregory of Tours did it into Latin. There is a Syriac version by James of Sarug (d. 521), and from the Syriac the story was done into other Eastern languages. There is also an Anglo-Norman poem, "Li set dormanz", written by a certain Chardry, and it occurs again in Jacobus de Voragine's "Golden Legend" (*Legenda aurea*) and in an Old-Norse fragment. Of all these versions and re-editions it seems that the Greek form of the story, which is the basis of Symeon Metaphrastes, is the source. The story is this: Decius (249-251) once came to Ephesus to enforce his laws against Christians -- a gruesome description of the horrors he made them suffer follows -- here he found seven noble young men, named Maximilian, Jamblichos, Martin, John, Dionysios, Exakostodianos, and Antoninos (so Metaphrastes; the names vary considerably; Gregory of Tours has Achillides, Diomedes, Diogenus, Probatas, Stephanus, Sambatus, and Quiriacus), who were Christians. The emperor tried them and then gave them a short time for consideration, till he came back again to Ephesus. They gave their property to the poor, took a few coins only with them and went into a cave on Mount Anchilos to pray and prepare for death. Decius came back after a journey and inquired after these seven men. They heard of his return and then, as they said their last prayer in the cave before giving themselves up, fell asleep. The emperor told his soldiers to find them, and when found asleep in the cave he ordered it to be closed up with huge stones and sealed; thus they were buried alive. But a Christian came and wrote on the outside the names of the martyrs and their story. Years passed, the empire became Christian, and Theodosius [either the Great (379-395) or the Younger (408-450), Koch, *op.cit. infra*, p.12], reigned. In his time some heretics denied the resurrection of the body. While this controversy went on, a rich landowner named Adolios had the Sleepers' cave opened, to use it as a cattle-stall. Then they awake, thinking they have slept only one night, and send one of their number (Diomedes) to the city to buy food, that they may eat before they give themselves up. Diomedes comes into Ephesus and the usual story of cross-purposes follows. He is amazed to see crosses over churches, and the people cannot understand whence he got his money coined by Decius. Of course at last it comes out that the last thing he knew was Decius's reign; eventually the bishop and the prefect go up to the cave with him, where they find the six others and the inscription. Theodosius is sent for, and the saints tell him their story. Every one rejoices at this proof of the resurrection

of the body. The sleepers, having improved the occasion by a long discourse, then die praising God. The emperor wants to build golden tombs for them, but they appear to him in a dream and ask to be buried in the earth in their cave. The cave is adorned with precious stones, a great church built over it, and every year the feast of the Seven Sleepers is kept.

Koch (op.cit.) has examined the growth of this story and the spread of the legend of miraculously long sleep. Aristotle (Phys., IV, xi) refers to a similar tale about sleepers at Sardes; there are many more examples from various countries (Koch, pp. 24-40, quotes German, British, Slav, Indian, Jewish, Chinese, and Arabian versions). Frederick Barbarossa and Rip Van Winkle are well-known later examples. The Ephesus story is told in the Koran (Sura xviii), and it has had a long history and further developments in Islam (Koch, 123-152), as well as in medieval Christendom (ib., 153-183). Baronius was the first to doubt it (Ann. Eccl. in the Acta SS., July, 386, 48); it was then discredited till modern study of folk-lore gave it an honoured place again as the classical example of a widely spread myth. The Seven Sleepers have feasts in the Byzantine Calendar on 4 August and 22 October; in the Roman Martyrology they are commemorated as Sts. Maximianus, Malchus, Martinianus, Dionysius, Joannes, Serapion, and Constantinus on 27 July.

Metaphrastes' version is in P.G., CXV, 427-448; Gregory of Tours, Passio VII Dormientium in the Anal. Bolland., XII, 371-387; Chardry, Li Set Dormanz, ed. Koch (Leipzig, 1879); Legenda Aurea and Caxton's version for July; Koch, Die Siebenschlafereigende, ihr Ursprung u. ihre Verbreitung (Leipzig, 1883); an exhaustive monograph with a full bibliography.

ADRIAN FORTESCUE

Ephod

Ephod

(Heb. *aphwd* or *aphd*; Gr. *'is*, *'ephód*, *'ephoúd*; Lat. *superhumerales*).

The ephod is a kind of garment mentioned in the O.T., which differed according to its use by the high-priest, by other persons present at religious services, or as the object of idolatrous worship.

Ephod of the High-Priest

Supplementing the data contained in the Bible with those gleaned from Josephus and the Egyptian monuments, we may distinguish in the ephod three parts: a kind of waistcoat or bodice, two shoulder-pieces, and a girdle. The first of these pieces constituted the main part of the ephod; it is described by some as being an oblong piece of cloth bound round the body under the arms and reaching as far as the waist. Its mater-

ial was fine-twisted linen, embroidered with violet, purple, and scarlet twice-dyed threads, and interwoven with gold (Ex., xxviii, 6; xxxix, 2). The ephod proper must not be confounded with the "tunick of the ephod" (Ex., xxviii, 31-35), nor with the "rational of judgment" (Ex., xxviii, 15-20). The tunick was worn under the ephod; it was a sleeveless frock, made "all of violet", and was put on by being drawn over the head, something in the manner of a cassock. Its skirt was adorned with a border of pomegranates "of violet, and purple, and scarlet twice dyed, with little bells set between", whose sound was to be heard while the high-priest was ministering. The "rational of judgment" was a breastplate fastened on the front of the ephod which it resembled in material and workmanship. It was a span in length and width, and was ornamented with four rows of precious stones on which were inscribed the names of the twelve tribes. It held also the *Urim* and *Thummim* (doctrine and truth) by means of which the high-priest consulted the Lord. The second part of the ephod consisted of a pair of shoulder-pieces, or suspenders, fastened to the bodices in front and behind, and passing over the shoulders. Each of these straps was adorned with an onyx stone engraved with the names of six of the tribes of Israel, so that the high-priest while ministering wore the names of all the tribes, six upon each shoulder (Ex., xxviii, 9-12; xxv, 7; xxxv, 9; xxxix, 16-19). The third part of the ephod was the cincture, of the same material as the main part of the ephod and woven in one piece with it, by which it was girt around the waist (Lev., viii, 7). Some writers maintain that the correct Hebrew reading of Ex., xxviii, 8, speaks of this band of the ephod; the contention agrees with the Syriac and Chaldee versions and with the rendering of Josephus (cf. Ex., xxviii, 27 sq.; xxix, 5; xxxix, 20 sq). It must not be imagined that the ephod was the ordinary garb of the high-priest; he wore it while performing the duties of his ministry (Ex., xxviii, 4; Lev., viii, 7; I K., ii, 28) and when consulting the Lord. Thus David learned through Abiathar's ephod the disposition of the people of Ceila (I K., xxiii, 11 sq.) and the best plan of campaign against the Amalecites (I K., xxx, 7 sqq.). In I K., xiv, 18, it appears that Saul wished the priest Achias to consult the Lord by means of the Ark; but the Septuagint reading of this passage, its context (I K., xiv, 3), and the text of Josephus (Ant. Jud., VI, vi, 3) plainly show that in I K., xiv, 18, we must read "take the ephod" instead of "bring the ark".

The Common Ephod

An ephod was worn by Samuel when serving in the time of Heli (I K., ii, 18), by the eighty-five priests slain by Doeg in the sanctuary of Nob (I K., xxii, 18), and by David dancing before the Ark (II K., vi, 14). This garment is called the linen ephod; its general form may be supposed to have resembled the ephod of the high-priest, but its material was not the celebrated fine white linen, nor does it appear to have been adorned with the variegated colours of the high-priest's ephod. The Septuagint trans-

lators seem to have intended to emphasize the difference between the ephod of the high-priest and that worn by David, for they call this latter the idolatrous ephod.

The Idolatrous Ephod

According to Judges, viii, 26 sq., Gedeon made an ephod out of part of the spoils taken from the Madianites, their golden earlets, jewels, purple raiment, and golden chains. All Israel paid idolatrous worship to this ephod, so that it became a ruin to Gedeon and all his house. Some writers, following the Syriac and Arabic versions, have explained this ephod as denoting a gold casing of an oracular image. But there is no other instance of such a figurative meaning of ephod; besides, the Hebrew verb used to express the placing of the ephod on the part of Gedeon denotes in Judges, vi, 37, the spreading of the fleece of wool. The opinion that Gedeon's ephod was a costly garment like that of the high-priest, is, therefore, preferable.

A.J. Maas

St. Ephraem

St. Ephraem

(EPHREM, EPHRAIM).

Born at Nisibis, then under Roman rule, early in the fourth century; died June, 373. The name of his father is unknown, but he was a pagan and a priest of the goddess Abnil or Abizal. His mother was a native of Amid. Ephraem was instructed in the Christian mysteries by St. James, the famous Bishop of Nisibis, and was baptized at the age of eighteen (or twenty-eight). Thenceforth he became more intimate with the holy bishop, who availed himself of the services of Ephraem to renew the moral life of the citizens of Nisibis, especially during the sieges of 338, 346, and 350. One of his biographers relates that on a certain occasion he cursed from the city walls the Persian hosts, whereupon a cloud of flies and mosquitoes settled on the army of Sapor II and compelled it to withdraw. The adventurous campaign of Julian the Apostate, which for a time menaced Persia, ended, as is well known, in disaster, and his successor, Jovianus, was only too happy to rescue from annihilation some remnant of the great army which his predecessor had led across the Euphrates. To accomplish even so much the emperor had to sign a disadvantageous treaty, by the terms of which Rome lost the Eastern provinces conquered at the end of the third century; among the cities retroceded to Persia was Nisibis (363). To escape the cruel persecution that was then raging in Persia, most of the Christian population abandoned Nisibis *en masse*. Ephraem went with his people, and settled first at Beit-Garbaya, then at Amid, finally at Edessa,

the capital of Osrhoene, where he spent the remaining ten years of his life, a hermit remarkable for his severe asceticism. Nevertheless he took an interest in all matters that closely concerned the population of Edessa. Several ancient writers say that he was a deacon; as such he could well have been authorized to preach in public. At this time some ten heretical sects were active in Edessa; Ephraem contended vigorously with all of them, notably with the disciples of the illustrious philosopher Bardesanes. To this period belongs nearly all his literary work; apart from some poems composed at Nisibis, the rest of his writings-sermons, hymns, exegetical treatises-date from his sojourn at Edessa. It is not improbable that he is one of the chief founders of the theological "School of the Persians", so called because its first students and original masters were Persian Christian refugees of 363. At his death St. Ephraem was borne without pomp to the cemetery "of the foreigners". The Armenian monks of the monastery of St. Sergius at Edessa claim to possess his body.

The aforesaid facts represent all that is historically certain concerning the career of Ephraem (see BOUVY, "Les sources historiques de la vie de S. Ephrem" in "Revue Augustinienne", 1903, 155-61). All details added later by Syrian biographers are at best of doubtful value. To this class belong not only the legendary and occasionally puerile traits so dear to Oriental writers, but also others seemingly reliable, e.g. an alleged journey to Egypt with a sojourn of eight years, during which he is said to have confuted publicly certain spokesmen of the Arian heretics. The relations of St. Ephraem and St. Basil are narrated by very reliable authors, e.g. St. Gregory of Nyssa (the Pseudo?) and Sozomen, according to whom the hermit of Edessa, attracted by the great reputation of St. Basil, resolved to visit him at Caesarea. He was warmly received and was ordained deacon by St. Basil; four years later he refused both the priesthood and the episcopate that St. Basil offered him through delegates sent for that purpose to Edessa. Though Ephraem seems to have been quite ignorant of Greek, this meeting with St. Basil is not improbable; some good critics, however, hold the evidence insufficient, and therefore reject it, or at least withhold their adhesion. The life of St. Ephraem, therefore, offers not a few obscure problems; only the general outline of his career is known to us. It is certain, however, that while he lived he was very influential among the Syrian Christians of Edessa, and that his memory was revered by all, Orthodox, Monophysites, and Nestorians. They call him the "sun of the Syrians," the "column of the Church", the "harp of the Holy Spirit". More extraordinary still is the homage paid by the Greeks who rarely mention Syrian writers. Among the works of St. Gregory of Nyssa (P.G., XLVI, 819) is a sermon (though not acknowledged by some) which is a real panegyric of St. Ephraem. Twenty years after the latter's death St. Jerome mentions him as follows in his catalogue of illustrious Christians: "Ephraem, deacon of the Church of Edessa, wrote many works [*opuscula*] in Syriac, and became so famous that his writings are

publicly read in some churches after the Sacred Scriptures. I have read in Greek a volume of his on the Holy Spirit; though it was only a translation, I recognized therein the sublime genius of the man" (*De viris illustr.*, c. cxv). Theodoret of Cyrus also praised his poetic genius and theological knowledge (*Hist. Eccl.*, IV, xxvi). Sozomen pretends that Ephraem wrote 3,000,000 verses, and gives the names of some of his disciples, some of whom remained orthodox, while others fell into heresy (*Hist. Eccl.*, III, xvi). From the Syrian and Byzantine Churches the fame of Ephraem spread among all Christians. The Roman Martyrology mentions him on 1 February. In their menologies and synaxaria Greeks and Russians, Jacobites, Chaldeans, Copts, and Armenians honour the holy deacon of Edessa.

WORKS OF ST. EPHRAEM

The works of this saint are so numerous and important that it is impossible to treat them here in detail. Let it suffice to consider briefly: (1) the text and the principal versions and editions of his writings; (2) his exegetical writings; (3) his poetical writings.

(1) Texts and Principal Versions and Editions

The Syriac original of Ephraem's writings is preserved in many manuscripts, one of which dates from the fifth century. Through much transcription, however, his writings, particularly those used in the various liturgies, have suffered no little interpolation. Moreover, many of his exegetical works have perished, or at least have not yet been found in the libraries of the Orient. Numerous versions, however, console us for the loss of the originals. He was still living, or at least not long dead, when the translation of his writing into Greek was begun. Armenian writers seem to have undertaken the translation of his Biblical commentaries. The Mechitarists have edited in part those commentaries and hold the Armenian versions as very ancient (fifth century). The Monophysites, it is well known, were wont from an early date to translate or adapt many Syriac works. The writings of Ephraem were eventually translated into Arabic and Ethiopian (translations as yet unedited). In medieval times some of his minor works were translated from the Greek into Slavonic and Latin. From these versions were eventually made French, German, Italian, and English adaptations of the ascetic writings of St. Ephraem. The first printed (Latin) edition was based on a translation from the Greek done by Ambrogio Traversari (St. Ambrose of Camaldoli), and issued from the press of Bartholomew Guldenbeek of Sultz, in 1475. A far better edition was executed by Gerhard Vossius (159-1619), the learned provost of Tongres, at the request of Gregory XIII. In 1709 Edward Thwaites edited, from the manuscripts in the Bodleian Library, the Greek text, hitherto known only in fragments. The Syriac original was unknown in Europe until the fruitful Oriental voyage (1706-07) of the Maronites Gabriel Eva, Elias, and especially Joseph Simeon Assemani (1716-17), which resulted in the discovery of a precious collection of manuscripts in the Nitrian (Egypt) monastery

of Our Lady. These manuscripts found their way at once to the Vatican Library. In the first half of the nineteenth century the British Museum was notably enriched by similar fortunate discoveries of Lord Prudhol (1828), Curzon (1832), and Tattam (1839, 1841). All recent editions of the Syriac original of Ephraem's writings are based on these manuscripts. In the Bibliotheque Nationale (Paris) and the Bodleian (Oxford) are a few Syriac fragments of minor importance. Joseph Simeon Assemani hastened to make the best use of his newly found manuscripts and proposed at once to Clement XII a complete edition of the writings of Ephraem in the Syriac original and the Greek versions, with a new Latin version of the entire material. He took for his own share the edition of the Greek text. The Syriac text was entrusted to the Jesuit Peter Mobarak (Benedictus), a native Maronite. After the death of Mobarak, his labours were continued by Stephanus Evodius Assemani. Finally this monumental edition of the works of Ephraem appeared at Rome (1732-46) in six folio volumes. It was completed by the labours of Overbeck (Oxford, 1865) and Bickell (*Carmina Nisibena*, 1866), while other savants edited newly found fragments (Zingerle, P. Martin, Rubens Duval). A splendid edition (Mechlin, 1882-1902) of the hymns and sermons of St. Ephraem is owing to the late Monsignor T. J. Lamy. However, a complete edition of the vast works of the great Syriac doctor is yet to be executed.

(2) Exegetical Writings

Ephraem wrote commentaries on the entire Scriptures, both the Old and the New Testament, but much of his work has been lost. There is extant in Syriac his commentary on Genesis and on a large portion of Exodus; for the other books of the Old Testament we have a Syriac abridgment, handed down in a catena of the ninth century by the Syriac monk Severus (851-61). The commentaries on Ruth, Esdras, Nehemias, Esther, the Psalms, Proverbs, the Canticle of Canticles, and Ecclesiasticus are lost. Of his commentaries on the New Testament there has survived only an Armenian version. The Scriptural canon of Ephraem resembles our own very closely. It seems doubtful that he accepted the deuterocanonical writings; at least no commentary of his on these books has reached us. On the other hand he accepted as canonical the apocryphal Third Epistle to the Corinthians, and wrote a commentary on it. The Scriptural text used by Ephraem is the Syriac Peshito, slightly differing, however, from the printed text of that very ancient version. The New Testament was known to him, as to all Syrians, both Eastern and Western, before the time of Rabulas, in the harmonized "Diatessaron" of Tatian; it is also this text which serves as the basis of his commentary. His text of the Acts of the Apostles appears to have been one closely related to that called the "Occidental". (J. R. Harris, "Fragments of the Commentary of Ephrem Syrus upon the Diatessaron", London, 1905; J. H. Hill, "A Dissertation on the Gospel Commentary of St. Ephraem the Syrian", Edinburgh, 1896; F. C. Burkitt, "St Ephraim's Quotations

from the Gospel, Corrected and Arranged", in "Texts and Studies", Cambridge, 1901, VII, 2.) The exegesis of Ephraem is that of the Syriac writers generally, whether hellenized or not, and is closely related to that of Aphraates, being, like the latter, quite respectful of Jewish traditions and often based on them. As an exegete, Ephraem is sober, exhibits a preference for the literal sense, is discreet in his use of allegory; in a word, he inclines strongly to the Antiochene School, and reminds us in particular of Theodoret. He admits in Scripture but few Messianic passages in the literal sense, many more, however, prophetic of Christ in the typological sense, which here is to be carefully distinguished from the allegorical sense. It is not improbable that most of his commentaries were written for the Christian Persian school (*Schola Persarum*) at Nisibis; as seen above, he was one of its founders, also one of its most distinguished teachers.

(3) Poetical Writings

Most of Ephraem's sermons and exhortations are in verse, though a few sermons in prose have been preserved. If we put aside his exegetical writings, the rest of his works may be divided into homilies and hymns. The homilies (Syriac *memrê*, i.e. discourses) are written in seven-syllable verse, often divided into two parts of three and four syllables respectively. He celebrates in them the feast of Our Lord and of the saints; sometimes he expounds a Scriptural narrative or takes up a spiritual or edifying theme. In the East the Lessons for the ecclesiastical services (see OFFICE, DIVINE; BREVIARY) were often taken from the homilies of Ephraem. The hymns (Syriac *madrashê*, i.e. instructions) offer a greater variety both of style and rhythm. They were written for the choir service of nuns, and were destined to be chanted by them; hence the division into strophes, the last verses of each strophe being repeated in a kind of refrain. This refrain is indicated at the beginning of each hymn, after the manner of an antiphon; there is also an indication of the musical key in which the hymn should be sung. The following may serve as an illustration. It is taken from an Epiphany hymn (ed. Lamy, I, p. 4).

Air: Behold the month.

Refrain: Glory to Thee from Thy flock on the day of Thy manifestation.

Strophe: He has renewed the heavens, because the foolish ones had adored all the stars | He has renewed the earth which had lost its vigour through Adam | A new creation was made by His spittle | And He Who is all-powerful made straight both bodies and minds

Refrain: Glory to Thee etc.

Mgr. Lamyu, the learned editor of the hymns; noted seventy-five different rhythms and airs. Some hymns are acrostic, i.e., sometimes each strophe begins with a letter of

the alphabet, as in the case with several (Hebrew) metrical pieces in the Bible, or again the first letters of a number of verses or strophes form a given word. In the latter way Ephraem signed several of his hymns. In Syriac poetry St. Ephraem is a pioneer of genius, the master often imitated but never equalled. He is not, however, the inventor of Syriac poetry; this honour seems due to the aforesaid heretic Bardesanes of Edessa. Ephraem himself tells us that in the neighbourhood of Nisibis and Edessa the poems of this Gnostic and his son Harmonius contributed efficaciously to the success of their false teachings. Indeed, if Ephraem entered the same field, it was with the hope of vanquishing heresy with its own weapons perfected by himself. The Western reader of the hymns of Ephraem is inclined to wonder at the enthusiasm of his admirers in the ancient Syriac Church. His "lyricism" is by no means what we understand by that term. His poetry seems to us prolix, tiresome, colourless, lacking in the personal note, and in general devoid of charm. To be just, however, it must be remembered that his poems are known to most readers only in versions, from which of course the original rhythm has disappeared---precisely the charm and most striking feature of this poetry. These hymns, moreover, were not written for private reading, but were meant to be sung by alternating choirs. We have only to compare the Latin psalms as sung in the choir of a Benedictine monastery with the private reading of them by the priest in the recitation of his Breviary. Nor must we forget that literary taste is not everywhere and at all times the same. We are influenced by Greek thought more deeply than we are aware or like to admit: In literature we admire most the qualities of lucidity, sobriety, and varied action. Orientals, on the other hand, never weary of endless repetition of the same thought in slightly altered form; they delight in pretty verbal niceties, in the manifold play of rhythm and accent, rhyme and assonance, and acrostic. In this respect it is scarcely necessary to remind the reader of the well-known peculiarities and qualities of Arabic poetry.

As stated above there is no complete edition of the works of St. Ephraem; nor is there any satisfactory life of the great doctor. Mention has been made of the Assemani edition of his works: *Opera omnia quae extant graece syriace latine in sex tomos distributa* (Rome, 1732-46). It is considered imperfect from the textual standpoint, while the Latin translation is rather a paraphrase. OVERBECK, *S. Ephraemi Syri opera selecta* (Oxford, 1865); BICKELL, *Carmina Nisibena* (Leipzig, 1866); LAMY, *Hymni et Sermones* (Mechlin, 1882-86 and 1902). Among the versions it may suffice to mention the Armenian version edited by the MECHITARISTS (Venice, 1856, 1893). See also BICKELL, *Conspectus rei Syrorum literariae* (Munster, 1871); WRIGHT, *A Short History of Syriac Literature* (London, 1894); Zingerle in *Kirchenlex.*, s. v. Ephraem; especially BARDENHEWER, *Patrology*, tr. SHAHAN (Freiburg im Br., 1908), 387-93, excellent appreciation and extensive bibliography; RODIGER-NESTLE in *Realencyk.*

JEROME LABOURT

Ephraim of Antioch

Ephraim of Antioch

(*Ephraimios*).

One of the defenders of the Faith of Chalcedon (451) against the Monophysites, b. at Amida in Mesopotamia; d. in 545. He was Count of the East (Comes Orientis) under Justinian I. In 527 he succeeded Euphrasius as Patriarch of Antioch. Most of his many works are lost. We know the titles of them, however, from Anastasius Sinaita (c. 700), St. John Damascene (d. about 754) or whoever was the author of the "Sacra Parallela", and especially Photius (d. 891). Anastasius (P.G., LXXXIX, 1185-1188) quotes passages from a work of Ephraim against Severus, the Monophysite Patriarch of Antioch (512-519). The "Sacra Parallela" give a short passage from "St. Ephraim, Archbishop of Antioch", taken from a work "On John the Grammarian and the Synod" (Tit. lxi, cf. P.G., LXXXVI, 2, 2104-2109). Photius (P.G., CIII, 957-1024) speaks of four books by Ephraim. The first consisted of sermons and letters, the second, and third contained a treatise against Severus in three parts and an answer to five questions about Genesis addressed to the author by a monk named Anatolius. The fragments quoted by Photius represent practically all that is left of Ephraim's writings. Cardinal Mai was able to add a few more from a manuscript *Catena* in the Vatican library (P.G., LXXXVI, loc. cit.). Krumbacher (*Byz. Litt.*, loc. cit.) mentions a few other fragments in the Paris library, etc., and considers that Ephraim would deserve the same reputation as Leontius Byzantinus if more of his work had been preserved. He had extensive knowledge of Greek Fathers and follows chiefly St. Cyril of Alexandria in his Christology.

KRUMBACHER, *Byzantinische Litteratur* (Munich, 1897), 57; BARDENHEWER, *Patrology*, tr. SHAHAN (St. Louis, 1908), 551.

ADRIAN FORTESCUE

Epicureanism

Epicureanism

This term has two distinct, though cognate, meanings. In its popular sense, the word stands for a refined and calculating selfishness, seeking not power or fame, but the pleasures of sense, particularly of the palate, and those in company rather than solitude. An epicure is one who is extremely choice and delicate in his viands. In the other sense, Epicureanism signifies a philosophical system, which includes a theory of conduct, of nature, and of mind.

HISTORY

Epicurus, from whom this system takes its name, was a Greek, born at Samos 341 B.C., who, in 307 B.C., founded a school at Athens, and died 270 B.C. The Stoic School, diametrically opposite to this, was founded about the same time, probably 310 B.C. Thus these two systems, having for their respective watchwords *Pleasure* and *Duty*, sprang up within the first generation after Aristotle (d. 322 B.C.), each of them holding a half-truth and by exaggeration turning it into falsehood. The Epicurean School was rather a practical discipline than a habit of speculation. The master laid down his principles dogmatically, as if they must be evident as soon as stated, to any one not foolish. His disciples were made to learn his maxims by heart; and they acquired a spirit of unity more akin to that of a political party, or of a sect, than to the mere intellectual agreement of a school of philosophers. About a century and a quarter after the death of its founder, the system was introduced into Rome, and there, as well as in its native country, it attracted in the course of time a number of adherents such as moved the astonishment of Cicero. It had the fortune to be adopted by the finest of didactic poets, Lucretius (91-51 B.C.), and was expounded by him in a poem (*De rerum naturâ*) with a beauty of expression and a fervour of eloquence worthy of a nobler theme. In the latter half of the second century, when Marcus Aurelius was founding chairs of philosophy at Athens, that emperor, himself a Stoic, recognized the Epicurean (together with his own, and the Platonic, and the Aristotelic systems) as one of the four great philosophies to be established and endowed on a footing of equality. In modern times Epicureanism has had many theoretical as well as practical adherents. In the seventeenth century, when Aristoteleanism and Scholasticism were assailed by the champions of the new sciences, Gassendi (q.v.) selected Epicurus for his master; but he seems to have been attracted chiefly by the physics, and to have aimed at reforming the moral theory so as to make it tolerable to a Christian. The numerous editions of the poem

of Lucretius which the present age is producing may be taken to indicate a sympathy with the philosophy expounded in it.

EPICUREAN ETHICS

Philosophy was described by Epicurus as "the art of making life happy", and he says that "prudence is the noblest part of philosophy". His natural philosophy and epistemology seem to have been adopted for the sake of his theory of life. It is, therefore, proper that his ethics should first be explained. The purpose of life, according to Epicurus, is personal happiness; and by happiness he means not that state of well-being and perfection of which the consciousness is accompanied by pleasure, but pleasure itself. Moreover, this pleasure is sensuous, for it is such only as is attainable in this life. This pleasure is the immediate purpose of every action. "Habituate yourself", he says,

to think that death is nothing to us; for all good and evil is in feeling; now death is the privation of feeling. Hence, the right knowledge that death is nothing to us makes us enjoy what there is in this life, not adding to it an indefinite duration, but eradicating the desire of immortality.

His idea of the pleasurable differs from that of the Cyrenaic School which preceded him. The Cyrenaics looked to the momentary pleasures of gaiety and excitement. The pleasure of Epicurus is a state, equably diffused, "the absence of [bodily] pain and [mental] anxiety".

That which begets the pleasurable life is not [sensual indulgence] but a sober reason which searches for the grounds of choosing and rejecting, and which banishes those doctrines through which mental trouble, for the most part, arises.

The wise man will accordingly desire "not the longest life, but the most pleasurable". It is for the sake of this condition of permanent pleasure, or tranquillity, that the virtues are desirable. "We cannot live pleasantly without living prudently, gracefully, and justly; and we cannot live prudently gracefully, and justly, without living pleasantly" in consequence; for "the virtues are by nature united with a pleasurable life; and a pleasurable life cannot be separated from these." The virtues, in short, are to be practiced not for their own sake, but solely as a means of pleasure, "as medicine is used for the sake of health". In accordance with this view, he says that "friendship is to be pursued by the wise man only for its utility; but he will begin, as he sows the field in order to reap". "The wise man will not take any part in public affairs"; moreover, "the wise man will not marry and have children". But "the wise man will be humane to his slaves".

"He will not think all sinners to be equally bad, nor all philosophers to be equally good." That is, apparently, he will not have any very exacting standard, and will neither believe very much in human virtue, nor be very much surprised at the discovery of human frailty. In this system, "prudence is the source of all pleasure and of all virtue".

The defects of this theory of life are obvious. In the first place, as to the matter of fact, experience shows that happiness is not best attained by directly seeking it. The selfish are not more happy, but less so, than the unselfish. In the next place the theory altogether destroys virtue as virtue, and eliminates the idea and sentiment expressed by the words "ought", "duty", "right", and "wrong". Virtue, indeed tends to produce the truest and, highest pleasure; all such pleasure, so far as it depends upon ourselves, depends upon virtue. But he who practises virtue for the sake of the pleasure alone is selfish, not virtuous, and he will never enjoy the pleasure, because he has not the virtue. A similar observation may be made upon the Epicurean theory of friendship. Friendship for the sake of advantage is not true friendship in the proper sense of the word. External actions, apart from affection, cannot constitute friendship; that affection no one can feel merely because he judges it would be advantageous and pleasurable; in fact he cannot know the pleasure until he first feels the affection. If we consider the Epicurean condemnation of patriotism and of the family life, we must pronounce a still severer censure. Such a view of life is the meanest form of selfishness leading in general to vice. Epicurus, perhaps, was better than his theory; but the theory itself, if it did not originate in coldness of heart and meanness of spirit, was extremely well suited to encourage them. If sincerely embraced and consistently carried out, it undermined all that was chivalrous and heroic, and even all that was ordinarily virtuous. Fortitude and justice, as such, ceased to be objects of admiration, and temperance sank into a mere matter of calculation. Even prudence itself, dissociated from all moral quality became a mere balancing between the pleasures of the present and of the future.

THEOLOGY

Epicurus said that "it was not impiety to deny the gods of the multitude, but it was impiety to think of the gods as the multitude thought"; a sound principle, but one which he wrongly applied, since he got rid of what was true as well as of what was corrupt in the vulgar religion. Fear of the gods was an evil to be eradicated, as incompatible with tranquillity. As to their nature, the gods are immortal, but material, like every other being. He seems to have held that there was one supreme being; but this god was not the creator, scarcely the orderer, of the universe, the gods being only a part of the All. Nor is there a Providence, for an interest in human affairs would be inconsistent with perfect happiness. In short, the gods are magnified Epicurean philosophers.

NATURAL PHILOSOPHY

The physics of Epicurus are in a General sense atomic. He claimed originality for his theory, asserting that it began with his reflections upon a passage in Hesiod. As he read in school that all things came from chaos, he asked, What is chaos?--a question which his teacher could not answer. It is generally held, however, that he really learned his atomism from the Democritean philosophy, modifying it in one important respect; for he supposes that the atoms in falling through empty space collide by virtue of a *self-determining power*, or rather an indetermination owing to which it is possible for them by chance to swerve a little from the vertical direction.

BIOLOGY

In this Epicurus simply followed the view of Empedocles, that, first, all sorts of living things and animals, well or ill organized, were evolved from the earth and that those survived which were suited to preserve themselves and reproduce their kind.

ANTHROPOLOGY

The anthropology of Lucretius may be supposed to have been derived, like his physics and biology, from Epicurus. According to the Lucretian theory men were originally savage; the primitive condition was one of mutual war; in this condition men were like the wild beasts in strength and cunning; civil society was formed under the pressure of the evils of anarchy. The reader recognizes here the ideas indicated by the eighteenth-century phrases "state of nature" and "social contract". The "golden age" is a dream.

LOGIC

The Epicurean logic is criterional. The test of truth practically is the pleasant and the painful belief. Theoretically, their criterion is sensation. Sensation never is deceptive; the error lies in our judgment. Dreams, the ravings of fever or lunacy, the delirium of the drunkard are true in their own way. Besides sensation the human mind has also *notions*, or anticipations (*prolépseis*), as when, seeing an object at a distance, one wonders whether it is a man or a tree. These notions are the results left by previous sensations. The notion does not appear to differ from the internal sense of a brute, such as enables a dog, for example, to welcome strangers belonging to the profession of his master, and to bark furiously at a beggar that he has never seen before. The understanding, then, does not differ essentially from the internal senses.

PSYCHOLOGY

The human soul is material and mortal, being composed of a finer kind of atoms, resembling those of air or fire, but even more subtle. It is the bodily organism that holds together the atoms composing the soul. Yet the human will is free. "Better were

it to accept all the legends of the gods, than to make ourselves slaves to the fate of the natural philosophers." Fatalism, which to minds of a stoical disposition seemed a source of strength, was to those of an Epicurean temper simply a source of unpleasantness and helplessness. The freedom asserted by the Epicureans is not rational freedom in the true sense of the word. It does not consist in the power of choosing the right and the noble in preference to the pleasant. It is little better than physical contingency, and may be described as Casualism. The whole philosophy may well be described in a trenchant phrase of Macaulay as "the silliest and meanest of all systems of natural and moral philosophy".

M.J. RYAN

Epiklesis

Epiklesis

Epiklesis (Lat. *invocatio*) is the name of a prayer that occurs in all Eastern liturgies (and originally in Western liturgies also) after the words of Institution, in which the celebrant prays that God may send down His Holy Spirit to change this bread and wine into the Body and Blood of His Son. This form has given rise to one of the chief controversies between the Eastern and Western Churches, inasmuch as all Eastern schismatics now believe that the Epiklesis, and not the words of Institution, is the essential form (or at least the essential complement) of the sacrament.

Form of the Epiklesis

It is certain that all the old liturgies contained such a prayer. For instance, the Liturgy of the Apostolic Constitutions, immediately after the recital of the words of Institution, goes on to the Anamnesis -- "Remembering therefore His Passion..." -- in which occur the words: "thou, the God who lackest nothing, being pleased with them (the Offerings) for the honour of Thy Christ, and sending down Thy Holy Spirit on this sacrifice, the witness of the Passion of the Lord Jesus, to manifest (*opos apophene*) this bread as the Body of Thy Christ and this chalice as the Blood of Thy Christ..." (Brightman, Liturgies Eastern and Western, I, 21). So the Greek and Syrian Liturgies of St. James (*ibid.*, 54, 88-89), the Alexandrine Liturgies (*ibid.*, 134, 179), the Abyssinian Rite (*ibid.*, 233), those of the Nestorians (*ibid.*, 287) and Armenians (*ibid.*, 439). The Epiklesis in the Byzantine Liturgy of St. John Chrysostom is said thus: "We offer to Thee this reasonable and unbloody sacrifice; and we beg Thee, we ask Thee, we pray Thee that Thou, sending down Thy Holy Spirit on us and on these present gifts" (the Deacon says: "Bless, Sir the holy bread") "make this bread into the Precious Body of Thy Christ" (Deacon: "Amen. Bless, Sir, the holy chalice"): "and that which is in this chalice, the Precious Blood of Thy Christ" (Deacon: "Amen. Bless, Sir, both"),

"changing [*metabalon*] them by Thy Holy Spirit" (Deacon: "Amen, Amen, Amen."). (Brightman, *op. cit.*, I 386-387).

Nor is there any doubt that the Western rites at one time contained similar invocations. The Gallican Liturgy had variable forms according to the feast. That for the Circumcision was: "Hæc nos, Domine, instituta et præcepta retinentes suppliciter oramus uti hoc sacrificium suscipere et benedicere et sanctificare digneris: ut fiat nobis eucharistia legitima in tuo Filii tui nomine et Spiritus sancti, in transformationem corporis ac sanguinis domini Dei nostri Jesu Christi unigeniti tui, per quem omnia creas..." (Duchesne, "Origines du culte chrétien", 2nd ed., Paris, 1898, p. 208, taken from St. Germanus of Paris, d. 576). There are many allusions to the Gallican Invocation, for instance St. Isidore of Seville (*De eccl. officiis*, I, 15, etc.). The Roman Rite too at one time had an Epiklesis after the words of Institution. Pope Gelasius I (492-496) refers to it plainly: "Quomodo ad divini mysterii consecrationem coelestis Spiritus adveniet, si sacerdos...criminosus plenus actionibus reprobetur?" ("Epp. Fragm.", vii, in Thiel, "Epp. Rom. Pont.", I, 486). Watterich (*Der Konsekrationsmoment im h. Abendmahl*, 1896, pp. 133 sq.) brings other evidences of the old Roman Invocation. he (p. 166) and Drews (*Entstehungsgesch. des Kanons*, 1902, p. 28) think that several secrets in the Leonine Sacramentary were originally Invocations (see article CANON OF THE MASS). Of the essential clause left out -- our prayer: "Supplices te rogamus" (Duchesne, *op. cit.*, 173-5). It seems that an early insistence on the words of Institution as the form of Consecration (see, for instance, Pseudo-Ambrose, "De Mysteriis", IX, 52, and "De Sacramentis", IV, 4, 14-15, 23; St. Augustine, Sermon 227) led in the West to the neglect and mutilation of the Epiklesis.

Origin

It should be noticed that the Epiklesis for the Holy Eucharist is only one of many such forms. In other sacraments and blessings similar prayers were used, to ask God to send His Holy Spirit to sanctify the matter. There was an Epiklesis for the water of baptism. Tertullian (*De bapt.*, iv), Optatus of Mileve ("De schism. Don.", III, ii, VI, iii, in "Corp. Script. eccl. Latin.", vol. XXVI, 69, 148, 149), St. Jerome (*Contra Lucif.*, vi, vii), St. Augustine (*De bapt.*, V, xx, xxvii), in the West; and St. Basil (*De Spir. Sancto*, xv, 35), St. Gregory of Nyssa (*Orat. cat. magn.* xxxiii), and St. Cyril of Jerusalem (*Cat.* iii, 3), in the East, refer to it. In Egypt especially, Epiklesis were used to bless wine, oil, milk, etc. In all these cases (including that of the Holy Eucharist) the idea of invoking the Holy Ghost to sanctify is a natural one derived from Scripture (Joel, ii, 32; Acts, ii, 21: *ho an epikalesetai to onoma kyriou* . . .; cf. Rom., x, 13; I Cor., i, 2). That in the Liturgy the Invocation should occur after the words of Institution is only one more case of many which show that people were not much concerned about the exact instant at which all the essence of the sacrament was complete. They looked upon the whole

Consecration-prayer as one simple thing. In it the words of Institution always occur (with the doubtful exception of the Nestorian Rite); they believed that Christ would, according to His promise, do the rest. But they did not ask at which exact moment the change takes place. Besides the words of Institution there are many other blessings, prayers, and signs of the cross, some of which came before and some after the words, and all, including the words themselves, combine to make up the one Canon of which the effect is Transubstantiation. So also in our baptism and ordination services, part of the forms and prayers whose effect is the sacramental grace comes, in order of time, after the essential words. It was not till Scholastic times that theologians began to discuss the minimum of form required for the essence of each sacrament.

The Controversy

The Catholic Church has decided the question by making us kneel and adore the Holy Eucharist immediately after the words of Institution, and by letting her old Invocation practically disappear. On the other hand Orthodox theologians all consider the Epiklesis as being at least an essential part of the Consecration. In this question they have two schools. Some, Peter Mogilas, for instance, consider the Epiklesis alone as consecrating (Kimmel, *Monumenta fidei eccl. orient.*, Jena, 1850, I, 180), so that presumably the words of Institution might be left out without affecting the validity of the sacrament. But the greater number, and now apparently all, require the words of Institution too. They must be said, not merely historically, but as the first part of the essential form; they sow as it were the seed that comes forth and is perfected by the Epiklesis. Both elements, then, are essential. This is the theory defended by their theologians at the Council of Florence (1439). A deputation of Latins and Greeks was appointed then to discuss the question. The Greeks maintained that both forms are necessary, that Transubstantiation does not take place till the second one (the Epiklesis) is pronounced, and that the Latin "Supplices te rogamus" is a true Epiklesis having the same effect as theirs. On the other hand the Dominican John of Torquemada defended the Western position that the words of Institution alone and at once consecrate (Hardouin, IX, 977 sqq.). The decree of the council eventually defined this "quod illa verba divina Salvatoris omnem virtutem transsubstantiationis habent," *ibid.*; see also the decree for the Armenians: "forma huius sacramenti sunt verba Salvatoris" in Denziger, 10th ed., no. 698-old no. 593). Cardinal Bessarion afterwards wrote a book "De Sacramento Eucharistiæ et quibus verbis Christi corpus conficitur, 1462, in P. G., CLXI, 494-525), to whom Marcus Eugenicus of Ephesus answered in a treatise with a long title: "That not only by the sound of the Lord's words are the divine gifts sanctified, but (in addition) by the prayer after these and by the consecration of the priest in the strength of the Holy Ghost."

The official Euchologion of the Orthodox Church has a note after the words of Institution to explain that: "Since the demonstrative pronouns: This is my body, and again: This is my blood, do not refer to the Offerings that are present, but to those which Jesus, taking in His hands and blessing, gave to His Disciples; therefore those words of the Lord are repeated as a narrative [*diegematikos*], and consequently it is superfluous to show the Offerings (by an elevation) and indeed contrary to the right mind of the Eastern Church of Christ" (ed. Venice, 1898, p. 63). This would seem to imply that Christ's words have no part in the form of the sacrament. On the other hand Dositheus in the Synod of Jerusalem (1672) apparently requires both words of Institution and Epiklesis: "It [the Holy Eucharist] is instituted by the essential word [*remati uparktiko*, i.e. Christ's word] and sanctified by the invocation of the Holy Ghost" (Conf. Dosithei, in Kimmel, op. cit., I, 451), and this seems to be the common theory among the Orthodox in our time. Their arguments for the necessity of the Epiklesis as at any rate the perfecting part of the form are:

- that the context shows the words of Institution to be used only as a narrative;
- that otherwise the Epiklesis would be superfluous and deceptive: its very form shows that it consecrates;
- tradition.

The first and second points are not difficult to answer. The words of Institution are certainly used historically ("qui pridie quam pateretur, sumpsit panem...ac dixit: hoc est enim corpus meum," as well as all Eastern forms, is an historical account of what happened at the Last Supper); but this is no proof that they may not be used effectively and with actual meaning too. Given the intention of so doing, they necessarily would be so used. The second point is already answered above: the succession of time in sacramental prayers necessarily involves nothing but a dramatic representation of what presumably really takes place in one instant (this point is further evolved by Fortescue, "The Orth. Eastern Church," pp. 387 sq.). As for tradition, in any case it is only a question of Eastern tradition. In the West there has been a great unanimity in speaking of the words of Institution as consecrating, especially since St. Augustine; and the disappearance of any real Epiklesis in our Liturgy confirms this. Among Eastern Fathers there is less unanimity. Some, notably St. Cyril of Jerusalem, refer the consecration to the action of the Holy Ghost in a way that seems to imply that the Epiklesis is the moment (St. Cyril, Cat. xix, 7; xxi, 3; xxiii, 7, 19; cf. Basil, "De Spir. Sancto," xxvii sq.); others, as St. John Chrysostom (Hom. i, De prod. Iudæ, 6: "He [Christ] says: This is my body. This word changes the offering"; cf. Hom. ii, in II Tim., i), quite plainly

refer Consecration to Christ's words. It should be noted that these Fathers were concerned to defend the Real Presence, not to explain the moment at which it began, that they always thought of the whole Eucharistic prayer as one form, containing both Christ's words and the Invocation, and that a statement that the change takes place by the power of the Holy Ghost does not necessarily show that the writer attaches that change to this special prayer. For instance St. Irenæus says that "the bread which receives the Invocation of God is not common bread, but a Eucharist" (*Adv. hæc.*, IV, xviii, 5), and, yet immediately before (IV, xviii, 4), he explains that that bread is the Body of Christ over which the earlier part of the Anaphora is said. The final argument against the Epiklesis as Consecration-form is the account of the Last Supper in the Gospels. We know what Christ did then, and that He told us to do the same thing. There is no hint of an Epiklesis at the Last Supper.

It may finally be noted that later, in the West too (since the sixteenth century especially), this question aroused some not very important discussion. The Dominican Ambrose Catharinus (sixteenth century) thought that our Consecration takes place at an Epiklesis that precedes the recital of Christ's words. This Epiklesis he thinks to be the prayer "Quam oblationem." A few others (including Renaudot) more or less shared his opinion. Against these Hoppe (*op. cit. infra*) showed that in any case the Epiklesis always follows the words of Institution and that our "Quam Oblationem" cannot be considered one at all. He and others suggest a mitigated theory, according to which the Invocation (in our case the "Supplice te rogamus") belongs not to the essence of the sacrament, but in some way to its (accidental) integrity. John of Torquemada at the Council of Florence (*Hardouin*, IX, 976), Suarez (*De Sacram.*, disp. lviii, 3), Bellarmine (*De Euch.*, iv, 14), Lugo (*De Euch.*, disp. xi, 1) explain that the Invocation of the Holy Ghost is made rather that He may sanctify our reception of the Holy Eucharist. This is a theoretical explanation sought out to account for the fact of the Epiklesis, without giving up our insistence on the words of Institution as alone consecrating. Historically and according to the text of the old invocations they must rather be looked upon as dramatically postponed expressions of what happens at one moment. There are many like cases in our rite (examples quoted in "The Orth. Eastern Church," *loc. cit.*).

ADRIAN FORTESCUE

Epiphania

Epiphania

A titular see in Cilicia Secunda, in Asia Minor, suffragan of Anazarbus. This city is mentioned by many ancient geographers, Ptolemy, Pliny, Stephanus Byzantius, etc.

It was formerly called Oiniandos and afterwards Epiphania, after Antiochus IV Epiphanes, King of Syria (175-164 B.C.). Cicero once encamped there, and Pompey settled there some of the pirates he had subdued. The city had a special era beginning in A.D. 37 (Barthélemy, *Numismatique ancienne*, 247). Seven bishops of Epiphania are known, from 325 to 692 (Lequien, *Oriens christ.*, II, 895). The first, St. Amphion, suffered during the persecution of Diocletian and was present at the Council of Nicaea (325). Epiphania was the birthplace of George, the usurping Bishop of Alexandria in the fourth century. Its ruins stand near Piyas, in the sanjak of Djebel-i-Bereket, vilayet of Adana; there are remains of walls, a temple, an acropolis, an aqueduct, and many houses, all built in basalt. Nearby are the celebrated "Cilician Gates" and the battlefield of Issus (Ramsay, *Asia Minor*, 386; Alishan, *Sissouan*, Venice, 1899, 475).

Another Epiphania was a suffragan of Damascus. It is the modern Hamah, on the Orontes (about 60,000 inhabitants). Jesuits and native Mariamet sisters care for its Catholic population, who are, for the most part, Greek Melchites. For these and for Catholic Syrians, Hamah is united with Emesa (q.v.).

S. VAILHÉ

Epiphanius

Epiphanius

Surnamed SCHOLASTICUS, or in modern terms, THE PHILOLOGIST, a translator of various Greek works in the middle of the sixth century of the Christian Era. He prepared for Cassiodorus the text of the "Historia Tripartita", a compilation of the works of Socrates, Sozomen, and Theodoret. We also have his translation of the commentary of Didymus on the Seven Catholic Epistles and that of the "Codex encyclicus", a list of the adhesions of the bishops of the East to the decrees of the Council of Chalcedon, a list drawn up in 458 by the order of the Emperor Leo I. Epiphanius made several additions to it. He also translated the commentary of Didymus on the Book of Proverbs and that of Epiphanius of Salamina on the Canticle of Canticles. These works are either lost or as yet undiscovered. "He belongs", says Julicher, "to the group who, like Dionysius Exiguus, Mutianus, and many unknown others, satisfied the needs of the Latins for translations of Greek theologians.

PAUL LEJAY

Epiphanius of Constantinople

Epiphanius of Constantinople

Died 535. Epiphanius succeeded John II (518-20) as Patriarch of Constantinople. It was the time of the reaction against Monophysitism in the Eastern Empire that followed the accession of Justin I (518-27). Justin was Catholic; he let the Henoticon (482) of his predecessor Zeno (474-91) quietly drop, and very soon after his accession he caused a synod of forty bishops to meet under John II at the capital, in order to proclaim a general acceptance of the decrees of Chalcedon throughout the empire, the restoration of Catholic, and the deposition of Monophysite, bishops (P.G., LXXXVI, I, 785). The same synod reopened negotiations with the Roman See after the schism of Acacius (484-519). The reigning pope was Hormisdas (514-23), and it was on this occasion that he composed his famous formula. On Easter Day, 24 March, 519, the reunion was proclaimed. Severus of Antioch and the other Monophysite leaders fled to Egypt. The papal legates remained at Constantinople till 520. In that year the Patriarch John died, and Epiphanius was elected as his successor. He was then given authority from the pope to reconcile all schismatics and Monophysites who retracted their errors and signed the formula. Epiphanius signed it himself in the first place (Mansi, VIII, 502 sqq.).

Four letters from Epiphanius to Hormisdas are extant, with the pope's letters to him (P.L., LXIII). In the first, from Hormisdas to Epiphanius (col. 493), the pope complains that he has received as yet no letter and no legate to announce the patriarch's accession. In the second letter (l.c.) the pope requires that three repentant Monophysite bishops, Elias, Thomas, and Nicostratus, should be restored to their sees, and he appoints Epiphanius to restore them. Epiphanius then writes to Hormisdas (col. 494-95) to announce his succession to the See of Constantinople, as the pope had demanded. He excuses himself for his delay by explaining the difficult circumstances and the disorder that still remain since the Monophysite troubles, and protests his exceeding desire for communion with the Roman See: "It is my special prayer, most blessed Father, to be united to you and to embrace the Divine dogmas which were left by the holy Apostles especially to the holy See of Peter, chief of the Apostles; for I count nothing more precious than them" (l.c.). He then draws up a very orthodox profession of faith according to the decrees of Ephesus and Chalcedon; he accepts all the dogmatic letters of St. Leo I, and declares that he will never name in his diptychs anyone who is condemned by the pope. His second letter (col. 497-99) to Hormisdas praises the emperor's zeal for the Faith, explains the case of many bishops in Pontus, Asia, and the (civil) "diocese" of the East, whom Epiphanius wishes to receive back into communion

now that they have renounced Monophysitism, and mentions a jewelled chalice and other gifts he sends to the pope (this letter is dated 520). Hormisdas answers (col. 505-6), exhorting the patriarch to persevere in reconciling Monophysites and thanking him for his presents. Epiphanius' third letter relates that a number of Eastern bishops have petitioned the emperor for union with Rome (col. 506-7), and the fourth (col. 507) praises Paulinus, whom the pope had sent to Constantinople as his legate. Migne (P.G., LXXXVI, Pt. I, 783-86) gives the text of the condemnation of Severus and Peter of Antioch, made by a synod of Constantinople held under Epiphanius. Assemani (Bibl. Orient., I, 619) gives a list of forty-five canons drawn up by this same synod. Epiphanius was succeeded by Anthimus I.

ADRIAN FORTESCUE

Epiphany

Epiphany

Known also under the following names: (1) *ta epiphania*, or *he epiphaniōs*, sc. *hemera* (rarely *he epiphaneia*: though, e.g. in Athanasius, *he somatike epiphaneia* occurs); *theophaneia*: *dies epiphaniarum*; *festivitas declarationis*, *manifestationis*; *apparitio*; *acceptio*. (2) *hemera ton photon*: *dies luminum*; *dies lavacri*. (3) *phagiphania*, *Bethphania*; etc. (4) *Festum trium regum*: whence the Dutch *Drie-koningendag* Danish *Hellig-trekongersdag*, etc. (5) Twelfth Day, Swedish *Trettondedag*, etc. -- The meaning of these names will be explained below. The feast was called among the Syrians *denho* (up-going), a name to be connected with the notion of rising light expressed in Luke. I, 78. The name *Epiphania* survives in Befana, the great fair held at that season in Rome; it is difficult to say how closely the practice then observed of buying all sorts of earthenware images, combined with whistles, and representing some type of Roman life, is to be connected with the rather similar custom in vogue during the December feast of the Saturnalia. For the earthenware or pastry *sigillaria* then sold all over Rome, see Macrobius; s. I, x, xxiv; II, xlix; and Brand, "Pop. Ant.", 180, 183.

I. HISTORY

As its name suggests, the Epiphany had its origin in the Eastern Church. There exists indeed a homily of Hippolytus to which (in one manuscript only) is affixed the lemma *i eis ta hagia theophaneia* [not *epiphaneia*: Kellner]; it is throughout addressed to one about to be baptized, and deals only with the Sacrament of Baptism. It was edited by Bonwetsch and Achelis (Leipzig, 1897); Achelis and others consider it spurious. The first reference about which we can feel certain is in Clement (Strom., I, xxi, 45, in P.G., VIII, 888), who writes: "There are those, too, who over-curiously assign to the

Birth of Our Saviour not only its year but its day, which they say to be on 25 Pachon (20 May) in the twenty-eighth year of Augustus. But the followers of Basilides celebrate the day of His Baptism too, spending the previous night in readings. And they say that it was the 15th of the month Tybi of the 15th year of Tiberius Caesar. And some say that it was observed the 11th of the same month." Now, 11 and 15 Tybi are 6 and 10 January, respectively. The question at once arises; did these Basilidians celebrate Christ's Nativity and also His Baptism on 6 and 10 January, or did they merely keep His Baptism on these days, as well as His Nativity on another date? The evidence, if not Clement's actual words, suggests the former. It is certain that the Epiphany festival in the East very early admitted a more or less marked commemoration of the Nativity, or at least of the *Angeli ad Pastores*, the most striking "manifestation" of Christ's glory on that occasion. Moreover, the first actual reference to the ecclesiastical feast of the Epiphany (Ammianus Marcellinus, XXI, ii), in 361, appears to be doubled in Zonaras (XIII, xi) by a reference to the same festival as that of Christ's Nativity. Moreover, Epiphanius (Haer., li, 27, in P.G., XLI, 936) says that the sixth of January is *hemera genethlion toutestin epiphanon*, Christ's Birthday, i.e. His Epiphany. Indeed, he assigns the Baptism to 12 Athyr, i.e. 6 November. Again in chapters xxviii and xxix (P.G., XLI, 940 sq.) he asserts that Christ's Birth, i.e. Theophany, occurred on 6 January. as did the miracle at Cana, in consequence of which water, in various places (Cibyra, for instance), was then yearly by a miracle turned into wine, of which he had himself drunk. It will be noticed, first, if Clement does not expressly deny that the Church celebrated the Epiphany in his time at Alexandria, he at least implies that she did not. Still less can we think that 6 January was then observed by the Church as holy. Moreover, Origen, in his list of festivals (Contra Celsum, VIII, xxii, P.G., XI, 1549), makes no mention of it.

Owing no doubt to the vagueness of the name *Epiphany*, very different manifestations of Christ's glory and Divinity were celebrated in this feast quite early in its history, especially the Baptism, the miracle at Cana, the Nativity, and the visit of the Magi. But we cannot for a moment suppose that in the first instance a festival of manifestations in general was established, into which popular local devotion read specified meaning as circumstances dictated. It seems fairly clear that the Baptism was the event predominantly commemorated. The Apostolic Constitutions (VIII, xxxiii; cf. V, xii) mention it. Kellner quotes (cf. Selden, de Synedriis, III, xv, 204, 220) the oldest Coptic Calendar for the name *Dies baptismi sanctificati*, and the later for that of *Immersio Domini* as applied to this feast. Gregory of Nazianzus identifies, indeed, *ta theophania* with *he hagia tou Christou genesis*, but this sermon (Orat. xxxviii in P.G., XXXVI, 312) was probably preached 25 Dec., 380; and after referring to Christ's Birth, he assures his hearers (P.G., 329) that they shall shortly see Christ baptized. On 6 and 7 Jan., he preached orations xxxix and xl (P.G., loc. cit.) and there declared (col. 349) that the

Birth of Christ and the leading of the Magi by a star having been already celebrated, the commemoration of His Baptism would now take place. The first of these two sermons is headed *eis ta hagia phota*, referring to the lights carried on that day to symbolize the spiritual illumination of baptism, and the day must carefully be distinguished from the Feast of the Purification, also called *Festum luminum* for a wholly different reason. Chrysostom, however, in 386 (see CHRISTMAS) preached "Hom. vi in B: Philogonium" where (P.G., XLVIII, 752) he calls the Nativity the parent of festivals, for, had not Christ been born, neither would He have been baptized, *hoper esti ta theophania*. This shows how loosely this title was used. (Cf. Chrys., "Hom. in Bapt. Chr.", c. ii, in P.G., XLIX, 363; A.D. 387). Cassian (Coll., X, 2, in P.L., XLIX; 820) says that even in his time (418-427) the Egyptian monasteries still celebrated the Nativity and Baptism on 6 January.

At Jerusalem the feast had a special reference to the Nativity owing to the neighbourhood of Bethlehem. The account left to us by Etheria (Silvia) is mutilated at the beginning. The title of the subsequent feast, *Quadragesimae de Epiphania* (Perigrin. Silviae, ed. Geyer, c.xxvi), leaves us, however, in no doubt as to what she is describing. On the vigil of the feast (5 Jan.) a procession left Jerusalem for Bethlehem and returned the following morning. At the second hour the services were held in the splendidly decorated Golgotha church, after which that of the Anastasis was visited. On the second and third days this ceremony was repeated; on the fourth the service was offered on Mount Olivet; on the fifth at the grave of Lazarus at Bethany; on the sixth on Sion; on the seventh in the church of the Anastasia, on the eighth in that of the Holy Cross. The procession to Bethlehem was nightly repeated. It will be seen, accordingly, that this Epiphany octave had throughout so strong a Nativity colouring as to lead to the exclusion of the commemoration of the Baptism in the year 385 at any rate. It is, however, by way of actual baptism on this day that the West seems to enter into connection with the East. St. Chrysostom (Hom. in Bapt. Chr. in P.G., XLIX, 363) tells us how the Antiochians used to take home baptismal water consecrated on the night of the festival, and that it remained for a year without corruption. To this day, the blessing of the waters by the dipping into river, sea, or lake of a crucifix, and by other complicated ritual, is a most popular ceremony. A vivid account is quoted by Neale ("Holy Eastern Church", Introduction, p. 754; cf. the Greek, Syriac, Coptic, and Russian versions, edited or translated from the original texts by John, Marquess of Bute, and A. Wallis Budge). The people consider that all ailments, spiritual and physical, can be cured by the application of the blessed water. The custom would seem, however, to be originally connected rather with the miracle of Cana than with the Baptism. That baptism on this day was quite usual in the West is proved, however, by the complaint of Bishop Himerius of Tarragona to Pope Damasus (d. 384), that baptisms were being

celebrated on the feast of the Epiphany. Pope Siricius, who answered him (P.L., XIII, 1134) identifies the feasts of *Natalitia Christi* and of his *Apparitio*, and is very indignant at the extension of the period for baptisms beyond that of Easter and that of Pentecost. Pope Leo I ("Ep. xvi ad Sicil. episcopos", c. i, in P.L., LIV, 701; cf. 696) denounces the practice as an *irrationabilis novitas*; yet the Council of Gerona (can. iv) condemned it in 517, and Victor Vitensis alludes to it as the regular practice of the (Roman-) African Church (De Persec. Vandal., II, xvii, in P.L., LVIII, 216). St. Gregory of Tours, moreover (De gloriâ martyrum in P.L., LXXI, 783; cf. cc. xvii, xix), relates that those who lived near the Jordan bathed in it that day, and that miracles were then wont to take place. St. Jerome (Comm. in Ez., I, i, on verse 3 in P.L., XXV, 18) definitely asserts that it is for the baptism and opening of the heavens that the *dies Epiphaniarum* is still venerable and not for the Nativity of Christ in the flesh, for then *absconditus est, et non apparuit* -- "He was hidden, and did not appear."

That the Epiphany was of later introduction in the West than the Christmas festival of 25 December, has been made clear in the article CHRISTMAS. It is not contained in the Philocalian Calendar, while it seems most likely that 25 December was celebrated at Rome before the sermon of Pope Liberius (in St. Ambrose, De virg., iii, I, in P.L., XVI, 231) which many assign to 25 Dec., 354. St. Augustine clearly observes Oriental associations in the Epiphany feasts: "Rightly", says he (Serm. ccii, 2, in Epiph. Domini, 4, in P. L., XXXVIII, 1033), "have refused to celebrate this day with us; for neither do they love unity, nor are they in communion with the Eastern Church, where at last the star appeared." St. Philastrius (Haer., c. cxl, in P.L., XII, 1273) adds that certain heretics refuse to celebrate the Epiphany, regarding it, apparently, as a needless duplication of the Nativity feast, though, adds the saint, it was only after twelve days that Christ "appeared to the Magi in the Temple". The *dies epiphaniarum*, he says (P.L., XII, 1274), is by some thought to be "the day of the Baptism, or of the Transformation which occurred on the mountain". Finally, an unknown Syrian annotator of Barsalibi (Assemani, Bibl. Orient., II, 163) boldly writes: "The Lord was born in the month of January on the same day on which we celebrate the Epiphany; for of old the feasts of the Nativity and Epiphany were kept on one and the same day, because on the same day He was born and baptized. The reason why our fathers changed the solemnity celebrated on 6 January, and transferred it to 25 December follows: it was the custom of the heathens to celebrate the birthday of the sun on this very day, 25 December, and on it they lit lights on account of the feast. In these solemnities and festivities the Christians too participated. When, therefore, the teachers observed that the Christians were inclined to this festival, they took counsel and decided that the true birth-feast be kept on this day, and on 6 Jan., the feast of the Epiphany. Simultaneously, therefore, with this appointment the custom prevailed of burning lights until the sixth day."

It is simpler to say that, about the time of the diffusion of the December celebration in the East, the West took up the Oriental January feast, retaining all its chief characteristics, though attaching overwhelming importance, as time went on, to the apparition of the Magi. Epiphanius indeed had said (*loc. cit.*) that not only did water in many places turn into wine on 6 Jan., but that whole rivers, and probably the Nile, experienced a similar miracle; nothing of this sort is noted in the West. The Leonine Sacramentary is defective here; but Leo's eight homilies on the *Theophania* (in P.L., LIV, Serm. xxxi, col. 234, to Serm. xxxviii, col. 263) bear almost wholly on the Magi, while in Serm. xxxv, col. 249, he definitely asserts their visit to be the commemoration for which the feast was instituted. Fulgentius (Serm. iv in P.L., LXV, 732) speaks only of the Magi and the Innocents. Augustine's sermons (cxcix-cciv in P.L., XXXVIII) deal almost exclusively with this manifestation; and the Gelasian Sacramentary (P.L., LXXIV, 1062) exclusively, both on the vigil and the feast. The Gregorian Sacramentary makes great use of Ps. lxxii (A. V. lxxiii), 10 and mentions the three great apparitions in the Canon only. The Ambrosian, however, refers to all three manifestations in the vigil-preface, and in the feast-preface to baptism alone. The "Missale Vesontienne" (Neale and Forbes, *The Anc. Liturgies of the Gallican Church*, p. 228) speaks, in the prayer, of *Illuminatio*, *Manifestatio*, *Declaratio*, and compares its Gospel of Matt., iii, 13-17; Luke, iii, 22; and John, ii, 1-11, where the Baptism and Cana are dwelt upon. The Magi are referred to on the Circumcision. The Gothic Missal (Neale and Forbes, *op. cit.*, p. 52) mentions the Magi on the vigil, saying that the Nativity, Baptism, and Cana make Christ's *Illustratio*. All the manifestations are, however, referred to, including (casually) the feeding of the 5000, a popular allusion in the East, whence the name *phagiphania*. Augustine (Serm. suppl. cxxxvi, 1, in P.L., XXXIX, 2013) speaks of the raising of Lazarus (*cf.* day 5 of the Jerusalem ritual) as on an equality with the other manifestations, whence in the East the name *Bethphania* occurs. Maximus of Turin admits the day to be of three miracles, and speculates (Hom. vii, in *epiph.*, in P.L., LVII, 273) on the historical connection of date and events. Polemius Silvanus, Paulinus of Nola (Poem. xxvii; Natal., v, 47, in P.L., LXI) and Sedulius (in P.L., LXXII) all insist on the three manifestations. The Mozarabic Missal refers mainly to the Magi, using of their welcome by Christ the word *Acceptio*, a term of "initiation" common to Mithraists and Christians. In 381, the Council of Sargossa (*can. iv*), read together with the Mozarabic Missal's Mass *in jejuniis epiphaniae*, makes it clear that a fast at this season was not uncommon even among the orthodox. "Cod. Theod." (II, viii, 20; XXV, v, 2) forbids the circus on this day in the year 400; "Cod. Justi." (III, xii, 6) makes it a day of obligation. In 380 it is already marked by cessation of legal business in Spain; in Thrace (if we can trust the "Passio S. Philippi" in Ruinart, "Acta", 440, 2) it was kept as early as 304. Kellner quotes

the "Testamentum Jesu Christi" (Mainz, 1899) as citing it twice (I, 28; IV, 67, 101) as a high festival together with Easter and Pentecost.

In the present Office, *Crudelis Herodes* alludes to the three manifestations; in Nocturn i, the first response for the day, the octave, and the Sunday within the octave, deals with the Baptism, as does the second response; the third response, as all those of Nocturns i and iii, is on the Magi. The antiphon to the Benedictus runs: "To-day the Church is joined to her celestial spouse, because in Jordan Christ doth wash her sins; the Magi hasten with gifts to the royal marriage-feast, and the guests exult in the water turned to wine." *O Sola* refers to the Magi only. The Magnificat antiphon of Second Vespers reads: "We keep our Holy Day adored with three miracles: to-day a star led the Magi to the crib, to-day wine was made from water at the marriage, to-day in Jordan Christ willed to be baptized by John to save us." On the Epiphany it was a very general custom to announce the date of Easter, and even of other festivals, a practice ordered by many councils, e.g. that of Orléans in 541 (can. i); Auxerre in 578 and 585 (can. ii), and still observed (Kellner) at Turin, etc. Gelasius finally tells us (Ep. ad episc. Lucan., c. xii, in P.L., LIX., 52) that the dedication of virgins occurred especially on that day.

II. ORIGIN

The reason for the fixing of this date it is impossible to discover. The only tolerable solution is that of Mgr. Duchesne (*Orig. Chr.*, 262), who explains simultaneously the celebration of 6 January and of 25 December by a backward reckoning from 6 April and 25 March respectively. The Pepyzitae, or Phrygian Montanists, says Sozomen (*Hist. Eccl.*, VII, xviii, in P.G., LXVII, 1473), kept Easter on 6 April; hence (reckoning an exact number of years to the Divine life) Christ's birthday would have fallen on 6 January. But, it may be urged, the first notice we have of the observance of this date, refers to Christ's Baptism. But this (if we may assume the Basilidians, too, to have argued from 6 April) will have fallen on the exact anniversary of the Birth. But why preeminently celebrate the Baptism? Can it be that the celebration started with those, of whatever sect, who held that at the Baptism the Godhead descended upon Christ? On this uncertain territory we had better risk no footstep till fresh evidence, if such there be, be furnished us. Nor is this the place to discuss the legends of the Three Kings, which will be found in the article MAGI. Kellner, *Heortologie* (Freiburg im Br., 1906); Funk in Kraus, *Real-Encyclopädie*, s. v. *Feste*; Bingham, *Antiquities of the Christian Church* (London, 1708-22), Bk. XX, c. iv; Usener, *Religionsgeschichtliche Untersuchungen* (Bonn, 1889). I. Cyril Martindale.

CYRIL MARTINDALE

Epistemology

Epistemology

(*Epistème*, knowledge, science, and *lógos*, speech, thought, discourse).

Epistemology, in a most general way, is that branch of philosophy which is concerned with the value of human knowledge.

The name *epistemology*, is of recent origin, but especially since the publication of Ferrier's "Institutes of Metaphysics: the Theory of Knowing and Being" (1854), it has come to be used currently instead of other terms, still sometimes met with, like applied logic, material or critical logic, critical or initial philosophy, etc. To the same part of philosophy the name *criteriology* is given by the authors of some Latin textbooks and by the Louvain School.

The exact province of epistemology is as yet but imperfectly determined, the two main views corresponding to the two meanings of the Greek word *epistème*. According as this is understood in its more general sense of knowledge, or in its more special sense of scientific knowledge, epistemology is "the theory of the origin, nature and limits of knowledge" (Baldwin, "Dict. of Philos. and Psychol.", New York, 1901, s.v. "Epistemology", I, 333; cf. "Gnosiology", I, 414); or "the philosophy of the sciences", and more exactly, "the critical study of the principles, hypotheses and results of the various sciences, designed to determine their logical (not psychological) origin, their value and objective import" ("Bulletin de la Société française de Philos.", June, 1905, fasc. no. 7 of the Vocabulaire philosophique, s.v. "Epistémologie", 221; cf. Aug., 1906, fasc. 9 of the Vocabul., s.v. "Gnoséologie", 332). The Italian usage agrees with the French. According to Ranzoli ("Dizionario di scienze filosofiche", Milan, 1905, s.v. "Epistemologia", 226; cf. "Gnosiologia", 286), epistemology "determines the objects of every science by ascertaining their differentiating characteristics, fixes their relations and common principles, the laws of their development and their special methods".

Here we shall consider epistemology in its first and broader meaning, which is the usual one in English, as applying to the theory of knowledge, the German *Erkenntnistheorie*, i.e. "that part of Philosophy which, in the first place, describes, analyses, examines genetically the facts of knowledge as such (psychology of knowledge), and then tests chiefly the value of knowledge and of its various kinds, its conditions of validity, range and limits (critique of knowledge)" (Eisler, Wörterbuch der philos. Begriffe, 2d ed., Berlin, 1904, I, 298). In that sense epistemology does not merely deal with certain assumptions of science, but undertakes to test the cognitive faculty itself in all its functions.

HISTORICAL OUTLINE

The first efforts of Greek thinkers centre around the study of nature. This early philosophy is almost exclusively objective, and supposes, without examining it, the validity of knowledge. Doubt arose later chiefly from the disagreement of philosophers in determining the primordial elements of matter and in discussing the nature and attributes of reality. Parmenides holds that it is unchangeable; Heraclitus, that it is constantly changing; Democritus endows it with an eternal inherent motion, while Anaxagoras requires an independent and intelligent motor. This led the Sophists to question the possibility of certitude, and prepared the way for their sceptical tendencies. With Socrates, Plato, and Aristotle, who oppose the Sophists, the power of the mind to know truth and reach certitude is vindicated, and the conditions for the validity of knowledge are examined. But epistemological questions are not yet treated on their own merits, nor kept sufficiently distinct from purely logical and metaphysical inquiries. The philosophy of the Stoics is primarily practical, knowledge being looked upon as a means of right living and as a condition of happiness. As man must act according to guiding principles and rational convictions, human action supposes the possibility of knowledge. Subordinating science to ethics, the Epicureans admit the necessity of knowledge for conduct. And since Epicurean ethics rests essentially on the experience of pleasure and pain, these sensations are ultimately the practical criterion of truth. The conflict of opinions, the impossibility of demonstrating everything, the relativity of perception, became again the main arguments of scepticism. Pyrrho claims that the nature of things is unknowable, and consequently we must abstain from judging; herein consist human virtue and happiness. The representatives of the Middle Academy also are sceptical, although in a less radical manner. Thus Arcesilaus, while denying the possibility of certitude and claiming that the duty of a wise man is to refuse his assent to any proposition, admits nevertheless that a degree of probability sufficient for the conduct of life is attainable. Carneades develops the same doctrine and emphasizes its sceptical aspect. Later sceptics, Ænesidemus, Agrippa, and Sextus Empiricus, make no essential addition.

The Fathers of the Church are occupied chiefly in defending Christian dogmas, and thus indirectly in showing the harmony of revealed truth with reason. St. Augustine goes farther than any other in the analysis of knowledge and in the inquiry concerning its validity. He wrote a special treatise against the sceptics of the Academy who admitted no certain, but only probable, knowledge. What is probability, he asks in an argument *ad hominem*, but a likeness of or an approach to truth and certitude? And then how can one speak of probability who does not first admit certitude? On one point at least, the existence of the thinking subject, doubt is impossible. Should a man doubt everything or be in error, the very fact of doubting or being deceived implies existence.

First logical principles also are certain. Although the senses are not untrustworthy, perfect knowledge is intellectual knowledge based on the data of the senses and rising beyond them to general causes. In medieval philosophy the main epistemological issue is the objective value of universal ideas. After Plato and Aristotle the Scholastics hold that there is no science of the individual as such. As science deals with general principles and laws, to know how far science is legitimate it is necessary to know first the value of general notions and the relations of the universal to the individual. Does the universal exist in nature, or is it a purely mental product? Such was the question raised by Porphyry in his introduction to Aristotle's "Categories". Up to the end of the twelfth century the answers are limited to two, corresponding to the two, possibilities mentioned by Porphyry. Hence if one may speak of Realism at that period, it does not seem altogether correct to speak of Conceptualism or Nominalism in the well-defined sense which these terms have since acquired (see De Wulf, *Hist. de la phil. médiévale*, 2d ed., Louvain 1905). Later, a distinction is introduced which St. Thomas formulates clearly and which avoids both extremes. The universal as such does not exist in nature, but only in the mind. Yet it is not a mere product of mental activity; it has a basis in really existing things; that is, by their individual and by their common features, existing things offer to the mind a basis for the exercise of its functions of abstraction and generalization. This moderate Realism, as it is called in opposition to Conceptualism on the one side, and on the other, to exaggerated, or absolute Realism, is also essentially the doctrine of Duns Scotus; and it prevailed in the School till the period of decadence when Nominalism or Terminism was introduced by Occam and his followers.

In modern times Descartes may be mentioned for his methodical doubt and his solution of it in the *Cogito, ergo sum*, i.e. I think, therefore, I exist. But Locke, in his "Essay concerning Human Understanding", is the first to give a clear statement of epistemological problems. To begin with ontological discussions is to begin "at the wrong end" and to take "a wrong coursed." Hence "it came to my thoughts that . . . before we set ourselves upon inquiries of that nature, it was necessary to examine our own abilities, and to see what objects our understandings were, or were not fitted to deal with" (Epistle to the Reader). Locke's purpose is to discover "the certainty, evidence and extent" of human knowledge (I, i, 3), to find "the horizon which sets the bounds between the enlightened and dark parts of things, between what is, and what is not comprehensible by us (I, i, 7), and "to search out the bounds between opinion and knowledge" (I, i, 3). One who reflects on the contradictions among men, and the assurance with which every man maintains his own opinion "may perhaps have reason to suspect that either there is no such thing as truth at all, or that mankind hath no sufficient means to attain a certain knowledge of it" (I, i, 2). This investigation will prevent us from undertaking the study of things that are "beyond the reach of our capacities"

(I, i, 4), and will be "a cure of skepticism and idleness" (I, i, 6). Such is the problem; among the main points in its solution may be mentioned the following: "we have the knowledge of our own existence by intuition; of the existence of God by demonstration; and of other things by sensation" (IV, ix, 2). The nature of the soul cannot be known, nor does the trustworthiness of the senses extend to "secondary qualities"; a fortiori, substance and essences are unknowable. These and other conclusions, however, are not reached by a truly epistemological method, i.e. by the criticism of the processes and postulates of knowledge, but almost exclusively by the psychological method of mental analysis. Following in Locke's footsteps and proceeding farther, Berkeley denied the objectivity even of primary qualities of matter, and Hume held a universal and radical phenomenalism. Aroused from his "dogmatic slumber" by the skepticism of Hume, Kant took up again the same problem of the extent, validity, and limits of human knowledge. This is the task of criticism, not the criticism of books and systems, but of reason itself in the whole range of its powers, and in regard to its ability to attain knowledge transcending experience. Briefly stated, the solution reached by Kant is that we know things-as-they-appear, or phenomena, but not the noumena, or things-in-themselves. These latter, precisely because they are outside the mind, are also outside the possibility of knowledge. Kant's successors, identifying the theory of being with the theory of knowing, elaborated his "Critique" into a system of metaphysics in which the very existence of things-in-themselves was denied. After Kant we reach the present period in the evolution of epistemological problems.

PROBLEMS

Today epistemology stands in the foreground of philosophical sciences. The preceding outline, however, shows that it was the last to be constituted as a distinct investigation and to receive a special systematic treatment. In older philosophers are found partial discussions, not yet coordinated and regarding only special aspects of the problem. The problem itself is not formulated before Locke, and no true epistemological solution attempted before Kant. In the beginning of philosophical investigation, as well as in the beginning of cognitive life in the individual, knowledge and certitude are accepted as self-evident facts needing no discussion. Full of confidence in its own powers, reason at once rises to the highest metaphysical considerations regarding the nature, essential elements, and origin of matter and of the human soul. But contradiction and conflict of opinions oblige the mind to turn back upon itself, to reflect in order to compare, test, and perhaps revise its conclusions; for contradictions cause doubt; and doubt leads to reflection on the value of knowledge. Throughout history, also, interest in epistemological questions is aroused chiefly after periods characterized by ontological investigations implying the assumption of the validity of knowledge. As the psychology of knowledge develops problems of epistemology grow more numerous,

and their solutions more varied. Originally the choice is almost exclusively between affirming the value of knowledge and denying it. For one who looks upon knowledge as a simple fact, these are the only two possible alternatives. After psychology has shown the complexity of the knowing-process, pointed out its various elements, examined its genesis, and followed its development, knowledge is no longer deemed either valid or invalid in its totality. Certain forms of it may be rejected and others retained; or knowledge may be held as valid up to, but not beyond, a certain point. In fact, at present, one would look in vain for absolute and unlimited dogmatism as well as for pure and complete skepticism. Opinions vary between these two extremes; and hence comes, partly at least, the confusion of terms by which various views are designated--a labyrinth in which even the most experienced can hardly find their way. Here a few systems only will be mentioned, and their names used in their most general and obvious sense.

The main problems of epistemology may be conveniently reduced to the following.

- 1 Starting from the fact of spontaneous certitude, the first question is: Does reflection also justify certitude? Is certain knowledge within man's power? In a general way Dogmatism gives an affirmative, Scepticism a negative answer. Modern Agnosticism (q.v.) attempts to indicate the limits of human knowledge and concludes that the ultimate reality is unknowable.
- 2 This leads to a second problem: How does knowledge arise, and what modes of knowledge are valid? Empiricism (q.v.) admits no other trustworthy information than the data of experience, while Rationalism (q.v.) claims that reason as a special faculty is more important.
- 3 A third question presents itself: What is knowledge? Cognition is a process within the mind with the special feature of referring to something without the mind, of representing some extramental reality. What is the value of this representative aspect? Is it merely the result of the mind's inner activity, as Idealism (q.v.) claims? Or is the mind also passive in the act of knowing, and does it in fact reflect some other reality, as Realism asserts? And if there exist such realities, can we know anything about them in addition to the fact of their existence? What is the relation between the idea in the mind and the thing outside the mind? Finally, even if knowledge is valid, the fact of error is undeniable; what then will be the criterion by which truth may be distinguished from error? What signs decide whether certitude in any case is justified? Such systems as Intellectualism, Mysticism, Pragmatism, Traditionalism, etc., have attempted to answer these questions in various ways.

Like all other sciences, epistemology should start from self-evident facts, namely the facts of knowledge and certitude. To begin, as Descartes did, with a universal doubt is to do away with the facts instead of interpreting them; nor is it possible consistently to emerge out of such a doubt. Locke's principle that "knowledge is conversant only with our ideas" is contrary to experience, since in fact it is for the psychologist alone that ideas become objects of knowledge. First to isolate the mind absolutely from external reality, and then to ask how it can nevertheless come into contact with this reality, is to propose an insoluble problem. As to the Kantian attitude, it has been criticized repeatedly for examining the validity of knowledge with the knowing faculty, for making reason its own critic and judge while its lights to criticize and judge are still held in doubt. Epistemology, the science of knowing, is closely related to metaphysics, the science of being, as its necessary introduction, and as gradually leading into it. The main epistemological issue cannot be met without stepping almost immediately on metaphysical ground, since the faculty of knowledge cannot be examined apart from its exercise and therefore from the contents of knowledge. Logic in its strict sense is the science of the laws of thought; it is concerned with the form, not the matter of knowledge, and in this it differs from epistemology. Psychology deals with knowledge as a mental fact, apart from its truth or falsity; it endeavours to determine the conditions, not only of cognitive, but of all mental processes and to discover their relations and the laws of their sequence. Thus logic and epistemology complement the work of psychology in two different directions, and epistemology forms a transition from psychology and logic to metaphysics. The importance of epistemology can hardly be overestimated, since it deals with the ground-work of knowledge itself, and therefore of all scientific, philosophical, moral, and religious principles. At the present time especially it is an indispensable requisite for apologetics, for the very foundations of religion are precisely the doctrines most frequently looked upon as beyond the reach of human intelligence. In fact much recent discussion concerning the value of knowledge has taken place on the ground of apologetics, and for the distinct purpose of testing the value of religious beliefs. If, contrary to the definitions of the Council of the Vatican, the existence of God and some at least of His attributes cannot be demonstrated, it is evident that there is no possibility of revelation and supernatural faith. As Pius X expresses it (Encycl. "Pascendi", 8 Sept., 1907), to confine reason within the field of phenomena and give it no right and no power to go beyond these limits as to make it "incapable of lifting itself up to God and of recognizing His existence by means of visible things. . . . And then all will readily perceive what becomes of natural theology, of the motives of credibility and of external revelation". (See SCEPTICISM; CERTITUDE; DOUBT.)

C.A. DUBRAY

Epistle (In Scripture)

Epistle (in Scripture)

Lat. *epistola*; Gr. *'epistolé*; in Hebrew, at first only the general term meaning "book" was used, then certain transitional expressions signifying "writing", and finally *agrt*, *'iggéréth* (of Assyrian or Persian origin), and *nshwtwn*, *nishtewan* (of Persian derivation), which the Septuagint always renders *'epistolé*.

In the study of Biblical epistles, it will be found convenient to distinguish between the Old Testament and the New.

THE OLD TESTAMENT

The Old Testament exhibits two periods in its idea of an epistle: first, it presents the epistle under the general concept of a book or a writing; secondly, it regards the epistle as a distinct literary form. It may be difficult to point out the dividing line between these two periods with accuracy; in general it may be maintained that the Hebrews developed their notion of epistle as a specific form of writing during the time of the Captivity. The first instance of a written Biblical message is found in II K., xi, 14-15, where we are told about David's letter to Joab concerning Urias; there was need for secrecy in this case as well as in that of Jezebel's order to the ancients and chief men of the city in the matter of Naboth (III K., xxi, 8-9), and of Jehu's commands sent to Samaria (IV K., x, 1, 6). It may have been in order to avoid the danger of a personal interview that the Prophet Elias (Eliseus?) wrote to King Joram concerning his impending punishment (II Par., xxi, 12-15). The desire to be emphatic and peremptory prompted the letter of the King of Syria to the King of Israel, asking for the cure of Naaman's leprosy (IV K., v, 5-7), and Sennacherib's open letter to Ezechias (IV K., xix, 14; Is., xxxvii, 14; II Par., xxxii, 17); the wish to be courteous seems to have inspired the letter of Merodach Baladan to Ezechias after the latter's recovery from sickness (IV K., xx, 12; Is., xxxix, 1). Similar to the foregoing authoritative letters is the message addressed by Jeremias to the exiles in Babylon (Jer., xxix, 1 sq.); the Prophet alludes also to letters sent by a pseudo-prophet from Babylon to Jerusalem with the purpose of undermining Jeremias's authority (*ibid.*, 25, 29).

Thus far, letters are of relatively rare occurrence in the Bible, and they are not regarded as constituting a distinct class of literature. Hereafter they become more frequent, and both their name and their form mark them as a peculiar literary species. Their subsequent frequency may be inferred from their repeated occurrence in the Books of Esther, Esdras, and Nehemias: Esth., i, 22; iii, 12; viii, 5 sq.; ix, 20, 29; xiii, 1-7; xvi, 1-24; I Esdr., iv, 7, 11 sq.; v, 6; vii, 11; Neh., ii, 7; vi, 5, 17, 19. Their general name

"book" gives way, first, to that of "writing" (II Par., ii, 11; xxi, 12; Esth., iii, 13-14; viii, 10, 13), and then to that of "letter" (II Par., xxx, 1, 6; I Esdr., iv, 7 sqq.; v, 5 sqq.; Neh., ii, 7-9; vi, 5, 17, 19; Esth., ix, 26, 29). Their form begins to be marked by a formal address and a distinctively epistolary ending. Instances of such explicit addresses may be seen in Esdr., v, 7: "To Darius the king all peace"; Esth., xiii, 1: "Artaxerxes the great king who reigneth from India to Ethiopia, to the princes and governors of the hundred and twenty-seven provinces, that are subject to his empire, greeting"; I Mach., xi, 30: "King Demetrius to his brother Jonathan, and to the nation of the Jews, greeting". An instance of an epistolary conclusion occurs in II Mach., xi, 33: "Fare ye well. In the year one hundred and forty-eight, the fifteenth day of the month of Kanthicus"; a similar example may be seen, *ibid.*, 38. But the Old Testament does not furnish us with any model of private correspondence between Hebrews.

THE NEW TESTAMENT

The New Testament presents us with a very highly developed form of an epistle. Recent writers on the subject have found it convenient to follow Professor Deissmann in his distinction between the letter and the epistle. The letter is a private and confidential conversation with the addressee, his anticipated answers shaping the course of the writing; the epistle is general in its aim, addresses all whom it may concern, and tends to publication. The letter is a spontaneous product of the writer, the epistle follows the rules of art. If publication be regarded as an essential condition of literature, the letter may be described as a "pre-literary form of self-expression". In order to apply this distinction more effectively to the written messages contained in, or referred to by, the New-Testament Books, we shall group the relevant data as pre-Pauline, Pauline, and post-Pauline.

Pre-Pauline

The Book of Acts (ix, 2; xxii, 5; xxviii, 21) shows that the Jews of Jerusalem sent occasional letters to the synagogues of the Dispersion; Acts, xv, 22-23, gives a parallel instance of a letter written by the Apostles from Jerusalem to the churches in Antioch, Syria, and Cilicia. We may also infer from the testimony of the New Testament (I Cor., xvi, 3; II Cor., iii, 1; Rom., xvi, 1-2; Acts, xviii, 27) that letters of commendation were of common occurrence. I Cor., vii, 1, informs us that the Corinthian Christians had applied to St. Paul in their difficulties by way of letter.

Pauline

The Pauline Epistles form a collection which was formerly called *‘o ’apóstolos*. They are called "epistles", though that addressed to the Hebrews hardly deserves the name, being really a theological homily. The Epistles mentioned in I Cor., v, 9, and Col., iv, 16, have not been preserved to us; their accidental loss makes us suspect that other Epistles may have perished. The peculiar form and style of the Pauline Epistles

are studied in their respective introductions and commentaries; but we may add here that I Tim., II Tim., and Tit. are called Pastoral Epistles; owing to its peculiar style and form, it is supposed by some writers that the Epistle to the Hebrews was not even dictated by the Apostle, but only expresses his doctrine. Only the three Pastoral Epistles and Philemon are addressed to individuals; all the others are directed to churches, most of which, however, were well known to the writer. They exhibit more of their author's personal character than most profane letters do.

Post-Pauline

Generally speaking, we may describe the so-called Catholic Epistles as Post-Pauline. We need not note here that these Epistles are not named after the addressee, as happens in the case of the Pauline Epistles, but after the inspired author. The Epistle of St. James has no final greetings; it was meant for a class, not for persons known to the writer. In I John we have a sermon rather than a letter, though its familiarity of language indicates that the readers were known to the writer. The following two Epistles of St. John are real letters in style and form. St. Peter's first Epistle supposes some familiarity with his readers on the part of the writer; this can hardly be said of II Peter or of the Epistle of Jude. What has been said sufficiently shows that Professor Deissmann's distinction between the artistic epistle and pre-literary letter cannot be applied with strict accuracy. Quite a number of the New-Testament Epistles contain those touches of intimate familiarity which are supposed to be the essential characteristics of the letter.

A.J. Maas

Joseph Epping

Joseph Epping

German astronomer and Assyriologist, b. at Neuenkirchen near Rhine in Westphalia, 1 Dec., 1835; d. at Exaeten, Holland, 22 Aug., 1894. His parents died while he was very young, and he owed his early education to the fostering care of relations. After completing the usual gymnasium at Rheine and at Münster, he matriculated at the academy in Münster, where he devoted himself particularly to mathematics. In 1859 he entered the novitiate of the Society of Jesus in Münster and after his philosophical studies was appointed professor of mathematics and astronomy at Maria-Laach. He spent the years from 1867 to 1871 in the study of theology and was ordained priest

in 1870. Garcia Moreno, President of Ecuador, had petitioned the General of the Jesuits in the early seventies for members of the Society to form the faculty of the Polytechnicum at Quito, which he had recently founded. A number of German Jesuits responded to the call, among them Epping, who set out in June, 1872, for Quito to become professor of mathematics. He quickly learned Spanish and was able to write a textbook of geometry in that language. He likewise took an active part in all the scientific work of the Fathers. The political disturbances which followed the assassination of Moreno (6 Aug., 1875) made it necessary for the Jesuits to return to Europe, and Epping arrived in Holland in the fall of 1876. He spent the remaining years of his life at Blijenbeck, and later at Exaeten, as professor of astronomy and mathematics to younger members of his order, devoting his leisure to research and literary work.

Epping's first published volume, "Der Kreislauf im Kosmos", appeared in 1882. It was an exposition and critique of the Kant-Laplace nebular hypothesis and a refutation of the pantheistic and materialistic conclusions which had been drawn from it. His most important work, however, was begun in collaboration with Father Strassmaier who, in connection with his own studies in Assyriology, had induced him to undertake a mathematical investigation of the Babylonian astronomical observations and tables. After considerable labour the key was found. He discovered the table of differences for the new moon in one of the tablets, and identified *Guttu* with Mars, *Sakku* with Saturn, and *Te-ut* with Jupiter (Epping and Strassmaier in "Stimmen aus Maria-Laach", vol. 21, pp. 277-292). Eight years later he published "Astronomisches aus Babylon oder das Wissen der Chaldäer uüber den gisternten Himmel" (Freiburn im Br., 1889). This work was of much importance both from the standpoint of astronomy and chronology. It contains an exposition of the astronomy of the ancient Babylonians, worked out from their Ephemerides of the moon and the planets. This was supplemented by "Die bablyonische Berechnung des Neumondes" (Stimmen aus Maria-Laach, Vol. XXXIX, pp. 229-240). He was also the author of a number of articles in the "Zeitschrift für Assyriologie". Father Epping suffered much from ill-health during the last years of his life. He was none the less a man of untiring activity and combined geniality and a keen sense of humor with a deep and simple piety.

Baumgartner in Zeitsch. f. Assyriologie (Weimar, 1894), appendix IX.

H.M. BROCK

Desiderius Erasmus

Desiderius Erasmus

The most brilliant and most important leader of German humanism, b. at Rotterdam, Holland, 28 October, probably in 1466; d. at Basle, Switzerland, 12 July, 1536.

He was the illegitimate child of Gerard, a citizen of Gouda, and Margaretha Rogers, and at a later date latinized his name as Desiderius Erasmus. Eventually his father became a priest. Erasmus and an elder brother were brought up at Gouda by their mother. When nine years old he was sent to the school of the celebrated humanist Hegius at Deventer, where his taste for humanism was awakened and his powers of mind received their bent for life. The most brilliant qualities of his intellect, a wonderful memory and an extraordinarily quick power of comprehension, showed themselves even in this his earliest training. His mother died when he was thirteen years old, and a little later his father also; he was now sent by his guardians for two years, which he afterwards called two lost years, to the monastery school of Hertogenbosch. Then, after wandering aimlessly about for a time, he was forced, through necessity and the insistence of his guardians, to enter in 1486 the monastery of Emmaus, near Gouda, a house of Canons Regular. He felt no true religious vocation for such a step, and in later years characterized this act as the greatest misfortune of his life. As a matter of fact the beginnings of his religious indifferentism and of his weakness of character are to be sought in his joyless youth and in the years spent under compulsion in the monastery. He was left free, however, to pursue his studies, and devoted himself mainly to the ancient classics, whose content and formal beauty he passionately admired. His religious training was obtained from the study of St. Jerome and Lorenzo Valla. In 1491 a lucky accident freed him from monastic life. The Bishop of Cambrai was minded to visit Italy and chose Erasmus as secretary and traveling companion, attracted by the young man's linguistic attainments; he also ordained him priest in 1492. The journey was never made, but Erasmus remained in the service of the bishop, who, in 1496, sent him to Paris to complete his studies. The scholastic method of instruction then prevalent at Paris was so repugnant to him that he spent much of his time travelling through France and the Netherlands, receiving occasionally friendly help; he was also for a while at Orléans, where he worked at his collection of proverbs, the later "Adagia". The money for a trip to England he earned by acting as tutor to three Englishmen, from whom he also obtained valuable letters of introduction. During his stay in England (1498-99), he made the acquaintance at Oxford of Colet, Thomas More, Latimer, and others, with all of whom acquaintance ripened into lifelong friendship. Colet showed him how to reconcile the ancient faith with humanism by abandoning the scholastic method and devoting himself to a thorough study of the Scriptures. Consequently, on his return to the Continent he took up with ardour the study of Greek at Paris and Louvain. The first publications of Erasmus occurred in this early period. In 1500 was issued the "Adagia", a collection of Greek and Latin proverbs, and in 1508 another greatly enlarged edition of the same; in 1502 appeared the "Enchiridion militis christiani", in which he described the nature of true religion and true piety, but with comments

that were biting and antagonistic to the Church; in 1505 Lorenzo Valla's "Annotationes" to the New Testament, the manuscript of which he had found in a monastery at Brussels. His introduction to this work is important, for in it occurred his first utterance concerning the Scriptures, laying especial stress on the necessity of a new translation, a return to the original text, and respect for the literal sense.

In 1506 he was finally able, by the aid of his English friends, to attain his greatest desire, a journey to Italy. On his way thither he received at Turin the degree of Doctor of Divinity; at Bologna, Padua, and Venice, the academic centres of Upper Italy, he was greeted with enthusiastic honour by the most distinguished humanists, and he spent some time in each of these cities. At Venice he formed an intimate friendship with the famous printer Aldus Manutius. His reception at Rome was equally flattering; the cardinals, especially Giovanni de' Medici (later Leo X), and Domenico Grimani, were particularly gracious to him. He could not, however, be persuaded to fix his residence at Rome, and refused all offers of ecclesiastical promotion. Henry VIII had just reached the throne of England, and thus awakened in Erasmus the hope of an advantageous appointment in that country, for which he accordingly set out. On his way out of Italy (1509) he wrote the satire known as "The Praise of Folly" ("*Moriæ Encomium*", or "*Laus Stultitiæ*"), which in a few months went through seven editions. Originally meant for private circulation, it scourges the abuses and follies of the various classes of society, especially of the Church. It is a cold-blooded, deliberate attempt to discredit the Church, and its satire and stinging comment on ecclesiastical conditions are not intended as a healing medicine but a deadly poison.

Erasmus may now be said to have reached the acme of his fame; he was in high repute throughout all Europe, and was regarded as an oracle both by princes and scholars. Every one felt it an honour to enter into correspondence with him. His inborn vanity and self-complacency were thereby increased almost to the point of becoming a disease; at the same time he sought, often by the grossest flattery, to obtain the favour and material support of patrons or to secure the continuance of such benefits. This was also the period of his greatest literary productivity. He wrote at this time works destined to influence profoundly the ecclesiastical revolution that was soon to break out. The next five years he spent in England, but never accepted a permanent office; it was only for a short time that he held a professorship of Greek at Cambridge. When the hopes he had based on the friendship of Henry VIII proved vain and he realized that Henry's money was all needed in warlike schemes, Erasmus returned to Brabant, where he became one of the royal councillors of Archduke Charles, later Emperor Charles V. This office gave him a fixed salary, and for his princely patron he now wrote the "*Institutio principis christiani*", a humanistic portrait of the ideal ruler. The archduke thought of making Erasmus a bishop, wherefore, with the aid of the papal legate Am-

monius, the famous scholar obtained a papal Brief releasing him from all obligations to his monastery and also from the censures he had incurred by discarding the dress of his order without permission. No longer obliged to have permanent residence, Erasmus kept up his wandering life, occupied alternately with the composition and the publication of his works. In order to secure absolute freedom Erasmus refused many brilliant offers, among them an invitation from the King of France to reside at Paris, from Archduke Ferdinand to come to Vienna, and from Henry VIII to return to England. He frequently went to Basle to visit the famous printer Froben, who published henceforth nearly all the writings of Erasmus and procured for them a very wide circulation. In this way Erasmus came into closer relations with German humanism, and his influence did much to increase its prestige in south-western Germany, inasmuch as the followers of the "new learning" in Basle, Constance, Schlettstadt, and Strasburg, looked up to him as their leader. One of his chief works at this period is the "Colloquia Familiaria", first published in 1518, issued in an enlarged form in 1526, and often reprinted. It is a kind of textbook for the study of the Latin language, and introduction to the purely natural formal training of the mind, and a typical example of the frivolous Renaissance spirit. The defects of ecclesiastical and monastic life are in this work held up to pitiless scorn; moreover, he descends only too often to indecent and cynical descriptions. His edition of the Greek original of the New Testament, "Novum Instrumentum omne" (Basle, 1516), no model of text-critical scholarship, was accompanied by a classical Latin translation destined to replace the Vulgate. Among the notes, partly textual criticism, partly exegetical comments, were inserted sarcastic slurs on the ecclesiastical conditions of the period. In a general introduction he discussed the importance of the Scriptures and the best method of studying them. Although the Complutensian edition offered a better text and was also printed, but not published, at an earlier date, yet the edition of Erasmus remained for a long time authoritative on account of his high reputation, and became the basis of the *textus receptus* or received text. No less instrumental in preparing the way for the future Reformation, by setting aside the scholastic method and undermining the traditional authority of the Scriptures, were the "Paraphrases of the New Testament" (1517 and later). This work was dedicated to various princes and prelates, e. g. the paraphrases of the Evangelists to Charles V, Francis I, Henry VIII, and Ferdinand I. In these publications the attitude of Erasmus towards the text of the New Testament is an extremely radical one, even if he did not follow out all its logical consequences. In his opinion the Epistle of St. James shows few signs of the Apostolic spirit; the Epistle to the Ephesians has not the diction of St. Paul, and the Epistle to the Hebrews he assigns with some hesitation to Clement of Rome. In exegesis he favoured a cold rationalism and treated the Biblical narratives

just as he did ancient classical myths, and interpreted them in a subjective and figurative, or, as he called it, allegorical, sense.

The literary works issued by Erasmus up to this time made him the intellectual father of the Reformation. What the Reformation destroyed in the organic life of the Church Erasmus had already openly or covertly subverted in a moral sense in his "Praise of Folly", his "Adagia", and "Colloquia", by his pitiless sarcasm or by his cold scepticism. Like his teacher Lorenzo Valla, he regarded Scholasticism as the greatest perversion of the religious spirit; according to him this degeneration dated from the primitive Christological controversies, which caused the Church to lose its evangelical simplicity and become the victim of hair-splitting philosophy, which culminated in Scholasticism. With the latter there appeared in the Church that Pharisaism which based righteousness on good works and monastic sanctity, and on a ceremonialism beneath whose weight the Christian spirit was stifled. Instead of devoting itself to the eternal salvation of souls, Scholasticism repelled the religiously inclined by its hair-splitting metaphysical speculations and its over-curious discussion of unsolvable mysteries. The religious life, he held, was not furthered by discussions concerning the procession of the Holy Ghost, or the *causa formalis efficiens*, and the *character indelebilis* of baptism, or *gratia gratis data* or *acquisita*; of just as little consequence was the doctrine of original sin. Even his concept of the Blessed Eucharist was quite rationalistic and resembled the later teaching of Zwingli. Similarly he rejected the Divine origin of the primacy, of confession, the indissolubility of marriage, and other fundamental principles of Christian life and the ecclesiastical constitution. He would replace these *traditiunculæ* and *constitutiunculæ hominum* by the simple words of the Scriptures, the interpretation of which should be left to the individual judgment. The disciplinary ordinances of the Church met with even less consideration; fasts, pilgrimages, veneration of saints and their relics, the prayers of the Breviary, celibacy, and religious orders in general he classed among the perversities of a formalistic Scholasticism. Over against this "holiness of good works" he set the "philosophy of Christ", a purely natural ethical ideal, guided by human sagacity. Of course this natural standard of morals obliterated almost entirely all differences between heathen and Christian morality, so that Erasmus could speak with perfect seriousness of a "Saint" Virgil or a "Saint" Horace. In his edition of the Greek New Testament and in his "Paraphrases" of the same he forestalled the Protestant view of the Scriptures.

Concerning the Scriptures, Luther did not express himself in a more rationalistic manner than Erasmus; nor did he interpret them more rationalistically. The only difference is that Luther said clearly and positively what Erasmus often merely suggested by a doubt, and that the former sought in the Bible, above all other things, the certainty of justification by Christ, while the latter, with an almost Pelagian definiteness, sought

therein the model of a moral life. Substantially the same fundamental principles and arguments were put forth by the representatives of eighteenth-century "Enlightenment" to attain exactly the same results. It must be added, however, that the attitude of Erasmus towards the religious questions of his time was conditioned rather by literary interests than by profound interior conviction. His demeanour was apt to be influenced by anxiety for peace and by personal considerations; moreover, in contrast to Luther, it was the refined and scholarly public, not the common people, that he sought to influence by his writings. He, therefore, laboured for a reform of the Church that would not be antagonistic to the pope and the bishops, nor productive of a violent rupture, but which, through the dissemination of a larger enlightenment, would eventually but gradually result in the wished-for reorganization. This was to be the work, however, not of the common people, but of scholars and princes. Hence he tried subsequently to check the Lutheran movement by some kind of peaceful compromise. With a scholar's love of peace, he was from the beginning disinclined to enter deeply into the current religious dispute. For a time his reform ideas seemed to have some prospect of success. As soon, however, as the Lutheran movement was seen to mean definitive separation from the Church, it was clear that a rigorous adherence to the latter was the only logical attitude and the one most capable of defence. In the first years of the Reformation many thought that Luther was only carrying out the programme of Erasmus, and this was the opinion of those strict Catholics who from the outset of the great conflict included Erasmus in their attacks on Luther. Given the wavering character of Erasmus, such attacks were to provoke on his part a very equivocal attitude, if not plain double-dealing. He gave Luther clearly to understand that he agreed with him, and urged only a less violent manner and more consideration for the pope and ecclesiastical dignitaries. At the same time he affected in public an attitude of strict neutrality, and as time went on withdrew more and more from Luther. In 1519 he wrote to Luther: "I observe as strict a neutrality as possible, in order to advance scholarship, which is again beginning to flourish, by my modesty rather than by passion or violence." That close relations between these two fundamentally different characters were maintained as late as the Diet of Worms, though both soon clearly saw the difference in their points of view and their attitudes, was largely due to Melancthon. Though Erasmus had prepared the way for him, Luther was greatly dissatisfied with him because of his strongly rationalistic concept of original sin and the doctrine of grace. As early as 1517 Luther thus expressed himself concerning Erasmus: "My liking for Erasmus declines from day to day.... The human is of more value to him than the Divine.... The times are now dangerous, and I see that a man is not a more sincere or a wiser Christian for all that he is a good Greek or Hebrew scholar." Luther felt hurt, moreover, by the cool and reserved manner in which Erasmus passed judgment on his writings and

actions. Nevertheless, Erasmus always opposed any persecution of Luther, and frequently and in no measured terms condemned the Bull of excommunication. At the same time, he declined any association with Luther, and protested his ignorance of the latter's writings and his own complete submission to the highest ecclesiastical authority. But with all this he took the part of Luther in his correspondence with the Elector Frederick of Saxony. He expressed his views concerning Luther's doctrine in twenty-two "Axiomata" addressed to the Elector's court chaplain, Spalatinus, which, to his disgust, were soon afterwards printed. In this memoir and in other writings addressed to the emperor and to friends at Rome, Erasmus proposed arbitration by a court of scholars; he complained, moreover, of the violent attacks made on himself by the monks, and asserted his absolute neutrality and his fidelity to Rome. The latter assurance was all the more necessary as the papal legate Alexander in his reports to Rome put the authorities on their guard against Erasmus, and accused him of being an accomplice in the religious revolt. "The poison of Erasmus has a much more dangerous effect than that of Luther, who by his notorious satirical and insulting letters has injured his own teaching."

While Erasmus, by his relations with the Roman Curia, was able to checkmate the aforesaid and similar hostile complaints, in Germany he continued to be regarded with distrust and even with hatred, sentiments that acquired new strength when, in spite of repeated entreaties, he refused to appear publicly against Luther. Insinuations and charges of this kind were brought against him, especially by the theologians of Louvain. Consequently, in 1521, he moved to Basle, where the presence of numerous humanists of the Upper Rhine seemed to assure him a peaceful existence. Even here his attitude continued for a considerable time uncertain. To Duke George of Saxony he expressed himself most favourably concerning Luther and blamed both the Bull of excommunication and the imperial edict against the reformer; yet in his correspondence with the emperor and with Adrian VI he denied all association with Luther, and reverted again to his plan of reconciliation by means of a court of arbitration. He also defended with great earnestness his own orthodoxy against Stunica, who wrote the treatise "Erasmi Rotterdami blasphemiae et impietates" (Rome, 1522), to prove that Lutheran errors were to be found in the aforesaid "Annotationes" to the New Testament. The same year (1522) the fugitive Von Hutten, on his way to Zurich, attempted but in vain, to meet at Basle his former friend. Von Hutten revenged himself in his "Expostulatio cum Erasmo" (1523), in which he laid bare with passionate violence all the weaknesses, all the *parvitas et imbecillitas animi* of his former patron. Erasmus replied from Basle with his "Spongia Erasmi adversus adspergines Hutteni", in which, with equal violence, he attacked the character and life of his opponent, and defended himself against the reproach of duplicity. He had endeavoured, so he wrote, to hold aloof from all parties;

he had, indeed, attacked Roman abuses, but he had never attacked the Apostolic See or its teaching.

All sympathetic association of Erasmus with the Reformers now ceased, though Melanchthon tried to stay the final rupture. One after another, the leaders of the religious anti-Roman movement withdrew from the famous humanist, especially Zwingli and Ecolampadius. This same year Erasmus resolved at last to heed the many appeals made to him, especially by Adrian VI and Henry VIII, to write against Luther. For the first time he took a decided stand, moved, no doubt, by the fear of losing the confidence of both parties. He chose with skill the point on which he would attack Luther. Erasmus had complained much earlier that the new religious movement begat only commotion, moral disorganization, and the interruption, if not the complete ruin, of learned studies. These abuses he traced to Luther's denial of free will. He wrote, therefore, in defence of the freedom of the will, an attack on Luther, entitled: "Diatribes de libero arbitrio" (1524). The work, it may be said, was couched in a calm and dignified style. Though by no means sufficiently profound in its theological reasoning, the proofs are drawn with skill from the Bible and from reason. Luther's reply was the "De servo arbitrio" (1524), henceforth the official programme of the new movement. Starting from the third chapter of the Epistle to the Romans, it teaches the absolute incompetency of man in his fallen state to perform moral acts; no franker antithesis to the humanistic ideal could be imagined. Erasmus replied in a work entitled "Hyperaspistes" (1526), but without effect. Luther ignored this reply, except in private letters in which he showed much irritation. Some years later, however, when the "Explanatio Symboli" of Erasmus appeared (1533), Luther attacked him once more in a public letter, to which Erasmus replied in his "Adversus calumniosissimam epistolam Martini Lutheri". These passages at arms brought on Erasmus the violent hatred of the Wittenberg reformer, who now called him nothing but a sceptic and an Epicurean. Catholics, however, considered that Erasmus had somewhat rehabilitated himself, although the more extreme still disbelieved in him. He had not ceased to insist on the need of reforms, though he now spoke more composedly of many matters, such as celibacy. In his later years, it may be said, he held aloof from all religious conflicts, devoted to his humanistic studies and to an intimate circle of such friends as Boniface Amerbach, Beatus Rhenanus, and Glareanus. Nor was he indifferent to contemporary efforts at conciliation; he was in favour of ecclesiastical reunion. Meantime, the Reformation made rapid progress in Basle, where it took the form, greatly detested by Erasmus, of a violent destruction of images. He removed, therefore (1529), to Freiburg in the Breisgau, not far from Basle, in which city he could still find congenial Catholic surroundings. He did not relax his efforts for religious peace, in favour of which he exerted all his influence, especially at the imperial court. He also wrote, at the request of Melanchthon

and Julius von Pflug, his "*De sarciendâ Ecclesiæ concordîâ*" (1533), in which he advocates the removal of ecclesiastical abuses in concord with Rome and without any changes in the ecclesiastical constitution. Notwithstanding his rupture with Luther, an intense distrust of Erasmus was still widespread; as late as 1527 the Paris Sorbonne censured thirty-two of his propositions. It is a remarkable fact that the attitude of the popes towards Erasmus was never inimical; on the contrary, they exhibited at all times the most complete confidence in him. Paul III even wanted to make him a cardinal, but Erasmus declined the honour, alleging his age and ill-health. Naturally weak and sickly, and suffering all his life from calculi, his strength in the end failed completely. Under these circumstances he decided to accept the invitation of Mary, regent of the Netherlands, to live in Brabant, and was preparing at Basle for the journey when a sudden attack of dysentery caused his death. He died with composure and with all the signs of a devout trust in God; he did not receive the last sacraments, but why cannot now be settled. He was buried with great pomp in the cathedral at Basle. Shortly before his death he heard the sorrowful news of the execution of two of his English friends, Sir Thomas More and Bishop Fisher.

Editions of the classics and the Fathers of the Church kept Erasmus fully employed during the later period of his life at Basle. In his editions of the Fathers Erasmus formed a means of realizing the theological ideal of Humanism, which was to make accessible the original sources of ecclesiastical and theological development and thus to popularize the historical concept of the Church as against the purely speculative viewpoint of Scholasticism. As early as 1516-18 Erasmus had published in nine volumes the works of St. Jerome, a theologian to whom he felt especially drawn. In 1523 appeared his edition of St. Hilary of Poitiers; in 1526 that of St. Irenæus of Lyons; in 1527, St. Ambrose; in 1528, St. Augustine; in 1529 the edition of Epiphanius; in 1530, St. Chrysostom; his edition of Origen he did not live to finish. In the same period he issued the theological and pedagogical treatises: "*Ecclesiastes sive Concionator evangelicus*" (1535), a greatly admired homiletic work; "*Modus confitendi*" (1525), a guide to right confession; "*Modus orandi Deum*"; "*Vidua christiana*"; "*De civilitate morum puerilium*"; "*De præparatione ad mortem*", etc.

Opinions concerning Erasmus will vary greatly. No one has defended him without reserve, his defects of character being too striking to make this possible. His vanity and egotism were boundless, and to gratify them he was ready to pursue former friends with defamation and invective; his flattery, where favour and material advantages were to be had, was often repulsive, and he lacked straightforward speech and decision in just those moments when both were necessary. His religious ideal was entirely humanistic; reform of the Church on the basis of her traditional constitution, the introduction of humanistic "enlightenment" into ecclesiastical doctrine, without, however, breaking

with Rome. By nature a cold, scholarly character, he had no real interest in uncongenial questions and subjects, above all no living affectionate sympathy for the doctrines and destinies of the Church. Devoid of any power of practical initiative he was constitutionally unfitted for a more active part in the violent religious movements of his day, or even to sacrifice himself for the defence of the Church. His bitter sarcasm had, indeed, done much to prepare the way for the Reformation; it spared neither the most sacred elements of religion nor his former friends. His was an absolutely unspeculative brain, and he lacked entirely all power of acute philosophical definition; we need not wonder, therefore, that on the one hand, he was unable to grasp firmly ecclesiastical doctrine or deal justly with its scholastic formulation, while on the other he inveighed with extreme injustice against the institutions of the Church. It must not be forgotten that the grave defects of his character were compensated by brilliant qualities. His splendid gifts explain the universal European fame of the man through several decades, a public esteem and admiration far excelling in degree and extent the lot of any scholar since his day. He had an unequalled talent for form, great journalistic gifts, a surpassing power of expression; for strong and moving discourse, keen irony, and covert sarcasm, he was unsurpassed. In him the world beheld a scholar of comprehensive and many-sided learning, though neither profound nor thorough, a man of universal observation, a writer whose diction was brilliant and elegant in the highest degree. In a word, Erasmus exhibits the quintessence of the Renaissance spirit; in him are faithfully mirrored both its good and bad qualities.

It cannot be denied that Erasmus was a potent factor in the educational movement of his time. As the foremost of the German humanists, he laboured constantly and effectually for the spread of the new learning, which imparted to the education of the Renaissance period its content and spirit. By his intercourse with scholars and students, his published satires on existing institutions and methods, and especially his work in editing and translating the Greek and Latin authors, he gave a powerful impulse to the study of the classics. But his more direct contributions to education are marked by the inconsistency which appears in his whole career. Some of his writings, e. g. his "Order of Study" (*De ratione Studii*, 1516) and his "Liberal Education of Children" (*De pueris statim ac liberaliter instituendis*, 1529), contain excellent advice to parents and teachers on the care of children, development of individuality, training in virtue and in the practice of religion, with emphasis on the moral qualifications of the teacher and the judicious selection of subjects of study. In other writings, as in the "Colloquia", the tone and the language are just the opposite, so offensive in fact that even Luther in his "Table Talk" declares: "If I die I will forbid my children to read his Colloquies ... See now what poison he scatters in his Colloquies among his made-up people, and goes craftily at our youth to poison them." It is not surprising that this work was con-

demned by the Sorbonne (1526) as dangerous to morals, and was eventually placed on the Index. That in most works on the history of education Erasmus occupies so large a place, while others who contributed far more to the development of educational method (e. g. Vives) are not mentioned, is perhaps due to sympathy with the anti-ecclesiastical attitude of Erasmus, rather than to the intrinsic value of his constructive work (see Stöckl, *Gesch. d. Pädagogik*, Mainz, 1876).

A complete edition of the works of Erasmus, to which a life of him was added, was issued by Beatus Rhenanus (Basle, 1540-41) in 9 vols.; an edition was also published by Le Clerc (Leyden, 1703-06), 10 vols.; Ruelens, "Erasmii Rott. Silva carminum" (Brussels, 1864). The editions of the letters of Erasmus have been as follows: "Epistolæ familiares Erasmi" (Basle, 1518); Herzog, "Epistolæ famil. ad Bon. Amerbachium" (Basle, 1779); Horawitz, "Erasmiana" in the Transactions of the philosophical-historical section of the Academy of Vienna, vols. XC and XCV (1878-85); Horawitz, "Erasmus and Martin Lipsius" (1882); F. M. Nichols, "The Epistles of Erasmus" (London, 1901-04), 2 vols.; von Miaskowski, "Correspondenz des Erasmus mit Polen" (Breslau, 1901). Selections from his pedagogical writings were published by Reichling, "Ausgew. pädagogische Schriften des Erasmus" (Freiburg, 1896).

Information about the life of Erasmus is obtained from his letters to Servatius and Grunnius. Durand de Laur, *Erasme de Rotterd., précurseur et initiateur de l'esprit moderne* (Paris, 1872), II; Drummond, *Erasmus, His Life and Character* (London, 1873), II; Feugère, *Erasme, étude sur sa vie et ses ouvrages* (Paris, 1874); Gilly, *Erasme* (Arras, 1879); Richter, *Erasmusstudien* (Dresden, 1891); Fr. Seebohm, *The Oxford Reformers: John Colet, Erasmus, and Thomas More* (London, 1899); Emerton, *Erasmus* (London, 1899); Pennington, *Erasmus* (London, 1901); Capey, *Erasmus* (London, 1902), with a good bibliography, pp. 196-220; concerning the policy of conciliation of Erasmus see Woker, *De Erasmi studiis irenicis* (Paderborn, 1872); Kalkoff in *Zeitschrift für Reformationsgesch.*, I (1904), 1 sqq.; Hartfelder, *Erasmus u. die Päpste in Histor. Taschenbuch*, VI, Series XI, 148 sqq.; Pastor, *Gesch. der Päpste*, I, IV, 472 sqq.; Lezius, *Zur Charakteristik des relig. Standpunktes des Erasmus* (1895); Richter, *Desid. Erastus and Erastianism

Erastus and Erastianism

The name "Erastianism" is often used in a somewhat loose sense as denoting an undue subservience of the Church to the State. This was not, however, the principal question on which the system of Erastus turned, but rather a subsidiary one and a deduction from it. This can be explained by a short account of his life and works.

The real name of Erastus was Thomas Lieber or Liebler. He used the latinized form in his works, and accordingly has become known by that name. He was born at Baden, in Switzerland, of humble parents, 7 September, 1524; and died 31 December, 1583. For his education he went to Basle in 1540, and two years later, he found a patron by whose assistance he was able to enter the university. His zeal for learning may be estimated from the fact that although by disease he lost the use of his right arm, he learnt to write with his left hand, and is said to have been able to take down his notes more fluently than others who had no similar impediment. During his residence at Basle there was an outbreak of plague. Erastus was one of the victims; but he did not suffer severely, and on his recovery, schools having been suspended, he left Basle and proceeded to Bologna, where he studied philosophy and medicine. He was afterwards for a time also at the University of Padua. In 1553 he went to Germany and obtained an appointment as court physician to the Prince of Hennenberg. We next find him in 1558 as court physician to the elector Palatine, Otho Heinrich, and occupying at the same time the chair of medicine in the University of Heidelberg.

Although his work and lectureship were both connected with medicine, the chief interest of Erastus had always been in theology. Heidelberg was at that time the scene of severe controversial strife. Erastus, who was himself a follower of Zwingli, threw himself heart and soul into the conflict against the Lutherans. The Elector Frederick III (who had succeeded Otho Heinrich in 1559) was then enforcing the teaching of Calvinistic doctrines, and Beza was actively defending them as against Breny in Stuttgart. A conference was arranged to take place at the monastery of Maulbronn in 1564, and by request of the elector, Erastus took a prominent part therein. He published a statement defending the doctrine of Zwingli, and on its being attacked, he wrote a second defence the following year. The conference was far from successful in settling the dispute, which continued in an aggravated form. In 1568, Erastus wrote his celebrated "Theses" against what he called the "excommunicatory fever", which we shall discuss presently. They were violently attacked by Beza, and Erastus answered the following year by his "Confirmatio Thesium". Notwithstanding his efforts, a full presbyterian system was set up in 1570 at Heidelberg, and the council proceeded to excom-

municate Erastus on the ground of his alleged Unitarianism. After a long further controversy, he succeeded in convincing them that this allegation was false; and the excommunication was removed in 1575; but his position had become a difficult one, and five years later he resigned his office. He returned to Basle, where he taught ethics for a short time, until his death. On his tomb in St. Martin's church he is described as "an acute philosopher, a clever physician, and a sincere theologian". He left behind him the reputation of an upright life, with great amiability of character, coupled with an absorbing zeal for learning. He took an active part in combating the superstitions of astrology; but he showed that he was not free from the prejudices of his day by advocating the killing of witches.

The great work by which Erastus is known is his "Seventy-five Theses", to which we have already alluded. They were never printed in his lifetime, but during his last illness he expressed a desire that they should be published, and Castelvetro, who married his widow, carried out his wishes. The "Theses" and "Confirmatio thesium" appeared together in 1589, the printer's name and place being suppressed from motives of prudence. The central question about which the "Theses" turned was that of excommunication. The term is not, however, used by Erastus in the Catholic sense as excluding the delinquent from the society or membership of the Church. The excommunication to which alludes was the exclusion of those of bad life from participation in the sacraments. He explains what he means in the introduction to the Theses" which he wrote at the end of his life. "It is about sixteen years ago", he writes, "since some men were seized on by a certain excommunicatory fever, which they did adorn with the title of ecclesiastical discipline. . . . They affirmed the manner thereof to be this; that some certain presbyters should sit in the name of the whole Church and should judge who were worthy or unworthy to come unto the Lord's Supper." The first eight theses are devoted to a detailed explanation of the various senses in which the word *excommunication* is used, and in the ninth Erastus defines the issue with which he is concerned: "This, then, is the question, whether any command or any example can be produced from Holy Scriptures requiring or intimating that such persons [i.e. sinners] should be excluded from the sacraments." In the following thesis (x) he says: "Our answer is that none such can be found, but rather that many, as well examples as precepts, of an opposite tendency, occur everywhere in the Bible." The following twenty-eight theses are devoted to developing and maintaining his conclusions, before proceeding in the last half of his work to answer possible objections.

The chief argument on which Erastus bases his whole system is an analogy between the Jewish and Christian Dispensations, and it is exactly here that the fallacy of his conclusions becomes manifest. A Catholic, indeed, would be less likely to fall into the error of looking upon the Sacrament of the Eucharist and the Sacrifice of the Mass as

in any close way analogous to the Sacrifices of the Old Law, and the slaying of the paschal lamb; or the relation of the ceremonial law to the political law of the Jews as in any way realized or realizable in the most Christian of states. To a Protestant who looked upon the Bible as the sole source of Revelation this was different. Erastus argued that by the Law of Moses no one was excluded from the offering of the paschal sacrifice, but every male was commanded to observe it under pain of death; and with respect to the ordinary sacrifices in the Temple, not only was no one excluded from them, but there was a positive command for all to assist at least three times a year, on the chief feasts, viz. Pasch, Pentecost, and Tabernacles. In illustration of the Jewish tradition, he also pointed to the conduct of St. John, who administered his baptism to all, good and bad indifferently. He laid great stress also on Christ Himself having admitted Judas to the participation of the Holy Communion at its institution; though he grants that this is not certain, as some commentators are of opinion that the traitor had already gone out, at any rate Judas was never publicly or even privately excluded; and, in any case, he shared in the celebration of the pasch, showing that Christ promulgated no law of exclusion.

A further argument is drawn from the nature of the sacraments themselves, again bringing into prominence the different of view between Protestants and Catholics; for Erastus looked upon the "preaching of the Word" as equal in sacredness with the sacraments. "I ask", he said, "are the sacraments superior in authority and dignity to the Word? Are they more useful and necessary? None of those who have been saved were saved without the Word; but without sacraments, especially without the Lord's Supper, there doubtless might be, and there have been many saved who, however, did not despise these ordinances. So seems the Apostle to have judged when he wrote that he was sent not to baptize but to preach the Word. Do not almost all divines hold the sacraments to be visible words and to exhibit to the eyes what words express to the ear? Why, then, do we go about to exclude nobody from the word, while from the sacraments, especially the Lord's Supper, we would exclude some, and that contrary to, or without, the express command of God?" (thesis xxxviii).

He deals at some length (thesis xv) with the Jewish law as to the "unclean", contending that uncleanness was by no means intended to typify sin; for, in that case, he argues, since the unclean were excluded from sacrifice while the sinful were not, it would follow that those who were blameless -- for legal uncleanness was incurred by such acts as contact with the dead, etc. -- were, from being types of sinners, punished more severely than sinners themselves; this he considers a *reductio ad absurdum*. He contended that uncleanness was a figure, "not of a work, but of a quality -- even our depraved nature; and he adds, "neither did it prefigure in what manner this ought to be punished [in the Church on earth], for Moses taught this in plain and explicit terms,

but what should be our condition in a future life. In meeting the question of the expulsion from the synagogues alluded to by Christ, Erastus contended (thesis xxii) that this was a merely civil act: for the synagogues were also law courts; and, in fact, those who were expelled from the synagogues were not excluded from the Temple. He added also that he would see no difficulty, even otherwise, in admitting that abuses might have crept into the Jewish as into the Christian Church, and that the Pharisees might have acted in a spirit out of keeping with the true and proper interpretation of the Law.

Out of the seventy-five theses of Erastus, the first seventy-two are devoted to the question of excommunication: it is only in the last three that the general relation of the Church to the State, which comes as a corollary to his theory, is discussed. This can be given in his own words. "I see no reason", he says, "why the Christian magistrate at the present day should not possess the same power which God commanded the magistrate to exercise in the Jewish commonwealth. Do we imagine that we are able to continue a better constitution of Church and State than that?" (thesis lxxiii). He then proceeds to discuss the position of the magistrate in the Jewish nation, and argues in the following thesis (lxxiv) that "if that Church and State were most wisely founded, arranged, and appointed, any other must merit approbation which approaches to its form as nearly as present times and circumstances will permit. So that wherever the magistrate is godly, there is no need of any other authority under any other pretension or title to rule or punish the people -- as if the Christian magistrate differed nothing from the heathen . . . I allow indeed the magistrate ought to consult, when *doctrine* is concerned, those who have particularly studied it; but that there should be any such ecclesiastical tribunal to take cognizance of men's conduct, we find no such thing anywhere appointed in the Holy Scriptures! It may reasonably be asked how the system of Erastus could work in a state which is professedly un-Christian, and the last thesis is devoted to answering that question. "But in those church the members of which live under an ungodly government (for example Popish or Mohammedan), grave and pious men should be chosen according to the precept of the Apostle, to settle disputes by arbitration, compose quarrels, and do other offices of that sort. These men ought also, in conjunction with the ministers, to admonish and reprove them who live unholy and impure lives; and if they do not succeed, they may also punish, or rather recall them to virtue, either by refusing to hold private intercourse with them or by a public rebuke, or by any other such mark of disapprobation. But from the sacraments which God has instituted, they may not debar any who desire to partake."

The full system of Erastus was never accepted or promulgated by any definite sect or band of followers; but the influence of his opinions was very considerable; both in Germany and in Great Britain. The Presbyterians of course have always vigorously

repudiated his doctrines; but in the Westminster Assembly (1643-7) there was a strong Erastian party. After a long controversy, a definite resolution, affirming that the Church has its own government distinct from the civil power, was carried almost unanimously, the sole dissentient being the well-known divine, John Lightfoot. On the general questions of the relation between Church and State, it must be admitted that the opinions popularly denoted by the word *Erastian* have unmistakable influence on the Established Church of England, though there has always been a party resisting the encroachments of civil power. We can, perhaps, take Hooker's *Ecclesiastical Polity*" as an authoritative exposition of this phase of Anglicanism. Hooker was a contemporary of Erastus, and in his preface he gives an account of the controversy of the latter with Beza. The eighth volume, however, in which he deals with the question before us did not appear until 1648, many years after his death. Its authenticity has been questioned; but it is now generally conceded that it is based on rough notes made during his lifetime. He adopts the analogy of Erastus between the Jewish nation and a Christian state. Starting from the truism that a good monarch should look to the spiritual good of his subjects no less than to the temporal, he defends at once the title of the king to be head of the Church. He considers that the consent of the laity is required before an ecclesiastical law can be binding, and looks upon Parliament as their mouthpiece, and accordingly defends the right of Parliament to legislate on ecclesiastical matters. He defends the king's power of appointing bishops and his jurisdiction over ecclesiastical courts.

We may contrast with this the Catholic system of the union of Church and State which has always been the Church's ideal, and has often been in great measure realized, and in our own days has been brought into prominence by the solemn pronouncements of Pius IX. The power of the State is maintained to be of God, either immediately, or mediately through the will of the people; and the civil government exists side by side with the ecclesiastical government. Each is complete in its own sphere. The pope has "temporal power, using the term in its true sense, i.e. of his right to certain interference with the temporal government of states when the principles of religion are at stake. On the other hand, any interference on part of the State with ecclesiastical appointments, as, for example, by nomination of bishops or by veto on such nomination, or even on the election of the pope, such as has sometimes existed in the case of some Catholic powers, is conceded by courtesy, in consideration of services rendered and by no means acknowledged as a right. The Theses of Erastus and the *Confirmatio Thesium* were reprinted at Amsterdam in 1649. An English translation of the Theses, without the *Confirmatio*, appeared in London in 1659 -- a very literal rendering, in places hardly intelligible. A new translation of the Theses, by Dr. Robert Lee, with a valuable preface, was published at Edinburgh in 1844.

BERNARD WARD

Veit Erbermann

Veit Erbermann

(Or Ebermann).

Theologian and controversialist, born 25 May, 1597, at Rendweisdorff, in Bavaria; died 8 April, 1675. He was born of Lutheran parents, but at an early age he became a Catholic, and on 30 May, 1620, entered the Society of Jesus. After completing his ecclesiastical studies he taught philosophy and Scholastic theology, first at Mainz and afterwards at Würzburg. Subsequently he was appointed rector of the pontifical seminary at Fulda, which position he held for seven years. His theological attainments and zeal for the Church brought him into conflict with many of the leading Reformers of his time. He watched with a keen interest what in Protestant theological circles is known as "the syncretistic controversy", and in his frequent encounters with its chief representatives proved himself an able champion of Catholicism. His principal works are: "Anatomia Callixtina" (Mainz, 1644), and "Irenicon Catholicum" (2 vols., Mainz, 1645-46), in which he examines critically the religious tenets of George Calixtus; "Interrogationes apologeticae" (Würzburg, 1651); "Examen Examini Conringiani" (Würzburg, 1644), an exposition of the infallibility of the Church against H. Conring; "Anti-Musaeus, i.e. parallela Ecclesiae verae et falsae" (Würzburg, 1659), and "Anti-Musaei pars altera" (Würzburg, 1661); "Asserta theologica de fide divina" (Würzburg, 1665).

JOSEPH SCHROEDER

Alonso de Ercilla y Zuniga

Alonso de Ercilla y Zúñiga

Spanish soldier and poet, born in Madrid, 7 August, 1533; died in the same city, 29 November, 1594. After his father's death, his mother became lady-in-waiting to the Infanta María and made young Alonso a page to Prince Philip. Ercilla received a very thorough education, for, besides having the most learned teachers, he enjoyed the advantages of very extensive travelling and of living at court where he came in contact with high personages. When he was only fifteen he accompanied Philip through Italy and Germany; and their travels lasted three years. Later, Ercilla accompanied his mother to Bohemia where he left her and then visited Austria, Hungary, and other countries. Returning to Spain, he soon started out again with Philip. In London he made the acquaintance of Jerónimo de Alderete (1555), whose stories of his thrilling

adventures in the New World so fired Ercilla's imagination that he determined to accompany Alderete to the New World. He therefore obtained leave from Philip, and they set sail for America, 15 Oct., 1555. Soon after their arrival, however, Alderete died (near Panamá, April, 1556). Ercilla continued on his way to Peru, and in 1557 joined the forces of García Hurtado de Mendoza, who had recently been appointed Governor of Chile. During the succeeding two or three years he played a brilliant part in combating an insurrection among the natives of Arauco, a province of Chile, suffering great hardships, and distinguishing himself several times in battle. After a severe illness he returned to Spain in 1562, and for a time resumed his travels through Europe. In 1570, he married Doña María de Bazán, a woman of illustrious family and of intellectual attainments. He died at Madrid neglected and in great poverty.

Ercilla's great work is *La Araucana*, an epic poem of thirty-seven cantos, describing the difficulties encountered by the Spaniards during the insurrection in Arauco, and the heroic deeds of the natives as well as his companions. The epic partakes of the character of history, and the author adheres with such strict fidelity to the truth, that subsequent historians characterize his work as thoroughly trustworthy. In it the difficult art of story-telling is carried to perfection. Places are admirably described, dates are given with accuracy, and the customs of the native faithfully set forth, giving to the narrative animation and colouring. The poem was published in three parts, the first appearing in 1569, the second in 1578, and the third in 1590. The best editions are those published by the Spanish Academy in 1776 and 1828.

VENTURA FUENTES

St. Erconwald

St. Erconwald

Bishop of London, died about 690. He belonged to the princely family of the East Anglian Offa, and devoted a considerable portion of his patrimony to founding two monasteries, one for monks at Chertsey, and the other for nuns at Barking in Essex. Over the latter he placed his sister, St. Ethelburga, as abbess. He himself discharged the duties of superior at Chertsey. Erconwald continued his monastic life till the death of Bishop Wini in 675, when he was called to the See of London, at the instance of King Sebbi and Theodore, Archbishop of Canterbury. As monk and bishop he was renowned for his holiness of life, and miracles were wrought in attestation of his sanctity. The sick were cured by contact with the litter on which he had been carried; this we have on the testimony of Venerable Bede. He was present in 686 at the reconciliation between Archbishop Theodore and Wilfrith. King Ine in the preface to his

laws calls Erconwald "my bishop". During his episcopate he enlarged his church, augmented its revenues, and obtained for it special privileges from the king.

According to an ancient epitaph, Erconwald ruled the Diocese of London for eleven years. He is said to have eventually retired to the convent of his sister in Barking, where he died 30 April. He was buried in St. Paul's, and his tomb became renowned for miracles. The citizens of London had a special devotion to him, and they regarded with pride the magnificence of his shrine. During the burning of the cathedral in 1087 it is related that the shrine and its silken coverings remained intact. A solemn translation of St. Erconwald's body took place 14 Nov., 1148, when it was raised above the high altar. The shrine was robbed of its jewels and ornaments in the sixteenth century; and the bones of the saint are said to have been then buried at the east end of the choir. His feast is observed by English Catholics on 14 November. Prior to the Reformation, the anniversaries of St. Erconwald's death and translation of his relics were observed at St. Paul's as feasts of the first class, according to an ordinance of Bishop Braybrooke in 1386.

COLUMBA EDMONDS

Sampson Erdeswicke

Sampson Erdeswicke

Antiquarian, date of birth unknown; died 1603. He was born at Sandon in Staffordshire, his father, Hugh Erdeswicke, being descended from Richard de Vernon, Baron of Shipbrook, in the reign of William the Conqueror. The family resided originally at Erdeswicke Hall, in Cheshire, afterwards at Leighton and finally in the reign of Edward III settled at Sandon. Hugh Erdeswicke was a staunch Catholic who suffered much for the Faith. In 1582 he was reported to the Privy Council by the Anglican Bishop of Coventry as "the sorest and dangerousest papist, one of them in all England". His son Sampson, born in the reign of Henry VIII, entered Brasenose College, Oxford, as a gentleman-commoner in 1553. Leaving Oxford, he returned to his life as a country gentleman under the usual disabilities of a recusant. He devoted himself to antiquarian studies, particularly to the thorough Survey of Staffordshire. By this work his name is chiefly remembered, but it was not published during his lifetime, and considerable mystery exists as to the original manuscript, because the numerous existing copies differ much from one another. A description of these was published by William Salt, F.S.A., in 1844. The "Survey itself was published by Degge (1717 and 1723), by Shaw in his Staffordshire (1798), and lastly by Harwood (1820 and 1844). Other unpublished manuscripts by Erdeswicke are in the British Museum and the College of Arms. Latterly he employed as amanuensis, William Wyrley, a youth whom he had

educated and who afterwards published writings of his own. One of these, "The True Use of Armorie, was claimed by Erdeswicke as his own work, but he told William Burton the antiquary, that he had given Wyrley leave to publish it under his own name; but Antony à Wood denies this, adding that Erdeswicke being oftentimes crazed, especially in his last day, and fit then for no kind of serious business, would say anything which came into his mind, as 'tis very well known at this day among the chief of the College of Arms" (Ath. Oxon., Bliss ed., II, 217-18). Erdeswicke married first Elizabeth Dixwell, secondly Mary Digby (24 April, 1593). He died in 1603, but the date usually given, 11 April, must be erroneous, as his will is dated 15 May. He is buried in Sandon Church, beneath an elaborate monument representing his own recumbent form. Camden and other antiquaries praise his knowledge and industry, and he is believed to have been elected a member of the Society of Antiquaries founded by Archbishop Parker in 1572.

EDWIN BURTON

Erdington Abbey

Erdington Abbey

Erdington Abbey, situated in a suburb of Birmingham, Warwickshire, England, belongs to the Benedictine congregation of St. Martin of Beuron, Germany, and is dedicated to St. Thomas of Canterbury. Driven from Germany by the Falk laws, four of these exiled monks went to Erdington at the request of Bishop Ullathorne, O.S.B., and of the Rev. Daniel Haigh, M.A., a convert Anglican clergyman who gave them the splendid Gothic church which he had built and embellished out of his own private fortune, as a thank-offering to Almighty God for the gift of the true Faith. Father Haigh's modest presbytery was the first monastery, and here Dom Placid Walter, Arch-Abbot of the Beuron Congregation, Dom Hildebrand de Hempstine, later Abbot Primate of the Benedictine Order, Dom Leo Linse, afterwards Abbot of Fort Augustus in Scotland, Dom Leodgar Stocker, and a lay brother took up their abode in October, 1876. Dom Placid was the first prior. Two years later, Dom Hildebrand succeeded Dom Placid, and at once set about building a monastery that would accommodate a community large enough to chant the Divine Office in choir. It was finished in 1880, when the number of monks was increased to eleven with three lay brothers.

Meanwhile Father Haigh had found his last resting-place in the Blessed Sacrament chapel, so the untenanted presbytery was converted into a Catholic grammar school, the first of its kind in the neighbourhood of Birmingham, with Dom Wilfrid Wallace, an English priest who had lately joined the community, as head master. Dom Leo Linse became prior in 1882, and was succeeded in 1886 by Dom Boniface Wolff, who was

followed, in turn, by Dom Silvester Schlecht in 1895. On the feast of the Assumption, 1896, the priory was transformed into an abbey by a Brief of Leo XIII, though three years elapsed before it received an abbot. These were years of spiritual and material development. A novitiate was opened and a school for oblates, several members were added to the community, and a large addition made to the monastic buildings. These comprised the abbot's apartments and chapel, rooms for guests, entrance hall, parlours, novitiate, and clericate. They were completed and blessed in 1898. In July, 1899, Dom Ansgar Höckelmann was appointed its first abbot, and he was blessed in the abbey church on 3 Sept., by Bishop Ilsley of Birmingham. Since then a spacious refectory and library have been built, and the community continues to grow.

PETER NUGENT

St. Erhard of Ratisbon

St. Erhard of Ratisbon

Bishop of that city in the seventh century, probably identical with an Abbot Erhard of Ebersheimmunster mentioned in a Merovingian diploma of 684. Ancient documents call him also Erard and Herhard. The legendary account of his life offers little that is historically certain. The following, however, seems reliable. Erhard was born in Ireland, then known as "Scotia". Like many of his countrymen he went to the Continent as missionary bishop or chorepiscopus, and coming to the Vosges met there St. Hildulf, said to have been Archbishop of Trier, and who lived there as a hermit (666-671). He is called Erhard's brother, but very likely spiritual relationship was meant. It is said that each of them founded seven monasteries. Thence Erhard went to Ratisbon and founded the nunnery of Niedermunster. By Divine inspiration he was recalled to the Rhineland to baptize St. Odilia, blind from her birth, but who received her eyesight at her baptism. He sent a messenger to her father, Duke Attich, and reconciled him with his disowned daughter. According to another account, St. Odilia was baptized by Hildulf, Erhard acting as her sponsor. The year of his death is not known. He was interred in the still-extant Erhard-crypt at Niedermunster, and miracles were wrought at his grave, that was guarded in the Middle Ages by "Erhardinonnen", a religious community of women who observed there a perpetual round of prayer. Otto II, in 974, made donations of properties in the Danube valley to the convent "where the holy confessor Erhard rests". On 7 Oct., 1052 the remains of the holy bishops Erhard and Wolfgang were raised by Pope St. Leo IX in presence of Emperor Henry III and many bishops, a ceremony which was at that time equivalent to canonization. Ratisbon documents, however, mention only the raising of Wolfgang, not that of Erhard. At the close of the eleventh century, Paul von Bernried, a monk of Fulda, at the suggestion

of Abbess Heilika of Niedermunster, wrote a life of Erhard and added a second book containing a number of miracles. The learned canon of Ratisbon, Conrad of Megenberg (d. 1374), furnished a new edition of this work. The church in Neidermunster, now a parish church, still preserves the crosier of the saint, made of black buffalo-horn. A bone of his skull was enclosed in a precious receptacle in 1866 and is placed upon the heads of the faithful on his feast day, 8 Jan. Three ancient Latin lives of the saint are found in the *Acta Sanctorum* (8 Jan). The beautiful reliquary is reproduced in Jakob, "Die Kunst im Dienste der Kirche" (illust. 16).

PETER NUGENT

Erie

Erie

DIOCESE OF ERIE (ERIENSIS).

Established 1853; it embraces the thirteen counties of North-Western Pennsylvania, U. S. A.: Erie, Crawford, Warren, McKean, Potter, Mercer, Venango, Forest, Elk, Cameron, Clarion, Jeferson, and Clearfield, an area of 10,027 square miles.

This territory enjoys the distinction of having been under three different national and ecclesiastical governments: under the French flag and the See of Quebec from 1753 to 1758; under the English flag and the Vicariate Apostolic of London from 1758 to the Treaty of Paris, 3 September, 1783, and the erection of the See of Baltimore in 1789; under the American flag since the Treaty of Paris and a part of the See of Baltimore until the establishment of the Diocese of Philadelphia in 1808. In August, 1843, when the Diocese of Pittsburg was formed, it included all that part of the State of Pennsylvania west of a line running along the eastern border of Bedford, Huntingdon, Clearfield, Elk, McKean, and Potter counties, and consequently, the territory of the present Diocese of Erie.

In 1853 the Right Rev. Michael O'Connor, the first Bishop of Pittsburg, petitioned the Holy See, through the Fifth Provincial Council of Baltimore, for a division of his diocese, and took for himself the poorest part, and thus became the first Bishop of the Diocese of Erie. When Bishop O'Connor assumed the government of the diocese, 29 July, 1853, there were only twenty-eight churches with eleven secular priests and three Benedictine Fathers to attend to the wants of the Catholics scattered throughout the thirteen counties. At the urgent request and petition of the priests and people of Pittsburg, Bishop O'Connor was restored to them, having governed the Diocese of Erie for the short period of seven months.

His successor at Erie was the Rev. Josue Moody Young, a member of an old Puritan, New England family, born 29 Oct., 1808, at Shapleigh, Maine. He became a convert

from Congregationalism and was baptized in October, 1828, by the famous New England missionary, Father Charles D. French, O.P., when he then changed the Moody of his name to Maria. He was ordained priest 1 April, 1838, and consecrated second Bishop of Erie, in Cincinnati, by Archbishop Purcell, on 23 April, 1854. The outlook at his accession was gloomy. Many of the priests who were affiliated with Pittsburg before the division, returned there with Bishop O'Connor. Among those who cast their lot with the new diocese the most noteworthy were the Very Rev. John D. Coady, Revs. Anthony Reek, Joseph Hartman, M. A. De La Roque, John Berbegier, Andrew Skopez, Kieran O'Brannigan, and also Messrs. John Koch and Thomas Lonnergan, at that time studying for the priesthood. There were but two churches in Erie city, St. Patrick's, the pro-cathedral, and St. Mary's, built for a German congregation by Rev. Joseph Hartman. Outside the city there were twenty-eight churches, with eleven secular priests and three Benedictines for a Catholic population of 12,000. The church buildings outside the city of Erie were mostly wooden structures. There was only one Catholic school. The discovery of petroleum on Oil Creek, 28 August, 1859, gave a great impetus to both secular and religious progress throughout the diocese. To accommodate the settlers that located in the valleys of Oil Creek and the Allegheny River, where towns sprang up as by magic, churches were hastily erected, but the number of priests was still inadequate. As there were no railroads Bishop Young's labours were in the beginning very heavy. He died suddenly 18 September, 1866. At his death the Catholic population had more than doubled, and several new churches and schools had sprung into existence.

The vicar-general, Very Rev. John D. Coady, governed the diocese during the interregnum until the third bishop, the Rev. Tobias Mullen, was consecrated, 2 August, 1868. He was born in the County Tyrone, Ireland, 4 March, 1818, and was ordained priest at Pittsburg, 1 Sept., 1844, having gone there with Bishop O'Connor from Maynooth the previous year as a volunteer for the American mission. Under his direction a new era began, priests were ordained, new parishes sprang up, churches and schools were built, regular conferences for the clergy were held. Religious orders were introduced and new institutions arose for the maintenance and spread of religion, and for the enlightenment, and comfort, and shelter of suffering humanity. The frame churches gave place to brick and stone structures. The bishop himself was a tireless worker and infused his own spirit into his priests. A Catholic weekly, the "Lake Shore Visitor", was issued, edited mostly by the bishop himself, in the midst of labours that called him to every part of his extensive diocese. The Poles, the Slavs, the Hungarians, and the Italians had churches and priests provided for them, the orphans a large new home, the sick were provided with two large hospitals, and finally his crowning work, St. Peter's Cathedral, was finished, clear of debt, and consecrated in 1893, the twenty-

fifth anniversary of his consecration. In the following year he celebrated the golden jubilee of his priesthood. His strong active mind and body began to fail and on 19 May, 1897, he suffered a paralytic stroke and a coadjutor, the Rev. John E. Fitz Maurice, president of St. Charles's Seminary, Overbrook, Philadelphia, was chosen by the Holy See and consecrated titular Bishop of Amisus with right of succession in Philadelphia, 24 February, 1898. Bishop Mullen resigned, 10 August, 1899, and died, 22 April, 1900. Bishop Fitz Maurice succeeded as fourth bishop of the diocese, on 19 September, 1899, and the good work inaugurated under the late bishop went on quietly and steadily. He was born at Newtown-Sandes, County Kerry, Ireland, 9 Jan., 1840, and ordained priest in Philadelphia, 21 Dec., 1862. After officiating in several parishes he was appointed rector of the diocesan seminary in 1886.

The religious orders in the diocese are the Benedictines, the Redemptorists, the Brothers of Mary, the Benedictine Nuns, the Sisters of St. Joseph, the Sisters of Mercy, and the Felician Sisters. At one time the Franciscans, the Bridgettines, and the Sisters of the Humility of Mary had houses in the diocese. The Benedictines settled at St. Mary's, Elk county, under bishop O'Connor and in 1858 took charge of St. Mary's, Erie. The Redemptorists in 1875 began their foundation, purchasing a Presbyterian college--at Northeast--which they made a seminary and college for young men who intended to join their order. They have 142 students.

The Sisters of St. Joseph entered the diocese in 1860, and have charge of the orphan asylum, the home for the aged, and the two hospitals, the Academy of Villa Maria, the mother-house in the diocese, and of fifteen parochial schools. The Sisters of Mercy, who entered the diocese 24 September, 1870, besides the academy in Titusville, the mother-house, have charge of eight parochial schools. The Sisters of St. Benedict (St. Mary's, Penn.) (22 July, 1852) have St. Benedict's Academy, the mother-house at St. Mary's, and teach seven schools. The (Erie) Sisters of St. Benedict, besides the academy and school of St. Mary's Church, teach five parochial schools, and also conduct an academy in Sharon. The Felician Sisters teach St. Stanislaus' Polish school, in the city of Erie.

There are in the diocese 100 churches, with resident priests, 46 missions with churches, and 11 chapels; 160 priests--135 secular, 25 regular; 45 parochial schools, 3 academies for young ladies, 1 orphan asylum with 216 orphans, making a total of young people under the care of the Church, 10,385; two hospitals, and one home for the aged. The Catholic population of the diocese is estimated at 121,108.

LAMBING, *Hist. Cath. Ch. in Diocese of Pittsburg* (New York, 1880); BATES, *Hist. of Cranford County*; SMALL, *Legislative Hand-Book*; SHEA, *Hist. of Cath. Ch. in U. S.* (New York, 1894); Reuss, *Biog. Cyclo. of Cath. Hierarchy of U. S.* (Milwaukee, 1898).

JAMES J. DUNN

John Scotus Eriugena

John Scotus Eriugena

An Irish teacher, theologian, philosopher, and poet, who lived in the ninth century.

NAME

Eriugena's contemporaries invariably refer to him as *Joannes Scottus* or *Joannes Scottigena*. In the MSS. of the tenth and subsequent centuries the forms *Eriugena*, *Ierugena*, and *Erigena* occur. Of these, the oldest and most acceptable, philologically, is *Eriugena*, which, as it was perhaps sometimes written *Eriygena*, was changed into *Erigena*. It means "a native of Ireland". The form *Ierugena* is evidently an attempt to connect the first part of the name with the Greek word *hieros*, and means "a native of the Island of Saints"; the combination *Joannes Scotus Erigena* cannot be traced beyond the sixteenth century.

BIRTHPLACE

At one time the birthplace of Eriugena was a matter of dispute. Eriufen in Wales and Ayre in Scotland claimed the honour, and each found advocates. Nowadays, however, the claim of Ireland to be considered the birthplace of John is universally admitted. All the evidence points that way, and leads us to conclude that when his contemporaries tauntingly referred to his having come to France from Ireland they meant not only that he was educated in the Isle of Saints but also that Ireland was his birthplace. Whatever doubt there may have been about the meaning of *Scotus*, there can be none as to the signification of the surname *Eriugena*.

LIFE

What is known of the life of Eriugena is very soon told. About 847 he appeared in France at the court of Charles the Bald, was received with special favour by that prince, appointed head of the palace school, which seems to have had some kind of permanent location at Paris, and was commissioned by his royal patron to translate the works of Pseudo-Dionysius into Latin. This translation brought him into prominence in the world of letters and was the occasion of his entering into the theological controversies of the day, especially into those concerning predestination and the Eucharist. His knowledge of Greek is evident from his translations, and is also proved by the poems which he wrote. It is doubtful, on the other hand, whether he possessed the knowledge of Hebrew and other Oriental languages which is sometimes ascribed to him. In any case there is no evidence of his having travelled extensively in Greece and Asia Minor.

After leaving Ireland he spent the rest of his days in France, probably at Paris and Laon. There was, as we know from the MSS., an important colony of Irish scholars at the latter place. The tradition that after the death of Charles the Bald he went to England at the invitation of Alfred the Great, that he taught a school at Malmesbury, and was there put to death by his pupils, has no support in contemporary documents and may well have arisen from some confusion of names on the part of later historians. It is probable that he died in France, but the date is unknown. From the evidence available it is impossible to determine whether he was a cleric or a layman, although it is difficult to deny that the general conditions of the time make it more than probable that he was a cleric and perhaps a monk.

WRITINGS

I. Translations of the works of Pseudo-Dionysius: "De Coelesti Hierarchia"; "De Ecclesiastica Hierarchia"; "De Divinis Nominibus"; "De Mystica Theologia"; "Epistolae"; translations of the "Ambigua" of St. Maximus. — 2. Commentaries: "Homolia in prologum S. Evangelii sec. Joannem", and a commentary on the Gospel of St. John, of which few fragments only have come down to us; commentaries on the "Celestial Hierarchy" and the "Ecclesiastical Hierarchy" of Pseudo-Dionysius; glosses on the work of Martianus Capella (still in MS.), and on the theological opuscula of Boethius (Rand ed., Munich, 1906), with which is connected a brief "Life" of Boethius (Pieper ed., "Consolatio Philos.", Leipzig, 1871). — 3. Theological works: "Liber de Praedestinatione", and very probably a work on the Eucharist, though it is certain that the tract "De Corpore et Sanguine Domini", at one time believed to be Eriugena's, is the work of Paschasius Radbertus. — 4. Philosophical works: "De Divisione Naturae", his principal work, and a treatise, "De Egressu et Regressu Animae ad Deum", of which we possess only a few fragments. — 5. Poems: These are written partly in Latin and partly in Greek. Many of them are dedicated to Charles the Bald. The most complete edition of Eriugena's works is that of Dr. Floss, which is printed as Vol. CXXII of Migne's P.L. A new edition embodying the results of recent discoveries of manuscripts is often spoken of, and will doubtless be forthcoming before long.

DOCTRINES

Although the errors into which Eriugena fell both in theology and in philosophy were many and serious, there can be no doubt that he himself abhorred heresy, was disposed to treat the heretic with no small degree of harshness (as is evident from his strictures on Gottschalk), and all through his life believed himself an unswervingly loyal son of the Church. Taking for granted the authenticity of the works ascribed to Dionysius the Areopagite, he considered that the doctrines he discovered in them were not only philosophically true, but also theologically acceptable, since they carried with

them the authority of the distinguished Athenian convert of St. Paul. He did not for a moment suspect that in those writings he had to deal with a loosely articulated system of thought in which Christian teachings were mingled with the tenets of a subtle but profoundly anti-Christian pantheism. To this remark should be added another in order that we may fully understand Eriugena's attitude towards orthodoxy. He was accused by his contemporaries of leaning too much towards the Greeks. And, in fact, the Greek Fathers were his favourite authors, especially Gregory the Theologian, and Basil the Great. Of the Latins he prized Augustine most highly. The influence of these on the temperament of the venturesome Celt was towards freedom and not towards restraint in theological speculation. This freedom he reconciled with his respect for the teaching authority of the Church as he understood it. However, in the actual exercise of the freedom of speculation which he allowed himself, he fell into many errors which are incompatible with orthodox Christianity.

The "*De Prædestinatione*" seems to have been written after the translation of the works of Pseudo-Dionysius. Nevertheless there is in it only one allusion to the authority of the Greek Fathers and very little of the obtrusion of Greek words and phrases which so abound in the later works. It deals with the problem raised by Gottschalk regarding the doctrine of predestination, and, more specifically, undertakes to prove that predestination is single, not double — in other words, that there is no predestination to sin and punishment but only to grace and eternal happiness. The authority of Augustine is used very extensively. In the philosophical setting of the problem, however — namely, the discussion of the true nature of evil — Eriugena appears to go back farther than St. Augustine and to hold the radical neo-Platonic view that evil is non-existent. He is thus compelled to go even farther than St. Augustine in rejecting the doctrine of a double predestination. That he exceeded the bounds of orthodoxy is the contention of Prudentius of Troyes and Florus of Lyons who answered the "*Liber de Prædestinatione*" in works full of bitter personal attacks on Eriugena. Their views prevailed in the Councils of Valencia (855) and Langres (859), in which Eriugena's doctrine was condemned.

While the "*De Corpore et Sanguine Domini*" is not Eriugena's, though ascribed to him, there can be no doubt that in some work, now lost, on that subject he maintained doctrines at variance with the Catholic doctrine of Transubstantiation. From the fragment which has come down to us of his commentary on St. John we infer that he held the Eucharist to be merely a type or figure. At least he insists on the spiritual, to the exclusion, apparently, of the physical, "eating of the Flesh of the Son of Man".

In the "*De Divisione Naturæ*", his most important and systematic work, Eriugena treats in the form of a dialogue the principal problems of philosophy and theology. The meaning of the title is evident from the opening sentences in which he outlines

the plan of the work. "Nature", he says, "is divided into four species": (1) "Nature which creates and is not created" — this is God, the Source and Principle of all things; (2) "Nature which is created and creates" — this is the world of primordial causes or (Platonic) ideas; (3) "Nature which is created and does not create" — this is the world of phenomena, the world of contingent, sense-perceived things; (4) "Nature which neither creates nor is created" — this is God, the Term to which all things are returning.

(1) "Nature", then, is synonymous with reality, and also with God. For, whatever reality the world of ideas and the world of phenomena possess, is, in the truest and most literal sense, the reality of God Himself. "The being of all things is the over-being of God" (*esse omnium est superesse Divinitatis*) is a saying which he never tires of quoting from the works of Pseudo-Dionysius. So supremely perfect is the essence of the Divinity that God is incomprehensible not only to us but also to Himself. For if He knew Himself in any adequate sense He should place Himself in some category of thought, which would be to limit Himself. God is above all categories. When, therefore, we speak about Him we are safer in using the negative (*apophatike*) than the positive (*kataphatike*) mode of predication. That is, we are safer in predicating what He is not than in venturing to predicate what He is. If we have recourse to positive predication, we must use the prefix *hyper* and say God is *hypersubstantia*, i.e. more-than-substance, etc. Similarly, when we say that God is the "Creator" of all things we should understand that predicate in a sense altogether distinct from the meaning which we attach to the predicate "maker" or "producer" when applied to finite agents or causes. The "creation" of the world is in reality a *theophania*, or showing forth of the Essence of God in the things created. Just as He reveals Himself to the mind and the soul in higher intellectual and spiritual truth, so He reveals Himself to the senses in the created world around us. Creation is, therefore, a process of unfolding of the Divine Nature, and if we retain the word *Creator* in the sense of "one who makes things out of nothing", we must understand that God "makes" the world out of His own Essence, which, because of its incomprehensibility, may be said to be "nothing".

(2) Nature in the second sense, "Nature which creates and is created", is the world of primordial causes, or ideas, which the Father "created" in the Son, and which in turn "create", that is determine the generic and specific natures of concrete visible things. These, says Eriugena, were called "prototypes", *theia thelemata*, and "ideas", by the Greeks. Their function is that of exemplar and efficient causes. For since they are, though created, identical with God, and since their *locus* is the Word of God, the Second Person of the Blessed Trinity, they are operative causes and not merely static types. They are coeternal with the Word of God. From this, however, it is not necessary to infer, as some critics have done, that according to Eriugena the primordial causes are identical with the Word. As examples of primordial causes Eriugena enumerates

goodness, wisdom, intuition (insight), understanding, virtue, greatness, power, etc. These are united in God, partly separate or scattered in the Word, and fully separate or scattered in the world of phenomena. For there is underlying all Eriugena's doctrine of the origin of things the image to which he often referred, namely, that of a circle, the radii of which are united at the centre. The centre is God, the radii at a point near the centre are the primordial causes, the radii at the circumference are phenomena.

(3) These phenomena are "Nature" in the third sense, "which is created and does not create". The stream of reality, setting out from the centre, God, passing through the ideas in the Word, passes next through all the *genera suprema, media, and infima* of logic, then enters the region of number and the realm of space and time, where the ideas become subject to multiplicity, change, imperfection, and decay. In this last stage they are no longer pure ideas but only the appearances of reality, that is phenomena. In the region of number the ideas become angels, pure incorporeal spirits. In the realm of space and time the ideas take on the burden of matter, which is the source of suffering, sickness, and sin. The material world, therefore, of our experience is composed of ideas clothed in matter — here Eriugena attempts a reconciliation of Platonism with Aristotelean notions. Man, too, is composed of idea and matter, soul and body. He is the culmination of the process of things from God, and with him, as we shall see, begins the process of return of all things to God. He is the image of the Trinity in so far as he unites in one soul being, wisdom, and love. In the state of innocence in which he was created, he was perfect in body as well as in soul, independent of bodily needs, and without differentiation of sex. The dependence of man's mind on the body and the subjection of the body to the world of sense, as well as the distinction of male and female in the human kind, are all the results of original sin. This downward tendency of the soul towards the conditions of animal existence has only one remedy, Divine grace. By means of this heavenly gift man is enabled to rise superior to the needs of the sensuous body, to place the demands of reason above those of bodily appetite, and from reason to ascend through contemplation to ideas, and thence by intuition to God Himself. The three faculties here alluded to as reason, contemplation, and intuition are designated by Eriugena as internal sense (*dianoia*), ratiocination (*logos*), and intellect (*nous*). These are the three degrees of mental perfection which man must attain if he is to free himself from the bondage into which he was cast by sin, and attain that union with God in which salvation consists.

(4) Not only man, however, but everything else in nature is destined to return to God. This universal resurrection of nature is the subject of the last portion of Eriugena's work, in which he treats of "Nature which neither creates nor is created". This is God, the final Term, or Goal, of all existence. When Christ became man, He took on Himself body, soul, senses, and intellect, and when, ascending into Heaven, He took these with

Him, not only the soul of man but his senses, his body, the animal and the vegetative natures, and even the elements were redeemed, and the final return of all things to God was begun. Now, as Heraclitus taught, the upward and the downward ways are the same. The return to God proceeds in the inverse order through all the steps which marked the downward course, or process of things from God. The elements become light, light becomes life, life becomes sense, sense becomes reason, reason becomes intellect, intellect becomes ideas in Christ, the Word of God, and through Christ returns to the oneness of God from which all the processes of nature began. This "incorporation" in Christ takes place by means of Divine grace in the Church, of which Christ is the invisible head. The doctrine of the final return of all things to God shows very clearly the influence of Origen. In general, the system of thought just outlined is a combination of neo-Platonic mysticism, emanationism, and pantheism which Eriugena strove in vain to reconcile with Aristotelean empiricism, Christian creationism, and theism. The result is a body of doctrines loosely articulated, in which the mystic and idealistic elements predominate, and in which there is much that is irreconcilable with Catholic dogma.

INFLUENCE

Eriugena's influence on the theological thought of his own and immediately subsequent generations was doubtless checked by the condemnations to which his doctrines of predestination and of the Eucharist were subjected in the Councils of Valencia (855), Langres (859), and Vercelli (1050). The general trend of his thought, so far as it was discernible at the time of his translations of Pseudo-Dionysius, was referred to with suspicion in a letter addressed by Pope Nicholas I to Charles the Bald in 859. It was not, however, until the beginning of the thirteenth century that the pantheism of the "De Divisione Naturae" was formally condemned. The Council of Paris (1225) coupled the condemnation of Eriugena's work with the previous condemnations (1210) of the doctrines of Amalric of Chartres and David of Dinant, and there can be no doubt that the pantheists of that time were using Eriugena's treatise. While the great Scholastic teachers, Abelard, Alexander of Hales, St. Bonaventure, St. Thomas, and Albert the Great knew nothing, apparently, of Eriugena and his pantheism, certain groups of mystical theologians, even as early as the thirteenth century, were interested in his work and drew their doctrines from it. The Albigenses, too, sought inspiration from him. Later, the Mystics, especially Meister Eckhart, were influenced by him. And in recent times the great transcendental idealists, especially the Germans, recognize in him a kindred spirit and speak of him in the highest terms.

WILLIAM TURNER

Ermland

Ermland

Ermland, or Ermeland (Varmiensis, Warmia), a district of East Prussia and an exempt bishopric. St. Adalbert of Prague (d. 997) and St. Bruno of Querfurt (d. 1009) converted the early inhabitants of this region, the heathen Prussians, to Christianity and two centuries later Teutonic Knights and members of the Cistercian Order introduced civilization also into the land. Among these later was the saintly Bishop Christian of Oliva (d. 1245). In 1243 the territorial possessions of the Teutonic Knights were divided into the Dioceses of Culm, Pomesanien, Ermland, and Samland. Albert of Suerbeer, who came from Cologne, and who had been Archbishop of Armagh, Ireland, was appointed Archbishop of Prussia. In 1251 he took Riga for his see, a choice which was confirmed by Alexander IV, who in 1255 made Riga the metropolitan of the four dioceses just mentioned. A priest of the Order of Teutonic Knights, Heinrich of Strateich, was selected as the first Bishop of Ermland, but he was not able to enter upon his office. It was not until August 28, 1251, that the first actual Bishop of Ermland, Anselm of Meissen, who was also a priest belonging to the Order of Teutonic Knights, was consecrated at Valenciennes by the papal legate Pietro of Albano. The diocese included the whole of old Prussian districts of Warmien, Natangen, Barten, and Galindien, the northern half of Pomesanien and the southern halves of Nadrauen and Sudauen. The bishop was given one-third of this territory as personal property for his support, and in this district he was the secular ruler and a prince of the Holy Roman Empire; these rights of the bishop were confirmed in the Golden Bull of the Emperor Charles IV. In 1260 Bishop Anselm founded a chapter of sixteen canons attached to the cathedral of St. Andreas at Braunsberg and transferred to the chapter the right of electing the bishop. But Braunsberg was ravaged by the heathen Prussians in 1262, and the second bishop, Heinrich I (1278-1300), was obliged in 1280 to transfer the chapter to Frauenburg, where it has remained ever since.

From the thirteenth century to the fifteenth the history of Ermland was one of constant wars. Repeated rebellions of the native Prussians, incursions of the Lithuanians, and frequent wars with Poland, in which the bishop was always the faithful ally of the Teutonic Order, checked the development of Christianity and the cultivation of the soil. To these disorders were added the constant encroachment and violence of the Teutonic Knights who sought to bring Ermland, like other Prussian dioceses, under the dominion of the order. Ermland, however, defended its rights with great determination with such efforts, and would not allow the order to influence in any way the election of the bishops and the chapter. Yet in everything else the bishops held faithfully to the order, even when its star began to decline, and the whole territory ruled by the knights revolted in the so-called War of the Cities (1454-66). It was in this period that the celebrated Cardinal Enea Silvio de'Piccolomini (*Æneas Silvius*) was elected (1457) Bishop of Ermland; in the following year, however, he ascended the papal throne as Pius II. The Peace of Thorn (1466) removed the diocese from the protectorate of the Teutonic Knights and placed it under the sovereignty of the King of Poland. This transfer caused the discord to break out afresh, for the King of Poland claimed for himself in Ermland the same right he exercised in the rest of his kingdom, that of naming the bishop. Bishop Nikolaus of Tüngen (1467-89) and especially the determined Lukas Watzelrode (1489-1512) energetically opposed these unjust claims and guarded the right of a free election of the bishop. In 1512 the latter bishop obtained from Pope Julius II the release of his diocese from its suffragan connexion, always a loose one, with the metropolitan See of Riga. When this relationship was dissolved Ermland was declared an exempt bishopric and has remained such ever since. Bishop Watzelrode was equally successful in regulating the internal affairs of his diocese. On February 20, 1497, he held a diocesan synod at Heilsberg, where the bishops resided until 1800; in 1503 he made new laws for his domain, reorganized the cathedral school at Frauenburg, selecting it for excellent teachers, among whom was his celebrated nephew Copernicus, published the Breviary (Nuremberg, 1494) and the Missal (Strasburg, 1497), etc. His weak successor Fabian of Lozaniën (1512-23), however, in the Treaty of Piotrkow (December 7, 1512), conceded to the King of Poland a limited influence in the election of bishops. Existing conditions were, however, entirely changed by the defection to Protestantism of Albrecht of Bradenburg, Grand Master of the Teutonic Knights, and the two bishops of the order who ruled Samland and Pomesaniën, and the secularization of the dominion of the order by the Peace of Cracow (1525). Two-thirds of the former 220 parishes of Ermland went to the two apostate bishops. In these troubled times excellent episcopal rulers saved the diocese from complete defection; among these bishops was the energetic Moriz Ferber (1523-37), who by the ordinances issued in 1526 restored order to this desolated territory; another such

bishop was Joannes Dantiscus (1527-48), a noted poet and diplomat, who conscientiously fulfilled his duties as bishop and raised the intellectual life of his clergy (concerning Dantiscus cf. Czaplicki, *De vitâ et carminibus J. de Curiis Dantisci*, Breslau, 1855; *Geistliche Gedichte des Dantiscus übersetzt und herausgegeben von Franz Hipler*, Münster, 1857).

But the bishops who deserve the greatest praise for holding the diocese to the Catholic Faith when threatened by the surrounding Protestantism were Stanislaus Hosius (1551-79), later a cardinal, who was distinguished for learning and virtue, and Martin Kromer (1579-89), a noted historian. Among the means successfully used for the maintenance of the Faith were the assembling of various diocesan synods, of which the most important was the one held by Hosius in 1565 for the purpose of carrying out the decisions of the Council of Trent; yearly visitations, and above all the founding of the Jesuit College at Braunsberg in 1565 [cf. Duhr, *Geschichte des Jesuiten in den Ländern deutscher Zunge* (Freiburg im Br., 1907), I, 79 sqq., 307 sqq.] In addition to these the Congregation of St. Catherine (*Katharinerinnen*), founded at Braunsberg in 1571 by Regina Prothmann, did effective work in the instruction and training of girls; since the annulment of the right of teaching at the same time of the *Kulturkampf* the congregation has devoted itself almost entirely to the nursing of the sick. In the seventeenth century (1626-30, 1655-56), and at the beginning of the eighteenth century (1703-09), the diocese was repeatedly ravaged by the Swedes, who forcibly suppressed the Catholic Church services and carried away its literary and artistic treasures. At the time of the first Partition of Poland (1772) the whole of Ermland fell to the share of the kingdom of Prussia. In the treaty of Warsaw (September 18, 1773), King Fredrich II, it is true, guaranteed the *status quo* and the free exercise of religion for the Catholics of the annexed provinces, nevertheless all schools and institutions for education and training under religious control were gradually suppressed, and the landed property of the Church secularized.

The Bull "De salute animarum", of July 16, 1820, readjusted ecclesiastical relations for Ermland as well as for the whole of Prussia. The Diocese of Ermland now received not only the territory which had been forcibly taken from it at the time of the Reformation, but there were incorporated in it as well the whole of the former Diocese of Samland, five deaneries of the former Diocese of Pomesanien, and, in 1854, the country surrounding Marienwerder. Among the more important Bishops of Ermland during the nineteenth century were: Philippus Krementz, (1867-85), later cardinal and Archbishop of Cologne, and the successor of Bishop Krementz, Andreas Thiel (1885-1908); after the death of the later (July 17, 1908), Professor August Bludau of Münster, a native of Ermland, was elected bishop of the diocese.

STATISTICS

The Diocese of Ermland includes the whole province of East Prussia, which is composed of the government districts of Allenstein, Königsberg, and Gumbinnen, but those parts are excepted of the circles (subdivisions of a district) of Neidenburg and Osterode that belong to the Diocese of Culm; in the province of West Prussia Ermland includes the urban and rural circles of Elbing and the circle of Marienburg, all of which are in the government district of Danzig; also the whole circle of Stuhm and a part of the circle of Marienwerder in the government district of Marienwerder belong to the diocese. It is also divided into the following sixteen deaneries, each of which is under the direction of an archpriest: Allenstein, Braunsberg, Elbing, Guttstadt, Heilsburg, Littauen, Marienburg, Masuren, Mehlsack, Neuteich, Rössel, Samland, Seeburg, Stuhm, Wartenburg, Wormditt. In 1908 there were 141 parishes; 37 curacies and vicariates; 67 chaplaincies; 335 diocesan priests viz.: 171 parish priests and curates, 98 assistants, chaplains, and holders of benefices, 66 priests in other positions. *Religious*--Sisters of St. Catherine, 4 mother-houses (Braunsberg, Heilsberg, Rössel, Wormditt), 82 branch houses, and 364 religious; Grey Sisters (Sisters of St. Elizabeth), 4 houses and 69 religious; Sisters of St. Vincent de Paul, 2 houses, 17 religious. The Catholic higher schools of learning are, the Royal Lyceum Hosianum with philosophical and theological faculties, opened in 1818; at the close of 1908 the lyceum had 9 regular professors, 1 adjunct professor, 1 *Privatdozent* (instructor), 39 students; the seminary for priests at Braunsberg, reorganized in 1832; the gymnasium at Braunsberg, reopened in 1811, the progymnasium (studies not carried so far as in a gymnasium) at Rössel, founded in 1833, and the episcopal seminary for boys at Braunsberg and Rössel, which are carried on in connexion with the last two institutions. The cathedral chapter is established at Frauenburg in the circle (subdistrict) of Braunsberg; since 1800 this city has also been the see of the bishop. The chapter consists of 8 canons, including the two dignitaries, a cathedral provost and a cathedral dean, 4 honorary canons, 5 cathedral vicars. Pope Benedict XIV granted the pallium and the *crux gestatoria* to the bishops. In 1901 Dr. Eduard Hermann, a canon of the cathedral, was appointed auxiliary bishop and titular of the See of Cybistra. The Catholics number 327,567 in total population of about 2,000,000. The most important building of the diocese is the Cathedral of the Assumption at Frauenburg. It is a splendid gothic structure built of brick and begun by Bishop Heinrich II (1329-34); the choir was consecrated and the nave, commenced in 1355, was completed in 1388 when the fine vestibule was finished. The best-known and most visited place of pilgrimage in the diocese is Heiligelinde.

GREGOR REINHOLD

St. Ernan

Ernan

Name of four Irish saints. O'Hanlon enumerates twenty-five saints bearing the name Ernan, Ernain, or Ernin; it is, therefore, not surprising that their Acts have become confused.

(1) St. Ernan, Son of Eogan

Died about 640. He is mentioned in the Martyrology of Tallagh on 1 January. He was a nephew of St. Columba, Feilim or Feidhlimidh (St. Columba's father) being his paternal grandfather. Owing to this relationship, some writers have mistaken our saint for Ernan of Hinba, an uncle of St. Columba. His monastery in Ireland was at Druim-Tomma in the district of Drumhome, County Donegal. Adamnan relates the wonderful vision he had on the night St. Columba died (Vit. S. Col., III, 23). Ernan, with some companions, was fishing in the River Finn, in Donegal. Suddenly at midnight he beheld the whole sky brightly illuminated. Looking towards the east he perceived an immense pillar of fire shining as the sun at noonday. This marvellous light then passed into the heavens, and a great darkness followed, as after the setting of the sun. This wonderful occurrence was related to Adamnan by Ernan himself, who at the time is described as "a very old man, a servant of Christ, whose name may be rendered Ferreolus, but in Irish Ernene (of the clan Mocufirroide), who, himself also a holy monk, is buried in the Ridge of Tomma (Drumhome) among the remains of other monks of St. Columba, awaiting the resurrection of the saints". Some writers style this St. Ernan, Abbot of Druim Tomma. It is uncertain whether he visited Scotland, nevertheless he is regarded as patron saint of Killernan, in Ross-shire; and it may be that the dedications of Kilviceuen (church of the son of Eogan) in Mull, and of Kilearnadale in Jura, Argyleshire, are in his honour. In the "Scottish Kalendars", collected by Bishop Forbes, his name appears as Ethernanus, and his commemoration is assigned to 21 and 22 December (pp. 170, 222, 243).

(2) St. Ernan, Abbot of Hinba

Lived in the sixth century. He was uncle of St. Columba, and one of the twelve who accompanied him from Ireland to Iona. He was brother of Ethnea, St. Columba's mother, and son of Dima, the son of Noe of the race of Cathaer Ivor (Reeves, notes, p. 263). St. Columba appointed him superior of the community which he himself had established on the island of Hinba. The identity of Hinba has not been established with certainty. It may be Canna, about four miles N. W. of Rum (*ibid.*, p. 264); but more likely it is Eilean-na-Naoimh, one of the Gaveloch Isles, between Scarba and Mull (Fowler's Adamnan, p. 87). Hinba was a favourite place of resort for St. Columba.

There he was visited by St. Comgall, St. Cannich, St. Brendan, and St. Cormac. At the request of these holy men, St. Columba celebrated Mass, during which St. Brendan beheld a luminous globe of fire above St. Columba's head. It continued burning and rising up like a column of flame, till the Holy Mysteries had been completed (Adamnan, III, xvii). On another occasion, while visiting St. Ernan's monastery in Hinba, St. Columba was favoured with heavenly visions and revelations which lasted three days and nights (Adamnan, III, xviii). The death of St. Ernan was tragic. Being seized with an illness, he desired to be carried to Iona. St. Columba, greatly rejoiced at his coming, started to meet him. Ernan likewise hastened but when he was twenty-four paces from his nephew he fell to the earth and died. Thus was the prophecy of St. Columba fulfilled, that he would never again see Ernan alive (Adamnan, I, xlv).

(3) St. Ernan of Cluvain-Deoghra

St. Ernan of Cluvain-Deoghra in Meath (or in County Longford), sixth or seventh century. He is commemorated on 11 January in the Martyrology of Tallagh. When St. Fechin visited St. Ernan at Cluvain-Deoghra the grinding noise of the mill outside the guest-house gave him much annoyance. St. Fechin blessed the mill, and it is said that in consequence thereof the noise ceased to be heard in the guest-house for the future.

(4) St. Ernan of Torach

Died 17 August, about 650. He was son of Colman of the race of Eogan, son of Niall, and is numbered by some among the disciples of St. Columba. The latter saint founded a church and monastery on the island of Torach or Tory, off the N. W. coast of Donegal. It is uncertain whether St. Ernan actually accompanied St. Columba thither (the chronology would seem to preclude it), but he was chosen to be its abbot, and in after years was regarded as the local patron. Colgan has erroneously identified him with Ernan of Cluvain-Deoghra. It has been conjectured that this Ernan is identical with the Ernan whose name appears in the epistle of John, the pope-elect, to the prelates of North Ireland in 640. If this be so, he must have been a person of some importance. The whole question of the separate identity of the last three Ernans, as discussed by Colgan, Lanigan, and O'Hanlon, is exceedingly complex and obscure.

COLUMBA EDMONDS

Ernst of Hesse-Rheinfels

Ernst of Hesse-Rheinfels

Landgrave, b. 9 Dec., 1623, at Cassel; d. 12 May, 1693, at Cologne. He was the sixth son of Moritz, Landgrave of Hesse-Cassel, after whose resignation of the government in 1627 to his son Wilhelm V, Ernst and his brother Hermann respectively founded the collateral lines of Hesse-Rheinfels and Hesse-Rotenburg. He figures prominently in the religious history of his country on account of the controversial literature called forth by his conversion to the Catholic Faith. Under the strict discipline of his mother his instruction in the principles of the Reformed Church received the utmost attention. After considerable travel he chose, in 1641, the military career. In 1642 he entered the Hessian army, proving himself an able commander of the Hessian troops who fought on the side of Sweden during the Thirty Years' War. While visiting the Hessian General Geyso, who was in prison at Gesecke, he was himself arrested and taken prisoner to Paderborn. His social intercourse here with the royal army chaplain laid the foundation of his conversion. After the Peace of Westphalia he took up the government of his portion of Hesse. His desire to establish a collateral line independent of Cassel brought him in 1650 to Vienna, where his conversion to the Catholic Church was effected by the Augustinian Alfons Staimos. Before his formal reception into the church, he returned to Rheinfels and challenged the Hessian theologians, George Calixtus of Helmstadt, Crocius of Marburg, and Haberkorn of Giesses, to a public disputation on certain points of doctrine, with the Capuchin Valerian Magnus. After the disputation the landgrave made a formal profession of the Catholic Faith and gave the reasons for his conversion in the work: "Conversionis ad fidem Catholicam motiva S. et C. Principis ac Dom. Ernesti Hassiae Landgravii" (Cologne, 1652). This work gave rise to a long and bitter controversy in which he himself took an active part, defending fearlessly in various writings against his opponents the course he had taken. His character as a prince is best described by himself in "Pourtraict ou description de la vie du Prince Ernest" (1669).

JOSEPH SCHROEDER

Ernulf

Ernulf

Architect, b. at Beauvais, France, in 1040; d. 1124. He studied under Lanfranc at the monastery of Bec, entered the Benedictine Order, and lived long as a brother in

the monastery of St-Lucien, Beauvais. At the suggestion of Lanfranc he went to England, sometime after 1070, and joined the monks of Christ Church, Canterbury. He was made prior by Archbishop Anselm, and in 1107 Abbot of Peterborough; in 1114 he was appointed Bishop of Rochester. While at Canterbury, he had taken down the eastern part of the church which Lanfranc had built, and erected a far more magnificent structure. This included the famous crypt (Our Lady of the Undercroft), as far as Trinity Tower. The chancel was finished by his successor Conrad. The chapel of St. Andrew is also part of Ernulf's work. At Peterborough and Rochester, Ernulf had the old buildings torn down and erected new dormitories, refectories, chapter house, etc. He is the author of "Textus Roffensis" (a large collection of documents relating to the Church of Rochester); "Collectanea de rebus eccl. Ruffensis" in P.L., CLXIII, 1443 sqq., also of several canonical and theological treatises in D'Achery, "Spicileg.", III, 404 sqq.

THOMAS H. POOLE

William Errington

William Errington

Priest, founder of Sedgley Park School, b. 17 July, 1716; d. 28 September, 1768. He was son of Mark Errington of Wiltshire, a descendant of the Erringtons of Walwick Grange, Northumberland; his mother's maiden name was Martha Baker. In 1737 he went to Douai, took the mission oath 28 December, 1741, and was ordained a priest in December, 1747. If he acted as professor at Douai after his ordination, as is generally stated, it could only have been for a very short time, as he left there for England, 26 March, 1748 (manuscript list of Douai clergy in the Westminster archives). On arrival in London he took up his residence with Bishop Challoner, then coadjutor to Bishop Petre. Kirk states that Dr. Challoner "had a high opinion of Mr. Errington, both as an active and zealous missionary and as a man of business". It was on account of these qualities that when the bishop wished to found a good middle-class school in England he induced Errington to undertake the work. It was a most difficult undertaking, and Errington made three unsuccessful attempts, the first in Buckinghamshire, the second in Wales, and the third at Betley near Newcastle-under-Lyne in Staffordshire, before he succeeded in founding a permanent school at Sedgley Park in the neighbourhood of Wolverhampton. On Lady-Day, 1763, he opened this school with twelve boys in the house known as the Park Hall, till then the residence of John, Lord Ward, afterwards Viscount Dudley and Ward. The little foundation was at once attacked in Parliament, but Lord Dudley successfully defended himself. The school was not interfered with; it developed into the famous Sedgley Park School which did good service to the Church for over a century, and is now represented by St. Wilfrid's College, Oakmoor, near

Cheadle. Having founded the school, Errington's work there was done, and as soon as he secured the appointment of the Rev. Hugh Kendall as head-master in May, 1763, he returned to Bishop Challoner in London. He was appointed archdeacon and treasurer of the "Old Chapter" and held these offices till his death.

EDWIN BURTON

Error

Error

Reduplicatively regarded, is in one way or another the product of ignorance. But besides the lack of information which it implies, it adds the positive element of a mental judgment, by which something false is held to be true, or something true avouched to be false. The subject-matter of error so far as mortals go, like that of the want of knowledge whence it proceeds, is either (1) the law itself, or (2) a fact, or circumstance of a fact. In the first instance, one is astray in affirming or denying the existence of a law, or at any rate the inclusion of some individual case under its operation. In the second, one is labouring under an equal misapprehension, but with regard to some fact or aspect of a fact. Thus, for example, a Catholic, who is some unaccountable way would persuade himself that there was no law of abstinence on Friday, would be in error as to the law. If, although well aware of the precept of the Church, he is under the mistaken impression that a particular day, which happens to be Friday, is not Friday, he is in error as to the fact.

Taking account of the person in whom the error exists, it is said to be either vincible or invincible. Error is deemed to be invincible when, in spite of what is called moral diligence in the premises, it still persists. This may happen either because one has never been touched with any doubt as to the validity of one's stand, or as to the necessity of an inquiry, or it may be that one having, with full honesty of purpose, used such efforts as are demanded by the importance of the question at issue, is nevertheless unable to discover the truth. Much depends on the value to be attached to the phrase "moral diligence". It is not easy to state it in any set formula, unless it be this, that it is the diligence which prudent persons are accustomed to bringing to bear upon the settlement of like matters. This notion may be set forth more in detail by the following considerations:

- The moral diligence required does not mean that a person is to have recourse to every conceivable expedient.

- It does imply that the endeavours made by an agent, to set himself right, should be such as are exacted by the seriousness of the business involved, as well as bear a proper ratio to his capacity and resources.

Error is reckoned morally vincible as often as it is chargeable to the failure to exercise these ordinary and necessary precautions.

When an agent deliberately omits means calculated to dispel his error, or purposely fosters it, it is called affected. It is not so styled to indicate that it is simulated, but rather to point out that the erroneous tenet has been studiously aimed at. When the error is the offspring of sheer unrelieved negligence, it is termed crass. The influence of error on moral responsibility may be determined as follows. An act done in invincible error, whether the latter regard the fact or the law, is never impeachable as sin. The reason is that, in this hypothesis, there is no knowledge of, and consequently no violation of evil. On the contrary, what is done in morally vincible error is esteemed properly imputable to the agent. This is so because the error itself is then of the agent's own choosing, and he is therefore accountable for its outcome. It is obvious, however that the moral delinquency which has its rise in vincible error will have various degrees of guilt, in proportion to the greater or lesser culpability of the error itself.

Slater, *Manual of Moral Theology* (New York, 1908); Ballerini, *Opus Theologicum Morale* (Prato, 1898); Meyer, *Institutiones Juris Naturalis* (Freiburg, 1885); Ojetti, *Synopsis Rerum Moralium et Juris Pontificii* (Prato, 1904).

JOSEPH F. DELANY

Charles Erskine

Charles Erskine

Cardinal, b. at Rome, 13 Feb., 1739; d. at Paris, 20 March, 1811. He was the son of Colin Erskine of the Erskine family, who were Earls of Kellie and Mar; his mother was Agatha Gigli of the noble family of Gigli of Anagni. He was educated by Cardinal Henry, Duke of York, at the Scots College, Rome, and was afterwards a successful advocate, becoming Doctor of Laws in 1770. Pope Pius VI made him pro-auditor and Promoter of the Faith in 1782, also a domestic prelate, canon of St. Peter's, and dean of the college of consistorial advocates. He was ordained subdeacon, 28 August, 1783. In October, 1793, he was sent as papal envoy to England. By his tact and ability Mgr. Erskine established excellent relations with the Court and the ministry, diminished the dissensions among Catholics, and avoided stirring up any anti-Catholic demonstration against himself. During his stay in London the pope named him auditor, and in 1795 gave him additional powers as envoy extraordinary. He left London in 1801

and returned to Rome, where in January, 1803, he was created cardinal. As a member of the Propaganda he was still useful to English Catholics, and was made protector of Scotland. On the French invasion of Rome in 1808 he was made pro-secretary of Briefs, and was shut up in the Quirinal with the pope. When Pius VII was taken prisoner Erskine was allowed to go free, but his property was now lost and he would have been reduced to beggary if his Protestant relations had not made him an allowance. In 1809 Napoleon ordered him to Paris and though ill he was forced from Rome in January, 1810. Shortly after his arrival in Paris he fell into a gradual decline and soon died. He was buried in the church of Saint-Genevieve, now the Pantheon.

EDWIN BURTON

Franz Ludwig von Erthal

Franz Ludwig von Erthal

Prince-Bishop of Würzburg and Bamberg, b. at Lohr on the Main, 16 September, 1730; d. at Würzburg, 16 February, 1795. After studying theology at Mainz, Würzburg, and Rome, and jurisprudence at Vienna he became president of the secular Government of Würzburg in 1762. When he was sent in 1768 as Ambassador to Vienna to get the imperial investiture for Adam Friedrich, Count von Seinsheim, the Prince-Bishop of Würzburg, Emperor Joseph II made him imperial privy councillor and inspector of the Imperial Chamber (Supreme Court of the empire) at Wetzlar. In 1776 he took part as imperial commissioner in the Diet of Ratisbon. He succeeded Adam Friedrich as Prince-Bishop of Würzburg, 18 March, 1779, and as Prince-Bishop of Bamberg on the following 12 April. His rule was a blessing for Church and State. Being himself deeply religious he endeavoured to imbue his clergy and people with the spirit of true faith and piety. As far as the Church and his episcopal position permitted, he yielded to the rationalistic tendencies of the age, but was a staunch defender of papal rights against the adherents of Febronianism. As temporal ruler he never allowed personal considerations to outweigh the welfare of the people, and used his private means for the erection and improvement of charitable institutions. At Bamberg he founded a hospital which at that time was a model of its kind, and at Würzburg he greatly improved and partly rebuilt the already existing hospital of St. Julius. He improved the entire educational system, bettered the economic conditions of rural life and of the civil administration, and set the finances of his principalities on a firm basis. Von Erthal is the author of a work in German, refuting the revolutionary principles of his age, which is entitled: "Ueber den herrschenden Geist dieser Zeiten und über das Verhalten des rechtschaffenen Christen bei denselben" (Würzburg, 1793). Some of his sermons were collected and published after his death (Bamberg, 1797).

MICHAEL OTT

Friedrich Karl Joseph, Freiherr von Erthal

Friedrich Karl Joseph, Freiherr von Erthal

Last Elector and Archbishop of Mainz, b. 3 Jan., 1719, at Mainz; d. 25 July, 1802, at Aschaffenburg. He was an unworthy brother of Franz Ludwig, the Prince-Bishop of Bamberg and Würzburg, received his education at Reims, held prebends in Bamberg and Mainz at an early age, became canon at the cathedral of Mainz in 1753, rector of the university in 1754, president of the Aulic Council in 1758, and custos of the cathedral in 1768. From 1769-1774 he was plenipotentiary of the Electorate of Mainz at the imperial court of Vienna. On 18 July, 1774, he succeeded the deceased von Breidbach-Burresheim as Elector and Archbishop of Mainz and eight days later as Prince-Bishop of Worms. He was ordained priest on 11 Sept., 1774, and received episcopal consecration the following year on 14 May. At the beginning of his reign it appeared as if he would try to stem the tide of rationalism which had swept over the Church of Mainz during the weak rule of von Breidbach-Burresheim. One of his first acts as bishop was the dismissal of the free-thinking councillors of his predecessor. Soon, however, he became one of the most notable supporters of free-thought in theology and of Febronianism in the government of the Church. George Forster, a Protestant, became his librarian and William Heinse, another Protestant, and author of the lascivious romance "Ardinghello", was his official reader. Erthal suppressed the Carthusian monastery and two nunneries at Mainz and used their revenues to meet the expenses of the university, in which he appointed numerous Protestants and free-thinkers as professors. Notorious unbelievers such as Anthony Blau and others were invited to the university in 1784 to supplant the Jesuits in the faculty of theology.

As a spiritual ruler, Erthal was guided by the principles of Febronianism. In union with the Archbishops Max Franz of Cologne, Clemens Wenzeslaus of Trier, and Hieronymus Joseph of Salzburg he convoked the Congress of Ems at which twenty-three antipapal articles, known as the "Punctuation of Ems", were drawn up and signed by the plenipotentiaries of the four archbishops on 25 August, 1786. The purpose of the Punctuation was to lower the papal dignity to a merely honorary primacy and to make the pope a *primus inter pares*, with practically no authority over the territories of the archbishops. In order to increase his political influence he joined (25 October, 1785) the Confederation of Princes which was established by King Frederick the Great. In 1787 he apparently receded from the schismatic position of the Punctuation of Ems and applied to Rome for a renewal of his quinquennial faculties and for the approbation of his new coadjutor, Karl Theodor von Dalberg. Somewhat later, however, he resumed

his opposition to papal authority and continued to adhere to the Punctuation even after the other archbishops had rejected it. His opposition was made futile by the revolutionary wars which raged in his electorate from 1792-1801. By the treaty of Campo-Formio in 1797 Erthal was deprived of his possessions west of the Rhine and by the Concordat of 1801 he lost also spiritual jurisdiction over that part of his diocese. The negotiations concerning the reimbursement of Erthal for the loss of his territory west of the Rhine were not yet completed when he died.

MICHAEL OTT

Erwin of Steinbach

Erwin of Steinbach

One of the architects of the Strasburg cathedral, date of birth unknown; d. at Strasburg, 17 January, 1318. According to a tradition which arose in a later age he was called Erwin of Steinbach, and a monument has been erected to him in the village of Steinbach near Baden-Baden. Two of his sons, Erwin and Johannes, after them his grandson Gerlach, from 1341-71 and, up to 1382, another scion of the family named Kuntze, were also superintending architects. Hence they were heads of the Strasburg guild of stone-masons, the influence of which extended as far as Bavaria, Austria, and the borders of Italy. No written account exists as to the training for his work which the elder Erwin received. It must, however, be taken for granted that he had proved his abilities as a master-builder in other places before he was entrusted with the construction of the facade of the cathedral of Strasburg about the year 1277. His work on the cathedral shows the influence of the French Gothic. When Erwin took charge of the construction the cathedral was completed except the porch of the tower, and reflected in its parts the development of architectural styles from the first quarter of the eleventh century. As a matter of fact, the west front was now built by three masters, of whom one was Erwin. At the same time a part of the nave that had been badly damaged by fire in 1298 had to be repaired. Three plans of the facade are still in existence; according to Dehio the best design belongs to Erwin, to whom it is customary to ascribe the entire construction. Eichborn, it is true, has tried to prove that Erwin drew the weakest of the three plans. In any case the three master-architects by their joint work deserve the praise that, especially since Goethe, has been assigned to Erwin alone; they are not responsible, however, for the ungraceful central screen of the third story between the towers, nor for the pinnacle of the north tower. This front offers a happy combination of horizontal members in the French style with the German principle of daring height. The rose-window, also French in design and placed in the central one of the nine fields, gives a welcome point of rest to the eye. The somewhat peculiar ornament-

ation consists of a double tracery of bars and geometrical designs which covers the facade like a net dividing and filling the large surfaces. By the novelty and the daring of the new style the individual members of this facade are in marked contrast to the older parts of the building; the front, moreover, is connected directly with the body of the cathedral. The ornamental sculpture of the building, which is richer than that ordinarily found in German cathedrals, is attributed to Erwin's workshop, from which came also the monument to Conrad of Lichtenberg in the chapel of St. John. In this chapel the early Gothic forms correspond to the carving in the chapter-hall. Erwin's last work was the construction of the beautiful chapel of the Blessed Virgin. The legend of the woman sculptor, Savina, who, it is asserted, was a daughter of Erwin, rests on a mistaken interpretation of the words of a scroll. The inscriptions referring to Erwin, which along with tradition are our only sources of information, have also given rise to various doubts.

G. GIETMANN

Erythrae

Erythrae

A titular see in Asia Minor. According to legend the city was founded by colonists from Crete. The name must have been derived from the red stone common in the country. Ruled by kings at first, the city passed through periods of oligarchy and democracy, became tributary to Croesus and Cyrus, submitted to Athens, then to Sparta, and finally obtained independence. After Alexander, it had various masters until 191 B.C., when it took sides with the Romans, though still preserving its autonomy. Finally it was incorporated with the province of Asia. Erythrae was famous for its Sibyl Herophile and its temples of Hercules, Athena Polias, etc. At an early date it became a suffragan of Ephesus; to the bishops mentioned by Lequien (*Or. christ.*, I, 727): Euty chius (431), Dracontius (451), Theoctistus (553), Eustathius (787), Arsaphius (868), may be added Michael in 1229 (*Revue des études grecques*, VII, 80). By the sixteenth century the see had disappeared, together with the city and its port. A new village has arisen on its site, Litri or Rithri, not far from Tshesmé, in the vilayet of Aidin or Smyrna. The ruins include walls which are about three miles in circuit, a theatre, aqueducts, columns, and a Byzantine fortress.

S. VAILHÉ

Erzerum (Theodosiopolis)

Erzerum (Theodosiopolis)

DIOCESE OF ERZERUM (ERZERUMIENSIS ARMENIORUM).

The native name, Garin (Gr. *Karenitis*; Arab, Kalikelah), is still used by the Armenians. The kings of Armenia established here their summer residence. Later Garin fell into the power of the Byzantines, who named it Theodosiopolis (415), under which title it is still a Latin titular see. It became then a Greek bishopric, suffragan to Caesarea of Cappacocia. Three bishops are known at this period, Peter (448), Manasses (451), and another Peter (553). (See Lequien, *Or. christ.*, I, 437.) This ecclesiastical situation lasted at least until the ninth century. In the eleventh century, owing to a confusion with another Theodosiopolis in Mesopotamia, the see passed under the jurisdiction of the Patriarch of Antioch. From 622 to 633, a great council, which brought about a temporary union of the Armenian and Greek Churches, was held at Garin; the Emperor Heraclius attended with the Armenian and Greek patriarchs and many bishops of both Churches (Hefele, III, 73, 132). In 1201 the city was plundered by the Seljuk Turks, who named it Erzerum, which appears to mean "the country of the Romans", that is to say of the Greeks, though some think that the name is a corruption of Arzen er-Roum, Arzen being an ancient Armenian city in the neighbourhood. Erzerum was captured in 1214 by the sultans of Iconium, in 1387 by Timur-Leng, in 1400 by the Osmanli Turks. In 1430 it fell into the power of local dynasties, which held it under the hegemony of Persia until 1514, when it passed again to the Osmanlis. In 1828 and 1878 it was occupied by the Russians. In 1859 it was almost destroyed by an earthquake.

Erzerum is built at an altitude of over six thousand feet on a hill, which is surrounded by mountains of some ten thousand feet in height. The climate is healthful, but rigorous. Winter lasts eight and summer only four months. The Western Euphrates (Kara Su) is about four miles from the city. Garin is the capital of a vilayet and has a population of about 40,000, of whom 27,000 are Turks, the rest Armenians, Greeks, and a few Europeans (about 900 Catholics, mostly Armenians). The city is divided into three parts; the citadel, near the centre of the city, the city proper surrounded by a double wall, and four suburbs. There are 65 mosques, many churches, and several large bazaars. The chief industries are blacksmiths' and coppersmiths' work. Besides the Greek metropolitan, still subject to the Patriarch of Antioch, Gregorian and Catholic Armenian bishops reside at Erzerum. The Diocese of Theodosiopolis (Erzerum) was re-established in 1850 and on 10 July, 1883, divided into the Dioceses of Erzerum and Mush. The former diocese has (1909) 10,000 faithful, 38 priests, 30 parishes, 66 churches or chapels, a seminary, 19 schools with about 1000 pupils, and

a hospital. Armenian Sisters of the Immaculate Conception have a monastery. Two Capuchins conduct the Latin mission.

S. VAILHÉ

Esau

Esau

(**sw**, hairy).

The eldest son of Isaac and Rebecca, the twin-brother of Jacob. The struggle of the two brothers, when still within Rebecca's womb, was prophetic of the lifelong opposition, deepening at times into hatred, which marked the relations between Esau and Jacob (Gen., xxv, 22 sq.). Esau, who came forth first, when grown up, became a skilful hunter, and was much loved by Isaac, who ate of his hunting (Gen., xxv, 24-28). "Coming faint out of the field", and much moved by the sight and savour of the pottage boiled by his brother, Esau said to Jacob, "Give me of this red pottage". No doubt already informed as to the import of the oracle revealed to Rebecca, Jacob was quick to draw advantage from the greed of his famished brother. Consenting to the condition imposed, Esau not only exchanged his first birthright for the red pottage, but even confirmed the sale by an oath, saying, "Lo, I die; what will the first birthright avail me? And so taking bread and the pottage of lentils, he ate, and drank, and went his way; making little account of having sold his first birthright" (Gen., xxv, 29-34). That this transaction was widely known is justly inferred from the very name (*Edom*, red), which, though rarely given to Esau himself, is almost universally applied to his descendants. "Esau, being forty years old, married wives, Judith, the daughter of Beeri the Hethite, and Basemath the daughter of Elon of the same place" (Gen., xxvi, 34). This selection of Chanaanite wives, who "both offended the mind of Isaac and Rebecca" (Gen., xxvi, 35), seemed to have caused peculiar suffering to Rebecca, who, speaking with her husband, declared, "I am weary of my life because of the daughters of Heth: if Jacob take a wife of the stock of this land I choose not to live" (Gen., xxvii, 46). Old and with eyes so dim he could not see, Isaac ordered Esau to take quiver and bow, so that after having prepared a savoury dish with the fruit of his hunting, he might receive the parting blessing, belonging to the eldest son. Esau, yielding ready obedience, went "into the field to fulfil his father's commandment". (Gen., xxvii, 1-5.) Meanwhile, clothed with the very good garments of his older brother, with hands and neck so carefully covered under the tender hides of the kids as to resemble the hairy skin of Esau, Jacob, following in every detail the advice of Rebecca, knelt before Isaac, offered the savoury dish, and begged and obtained the coveted blessing. Great then was the astonishment, and genuine the indignation, of the disappointed Esau, who "roared

out with a great cry", on hearing the deceived Isaac declare, "thy brother came deceitfully and got thy blessing". Though sympathizing with his griefstricken son, Isaac, realizing more fully the import of the oracle communicated to Rebecca, felt impelled to add: "I have blessed him, and he shall be blessed"; "I have appointed him thy lord, and have made all his brethren his servants". (Gen., xxvii, 6-37.) The restraining influence of the father's presence is admirably portrayed in the few words uttered by Esau: "the days will come of the mourning of my father, and I will kill my brother Jacob" (Gen., xxvii, 41). That this exclamation revealed a deep-seated purpose, the evident anxiety of Rebecca, the hasty flight of Jacob to Haran, and his long stay with his uncle Laban, clearly demonstrated. (Gen., xxvii, 42-xxxii, 38.) Indeed, even after a self-imposed exile of twenty years, the carefully instructed messengers sent to Esau in the land of Seir (Gen., xxxii, 3) and the strategic division of his household and flocks into two companies clearly indicate Jacob's abiding sense of distrust (Gen., xxxii, 4-8).

After extending a cordial welcome to his returning brother, Esau parted from Jacob and "returned, that day, the way that he came, to Seir" (Gen., xxxiii, 1-16), where he and his descendants became exceedingly rich (Gen., xxxvi, 1-8). The very name *Edomite*, given to the descendants of Esau (Edom), has served to perpetuate the remembrance of the circumstances attending Esau's birth and the sale of his first birthright. From the noteworthy preference of Jacob to Esau (Gen., xxv, 22 sq.), St. Paul (Rom., ix, 4-16) shows that in the mystery of election and grace God is bound to no particular nation and is influenced by no prerogative of birth or antecedent merit. When Isaac, old and full of days, had died, we find Esau with Jacob at Hebron, there to bury their father in the cave of Machpelah (Gen., xxxv, 28-29).

Palis in Vig., *Dict. de la Bible*, s. v.; Cowan in Hastings, *Dict. of the Bible*, s. v.; Dods, *Isaac, Jacob, and Joseph* (London, 1880).

Daniel P. Duffy

Nicolaus van Esch

Nicolaus van Esch

(ESCHIUS)

A famous mystical theologian, b. in Oisterwijk near Hertogenbosch (Boisle-Duc), Holland, in 1507; d. 19 July, 1578. After finishing his classical studies in the school of the Hieronymites, he studied philosophy, theology, and canon law at Louvain, but refused to take his doctor's degree. In 1530 he was ordained priest, and then settled in Cologne in order to devote himself to higher studies and the practice of Christian perfection. At the same time he became the private tutor of a number of young men, mainly university students. Blessed Peter Canisius and Lawrence Surius are the most

celebrated of his pupils. In Cologne, too, he contracted a close friendship with several members of the Carthusian Order, among whom Johann Landsberger, Gerhard Homontanus, and Theodorich and Bruno Loher are worthy of special mention. Though his feeble health did not allow him to become a member of the order, he lived in the monastery, for a time at least, and followed its rule of life as closely as possible. In 1538 Nicolaus was appointed pastor of the Béguinage at Diest; after a year he surrendered his charge for a time, but took it up again with such success that after his death he was commonly spoken of as the saintly Father Eschius. He was also instrumental in founding several diocesan seminaries according to the rules laid down by the Council of Trent. Among his literary works the following are worthy of note: "Introductio in vitam introversam", which is really an introduction to a new edition of the "Templum animae" (Antwerp, 1563 etc.); "Exercitia theologiae mysticae, seu exercitia quaedam pia, quae compendio hominem ad vitam perfectam instituendam juvare possunt" (Antwerp, 1563).

A.J. MAAS

Eschatology

Eschatology

That branch of systematic theology which deals with the doctrines of the last things (*ta eschata*). The Greek title is of comparatively recent introduction, but in modern usage it has largely supplanted its Latin equivalent *De Novissimis*. As the numerous doctrinal subjects belonging to this section of theology will be treated *ex professo* under their several proper titles, it is proposed in this article merely to take such a view of the whole field as will serve to indicate the place of eschatology in the general framework of religion, explain its subject-matter and the outlines of its content in the various religions of mankind, and illustrate by comparison the superiority of Christian eschatological teaching.

As a preliminary indication of the subject-matter, a distinction may be made between the eschatology of the individual and that of the race and the universe at large. The former, setting out from the doctrine of personal immortality, or at least of survival in some form after death, seeks to ascertain the fate or condition, temporary or eternal, of individual souls, and how far the issues of the future depend on the present life. The latter deals with events like the resurrection and the general judgment, in which, according to Christian Revelation, all men will participate, and with the signs and portents in the moral and physical order that are to precede and accompany those events. Both aspects -- the individual and the universal -- belong to the adequate concept of eschatology; but it is only in Christian teaching that both receive due and proportionate

recognition. Jewish eschatology only attained its completion in the teaching of Christ and the Apostles; while in ethnic religion eschatology seldom rose above the individual view, and even then was often so vague, and so little bound up with any adequate notion of Divine justice and of moral retribution, that it barely deserves to be ranked as religious teaching.

I. ETHNIC ESCHATOLOGIES

Uncivilized societies

Even among uncivilized cultures the universality of religious beliefs, including belief in some kind of existence after death, is very generally admitted by modern anthropologists. Some exceptions, it is true, have been claimed to exist; but on closer scrutiny the evidence for this claim has broken down in so many cases that we are justified in presuming against any exception. Among the uncivilized the truth and purity of eschatological beliefs vary, as a rule, with the purity of the idea of God and of the moral standards that prevail. Some savages seem to limit existence after death to the good (with extinction for the wicked), as the Nicaraguas, or to men of rank, as the Tongas; while the Greenlanders, New Guinea negroes, and others seem to hold the possibility of a second death, in the other world or on the way to it. The next world itself is variously located -- on the earth, in the skies, in the sun or moon -- but most commonly under the earth; while the life led there is conceived either as a dull and shadowy and more or less impotent existence, or as an active continuation in a higher or idealized form of the pursuits and pleasures of earthly life. In most savage religions there is no very high or definite doctrine of moral retribution after death; but it is only in the case of a few of the most degraded cultures, whose condition is admittedly the result of degeneration, that the notion of retribution is claimed to be altogether wanting. Sometimes mere physical prowess, as bravery or skill in the hunt or in war, takes the place of a strictly ethical standard; but, on the other hand, some savage religions contain unexpectedly clear and elevated ideas of many primary moral duties.

Civilized Cultures

Coming to the higher or civilized societies, we shall glance briefly at the eschatology of the Babylonian and Assyrian, Egyptian, Indian, Persian, and Greek religions. Confucianism can hardly be said to have an eschatology, except the very indefinite belief involved in the worship of ancestors, whose happiness was held to depend on the conduct of their living descendants. Islamic eschatology contains nothing distinctive except the glorification of barbaric sensuality.

(a) Babylonian and Assyrian

In the ancient Babylonian religion (with which the Assyrian is substantially identical) eschatology never attained, in the historical period, any high degree of development. Retribution is confined almost, if not quite, entirely to the present life,

virtue being rewarded by the Divine bestowal of strength, prosperity, long life, numerous offspring, and the like, and wickedness punished by contrary temporal calamities. Yet the existence of an hereafter is believed in. A kind of semi-material ghost, or shade, or double (*ekimmu*), survives the death of the body, and when the body is buried (or, less commonly, cremated) the ghost descends to the underworld to join the company of the departed. In the "Lay of Ishtar" this underworld, to which she descended in search of her deceased lover and of the "waters of life", is described in gloomy colours; and the same is true of the other descriptions we possess. It is the "pit", the "land of no return", the "house of darkness", the "place where dust is their bread, and their food is mud"; and it is infested with demons, who, at least in Ishtar's case, are empowered to inflict various chastisements for sins committed in the upper world.

Though Ishtar's case is held by some to be typical in this respect, there is otherwise no clear indication of a doctrine of moral penalties for the wicked, and no promise of rewards for the good. Good and bad are involved in a common dismal fate. The location of the region of the dead is a subject of controversy among Assyriologists, while the suggestion of a brighter hope in the form of a resurrection (or rather of a return to earth) from the dead, which some would infer from the belief in the "waters of life" and from references to Marduk, or Merodach, as "one who brings the dead to life", is an extremely doubtful conjecture. On the whole there is nothing hopeful or satisfying in the eschatology of this ancient religion.

(b) Egyptian

On the other hand, in the Egyptian religion, which for antiquity competes with the Babylonian, we meet with a highly developed and comparatively elevated eschatology. Leaving aside such difficult questions as the relative priority and influence of different, and even conflicting, elements in the Egyptian religion, it will suffice for the present purpose to refer to what is most prominent in Egyptian eschatology taken at its highest and best. In the first place, then, life in its fullness, unending life with Osiris, the sun-god, who journeys daily through the underworld, even identification with the god, with the right to be called by his name, is what the pious Egyptian looked forward to as the ultimate goal after death. The departed are habitually called the "living"; the coffin is the "chest of the living", and the tomb the "lord of life". It is not merely the disembodied spirit, the soul as we understand it, that continues to live, but the soul with certain bodily organs and functions suited to the conditions of the new life. In the elaborate anthropology which underlies Egyptian eschatology, and which we find it hard to understand, several constituents of the human person are distinguished, the most important of which is the *Ka*, a kind of semi-material double; and to the justified who pass the judgment after death the use of these several constituents, separated by death is restored.

This judgment which each undergoes is described in detail in chapter 125 of the Book of the Dead. The examination covers a great variety of personal, social, and religious duties and observances; the deceased must be able to deny his guilt in regard to forty-two great categories of sins, and his heart (the symbol of conscience and morality) must stand the test of being weighed in the balance against the image of Maat, goddess of truth or justice. But the new life that begins after a favourable judgment is not at first any better or more spiritual than life on earth. The justified is still a wayfarer with a long and difficult journey to accomplish before he reaches bliss and security in the fertile fields of Aalu. On this journey he is exposed to a variety of disasters, for the avoidance of which he depends on the use of his revived powers and on the knowledge he has gained in life of the directions and magical charms recorded in the Book of the Dead, and also, and perhaps most of all, on the aids provided by surviving friends on earth. It is they who secure the preservation of his corpse that he may return and use it, who provide an indestructible tomb as a home or shelter for his Ka, who supply food and drink for his sustenance, offer up prayers and sacrifices for his benefit, and aid his memory by inscribing on the walls of the tomb, or writing on rolls of papyrus enclosed in the wrappings of the mummy, chapters from the Book of the Dead. It does not, indeed, appear that the dead were ever supposed to reach a state in which they were independent of these earthly aids. At any rate they were always considered free to revisit the earthly tomb, and in making the journey to and fro the blessed had the power of transforming themselves at will into various animal-shapes. It was this belief which, at the degenerate stage at which he encountered it, Herodotus mistook for the doctrine of the transmigration of souls. It should be added that the identification of the blessed with Osiris ("Osiris N. N." is a usual form of inscription) did not, at least in the earlier and higher stage of Egyptian religion, imply pantheistic absorption in the deity or the loss of individual personality. Regarding the fate of those who fail in the judgment after death, or succumb in the second probation, Egyptian eschatology is less definite in its teaching. "Second death" and other expressions applied to them might seem to suggest annihilation; but it is sufficiently clear from the evidence as a whole that continued existence in a condition of darkness and misery was believed to be their portion. And as there were degrees in the happiness of the blessed, so also in the punishment of the lost (Book of the Dead, tr. Budge, London, 1901).

(c) Indian

In the Vedic, the earliest historical form of the Indian religion, eschatological belief is simpler and purer than in the Brahministic and Buddhistic forms that succeeded it. Individual immortality is clearly taught. There is a kingdom of the dead under the rule of Yama, with distinct realms for the good and the wicked. The good dwell in a realm of light and share in the feasts of the gods; the wicked are banished to a place of
